Advanced Civ

Mod for BtS 3.19

version 1.06

2 May 2022

by Georg W. (firpo)

User Manual

AdvCiv is a mod for advanced players, building on karadoc's "K-Mod: Far Beyond the Sword." AdvCiv does not add content, and makes only few notable balance changes apart from changes to the Al. Multiplayer (except PitBoss) is supported but not thoroughly tested. For questions, comments and current activities, please visit the development thread on CivFanatics.

Installation

To install AdvCiv, copy the unzipped AdvCiv folder into Beyond the Sword\Mods under Program Files. When the mod is loaded for the first time, it creates a folder My Games\Beyond the Sword\AdvCiv for the \underline{BUG} settings. You'll have to remove this folder manually to fully uninstall AdvCiv.

The above assumes a BtS installation from optical disc on Windows 8 or earlier, though I understand that it works the same way with the GOG.com edition and on Windows 10. Steam users may have to revert to the Game Spy version in order to run any mods, and the Mods folder should be in Steamapps\Common\Sid Meier's Civilization IV Beyond the Sword\Beyond the Sword. On Unix-based systems, the mod can only be played through a virtual machine or Wine. (These guides might help, but I haven't tried either of them: MacOS, Linux. This CFC post also looks pertinent.)

To start the mod through a Windows shortcut, create a shortcut to Civ4BeyondSword.exe, open the shortcut's file properties, and add a space and mod=\AdvCiv to the Target field.

Contents

To start playing, it should suffice to read this overview of the mod's original content and included third-party components. The subsequent chapters describe the major changes in more detail. Most of the AI and UI changes are low-key though and only covered by the (extensive) appendix. I've assigned a numeric id to each batch of changes; when an id is mentioned, there's always a link to further details and rationales in the appendix.

- <u>UWAI</u>: Utility-Based War AI. Rewrite of the AI parts dealing with decisions on war and peace. The new AI is better at anticipating the course of a war. Conditions that rule out war categorically in BtS (e.g. attitude or being occupied with another war) are factored into an overall utility value and can be outweighed by factors that favor war. UWAI can be disabled through the "Aggressive AI" game option.
- <u>Dynamic Diplomacy</u>: Makes several relations bonuses harder to get, particularly "mutual struggle," "open borders" and "supplied resources." All AI memory decays, including "You declared war on us." Two new modifiers: "We oppose your ruthless expansionism" and "You agreed to come to our aid in wartime". +4 relations is required for "pleased" attitude and -1 for "cautious," but this is evened out by a change to the "first impression" modifier. The AI will (sometimes) offer and accept cities in trade.
- Revised Barbarians: Barbarian activity increases more gradually; fewer Barbarians on low-yield tiles; creation rate adjusted to game speed; fogbusting nerfed (units can appear on all fogged tiles); land units can spawn aboard Galleys; Great Wall reworked; goodies from Tribal Villages adjusted to game progress.
- Immortal Culture: Culture of defeated civs stays in the game and can cause anger and revolts. Revolts can occur in any cities, not just near a border. Shortened occupation countdown in conquered cities, but the countdown decreases only probabilistically based on the strength of the occupying force.
- K-Mod v1.46 by karadoc: substantial AI improvements (incl. <u>BBAI</u>); usability improvements (incl. <u>BUG</u>, which in turn includes <u>Civ4lerts</u>, <u>reminder</u>, <u>Sevopedia</u> and several optional advisor screens); bugfixes (incl. the <u>unofficial patches</u>); performance tweaks; game balance tweaks (several from <u>PIG</u>, <u>Lead From Behind</u>); practically no flavor changes other than <u>Actual Quotes</u>. The main author of BBAI is jdog5000. For BUG credits, see the BUG help file (Alt+Ctrl+F1 in a running game).
- Kek-Mod v0.26, a K-Mod fork by DarkLunaPhantom: partly included (mostly bugfixes).
- Show Hidden Attitude Mod by DaveMcW
- Various bugfixes, performance optimizations and UI and AI tweaks adopted from: We the People, BULL, More Naval AI, Caveman2Cosmos, Rise of Mankind, Dawn of Civilization
- <u>Various changes</u>, especially to rules and AI behaviors that are easy to take advantage of in BtS; e.g. can't capture workers right after declaring war.
- R&F: Rise and Fall. Game option that divides the game into chapters; you take control of a different civ in each chapter. A score is awarded after each chapter based on how the standing of your civ has changed.
- <u>True Starts</u>: Game option that chooses a civ based on the geography of the starting location for every player whose civ was set to "Random" during game setup.
- SPaH: Start Points as Handicap. Game option that gives an Advanced Start to the Al civs but not to the human civs.

- PerfectMongoose map script (v3.3; main authors: Cephalo and LunarMongoose)
- Mixed Continents map script based on jam3's Islands and Continents v1.1.
- <u>savemap</u> function by tywiggins and xyx
- Blue Marble "light": Altered terrain textures that are easier on the eyes; based on Kai Fiebach's <u>Blue Marble</u>, but closer to the original textures. (How to disable: see <u>appendix</u>.)

Utility-Based War Al

UWAI is enabled by default, but players who prefer the K-Mod AI, can use the "Aggressive AI (Legacy)" option on the Custom Game screen to disable UWAI; that option also enables the Aggressive AI mode. There aren't separate options for UWAI and Aggressive AI because UWAI doesn't have an aggressive or non-aggressive mode (see also change 019; K-Mod without Aggressive AI can still be configured in GlobalDefines advc.xml).

The major differences between UWAI, BtS and K-Mod:

UWAI BtS/K-Mod

Military analysis: UWAI predicts how ongoing and hypothetical wars might develop in the medium-term, i.e. over the next 25 to 50 turns. The projection is based on power ratings for various military branches, namely the army (land and air units available for offensives), home guard (only available for defense), fleet (sea units), logistics (cargo ships) and nukes. Simulates military build-up (based on estimated per-turn production), clashes of army stacks, naval landings and attempted conquests of specific cities. The outcomes include cities lost and conquered by the various war parties, invested production and lost military power. These predictions aren't intended to be accurate; they only need to be plausible enough to result in plausible AI behavior.

The BtS military analysis simply compares present power ratings. Each civ has a single power rating, i.e. land and sea units aren't distinguished. K-Mod adds a projection of military build-up.

Power: Power ratings are based on per-unit military power values that are, essentially, computed as combat strength raised to the power of 1.66. E.g. Swordsman has about 20 power and Cuirassier 75; that value also accounts for the faster movement and other useful abilities of Cuirassiers.

Caveat: Many other AI decisions and the power graph on the Info screen are still based on BtS power ratings.

The power value of a unit normally equals its combat strength; e.g. two Swordsmen count as much as one Cuirassier. That is, BtS underestimates the power of technologically advanced units.

The **evaluation** of the expected military outcomes is broken down into 28 aspects, each dealing with one specific reason for war (e.g. gaining more cities or animus for a war opponent) or against (e.g. diplomatic ill will or invested production). The result of the evaluation is a utility value indicating how worthwhile the war (plan) in question is.

The AI considers attitude, military power, geographical proximity and victory strategies. These factors are combined in an arcane manner by a function named startWarVal.

Peace is evaluated separately by the endWarVal function, which is based on war successes, finances and the tactical situation.

K-Mod has expanded startWarVal, but it's still inconsistent with endWarVal, leading to war-peace oscillation, and too ad hoc for this important part of the AI.

War plans are fully **re-evaluated** each turn while in preparation, and canceled if they no longer appear worthwhile.

War plans in preparation are only canceled in rare circumstances.

The only necessary condition for beginning (and continuing) war preparations is a **positive** war utility value. Attitude and power are covered by the war utility calculation and no longer work as hard requirements. That said, attitude has a particularly strong impact on war utility, so that a relatively peaceful leader like Saladin doesn't go to war against a civ that he is pleased with unless there are unusually strong reasons for the war. Once preparations are concluded and war is imminent, it's too late for a change in attitude to stop the war.

Thresholds for attitude and power ratio serve as necessary conditions for war; in particular, many AI leaders never start war preparations against civs they're pleased with. (Exceptions: Aggressive AI option and – in BBAI/ K-Mod – AI leaders close to a military victory.)

If war utility is positive, the AI begins war preparations with a per-turn probability based on personality and the utility value. As a result, the AI can be **quick to declare war** in response to another declaration of war or some rapid shift in power (e.g. after upgrading to Riflemen). The per-turn probability is based only on personality and attitude.

The AI **makes peace** if and only if war utility is negative or outweighed by reparations.

Apart from an endwarVal check, there are some special conditions for peace, such as having fought to a long draw or being alone in what had started as a dogpile war.

After a declaration of war, the AI **refuses to talk** for just one turn. After that, the AI can be contacted unless the price for peace is greater than what the other side is able to pay.

Exception: If war was declared at the request of a third party or through a defensive pact or a vote, the attacked AI civ refuses to talk to its war enemies for the same duration as in BtS.

The refuse-to-talk duration is based on Al personality and war success. Possible reparations don't play a role.

The AI can start a war while already in another war. It's possible, in principle, to hire an AI civ for war even if that AI civ is already preparing or fighting a war, but the price is usually prohibitive.

The AI doesn't consider war preparations when it's already in a war; K-Mod relaxes this restriction in the endgame. In both BtS and K-Mod, the AI can't be hired while already conducting or planning war.

The AI refuses requests for starting a war regardless of war utility if either its attitude toward the proposed target is too high, or its attitude toward the sponsor is too low.

Same: "We couldn't betray close friends" or "We don't like you enough." The Al also refuses categorically if the power ratio is too unfavorable or when already preparing or fighting a war.

Otherwise, the necessary payment is computed based on war utility. If the result exceeds a threshold, the AI refuses to declare war, stating "We are afraid of their military might" if the power ratio is highly unfavorable, and "We have enough on our hands right now" otherwise. Thus, "enough on our hands" doesn't imply that the AI is already preparing another war.

In BtS, if the trade screen says "enough on our hands," then the AI is definitely preparing a war. In K-Mod, other reasons for not wanting to start a war can block the enough-on-hands tell.

When an AI leader becomes willing to discuss a sponsored war, the player is notified through an alert message (change 210a) and the Glance tab of the Foreign Advisor screen shows a fist icon (152).

For the player's convenience, the BUG mod shows a fist icon on the scoreboard next to any AI civ that will give the "enough on our hand" response. (UWAI disables this.)

While the utility of a war plan against a human player is positive but small, and the AI hasn't begun war preparations yet, there's an increased chance of demands for **tribute** or a gift.

Tribute demands are made randomly against any disliked and militarily weaker human civ. Whether the AI is currently ready to start a war doesn't play a role.

UWAI continues to use almost all of the AI **personality** values from BtS. Many work differently but, in most cases, to a similar effect.

Each AI leader has some 20 personality values affecting war and peace, set in Civ4LeaderHeadInfos.xml.

For example, a high MaxWarNearbyPower Ratio leads to an optimistically biased military analysis, which can make AI leaders willing to start wars that they may well lose.

MaxWarNearbyPowerRatio is a threshold that rules out war if the military power ratio is too unfavorable.

Hiring war allies, granting or denying tribute, UN peacekeeping and some **other decisions** that imply war or peace are made based on war utility. Separate heuristics for these decisions, based on some combination of power ratio and attitude.

Decisions about vassal agreements are still largely made by the K-Mod AI (with many adjustments; change $\underline{112}$), and defensive pacts are still mainly a matter of attitude values.

The AI is *more* willing to make peace when there are hostile units near its cities – but can't evaluate if those units actually pose a threat. This can be exploited for better peace deals.

Unless a city is clearly about to fall, the AI is less inclined to make peace when there are **enemy units near** its cities.

Positions of units have no bearing on whether the AI is willing to capitulate.

This does not apply to capitulation; the Al capitulates only when faced with a threatening number of hostile units inside its borders or after multiple nuclear attacks (change <u>112b</u>).

This is the only part of UWAI that cares about positions of units on the map. UWAI does not control *how* war is conducted, only *if*.

Dynamic Diplomacy

One easily noticeable change is in the mapping from relations values to AI attitude:

Relations	≥ 9	≥ 4	≤ 3	≤ -2	≤ -9
AI attitude	Friendly	Pleased	Cautious	Annoyed	Furious

For comparison, in BtS, Cautious begins at -2, Pleased at +3 and Friendly at +10. However, AdvCiv also removes the (hidden) -1 relations penalty on Noble difficulty and above, meaning that, in effect, the thresholds for Pleased and Cautious stay the same and the threshold for Friendly is two lower than in BtS. Change id: 148.

The following changes to relations modifiers should make them more sensible, more dynamic and less exploitable. Changes to vassal agreements are described at the end of this chapter.

- "Our mutual military struggle ...": A bonus of more than 1 now requires getting involved in the war, that is, to inflict or incur losses. The bonus decays over time and is reduced when there is a non-mutual war. (In BtS, it's sufficient to be formally at war, and, once accumulated, the bonus stays for the rest of the game.) Fighting inside an ally's borders is especially effective at increasing the diplo bonus. 130m
- "You agreed to come to our aid in wartime": Joining a war at the request of an AI civ results in a +1 relations bonus that is remembered for 100 turns on average. <u>130s</u>
- When a war ally is brought in, the two allies automatically sign a 10-turn peace treaty. 146
- "Years of peace" only start to count once a civ is met. <u>130a</u>
- "You stopped trading with us": One cannot propose an embargo against one's own trade partner; will first have to cancel those trades. The target of the embargo refuses to talk for (on average) 18 turns (BtS: 30) with both the civ that proposed the embargo and

the one that agreed to it. (Exception: when a master asks its vassal to stop trading.) The embargo terminates even recent deals that couldn't otherwise be canceled. <u>130f</u>

- "You made an arrogant demand" now only applies when a tribute demand is granted; no diplo penalty if the AI refuses to pay. However, if a player declares war on an AI civ that remembers having paid tribute, that civ and all AI civs it has met refuse tribute and help requests by the player for (on average) 80 turns. When an AI civ declares war, it forgets all tribute demands, i.e. it can be attacked without repercussions. 1300
- "You press us too hard": There is always a chance that the AI refuses a request for a gift for no particular reason. A refused request is therefore not a reliable way to determine if the AI is preparing war against the player who makes the request. The AI is willing to grant a gift about every 30 turns (20 in BtS). 144
- "You're getting ahead of us": Al civs dislike civs that are ranked slightly higher on the scoreboard but not those ranked much higher. These rank-based modifiers work differently in BtS (and BtS hides them from the player). 130c
- "A first impression is a lasting one": Another hidden BtS modifier; this one remains constant for the entire game. It is based on leader personalities and affects mostly relations between Al civs. AdvCiv reduces the modifier a bit, specifically the impact of "peace weight," to make diplomacy less preordained. <u>130b</u>
- "We oppose your ruthless expansionism": Having a high number of cities with foreign majority culture results in relations penalties from everyone. These penalties complement the ones for having vassals ("our rivals being vassals to your empire"). 130w
- "We would have nothing to gain": Al leaders are reluctant to sign Open Borders with civs whom they haven't located yet (not a single revealed land tile) or can't reach. When pleased, most Al leaders sign Open Borders regardless of accessibility. <u>124</u>
- "Our Open Borders have brought our peoples together": The time that it takes to attain and increase this bonus depends on the distances and trade routes between the two peoples' cities. 130i
- "All the years you have supplied us with resources": This can take many, many years if the recipient already has many resources. 149
- All Al memory decays. For example, memory about how "you razed our cities" decays by one city every 75 turns on average (<u>130r</u>). The other decay times (no decay in BtS):

Memory type	Turns
"You razed our cities"	75
"You razed a holy city"	150
"Your spy was caught"	40
"You made an arrogant demand"	30
"You liberated our cities"	150
"You granted us independence"	300

Memory type	Turns
"You nuked us"	120
"You nuked our friends"	80
"You negotiated a trade embargo"	60
"You declared war on our friends"	120
"You brought in a war ally"	75
"You declared war on us"	150

- "You declared war on us" penalty reduced to -2 if the declaration of war is triggered by a defensive pact. <u>130y</u>
- "We are upset that you have signed Defensive Pacts with our rivals": Not if we like these rivals, or have our own defensive pacts with them, or if we're too weak to attack

them anyway. Also no penalty for voluntary vassals ("our rivals being vassals to your empire") if we like those vassals. <u>130t</u>

- The AI refuses to sign a Defensive Pact if it was recently canceled (same mechanism as for canceled Open Borders). Defensive Pacts aren't automatically canceled when triggered, i.e. when a third party declares war on one of the signatories. 130p/ kekm.3
- "We care for our brothers and sisters of the faith"/ "You have wisely chosen your civics": Reduced the upper limit of those modifiers by 1 for about half of the AI leaders (those with the highest limits). If many civs share a religion or civic (e.g. Hereditary Rule), the relations bonuses are reduced. Conversely, the AI is more tolerant toward another religion if either religion is shared by few other civs. 130n
- "You accepted our state religion/ favorite civic": The bonus decays faster when the player switches out of that religion or civic. <u>145</u>
- "Our trade relations have been fair and forthright": No longer based (primarily) on how recently a civ was met; more difficult to max out; and trades that are indeed "fair" contribute to the bonus. (In BtS, only what the AI gets on top of a fair deal counts.) 130p
- "You have traded with our worst enemy": The penalty is reduced when the worst enemy changes. Trade with a war enemy counts (partially) even if that enemy is not the worst enemy. Open Borders contribute to the enemy trade penalty. 130p
 - To become a worst enemy at peacetime, the relations value needs to be -3 or worse, i.e. Annoyed attitude isn't necessarily low enough. $\underline{148}$
- "Perhaps it is time for all this bloodshed to end": The AI sometimes contacts human players with peace offers that can be more generous than those resulting from "what is the price for peace/ stop this fighting". Rejecting such an offer makes the AI slightly less willing to accept human peace offers. (In BtS, a bug prevents AI peace offers.) 134a
- The AI forgets actions of other civs, like "You gave us help", a little less randomly, whereas the tracking of e.g. "years of peace" or supplied resources is now a bit randomized. (In BtS, e.g. "years of peace" pay off after exactly 60 turns.) 130k/ 130i

AdvCiv eliminates most of the diplomatic drawbacks associated with **capitulated vassals** (change <u>130v</u>). They have Friendly attitude toward the master, share the master's attitude toward rivals (but no better than Cautious), can't be anyone's worst enemy and are ineligible as war targets and for elections (<u>014</u>). The master civ is held responsible for grievances caused by its capitulated vassals – penalties for razed cities, border troubles and trades with a worst enemy are partially added to the master's relations modifiers –, but the master is not blamed for things that the vassal civ did prior to the vassal agreement, nor for the vassal's religion.

Peacefully acquired vassals still work as in BtS, i.e. as largely independent. The conditions under which the AI agrees to a vassal agreement have been tweaked: Civs only look for a master when feeling threatened – having fallen behind is not reason enough (112). If a master civ fails to protect its voluntary vassal (substantial loss of territory or nuked repeatedly), the vassal cancels the agreement (143). A vassal that gets close to a victory condition also cancels the vassal agreement (112).

The following changes (130h) should make it easier to have productive relations with former vassals after **helping them break free**: Civs in a vassal-master relationship don't consider each other "friends" as far as the "you declared war on our friends" penalty is

concerned. When a vassal makes peace or breaks free, its memory about past declarations of war is decreased. When a capitulated vassal is freed because its master capitulates, the freed vassal gives +2 "You granted us independence" to the master of its former master. Freed vassals and their liberator automatically cease fire. <u>130y</u>

Happiness from vassals ("We influence other civilizations") is now only gained from voluntary vassals, and it's capped at +1. $\underline{142}$

City trades with the AI are possible under the following conditions:

- The recipient needs to have at least 10% nationality (city tile culture) and at least half as much as the current owner. Exceptions:
 - When negotiating peace, 10% nationality of the recipient is always sufficient.
 - Liberation to a colonial vassal is allowed regardless of nationality.
 - Master to vassal: The vassal needs to have higher nationality than its master.
 - Vassals can never trade or liberate cities to rivals.
- War with the previous owner or nearby enemy units prevent (non-liberation) city trades.
- As in K-Mod, unrevealed cities are treated as secret and thus cannot be traded.
- Al attitude threshold for giving away cities in (non-liberation) trade: Personality-based.
 For many Al leaders (much) less strict if the owner has less than 20% nationality.
- The AI doesn't give away cities of major economic importance.
- After a (non-liberation) city trade, a peace treaty is signed automatically. Rarely, the AI may reject a city ("we have our reasons") in order to avoid a peace treaty.
- The AI accepts liberated cities only for free, as payment for making peace or in exchange for another liberated city. As in BtS, liberation to the AI improves relations, and only former owners and colonial vassals can receive a city through liberation.

The above doesn't cover all AI trade denial conditions. Full documentation: rules | AI | UI

User interface: The Foreign Advisor screen lists possible city trades on a new tab "Cities", and there is an alert for new city trades (can be disabled on the BUG menu).

Revised Barbarians

(For details, see change id 300 when no other id is stated below.)

- The Barbarian creation rate increases gradually, reaching its peak when slightly more than half of the land is claimed by cultural borders, i.e. typically in the last millennium BC. The rate is adjusted to the game speed setting.
- Fewer Barbarians on low-yield tiles: Barbarian units can only be created on habitable tiles (positive food yield when ignoring hills). They're less likely to appear on jungle and tundra without resources, and more likely on all other tiles. The maximal number of Barbarians to be placed per continent takes into account the length of the coastline and disregards nonhabitable tiles; i.e. fewer Barbarians on continents with large (polar) deserts, more on snaky continents. The aim of these changes is to help civs that are surrounded by poor land, and to disadvantage civs that have much good land to settle.
- Barbarian land units can be created **aboard Galleys** in the fog of war. Once a Barbarian Galley has cargo, it moves toward a nearby city for a naval assault. The units can also be dropped along the way, randomly, or to attack an unprotected non-combat unit. The intention is to make Barbarian Galleys harder to ignore, especially for civs without seafood at stake. (change <u>306</u>)
- "Fogbusting" weakened: So long as a tile is not visible to any civ, Barbarian units can

be created there, i.e. the mod disables a BtS rule that had blocked Barbarian placement in a 5x5 square around each civ unit. There are also several changes that make it more appealing to fight Barbarians (rather than ensure that none are created); see below.

- On Monarch, Emperor and Immortal difficulty, human units receive a +5% combat modifier against Barbarian units (none in BtS above Prince difficulty). 313
- Barbarian Spearmen no longer appear earlier than Axemen. This makes Chariot more useful as an anti-Barbarian unit. 301
- Half of the XP gained from Barbarians (rounded down) counts as Great General points. 25% less XP than in BtS is gained from attacks on Barbarians. As in BtS, units with 10 or more XP gain no XP from fighting Barbarians. These restrictions are aimed at "XP farming" tactics that deliberately leave tiles unobserved. 312
- The Great Wall (TGW) has two out of the three following effects depending on the Raging Barbarians (RB) and No Barbarians (NB) game options: 310
 - +1 trade route in cities on the same continent except when playing with RB;
 - prevents Barbarians from entering your borders on this continent except with NB;
 - +100% emergence of Great Generals inside your cultural borders if RB or NB.

To match the flavor of the new trade route effect, TGW switches its Great Person type with Versailles, i.e. TGW generates **Great Merchant** points and Versailles generates Great Spy points. TGW costs **300 production** instead of 150, and **requires two Walls** (in arbitrary cities). It goes **obsolete with Corporation.** As for the increased cost, bear in mind that Barbarian in AdvCiv.

- Effects from **Tribal Villages** are based on the game turn number. In particular, they will often only yield progress toward a tech rather than the whole tech. Tribal Villages that aren't reached until the midgame may yield several hundred gold or research points (toward any pre-Industrial tech). The other outcomes also become somewhat more potent over the course of a game, may e.g. yield a Worker instead of a Scout. 314
- Explorers get the ability to attack Barbarians, which allows them to enter guarded Tribal
 Villages, but they can't capture cities and no longer receive any free promotions. 315b
- Scouts may attack animals (315c) and Scouts get a combat bonus against all Barbarians (315a), not just against animals. On Emperor difficulty and Immortal, the AI starts with one free Scout instead of two and, on Immortal and Deity, with one fewer Archer than in BtS; this leaves more Tribal Villages for human Scouts (250e).
- On continents without any civs, Barbarian cities begin to appear earlier than they do in BtS. This way, a patchy network of Barbarian cities tends to be cover the **New World** by the time it is discovered, reminiscent of Sid Meier's Colonization. So long as these cities outnumber those of all civs taken together, Barbarian units act relatively peacefully.

Immortal Culture

- Eliminating a civ no longer removes that civ's tile culture. The remaining culture can cause anger, now listed as "We resent being ruled by a foreign culture" instead of "We yearn to join our motherland." 099
- Revolts can occur in any cities, not just those close to foreign borders, and culture of dead civs can cause revolts. However, only border cities can flip. Cities can never flip

from a master to its vassal. If a city can't flip, it loses one population on the third revolt and on subsequent revolts. <u>099c</u>

 The occupation timer after conquest or revolt decreases only with a per-turn probability that depends on the same factors as the revolt probability, in particular the strength of the occupying force. The timer starts at no more than 3 turns.

Damage makes units less effective at suppressing revolts, and occupying units heal only as fast as in a friendly non-city tile.

Revolts can happen during occupation unless the city owner is at war with the owner of the foreign culture. <u>023</u>

- "Cruel oppression" anger in a city makes revolts considerably harder to suppress.
 (Otherwise, Slavery would be a too obvious answer for anger from foreign culture.) 101
- The flipping-after-conquest game option is now called "No City Flipping after Conquest",
 i.e. its effect has been inverted. 101
- Tile culture is subject to a small exponential decay rate. The rate is increased for "stolen" tiles, i.e. tiles that no city can work but that could be worked if they flipped to a different owner. 099b
- The Creative trait grants 10 free culture upfront and only +1 culture per turn. Moreover,
 Colosseum is no longer sped up by that trait, and the happiness-from-culture abilities of
 Colosseum and Theater have been swapped. 908b
- K-Mod also makes changes to culture and revolts. AdvCiv keeps some of these see the first few bullets in the next chapter –, and reverses others:
 - Foreign culture strength no longer goes toward infinity when the current owner has close to 0% culture. <u>101</u>
 - Culture from trade routes disabled (still optional via XML). 125
 - Reverted most of the K-Mod changes to building culture rates. 201
 To balance out the remaining changes (especially to Free Speech), the threshold for Legendary city culture gets reduced on the low and medium difficulty levels. (On Monarch, the threshold begins to increase, matching the increasing tech costs relevant for Space victory.) 251

K-Mod

See also the K-Mod thread on CFC.

BUG (Better Unaltered Gameplay): Many BUG options are disabled by default in K-Mod and AdvCiv in favor of a lean interface that provides essential time savers but doesn't look too different from unmodified BtS. Please use the BUG menu (Ctrl+Alt+O) to adjust the settings to your own preferences. To import settings from another BUG installation, it should suffice to copy the respective .ini files to My Games\Beyond the Sword\AdvCiv\Settings - perhaps minus Advanced Scoreboard.ini because the column order string isn't fully portable between BUG, K-Mod and AdvCiv (cf. 085). Like all BUG-based mods, AdvCiv will restore its default settings if an .ini file or the whole settings folder is removed.

<u>BULL</u> is included only partly in K-Mod. I've merged the Show Hidden Attitude Mod (change <u>advc.sha</u>), city bar help (change <u>186</u>), added Sentry behavior to Fortify-Heal (<u>004l</u>) and replaced BULL's <u>pre-chop</u> option with a more general pre-build command (<u>011</u>) that is

triggered by holding down the Ctrl key while clicking on a worker command. There are still several conveniences in BULL and other UI mods that are, so far, missing in AdvCiv; that said, AdvCiv also includes numerous usability tweaks beyond those in other mods (see <u>004</u> for a list).

For players who aren't familiar with K-Mod, I'm listing the major gameplay changes. For players who *are* familiar with K-Mod, I'm also listing the K-Mod changes that I've reverted (end of this chapter).

- Culture system: Culture levels (e.g. "Influential") matter less in culture wars, and specific
 city culture values matter more. Moreover, the range at which the culture of a city affects
 borders has been increased, meaning that the number of border cities and their culture
 are less decisive. The output of some culture sources has been reduced:
 - Free Speech increases culture by 50% instead of 100%.
 - The Sistine Chapel adds only 3 culture to religious buildings, not 5, and the added culture isn't doubled after 1000 years.
 - Culture from Great Work depends on the game era [progression adjusted in AdvCiv].
 - The Spread Culture mission only affects tile culture, i.e. it can no longer be exploited for an "espionage victory."
 - Regarding culture victory, note that tech costs in the late game have also been increased, i.e. both culture and space victory take longer than in BtS.
- City flipping: Revolts happen faster, but cities don't flip until the third revolt. "The net effect of these changes is that [...] it's a bit more predictable and less dependent on luck." (from the K-Mod changelog)

The revolt probability is halved if a unit with the Leadership promotion is present.

- Vassal agreements: Can instruct vassals to start war preparations via "Let's discuss something else." The impact of vassals on number-of-cities maintenance is more noticeable than in BtS.
- The number-of-cities maintenance cost is no longer capped at 8 cities, meaning that very large empires can incur very high city maintenance. [Cap is 25 in AdvCiv; cf. <u>570</u>.]
- Expendable units are chosen as defenders when no defender has favorable odds.
 (Lead From Behind mod component)
- When a religion spreads, one of the older religions is sometimes (randomly) removed.
- The AI never agrees to Cease Fire.
- Trades offered by the AI can come with a discount. The discount is forgone if the player makes a counter-proposal. [In AdvCiv, the offer can also include more gold than the AI would normally consider; change <u>026</u>.]
- Espionage points accumulated by rivals against the player are treated as secret. Rival war weariness is only displayed when demographics are visible.
- The AI uses a greater variety of espionage missions.
- Strengthened considerably:
 - Serfdom +1 commerce on farms and plantations; -1 on towns

- All cargo ships +1 capacity
- XP from Great Warlord increased based on the number of units in the tile
- Weakened slightly:
 - War Elephant +10 cost
 - The Colossus +100 cost
- Strengthened slightly (incomplete list):
 - Vassalage -25% number-of-cities maintenance
 - Mercantilism upkeep Low
 - Grenadier +10% city attack
 - Watermill +1 commerce initially but only another +1 from Electricity
 - Drill I takes -15% collateral damage
 - · Protective trait boosts production of Security Bureau
 - Aggressive trait boosts production of Jail; Jail gets -2 espionage (regardless of trait)
 - Industrial Park +1 free Engineer (i.e. 2 in total), +50 cost
 - Guided Missile +1 range
 - Hippodrome grants 2 Artist slots (like Theater)
 - Space Elevator another +50% production for spaceship parts
 - Forest Preserve +1 commerce
 - Environmentalism doesn't penalize corporations, yields +1 happiness from Public Transportation but has High upkeep. Environmentalism and Public Transportation both reduce bad health from population instead of granting good health.

Some that I couldn't put better, quoted from the K-Mod database page:

- "Barbarian Galleys get -10% strength"
- "Tech requirements for corporations changed: Civ Jewelers: Corporation, Sushi Co: Refrigeration, Cereal Mills: Medicine, Creative Constr.: Steel, Std. Ethanol: Combustion"
- "Mining Inc now uses Aluminium and Uranium instead of Gold and Silver (this should make Mining Inc slightly weaker, and Civ Jewelers more viable)"
- "Cereal Mills also has +0.25 food output" [also: Aluminum Co. +0.5 research]
- "In the diplomacy screen, pressing 'Lets stop this fighting...' will now bring up the trade screen with the Al's suggested peace terms. (Originally, it just made peace instantly without any trades – it was a horrible button.)"
- "Tech trades in which the receiving player is more than 2/3 of the way through researching the tech or when the tech is two eras behind the 'game era' [the recipient's era in AdvCiv; <u>550e</u>] no longer count toward tech trade memory; i.e. they don't contribute to causing 'We fear you are becoming too advanced'."
- "Global warming has less of an impact on the map, but (in long games) causes unhappiness to those civs contributing to pollution. There's a new advisor screen [Environment tab on the Economics Advisor] about this."

Revised by AdvCiv:

- Changes made in order to smoothen or reinforce K-Mod balance changes:
 - Forest Preserve at Biology instead of Scientific Method. <u>901</u>
 - Watermill takes 4 turns to build, and Lumbermill 5 (instead of 8 both). 902
 - Serfdom has Medium upkeep instead of Low. <u>912a</u>
 - Pacifism costs 1 gold per military unit, not 0.5. 912b
 - Vassalage disables colony maintenance, State Property (as in K-Mod) doesn't. 912g
 - Colossus is obsolete with Chemistry. 310
 - Great Lighthouse obsolete with Astronomy; cost 250 (300 in K-Mod, 200 in BtS). 310
 - Quechua has no bonus against Archers; cost is 15 (was 20 in K-Mod). 907b
 - Panzer 2 first strikes instead of 1.5; no free Flanking promotion. 907f
 - Ship of the Line strength 10 (as in K-Mod), +25% against Frigate (K-Mod 20, BtS 50), reg. Iron (as in BtS), +1 move, increased bombard rate, cost -10. 905b
 - Ironclad +1 move (as in K-Mod), at Steam Power (no Steel required), +25% defense on Coast. 905b
 - Machine Gun +25% vs. Mounted units, not 10%. 909a
 - Meltdowns slightly more likely but, as in K-Mod, far less disastrous than in BtS. 652
- Changes kept from K-Mod versions prior to 1.45:
 - Scientific Method +1 research per specialist (1.45 moves this to Computers and has Scientific Method provide +10% commerce)
 - Lumbermill at Guilds with +1 commerce (902: regardless of river) but no production bonus until Replaceable Parts (1.45 gives them +1 production already at Guilds)
- Notable adjustments to K-Mod AI behavior:
 - Al razes fewer cities and less randomly; 116
 - uses Slavery and Drafting less aggressively, though still frequently; 121b, 017
 - uses malicious espionage only against civs it dislikes. 120

Reverted by AdvCiv:

- See <u>Immortal Culture</u> about reverted changes to culture and revolts.
- Production overflow is never invested into an additional unit as this had lead to balance problems with AI civs training multiple Archers per turn. Instead, excess overflow is converted into gold as in the <u>Unofficial Patch</u>, though with some tweaks to make this conversion more difficult to abuse. <u>064b</u>
- Gifting Great People to the AI does not provide a relations bonus. <u>141</u>
- No impact of global research on inflation; instead, adjusted tech costs based on difficulty for a more historically accurate tech pace, and Immortal and Deity games now start on turn 10. 251

- Some minor balance changes undone that weren't pulling their weight in terms of added complexity (change 200):
 - · Eiffel Tower back at Radio
 - No +2 production for Assembly Plant; no withdrawal chance for Musketeer; no free XP for Dun
 - Drill does not lead to additional promotions except Blitz (see next chapter)
 - All corporations have the same maintenance multiplier (i.e. mostly as in BtS)

Important miscellaneous changes in AdvCiv

- Workers and settlers only have a 50% chance of being captured and 0% if attacked on the same turn as declaring war. <u>010</u>
- When a tile with unfinished worker builds is left alone for more than 7 turns, the invested worker turns begin to decay. This is mainly to disincentivize pre-chopping. 011
- Forest and Jungle provide only 25% defense, and none if the tile is owned by the attacker. <u>012</u>
- Unowned Forests and Jungles can't be chopped down. 119
- Worker moves are excluded from the options for showing foreign moves. To speed those options up further, the AI also patrols less than in BtS. <u>102</u>
- The AI evacuates land units that can't defend well from cities that are about to be attacked and untenable. <u>139</u>
- When the AI has more happiness or health than it needs, it may refuse to accept resources in trade or may trade away its only copy of a resource. <u>036</u>
- Undefended cities stop "fearing for their safety" once Nationalism is discovered. 500c
- Hereditary Rule grants 1 happiness per every 2 military units and +25% happiness from resources. 912c
- Slavery base yield reduced to 24 production (from 30). 912d
- Financial trait grants +1 commerce only on tiles with a natural yield of at least 2 commerce (e.g. Coast) or a total yield of at least 3 commerce (e.g. riverside Hamlet). 908a
- Philosophical trait grants only +80% Great Person birth rate (not 100%). 908c
- Terrace culture rate reduced from 2 to 1. 908b
- Ikhanda and Rathaus effect on city maintenance reduced by 5 percentage points. exp.2
- Praetorian strength reduced from 8 to 7, cost from 45 to 40, starts with March, still no city attack bonus, and renamed to "Legionary." 907a
- Skirmisher loses 1 first strike; first-strike immunity moved from War Chariot to Immortal and Immortal has its anti-Archery bonus halved from 50% to 25%. 907d/e
- Fast Worker has only 2 moves but ignores terrain movement costs. 907c
- East Indiaman is a unique Frigate with 3 cargo spaces. Increased bombard rate of

Frigate. 905b

- Galley, Trireme, Caravel, Frigate, Privateer +1 move. (Except Barbarian Galleys.) Cost of Galley and Trireme reduced from 50 to 45. Cost of Transport reduced from 125 to 100 and can't attack. Trireme has strength 3, but gets no bonus vs. Galley. 905(b)
- Attack Submarine and Submarine (now called "Nuclear Submarine") switch places in the tech tree. Both units get 6 first strikes, which should make them more dangerous for Battleship, but Destroyer gets to ignore first strikes. Battleship costs 250 instead of 225.
 Stealth Destroyer receives the same anti-air and anti-submarine abilities as Destroyer and 1 cargo space for missiles but also a cost increase from 220 to 270. 906
- Drill I enables the Blitz promotion for ships, but Blitz only allows one extra attack. 164
- Metal Casting tech cost reduced by 1/6, Divine Right by 40%. 174, 306
- Tweaks to tech costs across the board for better alignment with the game year. <u>910</u>
- The Spy unit can investigate rival cities, but (unlike in Warlords) with a mission cost. <u>103</u>
- Research progress toward a tech makes that tech cheaper to steal. <u>120i</u>
- No espionage slider until Alphabet. 120c
- Get to choose from more civics and religions when using the "Change civics/religion"
 Spy mission, or when negotiating peace or trading with a vassal. <u>132</u>
- When a citizen starves, the Granary is emptied to delay further starvation. 160
- Courthouse allows two Spy specialists, Jail only one. 911a
- Grocer and Market (and Forum) cost 130 production instead of 150. 911b
- Aqueduct (and Baray, but not Hammam) costs 90 production instead of 100. 911c
- The Apostolic Palace grants only +1 production to religious buildings, costs 350 production (instead of 400) and allows 2 Priest specialists (instead of 0). The Shrines also allow 2 Priest specialists each (instead of 3). 179
 - The Apostolic Palace can propose war against (non-full) voting members, but only full members are compelled to declare war. <u>kekm.25</u>
- Can no longer bypass the Theocracy restriction by gifting missionaries. 123a/ kekm.4
- Damage from nuclear weapons to units made less predictable; SDI interception chance reduced from 75% to 60% and cost increased from 1000 to 1500 production. 650
- Wonders that have been removed from the production queue generate no "fail gold."
 Also no gold from national units. <u>123f</u>
- Trade routes can only come from revealed cities, and the paths to those cities need to be revealed as well. Cities are temporarily unavailable for trade when in disorder. Trade along rivers doesn't require any tech (as in Warlords; BtS demands Sailing). When borders of a war enemy block trade, a naval blockade can override this. Connecting a resource on an island workable by a mainland city requires only a road, not a fort. <u>124</u>
- When mountain peaks block off part of a landmass, the parts are treated as separate continents. This is relevant for the placement of Barbarians, colony maintenance and wonders that affect only one continent – though the main point is to make things easier

for the AI. 030

- On Emperor difficulty and above, some of the AI discounts have been reduced, but human civs face increased production costs, research costs, city growth thresholds and Great Person thresholds. The AI also starts with fewer freebies, in particular, without Agriculture on Immortal and Deity and without a second free Settler on Deity. Progressive AI bonuses are now based on the game turn instead of the AI era. <u>251</u>/ <u>250e</u>
- The default player count is 8 for the Standard map size. <u>137</u>
- Map generation: Clusters of Gold, Gems made less common. Silver may occur on Grassland Forest. No Flood Plains on river corners. Jungle may occur on Plains. 129
- New algorithm for assigning starting locations. Should partition the available land more evenly than in BtS. Not enabled for all map scripts (<u>list</u>). <u>027</u>, <u>108</u>
- Switched the no-war-probability of Roosevelt and Darius, meaning that Darius can start wars when pleased, and Roosevelt – normally – cannot. <u>005a</u>
- Suryavarman's favorite religion is Hinduism and his favorite civic Caste System. 005a

True Starts (TS)

This game option affects all players whose civ is set to "Random". Rather than choose the civs uniformly at random (or with a bias for civs with multiple leaders; cf. <u>191</u>), TS chooses civs and leaders that match the starting locations in terms of (historical) geography. TS takes into account the following factors:

- Latitude (i.e. distance to the equator) if the map has meaningful latitude values
- Distance to civs placed on other starting tiles vs. the distance that separated these civs on Earth (this aspect is akin to the <u>Culturally Linked Starts</u> mod component)
- The climate, especially precipitation, that the terrain and features around the starting tile suggest. E.g. Plains are assumed to be drier than Grassland.
- The topographic relief that the Hills and Peaks around the starting tile suggest
- Bonus resources around the starting tile
- Oceanity the number of nearby (salt) water tiles and tiles on other landmasses
- The number of nearby river tiles
- Estimated space for (peaceful) territorial expansion
- Presence of (somewhat) contemporary leaders on the map. Apart from randomness, this is the only criterion for preferring one leader over another leader of the same civ.

The range of tiles around a starting tile that affects the civ choice corresponds roughly to the working radius of a ring of hypothetical cities around the capital. The preferences of each civ are derived from statistics – such as average annual precipitation – read from XML files (folder Assets\XML\TrueStarts). Resource preferences are tied to the game's start era; e.g. when starting in Renaissance, most of the negative preferences don't apply.

Inappropriate bonus resources are not strongly discouraged; instead, TS swaps resources around once all civs have been assigned. To preserve the balance of the starting positions and for naturalism, TS tries to pick pairs of similar resources (e.g. Rice and Corn) and respect their placement restrictions. Typically, no more than a dozen pairs get swapped on

an 8-player map.

TS can be used with all map scripts, climate settings and scenarios without preplaced cities or units. Players for whom a civ has been selected on the game setup screen receive that civ regardless of geography. Exception (due to a technical limitation): In network games, TS picks civs for everyone. TS does not disable the difficulty-based assignment of starting locations to players, i.e. a human player on a high difficulty level receives one of the weakest starting locations, and then TS picks the most fitting civ for that location.

TS is similar to the less sophisticated <u>starting biases in Civ 6</u>; however, Civ 6 first chooses one civ per player uniformly at random and then makes a choice for each starting tile only from this limited subset of civs.

Screenshots of one set of starting locations assigned by TS can be found attached to this CFC post. See the appendix for further details.

Start Points as Handicap (SPaH)

The SPaH game option gives Advanced Starts only to the AI civs. You might want to use this option if:

- You find the game too easy on moderate difficulty, and dislike the crass ongoing Al
 bonuses on the high difficulty levels, perhaps for reasons of immersion. A big head start
 for the AI can be taken to mean that the AI civilizations emerged earlier than yours, like
 how the Romans appeared later than the Egyptians, whereas the ongoing AI bonuses
 on Immortal difficulty are difficult to explain or overlook.
 - A big AI head start can narrow down the viable strategies in the early game though. It helps to assign start points unequally to the AI civs because this leaves some targets for early warfare, and a few far-ahead AI civs can't build all the early wonders.
- You find the game too easy on moderate difficulty, and dislike the big AI head start on the high difficulty levels, e.g. a worker on Immortal. (Note that AdvCiv removes the free Settler on Deity.) Since Advanced Start replaces the AI freebies from the difficulty setting, you can reduce the AI head start by setting a modest amount of AI start points, e.g. Deity with 400 start points.
- You don't want every AI civ to receive the exact same freebies (e.g. because this puts AI civs that start have Hunting as one of their two starting techs at a disadvantage).

Usage:

Not entirely intuitive because, sadly, the Custom Game screen can't be freely modified. You'll need to check the "Advanced Start" option in order to unlock the "Base Points" box; without Advanced Start, the SPaH option has no effect. If you enter at most 9999 Base Points, then each AI civ simply receives the amount of points entered.

If you enter a five- or six-digit number, SPaH assigns start points unequally. The box is then assumed to contain two distinct numbers: a percentage in the two digits to the right and an integer in the three or four digits to the left. E.g. 80050 means 800 and 50%. The left number says how many start points the bottommost AI civ receives, i.e. the civ in the bottommost AI slot. The topmost AI civ (topmost AI slot) receives a *fraction* of the bottommost's points equal to the percentage. In the example, that's 50% of 800 = 400. The remaining AI civs receive values in between those two bounds. (Combined with Monarch difficulty, the 800/50% setting should be a challenge closer to Emperor than to Immortal.)

SPaH never gives an Advanced Start to human civs, i.e. they start as normal with a Settler and Warrior or Scout. Humans receive starting locations based on the difficulty setting, i.e. the best ones on Settler and the (almost) worst ones on Deity. Then, if an unequal point distribution is used, the AI civs with the fewest points (top AI slots) are placed in the locations closest to the human civs, and the AI civs with the most points (bottom AI slots) are placed the farthest away.

Once the game has started, the start point distribution is shown on the Settings tab of the Victory screen. You'll also notice that the game doesn't start on turn 0. This is done to reinforce the notion that the human civs are late arrivals, and to have the game year match the overall development of the world.

An AI civ with a small number of points may have difficulties repelling a human Warrior rush, so I'd recommend against going far below 300. Unequal distributions are incompatible with team games, which is to say, they should technically work, but the assignment algorithm makes no effort to balance the teams' start points and locations. See 250b about how to enable Advanced Start and SPaH in scenarios.

General changes to Advanced Start (250c):

BtS allows start points to be converted 1:1 into production, which is usually far better than a 1:1 conversion into research. In order to make technologies a bit more attractive in Advanced Start, I've changed the conversion rate to 1:1.5 for production, meaning that cities, units and buildings now cost 50% more. Improvements, visibility and culture still seemed overcosted in comparison, so I've lowered the costs of these a bit.

Advanced Start costs are no longer adjusted to the game speed setting. This makes it unnecessary to manually adjust the start points entered on the Custom Game screen to match the game speed. When playing without SPaH and on a difficulty higher than Noble, the AI receives more start points than entered. This was apparently intended by the BtS developers but not correctly implemented. Conversely, human start points are no longer adjusted based on difficulty (this was working in BtS); humans get exactly as many points as entered.

For reference, the AI freebies for each difficulty setting, and the number of start points that would be needed in order to buy those freebies given the above changes to Advanced Start costs and assuming Standard map size (tech is more expensive on larger maps):

Difficulty	Prince	Monarch	Emperor	Immortal	Deity
Free initial items	1 Settler	1 Settler	1 Settler	1 Settler 1 Worker	1 Settler ^{250e} 1 Worker
per AI civ	1 Warrior	1 Archer 1 Warrior	2 Archers 1 Scout ^{see 250e}	2 Archers ^{250e} 1 Scout ^{250e}	3 Archers 2 Scout
	2 Warrer				
		Archery	Archery Hunting	Archery Hunting ^{250e}	Archery Hunting
					Wheel ^{250e}
Worth in pts.	187	294	386	486	651

Includes 15 extra points for the 10 free initial production that the AI civs receive on all difficulty settings. In AdvCiv, the AI civs do not receive this free production after an Advanced Start. On Monarch and below, if an AI civ starts with Hunting, the Warrior becomes a Scout. When starting in a later era, the AI civs receive different free techs (cf. 126).

Rise and Fall (R&F)

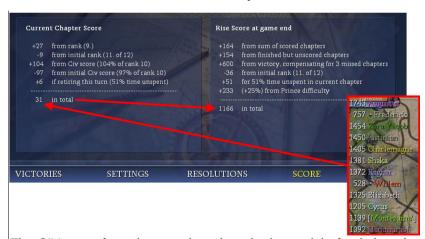

If the R&F game option is enabled on the Custom Game screen, the game gets divided into several *chapters* (of history). During the first chapter, you play as the leader and civ set on the Custom Game screen (random also works). Once a chapter ends, you're asked to select one of the other civs in the game. During the next chapter, you control the selected civ, while your previous civ is controlled by the Al. After each chapter, a score is awarded that measures how much your civ has improved since the start of the chapter. If you manage to fulfill a victory condition, the game ends, and you score a premium, which is, again, based on the standing of your civ at the start of the chapter. To maximize the total score, you need to pick civs that are doing badly but have the potential for improvement. If you play well, civs will "rise" under you control, and begin to decline after Al control resumes – this is the "fall" part. That is, unlike in the Rhye's and Fall mod, there is no special collapse mechanism. There is no connection with the "Rise & Fall" expansion for Civ 6. The High to Low challenge in Kael's Assimilation mod has been an inspiration.

Supported and recommended game settings: Single-player only, no teams or Permanent Alliances. The number of chapters is 6 on Quick speed, 7 on Normal, 8 on Epic and 9 on Marathon, provided that there are enough civs in the game. Since a different civ is supposed to be played in each chapter and some are usually eliminated before the final chapter, it's advisable to configure at least 1.5 times as many civs as chapters. If you dislike playing on Huge maps, you can fit enough civs on a Large map (up to 16 I'd say) or even a Normal map (up to 12) if you set the sea level to Low (assuming a standard map script like Fractal or Continents). You may want to take a look at the "Score" tab of the Victory screen at game start in order to verify that the number and length of chapters is as intended.

I haven't tested unusual settings much, but R&F should, in principle, work with any map script and any scenario where the civs start without cities. Advanced Start should be fine too, but not SPaH. Starting in a later era than Ancient results in fewer chapters.

R&F is intended to be played at a difficulty that makes it challenging to take a civ from a rank near the bottom to a rank near the top over the course of a chapter. That's going to be about three difficulty levels lower than what would normally pose a challenge. When it comes to expenses for units and cities (of human and AI civs alike), R&F will apply difficulty levels one higher than those configured on the Custom Game screen (i.e. Prince for the AI civs); see 708 for details. This is done because expenses can feel quite insignificant when playing several levels below one's usual difficulty level.

Objective: The objective is to maximize what I'm calling the *Rise* score. When the game ends, that score is computed as the sum of the *chapter* scores plus a premium for victory. What the scoreboard on the main screen shows are scores based on population, technology etc.; this score is computed as in BtS, and I'm calling it *CIV* score to distinguish it from the chapter score. Chapter score is based

The CIV score from the scoreboard on the lower right feeds into the chapter score on the left of the Score tab, which feeds into the Rise score on the right of the Score tab.

on the change(!) in CIV score and rank since the beginning of a chapter. Once the game ends, the final rank between "Dan Quayle" and "Augustus Caesar" is computed from the Rise score. (In non-R&F games, the rank is computed from the CIV score and game end turn.)

Delayed scoring, AI changes: A chapter isn't scored right after it ends but during the subsequent chapter. This is done to disincentivize shortsighted plays toward the end of a chapter, e.g. conquering cities that aren't tenable in the medium term. The first chapter is scored in the middle of the second chapter. With each chapter, the scoring delay decreases a little; the penultimate chapter is scored one quarter into the final chapter. The exact turns on which scoring happens are shown on the upper half of the Score tab. On those turns, a popup with a breakdown of the chapter score appears.

A side-effect of delayed scoring is that you have a stake in two civs during the first portion of each chapter: the one you're currently playing and the one from the previous chapter. This creates an awkward incentive for helping the civ from the previous chapter. Similarly, toward the end of a chapter, there can be an incentive for helping whichever civ you're going to take control of in the next chapter. In order to limit such collusive help, I've made the following changes to the AI:

- Doesn't accept unsolicited gifts, and asks for gifts less frequently than normal. No units can be gifted.
- Rejects offers that are heavily lopsided in favor of the AI. This can also mean that the AI refuses to make peace in exchange for a valuable technology.
- Is reluctant to get paid for things of questionable value to the player: civics and religion changes, embargoes, sponsored war and brokered peace.

These restrictions don't apply: to civs that have already been scored; to vassals of the player; nor to any civs that outrank the player on the scoreboard. During the final chapter, the restrictions only apply to the civ from the penultimate chapter (until that civ is scored).

Intermediate periods: In between every two consecutive chapters, there is an "intermediate" period of 5 to 10 turns (depending on game speed) during which you control no civ. During an intermediate period, most elements of the user interface aren't updated, meaning that you have practically no vision and agency. A countdown on the upper right shows how many turns remain until the start of the next chapter. The main purpose of the intermediate periods is to hinder military cooperation between the civs played in two consecutive chapters.

Civ selection: When an intermediate period ends, you're prompted to select a civ for the upcoming chapter. Each civ should be played for at most one chapter. Sometimes, this is impossible because too many civs have been eliminated already; therefore, it's allowed to play the same civ repeatedly, but the chapter score is halved then. Playing the same civ for two chapters in a row is not possible, and any vassals of the most recently played civ are off-limits too.

The selection popup lists civs in order of

Popup for civ selection

recommendation: First, non-vassals not previously played, inversely ordered by rank, then, vassals not previously played and, last, civs previously played. Civs known to any previously played civ are listed by name, the others as "unknown." Hovering over an entry shows the civ's current CIV score, whether it's a vassal, and if so, if capitulated or voluntary and the identity of the master, and lists any war enemies. A victory stage is shown if the civ is close (at least stage 3 out of 4) to fulfilling a victory condition. All this information is provided even if the name of the civ is unknown. It's often unwise to take over a civ that is at war with a stronger opponent. If you select a voluntary vassal, you'll be able to cancel the vassal agreement at any time. As a capitulated vassal, you'll have to acquire enough land and population in order to break free.

Chapter scoring function: The computation of the chapter score isn't entirely simple, but it may suffice to know that the more the CIV score has increased between the start of the chapter and scoring, the higher the chapter score.

 When a chapter is scored, 0 to 100 points are awarded based on the rank r of the scored civ on the CIV scoreboard at the time of scoring:

```
100 * (worst rank - r) / (worst rank - 1)
```

That's 100 when ranked first (r=1) and 0 when ranked last (worst). In this context, the civ currently controlled is always considered to be ranked behind the civ that is being scored; this way, success in the

Chapter score breakdown (Score tab)

current chapter can't hurt the score for the previous one. A score for the *initial* rank, i.e. the rank at the time that the scored civ came under human control, is computed in the same way, and subtracted from the score for the current rank. Thus, the total score from rank is maximized (100 points) by starting in the last place and climbing all the way to first. A civ that starts in rank 1 can at best gain 0 points from rank by staying in rank 1, and otherwise loses points.

- Points are also awarded directly for CIV score; otherwise, it would be pointless to continue a chapter when it's clear that the current civ can't climb another rank. The CIV score of the next best rank is used as a point of reference. In the example on the right, Rome is currently fourth, so its score of 929 is divided by that of the fifth rank (Ethiopia, 922), and the resulting percentage (101) is added to the chapter score. At the start of the chapter, Rome's score of 352 was 65% of the fifth rank (Charlemagne, 541), and that percentage is subtracted, resulting in a net gain of 36 points from CIV score.
- If the chapter was ended prematurely through retirement (see "End of chapter" below), the chapter score from rank and CIV score is increased by half the percentage of the turns remaining at the time of retirement. For example, if 14

973 Willem
973 Frederick

Example: Current scoreboard (left) and scoreboard at the start of the current chapter

out of 65 turns remain, the portion of unspent time is 22%, so the chapter score is increased by 11%.

If the bottom line is -10 or worse, a square root is applied in order to reduce the loss of points. This is done so that a single failed chapter can't ruin the total Rise score.

End of chapter: All chapters have the same length except for the last one, which can be a

bit longer or shorter than the others. The chapter length depends on the number of chapters and the game speed. To see how many turns remain, hover the mouse over your civ's flag on the main screen. During the last three turns of a chapter, a countdown is shown directly on the main screen, and, at the beginning of the final turn, there is a popup reminder.

As the end of a chapter approaches, you may want to try putting your civ in a state that its AI leader can work with because the civ will be under AI control for some time before scoring happens. E.g. Gandhi might not continue your war of conquest. Don't rely on preprogramming decisions for the AI: When the AI takes over, the mod clears your slider positions, governor settings and the queues for city production, research and unit missions.

You can end a chapter early by selecting "Retire" from the opening menu. This button, which normally concedes the entire game, works very differently with R&F. By retiring early, you earn a bonus to your chapter score (see "Chapter scoring function" above) and the chapter continues on Al Auto Play until its regular end turn. One situation in which retiring makes sense is when your civ is getting so far ahead of the others that the Al might run away with the game once the chapter ends.

Chapter	S			
	Zululand	Turn 0 to 64 (1440 BC)	57 points	Scored on Turn 118
2	England	Turn 73 to 137 (540 AD)	107 points	Scored on Turn 191
3	Rome	Turn 146 to 210 (1500 AD)	154 points	Scored on Turn 264
4	Aztec	Turn 219 to 283 (1826 AD)	31 points (turns remaining: 34)	Scored on Turn 337
		Turn 292 to 356 (1936 AD)		Scored on Turn 410
6		Turn 365 to 429 (2009 AD)		Scored on Turn 483
7		Turn 438 to 499 (2049 AD)	?	Scored on Turn 499
		Total so far:	349	

List of chapters on the Score tab, showing start and end turn (with end year), chapter score and scoring turn for past chapters, the current chapter and future chapters. The chapters with score values in bold have already been scored; score values not shown in bold indicate the score that would be awarded if the chapter were scored right now.

Game end: The game ends immediately when one of the BtS victory conditions is fulfilled by any civ. If the previous chapter hasn't been scored yet, it is scored now. If an AI civ wins, then the current chapter is scored as well and the Rise score is simply the sum of the chapter scores. If the human civ wins, then the current chapter is not scored, i.e. rank and CIV score don't matter. Instead, a victory premium is added to the total score of the earlier chapters. This is, once again, a bit complicated; in short, the incentive is to win as early as possible if it can be done from a poor position, but not to win a quick victory by picking a civ that is already about to win.

- Premium P: 150 points plus 150 for each chapter that hasn't started yet.
- The premium above is reduced based on the rank r_0 at the start of the current chapter (initial rank) by subtracting

```
(P/1.5) * (worst rank -r_0) / (worst rank -1).
```

However, even when the initial rank is 1, the premium is never reduced below a lower bound of P/3.

Rise score breakdown (Score tab)

 In the endgame, score isn't a good measure of a civ's standing. Therefore, whenever R&F considers ranks, those civs close to a victory condition (stage 3 or 4) are considered to be ranked higher than those not close to any victory, and civs at stage 4 outrank those at stage 3.

- Regardless of the initial rank, the percentage of turns remaining in the chapter in which victory has been achieved is added.
- Finally, the Rise score is multiplied by a factor based on the difficulty setting.

On the Hall of Fame screen, the Rise score is shown in the "final score" column. Use the "score victory" filter in order to display only results of R&F games.

A defeat of the human civ does not cause the game to end unless it happens in the final chapter. Instead, human defeat causes the game to continue on Auto Play until the chapter ends, and then a new civ is selected as normal. A defeated civ is scored immediately and is treated as having 0 CIV points.

PerfectMongoose (PM)

The PM map script is based cephalo's <u>PerfectWorld3</u> (PW3), which employs models of plate tectonics, wind patterns and hydrology. The basic ideas are best described in the old CFC <u>thread</u> for PerfectWorld2 (PW2). LunarMongoose ported PW2's successor PW3 from Civ 5 to Civ 4, incorporated changes by AlAndy and Fuyu, and made changes of his own, which are listed in the PM <u>thread</u> on CFC.

- PM vs. Tectonics: LDiCesare's Tectonics script, which is included in BtS, also models
 plate tectonics and wind but, as far as I can tell, in simpler ways. PM has about three
 times as many lines of code as Tectonics does if that's any indication. That said,
 Tectonics offers some unique options like "Mediterranean". An updated version of
 Tectonics is also included with AdvCiv (change id 021a).
- PM vs. Totestra: <u>Totestra</u> is a PW2 fork by vktj. Totestra offers more custom map options than PM, but PM has a more sophisticated noise generator. (Totestra should be compatible with AdvCiv but isn't included in the mod.)

I've customized PM (change <u>021b</u>) because I felt that the starting locations were too unbalanced and it played too differently from the standard map scripts. In particular, there was little arable land.

In many ways, PM can supersede the Fractal map script, but, since PM tends to generate more continents and more chokepoints than Fractal, the space available for expansion tends to be distributed less evenly. Other caveats:

- Huge maps might take a couple of minutes to compute.
- The "Old World Start" option sometimes only manages to reserve a small New World.

The "Plate Tectonics" option tends to produce somewhat more massive continents and mountain ranges. It uses the older landmass and elevation generator from PerfectWorld 2.

Mixed Continents

A variant of jam3's <u>Continents and Islands</u>, which, in turn, is based on the BtS script "Big and Small" by Sirian. I've called my version "Mixed Continents" because it doesn't necessarily involve islands – by default, the two landmass types are normal continents and small ("snaky") continents. It's possible to place the two landmass types in two separate regions of the map, but, by default, they're mixed together. (For separate regions, K-Mod's

"Not Too Big or Small" script may be the better choice.) I've disabled jam3's terrain options because I found them a bit arbitrary, and, instead of the "Add Water" option, the sea level setting is now used. ("Big and Small" ignores the sea level.) I've also added a world-wrap option and tweaked the land/ sea ratio and map dimensions so that the same player counts can be used as on e.g. Fractal. For some more details, see change id mxc.

All-Al games

An all-AI game can be a quick way to to get an impression of the AI behavior in AdvCiv or to check how well the mod handles certain game settings. The procedure is as follows:

- 1. Make sure that cheats are enabled (CheatCode = chipotle in My Games\Beyond the Sword\CivilizationIV.ini). This is a prerequisite for Debug mode and Al Auto Play.
- 2. On turn 0, press Ctrl + Z to switch into Debug mode. This makes the entire map visible.
- 3. Unless the game is set to Noble or Prince difficulty, if you want your own civ to have the same starting conditions as the other Al civs, you'll have to use the WorldBuilder to give additional techs and units to your civ (if the difficulty is higher than Prince; see the table above the Rise & Fall chapter), or to all other civs (if the difficulty is lower than Noble).
- 4. Press Ctrl + Shift + X to have the AI take control of your civ. A popup lets you choose the number of turns to be spent on AI Auto Play. (A mnemonic for the shortcut: control is shifted to the AI for x turns.) AI Auto Play can also be interrupted through Ctrl + Shift + X, though you may have to press these keys repeatedly because key presses are not received reliably during AI Auto Play.

AdvCiv makes a few improvements to the Al Auto Play mod component (change id 127):

- The player's civ plays by the same rules as the AI civs; in particular it plays on the same difficulty level.
- While both AI Auto Play and Debug mode are enabled, messages about major game events such as declarations of war and conquered cities are shown as if the player's civ had perfect knowledge of the game state.
- Unless interrupted, AI Auto Play ends at the start of a human turn. This means that no diplo popups can occur on that turn. (That said, it can still happen that the player is prompted to vote on a UN resolution right after AI Auto Play ends.)

Performance

Although the <u>UWAI</u> component is computationally expensive in large games, as of version 0.99, the mod appears to be faster than K-Mod even when the number of civs is increased beyond 18. In a test with 31 civs (i.e. 32=28 players when counting the Barbarians; this number has some computational advantages) on a map with 160 x 100 tiles, the first 300 turns on Al Auto Play (see <u>All-Al games</u>) took fewer than 30 minutes with AdvCiv and more than 50 minutes with K-Mod. K-Mod, in turn, is significantly faster than BtS. Note that changes to the civ limit (normally 18) require the DLL to be recompiled; see under <u>For developers</u>. For benchmarking, the shortcut Ctrl+Shift+B can be used (cf. <u>BM</u> in the appendix). The performance gains in AdvCiv have been achieved through various low-level optimizations across the Game Core DLL (cf. <u>advc.opt</u>).

Known limitations

- PBEM (play by e-mail) has barely been tested, PitBoss games not at all.
- Some of the Custom Game settings have been tested only superficially through AI Auto Play, and of course I haven't been able to test every combination of settings.
- If the mod folder "AdvCiv" is renamed, the name also has to be changed in Assets\XML\Art\CIV4ArtDefines_Misc.xml and (twice) in Resource\Civ4.thm. Otherwise, the mod will crash while loading: "Failed to initialize the primary control theme." This is a side effect of change <u>002b</u> (enlarged fonts). That change also makes it impossible to install AdvCiv into My Games\Beyond the Sword\Mods.
- The current version of the mod should be able to load savegames from all earlier versions but no savegames from other mods nor from unmodified BtS.
- The mod has only been tested with the international (MULTI5/ EFIGS) version of BtS.
 German translations are <u>almost</u> complete, though hardly tested. I don't recommend using one of the Romance languages as I've only translated parts of the new game text.
- One player has reported a potential issue with AdvCiv and Windows 7 user account control, so I've listed some steps that might help here. The dated but detailed instructions here could also be helpful. (Addendum: If a compatibility mode is needed, some say that it's best to use Vista SP2, others say Win 7.)
- The <u>Work in progress</u> section at the end of this manual lists non-critical open issues.
 (Most of them are not really work in progress anymore because v1.0 is supposed to be the last major release of this mod.)

For developers

The modified Game Core source code files are available on <u>GitHub</u>. In all modified files, changes and additions are labeled in-line with "advc.id" or enclosed in XML style: <advc.id> ... </advc.id>, where id is one of several three-digit numbers that I've (pretty arbitrarily) assigned to sets of related changes. Lately, I've started to replace some of the numerical ids with letters, e.g. "advc.opt" for miscellaneous performance optimizations. Nonfunctional changes (cf. <u>003</u>) are marked with just "advc" (no id number).

Changes from K-Mod-Extended are instead marked with kmodx (these are also in K-Mod 1.45, but I had merged them into AdvCiv before 1.45 was released), those adopted from Kek-Mod with kekm. and contributions by Erik (<u>devolution</u> on CFC) with Erik. AI changes from the <u>LoR SDK ModMod</u> are tagged with cdtw. Nightinggale's <u>GameFont Display</u> is tagged with gfd.

I've gathered bugfixes and tweaks that other mods could easily adopt *from* AdvCiv in <u>this</u> Git branch based on K-Mod 1.46. I've committed DLLs, so the branch is playable too.

UWAI is documented mostly through comments in code (more verbose documentation exists but is out of date); the appendix (id 104) only describes the integration of UWAI into BtS. Parts of UWAI are adjustable through AI_Variables_GlobalDefines.xml. If you've enabled logging (LoggingEnabled=1 in My Games\Beyond The Sword\CivilizationIV.ini), you can change REPORT_INTERVAL in GlobalDefines_devel.xml in order to have UWAI write AI internals to My Games\Beyond The Sword\Logs\uwai.log. The logs are formatted in Textile. I've been using Borgar Porsteinsson's Textile-JS to parse it (free web interface). In

Debug mode (Ctrl + Z), AI war plans can be checked in-game by holding down the Alt key and hovering over the AI leaders on the scoreboard; same as in the BBAI mod. If UWAI_SPECTATOR_ENABLED is set to 1 in GlobalDefines_devel.xml and Debug mode is enabled, then announcements about AI war preparations are shown during AI Auto Play. Debug mode, WorldBuilder and AI Auto Play can be enabled for network games through XML; see 135c for details. See 007 for a crib sheet about all available logfiles.

Unlike most mods, AdvCiv sets the maximal number of civs (MAX_CIV_PLAYERS) not in CvDefines.h but in CvEnums.h. The standard version of the mod uses MAX_CIV_PLAYERS=18 (like BtS) because unused player slots negatively affect performance. Due to various code optimizations, that overhead should be almost insignificant at this point, e.g. less than 10% (perhaps less than 5%) when increasing MAX_CIV_PLAYERS to 31 while using only 18 civs. Still, increasing MAX_CIV_PLAYERS in AdvCiv would break savegame compatibility with earlier versions of the mod. For mods derived from AdvCiv, going to 31 (i.e. 32 players when counting the Barbarians, a computationally advantageous number) would seem like a good idea, seeing that 18 aren't really enough to fill a Huge map at Low sea level and that some spare civs are desirable for colonial vassals.

Rebuilding CvGameCoreDLL.dll: If you've done this before for other mods, then it's just a matter of setting the usual file paths in <code>CvGameCoreDLL\Project\Makefile.settings</code>. Otherwise, see step 5 in this old guide by Asaf about the paths; <code>CIV4_PATH</code> corresponds to <code>CIVINSTALL</code>. As for installing the Windows SDK and Visual C++ toolkit, see step 3 under "Setup from Scratch" in Leoreth's guide. I use slightly different versions (see appendix), but those in the guide should also be fine. Step 2 describes how to install Visual Studio (VS) 2010 Express, which is what I've been using; any newer version of VS can be used as well, though it appears that VS 2010 still has to be installed. Make sure to select VS 2010 for C++ in the installer. To build the DLL, open <code>CvGameCoreDLL\Project\AdvCiv.sln</code> in VS and select "Build" from the "Debug" menu (or press F7). The build configuration can be changed in the "Configuration Manager". Nightinggale's guide contains some information about the available configurations. See "advc.make" in the appendix below about configurations added by AdvCiv.

To attach the VS debugger, I recommend creating a copy of My Games\Beyond the Sword\CivilizationIV.ini, e.g. named AdvCivDebug.ini. It's easiest to place it in the same directory as Civ4BeyondSword.exe (CIV4_PATH directory). In the copy, set FullScreen = 0 and Mod = Mods\AdvCiv. You may also want to reduce ScreenHeight a little (rationale) and make some other debug-friendly settings: CheatCode = chipotle, LoggingEnabled = 1, AutoSaveInterval = 1. Then select the "Debug" configuration in VS 2010 and under "Configuration Properties" - "Debugging," enter Civ4BeyondSword.exe with its full path(!) into the "Command" field and ini=AdvCivDebug.ini into "Command Arguments". (VS will write that information into CvGameCoreDLL\Project\AdvCiv.vcxproj.user; that file can also be edited directly.) You can then "Start Debugging" via the "Debug" menu.

Steam users need to install Steamless for debugging.

A note about the **GNU Public License**: A copy of that license is included in the BUG Doc folder only for the sake of the Al Auto Play mod. AdvCiv as a whole is not (at this time) distributed under that license and I don't believe the BUG mod is, either.

Appendix

Most of the change ids are assigned pretty arbitrarily. Changes since version 0.8 are also tracked through Git: <u>commit history</u>.

001	Minor bugfixes (not a complete list)
	Fixes merged from other mods: kmodx , kekm . mnai . 104z fixes a bug in CvPlayerAI:: AI_eventValue.

Corrected the city culture output shown during disorder by K-Mod/BUG with enabled Building-Actual-Effects option.

Al refuse-to-talk duration was lowered purely based on war success ratio in BtS, not absolute war success. This way, killing a single stray unit before stack combat could make the Al willing to talk. Added a lower bound for enemy war successes.

Barbarians no longer spare a single target city per continent from pillaging. In BtS, they apparently try to conquer that city intact. (CvUnitAI::AI pillageRange)

And Barbarians don't target cities protected by the Great Wall. (CvPlayerAI::AI findTargetCity)

Obsolete; Barbarians don't have a target city at all now through change 300.

Only cities whose location the AI knows or is able to deduce can be per-continent target cities. The corresponding visibility checks were missing in various places, but mainly in CvPlayerAI::AI findTargetCity.

Through CvPlayer::handleDiploEvent: An AI vassal will now target no city in particular when asked by its human master to attack a city that is not revealed to the vassal. (Don't want to filter those cities out in the menu because a player isn't necessarily supposed to know which cities are revealed to its vassals.)

Reduced the chance for building a "priority fort" from 80% to 20%, which, I suspect, was intended. (No clue if it's wise.)

Since K-Mod 1.44, Gunship had been able to capture cities if they contained a visible non-combat unit. Reported by Zholef <u>here</u>. Also fixed in K-Mod 1.45, but I've kept my own fix instead.

Eliminated AI civs can no longer do diplomacy. In BtS, there is a slim chance for this to happen right after an AI is eliminated by another AI.

All no longer trades for resources needed only for obsolete units (merged from **Better BUG AI**).

Integer overflow in K-Mod code when a large amount of culture is added through WorldBuilder. Thanks to xaster for pointing out the issue on <u>CFC</u>. Also fixed in K-Mod 1.46.

BBAI attitude cache updated when the ranks on the scoreboard are updated.

The dot map overlay shows up correctly after loading. Bugfix by EmperorFool: <u>source</u> And the overlay gets updated upon taking control of another player, i.e. will show the city dots that had been placed by the new active player and hide those placed by the old active player. BUG had already supported this behavior, but it had only been triggered by player cycling in Hot Seat games. Now also works for debug tools and the <u>R&F</u> option.

Tbd.: Overlay isn't cleared when regenerating the map. And stays disabled after Al Auto Play. And doesn't store the most recently selected color in savegames. And appears to be cleared when Python scripts are reloaded (if this doesn't crash BUG entirely; see <u>009b</u>).

The Civ4lerts module no longer crashes when the player takes control of a colonial vassal that hadn't existed when the game was last saved and reloaded.

When enemy units and neutral units are together in a tile, the unit model shown on the map is

quaranteed to be an enemy unit. (K-Mod bug in CvPlot::updateCenterUnit)

A resolution for mutual defensive pacts can't be signed if all non-vassal members already have signed defensive pacts. (CvGame::isValidVoteSelection)

In CvFractal::tectonicAction, a variable was unused, and this looked like a bug. I'm not sure though; the maps look as before. It seems that only the Continents script calls that function. (I'll probably also use it for the "True Starts" script; see advc.tsl.)

Two bugs fixed in the calculateTradeRoutes function (TradeUtil.py, CvExoticForeign Advisor.py). I don't think either of these had any impact in AdvCiv, but they were still bugs. Credits: Leoreth (Dawn of Civilization mod) Git commit 1 2

autologEventManager.py (Autlog mod) had assumed the active player slot to be 0 in a few places. There might be other issues with scenarios (which don't usually give slot 0 to the active player) – I haven't tested it; these are just errors I came across when browsing through the code.

K-Mod shows cities as Barbarian if the true owner hasn't been met (city revealed through map trade). Now showing the true color. In CvCity::getCityBillboardSizeIconColors.

If the AI starts the game with a free Worker, then the starting Settler is moved before the Worker. (In K-Mod, the first Worker turn is always wasted.) Implemented through CvPlayerAI::

AI movementPriority and CvUnitAI::AI handleStranded.

When a unit that is selected by the active player dies (in combat or disbanded), the per-turn income shown on the upper left is immediately updated to reflect possible changes in expenses (unit cost and supply). In CvUnit::kill.

Corrected the id of K-Mod's "Simple Unit Selection" option in the DLL (CvGame::selectUnit); the option had no effect previously.

From Mongoose Mod changelog

12-14 Dec 2012: "bug in CvUnitAI::AI_betterPlotBuild [...] it was thinking every plot bridged two plotgroups"

15 Feb 2013: "vanilla bug with the AI evaluation of [...] worldsize-scaling -1 quantity value on Broadway, Rock 'N Roll, and Hollywood's free resources" (in CvCityAI::AI buildingValue)

On the city screen, use the art style of the city owner even if another player is inspecting the city. Based on this bugfix by Leoreth (Dawn of Civilization mod). I've fixed it entirely through CvPlayer::getUnitArtInfo.

Set "time played" back to 0 when regenerating the map. (CvGame::regenerateMap)

canParadrop and canParadropAt had not been correctly exposed to Python (Credit: Roamty; <u>link)</u>

In CvCityAI::AI_getPlotMagicValue, the YieldWithBuild value needs to be taken times 100 to match the scale of AI getYieldMagicValue.

This bug was introduced with the BtS expansion and probably mattered only for the iPopToGrow computation in CvCityAI::AI_yieldValue. Even there, the impact seems to have been minor because happiness is normally the dominant limiting factor for (planned) AI population growth. See also: The bugfix is important for 113.

Fixed a potential issue with the BtS limits on withdrawal, evasion and interception chance in CvUnit::isPromotionValid: Once a unit exceeded a limit, it was unable to receive any promotion. That would be a problem when a mod increases the respective chance value in Civ4UnitInfo.xml. Now only promotions that increase the chance value are blocked.

The pyAssert function in CvUtil.py now actually raises an assertion error. Somewhat important to let findInfoTypeNum (same module) tolerate empty strings then; will otherwise render scenarios unplayable that cause no problems in BtS, specifically the Accurate Earth Maps by Laskaris.

Credits: More Naval AI (Ifgr), CFC user wfeiger for reporting the problem with Laskaris's maps (CFC post).

(Also adopted – not really a bugfix: Git commit)

The AI doesn't cheat with visibility when selecting a target city for a Trade mission (Great Merchant) in CvUnitAI::AI tradeMissionValue.

Credits: More Naval AI (Tholal)

Wrong type of AI strategy bitmask in AI getImprovementValue,

AI updateSpecialYieldMultiplier (both CvCityAI, having to do with AI yield adjustments).

Logical operators used with bitmask in CvPlayerAI::CvPlayerAI::AI_espionageVal; something about the counterespionage mission.

All three in K-Mod code.

See also: Found after turning the bitmasks into enumerators (advc.enum).

CvPlayerAI::AI_unitValue: Wrong parameter for the isCarrierUnitAIType call (BtS bug).
This probably meant that the AI was able to recognize special cargo units only through the AI types stated in Civ4UnitInfos.xml. So only a problem for mod-mods, maybe.

In the BBAI code for (automated) air recon, a visibility check had been flipped in CvUnitAI::AI_exploreAirPlotValue, and, in CvUnitAI::AI_exploreAir2 (renamed by AdvCiv to AI_exploreAirRange), the tiles around the airbase had been evaluated instead of the tiles around the candidate recon tile. On the bottom line, the recon target tile was chosen randomly with a bias only for maximal distance from the airbase.

See also: 650 uses that function also for AI air recon. 029 makes some AI tweaks.

In CvUnitAI::AI_handleStranded, units had been moving toward any coastal tiles including lakeshores. Now only seashores are targeted.

CvPlayerAI::AI_doDiplo failed to check for a trade connection before demanding resources from a vassal.

Fixed a perhaps inconsequential copy-paste error in CvDeal::isUncancelableVassalDeal.

K-Mod's ROUND_DIVIDE function was incorrect for fractions between 0 and 1. (CvGameCoreUtils.h)

The Partisans event had used tile culture to determine the previous city owner's culture level instead of city culture. Also (not a bugfix I suppose), I'm subtracting 1 from the culture level so that e.g. cities with "poor" culture don't spawn any partisan units.

Credits: Reported on CFC by SmokeyTheBear – who also suggested subtracting 1 and found another bug in the Partisans event that AdvCiv fixes through <u>003y</u>.

Flipped sign in the AI evaluation of specialist experience (CvCityAI::AI_jobChangeValue). That ability is unused for (non-super) specialists, so this only matters for mod-mods (possibly).

Clear popups of non-human players before saving in CvPlayer::write.

Tbd.: Find out under which circumstances the EXE adds popups to non-humans. (Update a couple of years later: Looks like the EXE no longer does that. Probably a problem I had introduced and fixed without noticing.)

When a city gets destroyed and replaced due to a change in ownership (CvPlayer::acquireCity), don't check if the city tile is valid for local units until the new city is in place. Because the tile may flip to a third party for an instant.

A K-Mod 1.45 change in CvCity::getProductionDifference had (accidentally) caused angry citizens to consume food even during the production of a Settler or Worker. I've also added a loading screen hint about the underlying Vanilla/BtS rule.

Credits: Bug reported by CFC user carp.

See also: K-Mod <u>Git commit</u> introducing the bug. CFC <u>thread</u> where a Firaxis developer explains why angry citizens don't consume food. <u>Post</u> by karadoc, half a year before the Git commit,

explaining that he's aware of the BtS rule and wants to keep it (reluctantly).

Tbd.: Maybe treat the population as 1 less while producing a settler or worker. That would seem more consistent. Still doesn't exactly make sense. (It would if workers and settlers consumed population as in Civ 3.)

K-Mod 1.44+ (through this Git commit) had chosen the "Big Espionage" strategy

(CvPlayerAI::AI_updateStrategyHash) based on the AI espionage commerce weight and the AI espionage weight (in part) based on "Big Espionage", creating a feedback loop. The problem was probably introduced when CvPlayerAI::m_iEspionageWeight was repurposed as a cache for the (final) espionage commerce weight.

Credits: CFC user SuperXANA made me aware that the AI uses "Big Espionage" very often. See also: Might fix this issue raised in the "Dawn of the Overlord" thread.

Tbd.: Similar problem with "Espionage Economy" and CvPlayerAI::AI_updateCommerce; not sure if it has adverse consequences.

In AI techUnitValue, BtS/BBAI/K-Mod code for incentivizing oceangoing ships had had no effect.

CvGame::onGraphicsInitialized: When loading a savegame in which the active player owns no units, the camera had centered on some (seemingly?) arbitrary tile, not necessarily a revealed tile. Now it centers on the active player's starting location in that case. See also: Based on a workaround (004j) that moves the camera after regenerating the map.

When a city was selected without opening the city screen, CvGame::shouldDisplayUnitModel had shown a 3D model next to the production queue only if a unit was selected before selecting the city. Now the model gets shown regardless of selected units.

The unused AdvancedStartCostIncrease XML tags for improvements and routes had increased the cost based on improvements or routes owned by any player – only those placed by the current player should count.

For random events involving two civs, it looks like CvPlayer::applyEvent hadn't properly checked whether both civs have been met before notifying the human player.

Looks like BtS and the unofficial patch didn't take the Random personalities option into account in CvGame::addPlayer and CvPlayer::getSplitEmpireLeaders. I haven't tested it, but, hopefully, colonial vassals will now receive a random AI personality that (usually) differs from the leader appearance.

Added code to CvPlot::changeVisibilityCount that works around a problem with the interaction of nuke visibility and Fallout replacing a sight-blocking feature (Forest or Jungle). Tbd.: A proper bugfix.

The price charged by the AI for an embargo (CvPlayerAI::AI_stopTradingTradeVal) had been counting all deals of the AI, not just those with the embargo target. (bug in vanilla Civ 4)

"No Action Recommendations" player option had been ignored at game start. Fixed by setting the dirty-bit for colored plots in CvPlayer::setOption.

See also 127: Automation options had been applied during Al Auto Play.

Flipped fraction in K-Mod's CvCityAI::AI_getImprovementValue had caused the AI to be less interested in Cottages when in Emancipation.

Fixed Civilopedia links to the Spy specialist article that had lead to the Spy unit instead. Similarly, links to coporations had lead to the HQ building instead of the coporation articles. Through helper functions CvGameTextMgr::setSpecialistLink, setCorporationLink and changes to some game text keys. Credits: Bug reported by crullerdonut (middle of the post)

Disregard non-rival units in CvPlayerAI::AI_doEnemyUnitData. (Because that data is used by AI governors for picking units that counter potential enemy units, e.g. Pikeman vs. Knight.) Seems like an oversight (but not a bug, strictly speaking).

When the game decides whether a starting site needs extra food (CvGame:: normalizeAddFoodBonuses). Whale is no longer counted as an available food source (unless starting in Renaissance or later). BtS had failed to check the tech requirements of the necessary terrain improvement (Whaling Boats).

Al resource evaluation had not counted projects (e.g. Manhattan Project when evaluating Uranium) in production gueues as currently relevant uses of the resource. Same bug with world units (which are not used by AdvCiv). These issue were introduced by the BtS expansion.

Fix counterintuitive rounding of hurry production costs that get reduced by a non-generic modifier. e.g. the settler modifier from the Imperialistic trait. *Credits*: Based on this CloseToHome Git commit

Call updateDiplomacyAttitude in the EXE after each update of the AI attitude cache that occurs while the Diplo screen is up. I think this aligns the leaderhead animations with the AI attitude level(?). Was previously only called after a civics or religion change (before updating the attitude cache), but there are several other interactions that can change relations values while the Diplo screen is up.

A K-Mod check in CvPlayerAI::AI espionageVal had assigned 0 value to the Spread Culture mission unless the spy owner had at least 8% city culture in the target city. City culture is 0 unless a city has been previously owned, so probably tile culture was intended.

Worked around an issue with Debug mode (and WorldBuilder) that had caused Tribal Villages that a rival had already entered to appear briefly upon being (eventually) revealed to the active (human) player. As far as I can tell, this only occurred when the active player had at an earlier point revealed the whole map and then hid it again. Perhaps the worst problem with that is that I or another developer might not be aware that only developer "cheats" can cause those ghost goody huts. Implemented in CvPlot::removeGoody.

Fixed an issue with XML comments in CvXMLLoadUtility::GetChildXmlValByName. K-Mod had already fixed such issues in several other places. (An XML parser unable to handle comments in certain places is a bug in my book.)

In CvPlayer::setCombatExperience, pick a civ-specific Great General unit — so that mod-mods can implement unique Great Generals. Credits: edead, Leoreth (CFC post)

The K-Mod 1.46 evaluation of AI tech paths had gotten the ordering of the techs wrong, picking the worst rather than the best option for the last (third) tech in a path. This had only affected paths consisting entirely of techs that the AI was able to research immediately, i.e. paths that didn't beeline anywhere.

001b (Not actually a bugfix.)

Can't train air units in cities already filled with air units. (BtS allows them to be trained and rebases them upon completion, destroys them if that's not possible.)

Gifting air units is only possible if the recipient has enough air unit capacity.

Support added for iAirUnitCap (Civ4UnitInfos.xml) greater than 1; not tested.

unit capacity, the unit is moved to the city's rally capacity will be exceeded, but cities without point. If no rally point is set, the unit is moved (as available air capacity are allowed to produce air in BtS) to the nearest city or fort with sufficient air units. Upon completion, an excess air unit is unit capacity. The unit has its movement points spent at the start of the next turn. If there is no city or fort with available capacity, the unit is scrapped. When moving to the nearest city (no rally point) or scrapping, an on-screen message is shown. Clicking on the message centers the camera on the unit's new location.

When a newly completed unit exceeds a city's air It's impossible to move air units into a tile whose moved to the nearest legal city or fort or destroyed if there is none. The forced move doesn't cost any movement points. The city owner isn't notified about the move (nor of the destruction of a unit).

Config	Previously, I had made it impossible to produce air units in cities without available air unit capacity (in part, through change <u>064d</u>). That rule change can be a bit tedious when mass-producing air units in the late game, but it can still be enabled through CAN TRAIN CHECKS AIR UNIT CAP in GlobalDefines advc.xml.		
Credits	Elkad made me aware that my old rule wasn't ideal with regard to usability. (CFC post)		
See also	163 always spends the movement points of teleported units. That doesn't help in this case because units are produced at the end of a turn, just before movement points are restored.		
	Help text for the gift-unit button based on <u>093</u>		
001c	Display and calculation of GP birth probabilities		
AdvCiv	BtS		
GPP modifi Age contrib	babilities are affected by the timing of GP birth probabilities are proportional to progress ers; e.g. specialists during a Golden ute more to the probability of their GP AdvCiv). GPP modifiers do not apply to those progress values. I wouldn't call it a bug, but it looks like an oversight to me. At any rate, it's counterintuitive when the per-unit progress values don't add up to the total progress		
	value.		
See also	Bug report, brief discussion on CFC: <u>link</u>		
bar (city scr project the future.	he birth probabilities shown on the GP Birth probabilities are based on the GPP ceen and BUG GP progress bar). Now collected so far; no projection. The probabilities adjust only gradually when a specialist is reassigned.		
Tbd.	Should perhaps take into account a foreseeable increase of the GP threshold due to other cities finishing their GP earlier. And Golden Age length if currently in a Golden Age. That said, I might at some point change the way the threshold increases; better to leave the UI-side alone for now.		
See also	078: Changes to BUG's GP bar options.		
001d	In Debug mode, the Top 5 Cities and Wonders tab and Religion, Civics and Espionage screens were not properly switching to the perspective of another civ because of some errors in the Vanilla Civ 4 and BtS Python code. And the Top-5/ Wonders didn't reveal all information when the Info screen pops up at game end.		
See also	007 deals with other changes to the Wonders tab in Debug mode.		
Tbd.	Tech tree doesn't show the tech progress of the civ selected from the Debug menu; only shows which techs are known to that civ.		
	The active player should be added to to the Debug drop-down menus first so that the active player is the initial selection. Currently, whoever is in player slot 0 is on top. (It's apparently not possible to make a selection programmatically.)		
Credits	crullerdonut reported the issue with Top-5 cities at game end <u>here</u> (penultimate quote box).		
	cities are shown as "Unknown" on Top 5 cities (K-Mod: "Unknown" only if owner not revealed cities are considered for the list of high-culture cities on the Victory screen.

001h	Industrial bad health	
AdvCiv		BtS
When a building leads to bad health with certain		Only bad health that the city will suffer directly, i.e.

strategic resources (Factory, Coal Plant, from currently available resources, is taken into Industrial Park with Coal or Oil), the Al assumes account, E.g. Factory counts as just 1 bad health that the city already has these resources when so long as Coal/ Oil aren't available. evaluating the effect of bad health. Starting in the Industrial era, so long as a city The AI does not aim at keeping a health surplus doesn't have power yet, the AI treats the city's available; just aims at balanced health given the current health as 1 less when evaluating the immediate effect of the building. effect of bad health. Increased the (negative) weights of bad health and food deficit in building evaluation. Hopefully no more (or only minor) population Al ends up building Factories and Coal Plants loss from bad health in Industrial AI cities. before getting Oil and Coal. If health is just balanced at that point, once Coal and Oil are connected, the city is at -8 health. The AI then shrinks the population gradually by 8 to avoid wasted food (more with Industrial Park, not to mention Poisoned Water). BBAI and K-Mod have largely rewritten the building evaluation code, but this bit works as in BtS. Rationale Treating health as one less should lead to some leeway for later bad health, especially from power. See also 160 makes Poisoned Water less dangerous, and 120e improves the AI response to that mission. Tbd. The bad health effects are badly balanced. Too much at once, bad health for no reward (Factory doesn't actually get better with Coal or Oil), punishing for tall strategies. Shouldn't even be possible to build a Coal Plant without Coal.

001i	Fog of war on routes	
AdvCiv		BtS
		The fog of war hides tile ownership, units, cities, improvements and routes.
The pathfinder ignores unrevealed routes on revealed tiles, meaning that the waypoints shown on the UI can't give away fogged routes and that the AI does not count on using such routes. The pathfinder treats all routes on revealed as revealed. By plotting a path through foggon tiles, a player can learn whether routes have been built in those tiles.		
Al plot dange routes on re	er calculations disregard unrevealed vealed tiles.	
See also	124 prevents the Trade layer from giving away routes in the fog of war. 181 prevents unit action recommandation from giving away unrevealed landmasses. 182 prevents tile yields from giving away unrevealed resources on foreign tiles. 183 addresses some issues with cities and forts in the fog of war. 128 sometimes prevents the plot danger functions from cheating with visibility. advc.pf fixes other pathfinder issues. 004c fixes some minor issues with air missions leaking fogged info. 031 prevents recommended city sites from giving away foreign cities in the fog of war (by making the AI city site evaluation care about revealed tile owners rather than	

a atual augusta)
actual owners).

001j	Deleted two (K-Mod) calls to CvPlayerAI::AI_getNumTrainAIUnits because CvPlayerAI::AI_totalAreaUnitAIs already counts those units.		
See also	017 fixes a bug that also has to do with confusing these two function.		
introduced v of Missionar	Added a couple of isFriendlyTerritory calls – had apparently been overlooked when BtS ntroduced vassal agreements (which allow passage even without an OB agreement). Al evaluation of Missionaries should be improved now.		
Replaced AI	WAYS_PEACE option checks in Al code with calls to CvTeamAI::AI_isWarPossible.		
Rationale	When both ALWAYS_PEACE and ALWAYS_WAR are enabled, war wins out. The (Vanilla Civ 4) AI_isWarPossible function sorts that out and also handles NO_CHANGING_WAR_PEACE.		
See also	105 replaces getAnyWarPlanCount with AI_isFocusWar; that's a vaguely similar change.		

001k	Al plot danger no longer (indirectly) checks isMadeAttack		
AdvCiv		BtS	
of being atta	checks whether a plot is in danger cked by a unit, it doesn't check unit has already attacked this round	Vanilla Civ 4 did not check for an earlier attack; BtS added this clause.	
Rationale	Plot danger is only checked during AI turns, and the active AI civ then wants know if another civ will be able to attack on that other civ's next turn; it doesn't matter if the unit could <i>immediately</i> attack. Perhaps the BtS developers hadn't realized that the MadeAttack flag persists for an entire round of turns.		
	Hard to say how significant this bug is; the plotDanger functions are called in dozens of contexts. I don't remember how I noticed it; some situation in which the AI clearly underestimated plot danger.		
See also	128 doesn't always let the plot danger functions cheat with visibility.		
	(Using the canBeEntered function from change <u>030</u> since v0.90.) No longer the case since v0.95.		
	"More Naval AI" fixed this a few years earlier (though my latest fix is better): <u>Git</u> commit		

001I	End combat upon reaching damage limit	
AdvCiv		BtS
Units with a damage limit below 100 hitpoints withdraw if they land a hit that reaches the		Withdrawal happens only when the damage from a hit exceeds the damage limit. Therefore an
damage limit exactly. E.g. a Cannon that lands its		
withdraws i	mmediately after this hit.	withdraw upon the 4 th hit and, if it can manage a 5 th hit, that hit will apply 0 damage and withdraw.
		The combat odds are exactly 50%. However, the code that displays the combat odds assumes that

		withdrawal will happen upon the 4 th hit, and so the displayed survival odds are 63.7%.
		The Advanced Combat Odds mod displays the correct odds; comment in the code (now deleted in AdvCiv): "A catapult that deals 25HP per round, and has a combatLimit of 75HP must deal four successful hits before it kills the warrior - not 3. []"
Rationale	more sense here. A 0-damage hit is weird when the damage limit does n	isagree. The logic for displaying the odds makes weird and won't appear in the combat log. It's also othing to make a combat less deadly; however, age limit 85) and is ultimately "just how combat
See also	advc.test: Code that uses simulation That's how I've found this bug.	s to compare actual odds with displayed odds.
	causes an attacker to reach its t is included in the combat log.	The combat log only shows full hits.
Rationale	No reason not to show the final hit (r	now that it can't cause 0 damage anymore).

001m	Scoreboard gets updated when a leader name changes	
AdvCiv		BtS
When the player enters a different leader name (Alt + D), the name is immediately updated on the scoreboard after clicking "OK".		The scoreboard isn't updated until end of turn unless the player manually closes and reopens the scoreboard.

(001n	Some potential OOS bugs fixed. (I've introduced my fair share of these bugs, but only	
		bugfixes in non-AdvCiv code are tagged with "001n". I'm also using that tag for some	
		misc. code that I added for OOS debugging.)	

The usual causes of out-of-sync errors in networked multiplayer are these:

- (a) Local code (invoked by user input) modifies the game state. All uses of the sync'd PRNG (SorenRandNum) modify the game state. Some Al functions have a bAsync parameter that causes them to use the asynchronous PRNG (AsyncRand) instead. Also tricky: Functions that cache their return value, in particular AI_baseBonusVal, AI_localDefenceStrength, AI_techBuildingValue and AI_obsoleteBuildingPenalty, all at CvPlayerAI; CvPlot::getFoundValue, CvCityAI::AI_buildingValue, CvCity::AI_neededFloating Defenders, and the Al plot danger and closeness functions. Most have a bConstCache parameter to prevent the cache write. I think the cache writes wouldn't actually be a problem if the caches were reliably invalidated, but the formulas depend on so many variables that this is impossible to do.
- (b) Access to uninitialized or non-allocated memory (e.g. out of array bounds)
- (c) Use of getActivePlayer in global code (not invoked by user input)
- (a) and (b) are also problematic in singleplayer. Rare, but something to reckon with: Sorting by memory address can cause OOS errors (K-Mod Git commit) and other errors (C2C Git issue).

Comprehensive guide by Gerikes about avoiding and debugging OOS errors: <u>CFC thread</u> Overview by Afforess: <u>link</u>

CFC post by karadoc on the subject of OOS errors: link

Some posts by EmperorFool: <u>link</u> By Nightinggale: <u>link</u>		
See also	See <u>007</u> (logging), <u>135c</u> (Debug mode) and <u>127</u> (Al Auto Play) about multiplayer debugging. <u>kekm.27</u> adds a OOSLogger component See <u>003g</u> about potential issues with floating point arithmetic. Open K-Mod issue concerning (a): <u>link</u> (related forum <u>post</u>). I think <u>036</u> addresses this. <u>repro</u> : Test for identifying non-deterministic code, addressing mainly error type (b).	
Tbd.	CvPlot::m_abBorderDangerCache isn't stored in savegames and that seems a bit risky, though it might be fine. The AI plot danger functions cache some data. They're only called in synchronized code currently (except in Debug mode, and I've disabled these dangerous calls in networked games) as far as I can tell, but it would be nicer not having to worry about that, so a const-cache parameter or accessor should be added.	
Config	I've left some code for debugging OOS problems commented out in CvSelectionGroupAI::AI_update. If an error is caused by the move of an AI unit, this will make it easier to identify the responsible unit. The checkInSync function could also be called from other (synchronized) parts of the code. The bFulloosCheck flag in CvGame::calculateSyncChecksum should be set in addition.	

001o	Main map blackouts
Mod had addunit pane (arexist in K-Moptimizations v0.97. Break possibly CvF gets cached conceivable conceivable commit, in the knowing the sure if the pblackouts du (but, then, I Python24.d. problem, but	timing of a CVDLLInterfaceIFaceBase::lookAt call in CVCity::conscript that K-ded. This seems to have fixed a bug that caused the main map to turn black and the not field-of-view slider) to disappear upon conscription. That said, this problem did not od, and it didn't occur in AdvCiv releases until v0.98. In release builds with global calciabled, I've been able to trace the problem back to this Git commit, which is part of sing that large commit up, the decisive change is probably in the CvUnit class (or Plot, CvCity). The main change to those classes is that the current tile of a unit or city as a CvPlot pointer in addition to being cached as a pair of coordinates. It's that there is indeed some problem with my implementation of that, but it's also that this change merely exposed some older problem, perhaps in an earlier AdvCiv eEXE – or maybe the K-Mod lookAt call was indeed erroneous, hard to say without exact semantics of that function. I write all this down (in Dec 2020) because I'm not roblem is really fixed now. I've been experiencing rare, non-reproducible main map ring AI Auto Play since at least Sep 2020, usually while I had the window minimized often minimize during AI Auto Play). In September, I had tried out a faster version of 11 (see under advc.make). Reverting to the old version of that DLL later did not fix the it appeared to be more common with the faster DLL. Upd. (June 2021): I haven't these random blackouts anymore.
•	ems persist, my best bet is to investigate <code>lookAt</code> calls. I've already tried calling <code>lookAt</code> e x, y and z coordinates. That (by itself) does not cause the main map to black out.
Credits	CFC user crullerdonut made me aware of the conscription issue: bug report

001p	Crash when loading a smaller game from inside a larger game	
AdvCiv		BtS
Kill all cities early in the loading process.		The logic for loading savegames is partly outside

Check for valid leader ty	•	the SDK, but the issue appears to be this:
CvPlayer::getNameKe		Cities remain untouched during the first stages of the loading process. As general game data and civs are being reset, the UI keeps getting updated, based on data about cities that are no longer consistent with the other data. This can result in a crash when the camera is near a city of a civ with an id greater than the highest civ id in the game that is being loaded (CvCity::getMusicScriptId) but apparently also in other circumstances (CvCity::isVisible). (Not sure what's going on with getNameKey.)
See also This CFC t	thread seems to describe	the bug. (No one posted a fix.)

001q	Safer definitions of integer type limits	
AdvCiv		BtS
Define negative limits as signed expressions to make sure that they don't get treated as unsigned values.		All limits are defined as hex literals. Only MAX_INT and MIN_INT are used. Vanilla uses those definitions consistently instead of INT_MAX
All uses of INT_MIN, INT_MAX replaced with MIN_INT, MAX_INT.		and INT_MIN (limits.h). In BtS, a couple of INT_MAX, INT_MIN have snuck in, and K-Mod seems to have used predominantly (exclusively?) INT_MAX, INT_MIN.
Config	The definitions are in CvGameCoreDLL.h.	
Rationale	The BtS constants are more than hard int x = 0; return (x >= had returned false. Fortunately, no (nor compared MIN_INT to anin-	MIN_SHORT); one before me used MIN_CHAR and MIN_SHORT
Tbd.	Should probably get rid of those constants and use limits.h instead. It's confusing to have two sets of definitions and I don't see any benefit. Note that std::numeric_limits is not a good alternative because those functions can't be used in template arguments (not in C++03 anyway).	

001r	Corrected AI computation of anarchy length in CvPlayerAI::AI_doCivics. (K-Mod bug)	
	131 makes further changes to the switch-civics AI. I've posted about this bug on the K-Mod subforum: link (under No. 1, "Update")	

	Some code that uses canDefend doesn't seem to take into account that all non-land units are defenseless against land units (yet canDefend returns true for all ships except Work Boat). One such oversight (in K-Mod code) causes the AI to ignore hostile units when stationing idle ships.
See also	139 further improves the AI code for keeping ships safe from land units.

001t	Preliminary fix for the following issue in K-Mod: After declaring war, an AI stack may decide to use a different path, even one for which no DoW would've been necessary. If this occurs, the AI now sticks to the original path (if it's legal) for at least one more turn so that a stack that triggers a DoW will immediately enter an enemy tile.
Rationale	The fix is more about concealing the problem than making the AI smarter; a DoW without crossing a border is an obvious mistake, sticking to a suboptimal path isn't.
Tbd.	I don't see how the DoW affects the best path; perhaps something in the pathCost function. Whatever it is, the pathfinder should anticipate that effect.

And a fix for a related bug: K-Mod sometimes lets stacks of non-city attackers move to an enemy city when war is imminent. Since these stacks aren't supposed to start the war, this doesn't normally make sense.

(001u	Fixed: K-Mod code had failed to recognize units as obsolete when evaluating a	
		strategic resource that it didn't have access to yet. This had sometimes led the AI to	
		cancel and renew trades for strategic resources (especially Horse) every 10 turns.	

001v	Bugs reported by vedg (Igor).	
See also	046 and 905b address other issues (not bugs, strictly speaking) reported by vedg. He also contributed to one of <u>devolution</u> 's bugfixes.

001x	No extra Golden Age turn when finis	shing Taj Mahal during a Golden Age
AdvCiv		BtS
finished duri Golden Age Golden Age owner's next before the el Golden Age immediately. happen throu in a mod-mo	ding that grants a Golden Age is ng the end of a player turn, the turn counter is increased by the duration at the beginning of the city turn. When the building is finished nd-of-player-turn sequence, the turn counter is increased For the Taj Mahal, this can only ugh a cheat command ([+] key), but, d, a special building like Academy Golden Age.	Buildings that grant a Golden Age immediately increase the Golden Age turn counter with one turn added to the duration. As a consequence, if the building gets finished at the end of a turn, the added turn gets subtracted later in the end-of-player-turn sequence, but, first, the end-of-turn sequences of all cities are completed, i.e. some of the player's cities benefit from the extra Golden Age turn. Moreover, when the Taj Mahal is finished during a Golden Age, then a turn gets subtracted only from the ongoing Golden Age at the end of the player turn, i.e. a full turn is added to the total

		Golden Age duration.
Rationale	The full extra turn from Taj Mahal dur this CFC post. The other issues are	ring a Golden Age is a widely known bug; see e.g. also bugs in my book.

001y	Fixed an issue with AI Work Boats being unable to find an order. BtS uses a "temporary hack" (in CvSelectionGroupAI::AI_update) to let such units skip their turn after 100 attempts to find an order. That hack is still in place as a fallback, and I intend to keep it permanently. I've reduced the number of attempts.		
Added a and	Added a another counter for the detection of and recovery from infinite loops in		
CvGame::updateMoves.			
Rationale	The code in AI_update can't handle infinite loops that involve units joining a different selection group.		

001z	Fix Ctrl+H (select wounded units)	
AdvCiv		Warlords (the shortcut was added in Warlords)
units with the selected unit	ing units through Ctrl+H, wounded e same domain type as the currently t(s) become selected. If there are I has no effect.	When units of different domains are in the same tile (city or fort), Ctrl+H selects only units of one domain that is chosen based on the internal order of the plot list, i.e. arbitrarily. If there are no such wounded units, then all units are unselected and automatic unit cycling (if enabled) proceeds to the next group.
Rationale	It's not possible to select units of diff	erent domains, so one domain has to be chosen.
Credits	CFC user xyx made me aware of the bug <u>here</u> .	

002	Aesthetic changes
002a	Minimap shows lighter player colors than in BtS on water tiles (like in Military Advisor), and slightly more opaque colors on land tiles. No units are shown on the minimap.
Rationale	CFC forum <u>post</u> (also with screenshots).
	When Desert and Forest shine through too much, player colors can become hard to distinguish.
	Units: Can't make them out properly anyway, and can't tell how many there are because each stack is shown as a single blip.
Config	Options on the BUG menu (Map tab). Can also remove player colors from water tiles like in Civ 3. Until AdvCiv 0.99, these options were in XML.
See also	kekm.21 shows Barbarian territory on the minimap.
002b	Increased font sizes.
	Shortened some leader names, e.g. "Augustus Caesar" → "Augustus" when used outside of Civilopedia.
	Shortened "Native American Empire" to "Amerindian Empire".
	Added/ removed some tabs in Sevopedia's shortcut categories (004y) in order to

	repair the text alignment.	
	Increased the total width of the civics screen (if the screen resolution allows it) and of the panels that describe the effects of the individual civics.	
Rationale	People play on rather high resolutions nowadays, and the fonts don't scale properly.	
	Long leader names take up (even) more room with the larger fonts. This is a problem for Native America because the text covers up the civics icons during diplo. Would be better to use only short descriptions there, but that seems to be programmed outside the SDK.	
Config	The font-size change can be reverted by removing the Resource folder and Assets\ XML\Art\CIV4ArtDefines_Misc.xml. This will also allow the mod to use any theme installed in CustomAssets (e.g. Blue Marble Gold). When a theme other than the AdvCiv theme is used, the FONT_SIZE_FACTOR in GlobalDefines_advc.xml should be adjusted so that the DLL knows how much text fits on the screen.	
	The civics screen changes are all in <code>cvCivicsScreen.py</code> . It's easy to make the panels in the upper half wider as well; I went out of my way to avoid that because I don't think it looks good.	
See also	061 (improved help text for listing the units in a tile) is the only DLL code so far that adjusts the amount of displayed text to the font size.	
	005 also shortens some leader names (but not for lack of space).	
Credits	Inspired by <u>VIP</u> mod and I also took a look at vincentz's setup. This <u>tutorial</u> was helpful, although neither the downloadable package nor the code in the tutorial actually worked for me.	
	This post by CFC user hagnat helped me fix some Vanilla Civ 4 and BtS errors in the theme files, though I don't think these errors were actually causing any problems. They did lead to confusing log output. See also this conversation on CFC. (In the thread, I conjecture that the log only gets created upon encountering a critical error. Not true; I just wasn't aware that it gets created in the BtS install directory.)	
Tbd.	Can't seem to change font sizes without defining a custom theme, which appears to mandate copying 25 thm text files. I was at least able to avoid copying all the tga files, which make up 15-30 MB – this would've been prohibitive for distribution.	
	I think there may be a way to make this work by copying just one or two files, but I can't figure it out (and I don't think other modders have).	
	Had to hardcode the mod folder name in $Assets\XML\Art\CIV4ArtDefines_Misc.xml$ in order to plug in the custom theme.	
	Could I verify before the mod tries loading the theme whether the game is installed in the correct location and display a more meaningful error message than "failed to initialize primary control theme"? perhaps helpful for this: C2C Git issue	
	To allow users to rename the mod folder, I could probably create a file with the contents of Civ4.thm (but using the current mod folder name, whatever it is) in the Windows temp folder and change the path of DEFAULT_THEME_NAME (Misc. ArtDefine) to that temp file before the theme gets loaded.	
	Allowing the mod to be loaded from My Games\Beyond the Sword\Mods seems tougher. Somehow, the .thm files would have to acquire the paths to the Vanilla and BtS folder dynamically (replacing the \\ path prefixes that blindly navigate two or three folders up).	
AdvCiv	BtS	
	ext shows aggregated information (e.g. The threshold is 15. ") about units if there are more than

new icon for highest espionage rate and highest free XP. And another, similar BUG option: icon at the city with the next projected Great Person birth. All disabled by default. See the hover text for documentation. The icons are shown when the active (human) player has at least 2 cities; BtS had required 3.

Config

Originally, I had implemented a separate option for each icon. Those individual options are still functional on the DLL-side, but commented out in XML and Python. Also left commented out: Options for icons at the Globe Theater and National Park city.

Credits

Brief discussion with crullerdonut on CFC: 1 (middle of the post) 2 (start of the post)

Rationale

It was easy to do and someone will always miss any established UI feature. As for the new icons, it remains to be seen if anyone will find them useful. The only I could see myself using (when playing without the GP progress bar) is the GP icon at the city where the next GP will be born.

I've though about tying the icons to national wonders. That might be a bit more useful, but would be pretty haphazard as there isn't an appropriate icon for every wonder, some of them don't need an icon at all, and Scotland Yard isn't a national wonder (but a good place for showing an espionage icon). Would also not work well in mod-mods with different national wonders.

There are still some unused icons left that could possibly make sense: The combat strength icon (perhaps for the highest military production rate – if it's not the same city as the one with the highest generic production rate), the negative gold icon (for cities with very high maintenance), the culture icon (for cities that somehow look relevant for a culture victory?). All a bit too complicated ...

The combat strength icon could also replace the Great General icon for the city with the most free XP. The GG icon is difficult to see – but the combat strength icon also isn't easy to see and is less fitting.

Another city bar icon: Spoiled food icon shown when a city is set to "Avoid Growth" (AG). And some other UI reminders about that setting: When a city has a food surplus despite "Avoid Growth", print "Avoiding Growth" on the city screen's food bar and show the turns-to-grow (i.e. turns until food gets discarded) in red. On the main map, show the gray status indicator (behind the population count) in that case. Show a red indicator when the city will discard food at the end of the current turn. Mention AG in the city bar hover text when enabled.

Added a loding-screen hint about the city bar icon, along with a reminder about turning on citizen automation during AG.

The tiny button on the city screen being highlighted is the only reminder about AG. The food bar on the city screen and on the main map looks completely normal, as if the city were growing (if there is a surplus).

When citizen automation is enabled, AG will usually cause the governor to reduce the food surplus to 0; the governor may even shrink the food store.

Rationale

AG is so easy to forget that it's almost not usable. The uses of AG without citizen automation are pretty limited in any case: A player who doesn't want a city to grow will normally manage to reduce the food surplus to 0 through citizen reassignment, and then there is no need for AG. That said, it can happen that the assignment with optimal non-food output will still have a small food surplus.

Important to make the city bar icon optional because players may use AG to permanently keep a city from growing (i.e. with citizen automation enabled and resulting in 0 food surplus), and, in that case, the icon can be more annoying than helpful.

AdvCiv		BtS
The last of the three icons contained in BULL's GameFont.tga, the Citizen icon, is used as the heading of the "population" column of the (non-customizable) Domestic Advisor screen.		The population column heading says "POP". All other columns are headed by icons. I guess BULL uses the Citizen icon only for city bar hover text.
See also	004 uses the strength icon for the sta	tioned-units column.

002h	Changes to textures
Config	Remove Assets\BML.fpk (renaming the file doesn't help) in order to use the BtS textures, or put a different fpk file in Assets (e.g. the Blue Marble texture pack linked in the opening post of the K-Mod thread (last paragraph). If BtS textures are used, clouds should probably be re-enabled through RENDER_GLOBEVIEW_CLOUDS in GlobalDefines_advc.xml because that switch can't remove the shadows.

	To modify my textures, BML.fpk has to be unpacked first, using PakBuild.				
Credits	I've worked from tex	tures in the <u>Blue Marble</u> (BM) de	sign.		
AdvCiv		BtS	ВМ		
Changed the brightness, saturation and color balance of all terrain textures except Hill, (land) Ice and Peak, aiming at a middle ground between BtS and BM. I think my colors are less saturated than either BtS and BM. Coast is quite a bit brighter than Ocean.		The BtS textures have bright colors. They're easy to distinguish except perhaps Coast and Ocean.	Much darker colors than in BtS; Coast and Ocean somewhat hard to distinguish. Also changes several non-		
	pted the water- terrain textures from lor scheme.		terrain textures that depict water (e.g. irrigated farm) to match the new color of water.		
Dark green F green Jungle Grassland.	Forests, medium e, light green	Bilious green Grassland and Jungle, medium to dark green Forest.	Dark green Forest and Jungle, medium green Grassland that contrasts very strongly with river banks.		
No changes to the texture detail, though reliefs might be more visible due to the lower color saturation.			More detailed texture reliefs. Makes Grassland in the fog of war and non-fogged Jungle a bit hard to distinguish.		
Clouds disat	oled.	When zooming out far, passing clouds are shown; these clouds also cast shadows.	No shadows; denser, more realistic clouds.		
the map.	o textures outside	Some textures resembling those on the map are shown in Civilopedia and the "Play Now!"	Adjusts these textures to match the BM style. (Compressed size: 6 MB)		
-	BM resource d also toned down t and Silk.	World Picker screens for illustration.	Less garish textures for Banana, Rice, Gems and Uranium.		
Roads light brown. Railroads from BM but with increased contrast for a dotted look.		Roads dark beige, Railroads light gray, difficult to tell apart.	Darker Railroads, no change to Roads. If BUG is used in addition, the <u>I Love Asphalt</u> component (not included in K- Mod/AdvCiv) colors roads black.		
Rationale	Rationale I mostly wanted something that's easier on the eyes. Blue Marble is pretty good in the regard, but has some other issues (see above) and looks more different from BtS that it has to. I've also gotten the (compressed) file size down to 5 MB from 15 MB. The BM reliefs look kind of nice but more crayon-like grainy than detailed.				
	All three versions let Coast bleed far into adjacent Ocean, which can make it har tell where the Coast ends. Probably can't be helped because the player is – apparently – supposed to be able to tell when there is an unrevealed Coast next revealed Ocean.		pecause the player is –

	Those look good wh	FC user MightyToad (who I think en zooming in, but, at the norma e seas look like from the stratosph			

	2x2 mosaic of one of MightyToad's textures (and also with some color adjustments) and that does result in smaller waves, but I guess they're still too big; anyway, it still looks too detailed overall, perhaps especially since the land textures aren't similarly detailed.
Tbd.	In the fog of war, the deciduous forests in the subtropics are too difficult to distinguish from tropical jungle. Making the forests darker or less reddish doesn't help. Brighter jungle would help, but would look too unnatural. (That's what BtS did.) Sparser forests? Don't really like that either. May have to apply to all forest varieties and also to routed forest, which already looks too sparse. Related CFC post (near the middle) Update: I've made jungle a bit brighter again; not sure how much it helps. Natural jungle can look pretty bright; see e.g. this photo on Wikipedia.

002i Player color palette revised

See table below. The BtS palette is on top and the AdvCiv palette on the bottom. The empty cells happened by accident. The colors labeled as unused are only used as secondary colors (when multiple leaders of the same civ are in one game), and light black (lower right corner) is entirely unused. I've been less careful about making these colors distinct than about the primary colors.

Made a few colors like the Aztec's green (upper left) and the Persian's blue (top center) less saturated and thus hopefully less painful to look at.

Most colors shifted a little bit to make them easier to distinguish.

Barbarians	America	Mongolia	Persia	France	Korea	Ottoman
		Portugal	China	Rome	Russia	Inca
Germany		Carthage	Mali	Spain	India	Japan
England		Arabia	Greece	Zulu		Celtia
Babylon	(unused)	Byzantium	Ethiopia	Holy Roman	Khmer	Мауа
(unused)	Native America		(unused)	Sumeria	(unused)	(unused)
Barbarians	America	Mongolia	Persia	France	Korea	Ottoman
			China	Rome		10.00
Germany	Aztec	Carthage	Mali	Spain	India	Japan
England	Egypt			Zulu		Celtia
Babylon	(unused)			Holy Roman	Khmer	Мауа
(unused)				Sumeria	(unused)	(unused)
				iginal colors.		

002a: Increased opacity on the minimap makes the colors a bit easier to distinguish See also there. duckstab's btsColorEditor with its "Adjust" button could've been useful if I had known about it. Also made the green of the research bar, the orange of the food bar a bit darker and the yellow of the GP bar darker and greener. Rationale The research bar was unpleasantly bright and too similar to COLOR POSITIVE TEXT. White text was difficult to read on the bright food and GP bars. City names on the main map are still not easy to read.

AdvCiv BtS When the same civ is used by multiple players (e.g. Washington, Lincoln and Roosevelt in the same game), then color schemes (primary color, last few of those color schemes are normally text color, secondary color) from unused civs are unused, but only in the sense that the color used for all players beyond the first: For the second player, a civ with a primary color resembling the original civ's secondary color is chosen; e.g. Lincoln as the second American leader in a game will receive England's colors because the secondary color of America and the primary color of England are both white – that is, unless England is also in the game. For the third player, a civ with a primary color resembling a mix of the original civ's primary and secondary color is chosen; e.g. Roosevelt as the third American leader will receive a primary color between middle blue and white (the Viking colors in a test, but perhaps that was because the Greek colors were already taken). Leaders

beyond the third (only possible in a mod-mod) receive the color scheme of an unused civ

Color schemes from the back of Civ4PlayerColorInfos.xml are chosen. The combinations are unique; the individual colors aren't unique, and can easily clash with the default colors of other civs in the game.

Screenshot posted on CFC that show clashing colors. See also

Rationale

chosen at random.

There are a few color definitions that are unused or used only as a secondary color. To improve on the BtS approach, those available colors, perhaps along with some novel color definitions, could've been used for a reserve of colors that can't clash with other primary colors. However, I think it's nicer to have unique replacement colors, i.e. chosen based on the unique (well, mostly) secondary color. For some civs, that secondary color is even quite fitting as the primary color, e.g. red for England. Using the color scheme of another civ was easier to implement than to create a color scheme around the secondary color dynamically. Choosing a color in between the primary and secondary color (for the third player of a civ) results in a color that is fairly easy to distinguish from the other two and establishes a color range that ties the three players together.

002j Changed the sizes of a few 3D models, especially ships.

Rationale	The sizes had already been scaled by hand, but a few units appeared oversized, especially Modern Work Boat. (Of course, all units are kind of oversized, and I've tried making them all 20% smaller, but that made them significantly harder to distinguish.)
Config	Through Art\Civ4ArtDefines_Unit.xml Mountain Peaks through Terrain\Civ4TerrainSettings.xml
Credits	Inspired by Elhoim's <u>Better Ship Scale</u> mod, though that mod makes the sailing ships look like nutshells, and the modern ships poke across the tile boundaries.
See also	905b increases the size of East Indiaman a bit because it's supposed to be bigger than Frigate.
Tbd.	Building scales could probably also be improved. E.g. the Taj Mahal is a bit small ("Dawn of Civilization" enlarges it). But I don't want to copy CIV4ArtDefines_Building.xml from BtS until I have more ideas what to change.
	Unit group sizes: Machine Gun and Gunship might look better as groups of two. For Bear (idea from the <u>PAE mod</u>) and Panther, group size 1 would make much more sense. Not sure about all the mechanized land units having group size 1; size 2 might be better. However, such changes aren't just a matter of UnitMeshGroups in Civ4UnitInfos.xml; the units also would have to be rescaled in Civ4ArtDefines_Unit.xml, and other adjustments might be needed in addition. Gunship rotors in frozen animation blot each other out. It seems that a larger group of Guided Missiles would require a change to the Guided Missile attack animation.

	Put "AD" (Anno Domini) before the year number in all game text. And removed the colon after "Turn" on the time display.
Rationale	I understand that "1500 AD" is acceptable, but "AD 1500" is more proper.
_	Option on the "Time" tab of the BUG menu. Can also pick CE/BCE there. Or edit the text keys in CIV4GameText_advc.xml.

002I	Tweaks to sound effects	
AdvCiv		BtS
Play comba	at audio based on player's era.	Based on the game era.
Rationale	1	e sound differs for each era, and I think all era- n) player's era, so it seems inconsistent to base
No sound is played when a unit takes nonlethal Flank damage, and the respective message is displayed immediately.		The victory or defeat sound is played, and the message appears with a slight delay for the attacker and, for the defender, only at the start of the next turn (bForce=false). All(?) the other combat-related message use bForce=true.
Rationale	Showing combat messages directly is generally preferable, but multiple messages with an associated sound can get noisy (constructive interference I suppose). Nonlethal damage isn't significant for a sound anyway (at least not for the victory and defeat sound); for units killed by Flank damage, I'm keeping the sounds and bForce=false.	
See also	CFC post by me on this subject	

	iple human units are promoted with he promotion sound is played only	Played simultaneously for each unit, i.e. can get loud.
	man stack makes a Stack Attack, a lefeat sound is played only for the final	A sound is played for each individual attack, all on top of each other.
Rationale	earlier attacks succeeded – because managed to eliminate all defenders.	t sound is appropriate even if the majority of the the attacker lost at least one unit and hasn't If the final attack succeeds, then the victory sound ere isn't a familiar neutral sound, and at least the what intuitive.

002m	Shortened unit animations		
AdvCiv		K-Mod	
The base number of animated combat rounds decreases slightly with each era. As a result, the animated units die after fewer hits in the late game than in the early game, and combat animations per battle take about 30-50% less time in the late game. Moreover, on the defense, starting in the Renaissance era, combat animations are cut short, meaning that they usually stop before one side has been defeated.		From the K-Mod changelog (v1.29b): "Combat animations are now orchestrated to roughly correspond to the events from the actual combat mechanics. (It still isn't a blow-for-blow representation of the actual battle, but events in the animation will at least occur in the same order as the events in the combat log.)" That is, the number of animated combat rounds is based on the number of entries in the combat log. In addition, it's multiplied by an XML-	
In addition t "Single Unit	o the above, when playing with the Graphics" option (SUG) in single- e, the base number of combat rounds	configurable base value. Looks like SUG doesn't affect the number of rounds, meaning that the two men are shown hitting each other for about 10 seconds.	
Config	GlobalDefinesAlt.xml (because the STANDARD_BATTLE_ANIMATION_ROUN		
Rationale	For attacks by the player, there's the "Quick Combat (Offense)" option, but "Quick Combat (Defense)" makes attacks against the player difficult to follow, and animating them takes too long in the late game.		
	Sadly, the speed at which the animations are played can, apparently, not be modified think the EXE consults functions like <code>getSecsPerTurn</code> in <code>CvDLLUtilityIFaceBase.</code> for this. (<code>CvUnit::getAnimationMaxSpeed</code> is called during combat but doesn't make any appreciable difference.) Can only speed animations up by making units die after fewer hits or by ending animations before one side has been defeated. The latter doesn't look nice, but the former just isn't enough when large AI stacks attack in the late game. And players still have the option to see fully animated combat on the attacks.		
	Fewer hits per kill as the game progredeadlier.	esses could be interpreted as weapons becoming	
	down. I'm applying my change only to	fleman takes bullet after bullet without going o singleplayer mode because I'm not sure if options could lead to synchronization problems in

	e air mission animation for recon, combing to 4 seconds, i.e. play them	5 seconds each	
Rationale	immediately and don't block the UI. (when playing with Quick Attack.) Still	y a problem as the missions take effect And the air strike animation isn't shown at all a bit distracting to see the aircraft hover for so ealistic. Perhaps a bit easy to miss for a first-time raxis made the animations so slow.	
Config	Civ4MissionInfos.xml. The iTime value gets taken times 250 ms (CvDLLUtilityIFaceBase::getSecsPerTurn).		
Shorten the	nuke animation to 8 seconds.	10 seconds	
Rationale	Still very long, but, if players actually played much faster.	want to see it, – it's not going to look good when	
See also	650 deals with other changes to nuc	ear war.	
rumble plus enough), is disabled. 1	nuke animation, i.e. mostly a camera s explosion sound (if zoomed in close shown when Particle Effects are second when playing with us turns and for enemy nukes.	Always 10 seconds, but, without Particle Effects, no explosion is actually shown and, on enemy turns, the camera doesn't focus on nukes. With simultaneous turns, it looks like the animation will play for all human players regardless of whether they can see it; but I haven't tested it. In contrast, the "Show Moves" options are treated as disabled when playing with simultaneous turns.	
When the fu (mostly) be	ull animation plays, the UI will still locked.	While the nuke animation plays, automatic unit cycling is disabled and only units in the same tile as the nuke unit can be manually selected.	
Credits	crullerdonut made me aware that the (end of the post).	nuke animation requires Particle Effects here	
See also	The end of my previous post (link ab	ove).	
Rationale	The best solution might be to stop the animation from interfering with unit cycling. More specifically, it seems to be the "delayed death" status of the nuke unit that inteferes. It's easy enough to kill the unit immediately, but that also cuts the animation off. There's probably a way to allow cycling while the selected unit is dying (and the animation playing), but it's too much effort for me to figure this out.		
	recon effect during their animation, a scout out enemy unit positions. As m	nere is no animation to see, but nukes have a nd player may want to use that opportunity to such as that illogical recon effect stinks, – wouldn't tion just so that they don't lose that benefit. I don't hout active visibility.	
		so I want to keep it simple. Apparently, playing an one machine would be quite a handicap (not sure	
Config	BUG option for showing the short rur Particle Effects" option.	mble or no animation at all regardless of the "No	

	1	s" could move the camera to the impact sites of think the full animation should be shown; should numan) player detonates a nuke.	
	Perhaps OK to remove the recon effect, i.e. never to play the animation when dropping a nuke in the fog of war. Players could still marvel at the animation when they nuke a visible tile (not so uncommon – how else can they target enemy unit stacks).		
nuke") im	Show the main screen message (" launches a nuke") immediately (bForce=true) when using nukes fired by the active (human) player. Otherwise at the start of the next turn.		
Rationale	Easier to follow enemy launches this	way.

002n	Flashing end-turn message disabled		
AdvCiv		BtS	
turn. No cha	message is shown at the end of a ange to the animation of the end-turn no change to flashing reminder	Once all units have orders and all popups have been dealt with, the end-turn button starts to pulsate and a flashing message "Press enter" is shown until the player ends the turn. The Reminders mod component (Alt+M) replaces the press-enter message with the reminder message set by the player.	
Config	Can be re-enabled on the "General" tab (column "Misc.") of the BUG menu.		
Rationale	Helpful for first-time players, but a little annoying in regular games, and quite annoying when taking screenshots. Newbies should still be able to notice the (subtly) animated end turn button eventually.		
See also	004t disables the flashing exit-city-screen message. 106l suppresses the Autosave message.		
Tbd.	In games with simultaneous turns, the "waiting for you" message seems to get shown as soon as all other players have ended their turns. That's a bit annoying, though I guess some indication is necessary (one time announcement?). Also the end-turn button turns red at that point — that should never happen when there are still units that need orders (CvPlayer::hasReadyUnit). This stuff is in part handled by CvGameInterface.cpp, e.g. CvGame::shouldDisplayWaitingYou.		

002o	Don't play the same music track twice in a row
	It would generally be better to shuffle the tracks upon entering a new era and upon loading a savegame. But not playing the same twice is at least an improvement and was easy to implement. (Actually, it looks like the original developers had meant to implement this.)

002p	No Aqueduct graphics across Coast	
AdvCiv	BtS	

can be the s	radius of any city with an Aqueduct starting point of an Aqueduct graphic re on the same continent as the city.	The Aqueduct 3D model starts in some Peak, Lake or Hills tile within the city cross. The EXE selects that tile based on a function CvPlot::getAqueductSourceWeight in the DLL. The city where the Aqueduct is located is not indicated to the DLL function, and the EXE does not check whether the source tile and the city are on the same continent.
See also	Example of a goofy looking Aqueduc	t: <u>CFC post</u>
Rationale	Maybe the DLL can figure out exactly which city <code>getAqueductSourceWeight</code> is being called for by keeping track of earlier EXE-to-DLL calls, but this simple solution seems good enough. Will sometimes (rarely) rule out Aqueduct sources unnecessarily when radii of cities on different continents overlap.	

002q	Option for disabling city soundscapes	
AdvCiv		BtS
BUG option (disabled by default) for disabling urban sounds on the city screen and instead letting the era and civ music continue.		City soundscapes aren't optional. The background music (era and civ music, depending on the camera distance) is paused while the city screen is open.
Config	Misc. column of the "City Screen" tab of the BUG menu	
Rationale	Some of the urban sounds get pretty annoying, but the pausing of the background music is annoying in itself if one opens the city screen frequently and briefly.	
Credits	Inspired by this CFC post	
See also	More CFC posts on the subject	
	004m changes the default camera di	stance, which affects music volume.
Tbd.	Could try changing the default camera distance while the city screen is open in order to avoid a change in music volume as the camera zooms in or out upon opening the city screen. Would at least be nice to have this as an option. A large change in volume is pretty clearly undesirable. As it is, players may feel compelled to set a lower camera default distance than they'd otherwise use.	

003	Style changes and other refactoring, utility functions, comments about unused or
	otherwise dubious code; in particular:

Minor refactoring changes to improve readability in large parts of the C++ code base:

Variable declarations moved to the point where the variable is initialized; continue, break and return statements to reduce indentation; variables named bissomething renamed to just bsomething; removed (obviously) unnecessary parentheses; made comments more compact, in particular those by jdog5000; removed blank lines and curly braces around one-liners unless the braces are needed to separate the one-liner from a multi-line condition; switched conditions like 0! =x around to x!=0; array initialization loops replaced with single-line initialization; INT_MAX and INT_MIN replaced with Civ's MAX_INT and MIN_INT, breaks in long lines (ca. 85 to 100 characters). removed the xmlkey parameters from getBUGOption... calls because the callee doesn't use them; const qualifiers added. For what it's worth, the last few Firaxis programmers working on the codebase (patch 3.19, Colonization) had been making changes (mostly localized) in a similar vein.

Those changed aren't marked with comments. Structural changes are sometimes tagged with an "advc" comment, but I've started deleting those comments again. In particular, continue statements without a comment can be assumed to come from AdvCiv.

Macros TEAMID added, and GET_TEAM can now also take a PlayerTypes parameter. For example, GET TEAM(GET PLAYER(ePlayer).getTeam())

becomes

GET TEAM(ePlayer)

(akin to the functions in BUG's PlayerUtil.py).

Macro PLAYER_TEXT_COLOR added to complement TEXT_COLOR; mainly used in CvGameTextMgr.cpp.

Shortened gDLL->getInterfaceIFace() **to** gDLL->UI().

Added some free <code>getActivePlayer</code> functions (local to implementation files) in order to abbreviate <code>GC.getGame().getActivePlayer()</code> in implementation files that need to access the active player (or team a lot). Also added boolean member functions <code>isActive</code> to CvPlayer and CvTeam and <code>isActiveOwned</code>, <code>isActiveTeam</code> to all classes that can be owned by a player or team.

Moved a lot of code out of CvGameCoreUtils.h/cpp — to more specific places, in part to new translation units.

Rationale

It's often faster for me to rewrite the code a bit than to make sense of it as it is – though fastidiousness has also played a role, I'm sure.

I've stuck to the (Systems) Hungarian notation, mainly for consistency with the BtS code, but I also think that it has some merit in this software design. Since objects are usually passed around through integer ids (instead of pointers), it's typical to work with an object pointer and its id side by side, and then eTeam is shorter than teamId.

003q, advc.fract: Fractional arithmetic

003e (private copy-constructors) makes the cast to CvCityAI safer to use.

advc.pf: Refactoring of pathfinding code.

advc.700, advc.250b: The R&F and SPaH code uses a bit of a different coding style. It took me a while to figure out which windmills (not) to fight. Eventually I settled on a middle ground and most of the codebase is consistent with that, but I haven't bothered to update the R&F and SPaH code because it isn't really subject to change by me and especially not by other modders.

Removed all trailing whitespaces in the C++ files, converted spaces used for indentation to tabs (also in the K-Mod Python scripts) and removed most of the spaces before closing parentheses.

Rationale

Shortly before releasing v0.96, I decided that it's better to make these changes once and for all instead of making them piecemeal along with functional changes. Irregular whitespaces are distracting to me when reviewing Git commits. For indentation, tabs were already used almost exclusively. It's especially important to stick to one way of indenting in Python. I haven't made further style changes in Python and none in XML because those files aren't frequently changed (by me).

Tbd.

Seach an replace (case-sensitive!):

"if(" → "if (" "for(" → "for (" "while(" → "while (" "switch(" → "switch ("

CvDeal: Added a more convenient interface for iterating over trade items. When a CvDeal object and the two trading civs A and B are given, then the BtS interface with functions like <code>getFirstTrades</code> and <code>getSecondTrades</code> forces the caller to check whether A is either the "first" or "second" civ, resulting in redundant code to deal with both cases. The function names also give no indication who gives an item away and who receives it.

I've adapted all or almost all the client code for which it makes sense to the new interface. AdvCiv BtS New class CvDLLLogger to encapsulate the The "message (control) log" is used mainly for logging combat outcomes and random numbers 'message log". (if "RandLog" is enabled in addition to "MessageLog"). And some misc. logging, e.g. in CvPlaver::setTurnActive: if (GC.getLogging()) if (gDLL->getChtLvl() > 0) TCHAR szOut[1024]; sprintf(szOut, "Player %d Turn ON\n", getID()); gDLL->messageControlLog(szOut); Rationale To make the logging code less distracting. See also There's a short guide about the various logs under 007. Renamed the getBugOption... functions to "isEnabled" and "getValue" and put them in a namespace "BUGOption". Merged a few non-functional changes from Roamty's Unofficial Patch 1.7 (link). Not marked in-line because the changes are too minor. He uploaded further changes here, but those are really just whitespace changes; nothing merged except for a bugfix (see "Roamty" under 001). AdvCiv BtS "GC" is now a CvGlobals const&, and most "GC" (global context) is a reference to the CvGlobals member functions have const. singleton instance of CvGlobals. It doesn't have a const qualifier. Most of the CvGlobals member qualifiers. functions don't have const qualifiers either. although they don't change the state of CvGlobals. The main class that changes (initializes) the state CvXMLLoadUtilitySet.cpp redefines GC as a of CvGlobals is CvXMLLoadUtility. (non-const) CvGlobals& for convenient access. GC provides access to other frequently used Functions that provide references to other singleton instances – CvGame, CvMap, singleton objects, in particular getGame, CvInitCore – and to the non-synchronized PRNG getInitCore and getMap, still return non-const and various pathfinders. Some of those instances references. This works because CvGlobals only are owned (allocated and deallocated) by stores pointers to those sub-objects. CvGlobals. In the rare cases, when the state of CvGlobals needs to be changed by classes other than CvXMLLoadUtility, the instance is accessed through CvGlobals::getInstance(). Most classes have no business changing CvGlobals, so the const restriction on GC Rationale should serve as a warning. I'm not sure if any performance gains are possible; making GC const certainly can't hurt with regard to performance. Removed functions from CvGlobals that had For each of the 100 or so "info" vectors that store returned references to the info vectors. Instead. data loaded from XML, there are three accessor functions: One that returns the size of the vector. CvXMLLoadUtility accesses the vectors directly.

one that returns an element at a given index and

	one that returns the whole vector by reference. The last function type is only called by CvXML LoadUtility, which is a friend of CvGlobals.
Rationale	Shouldn't expose those vectors to the entire game core when only one class needs to access them is already declared as a friend.
See also	advc.enum lets the preprocessor generate the remaining info accessor functions. Cavemen2Cosmos did the same thing (a little later than I): Git commit
suggestion endings are	gs: The DLL only uses line feeds (LF); I've run it through unix2dos (on devolution's). I think the original DLL also used LF exclusively, as did karadoc's code. XML line e mixed. Looks like BtS always used LFCR and so did I, but BUG uses LF. Well, at least s within individual files seem to be consistent. Haven't checked the Python code.
Turned K-N CitySiteEva	Mod's CvFoundSettings and AI_foundValue_bulk (CvPlayerAI) into a new class aluator.
Rationale	AI_foundValue_bulk was one of the most complex functions in the code base and it was located in the longest and most complex implementation file (CvPlayerAI.cpp). Moving it to a separate class has allowed me to store the data that gets computed prior to the city radius evaluation loop in member variables. This was a prerequisite for moving code into subroutines.
Tbd.	It's easy to see that the code still isn't well structured (for one thing, several functions return multiple values through reference parameters) and that the order of the evaluation steps is fairly arbitrary.
See also	031 deals with functional changes to the found value computation. When I moved the code, I also added log output; see 031c about that.
marked wit	most of the CvArea* function parameters to CvArea const&. Those changes aren't h comments. Repurposed the getArea functions (CvPlot, CvCity, CvUnit) to return a stead of an int id. Same-area checks are now usually performed by functions
functions re anymore. A most of the	e.g. CvCity::sameArea(CvCity const&), Or isArea(CvArea const&). The area eturning a CvArea* (CvPlot, CvCity, CvUnit, CvSelectionGroup) aren't used much all functions mentioned above are inlined except CvSelectionGroup::area. Previously, m weren't inlined because CvPlot and CvArea objects had to be looked up in CvMap. t, CvCity and CvUnit each store a CvArea*, and CvPlot no longer stores an area id.
Rationale	constness is preferable and so are references and inlining. None of this is important or its own, but all three combined gave me enough impetus for this rather expansive refactoring change.
	I've kept the area functions mostly for compatibility when merging with other DLL mods. The change to the <code>getArea</code> functions will hurt compatibility, but there really shouldn't be three different area accessors I think and accessing them by id is easily the worst method.
See also	The CvMap::getPlot function introduced by advc.opt also returns a reference, whereas CvMap::plot returns a pointer.
	the "plot unit functions" in CvGameCoreUtils, mainly through more descriptive variable re assertions.
Tbd.	Replace this with functors taken as template parameter? For better compile-time type safety.
	getCombatOdds and LFBgetCombatOdds functions from CvGameCoreUtils.cpp into a e CombatOdds.cpp, split them up so that they can share some code with each other the Advanced Combat Odds mod (ACO) can also reuse some of it. Moved some of the

and so that the Advanced Combat Odds mod (ACO) can also reuse some of it. Moved some of the

	from CvGameTextMgr.cpp into CombatOdds.cpp, the rest into ACOText.cpp. Refactored s-related code a bit, mostly the variable names (ACO had used some obscure one-letter ins).
Rationale	Should make it more feasible for mod-mods to change the combat rules. Updating the odds calculations is a real obstacle to that, especially when it has to be done in five(!) different places.
See also	advc.test: Code for verifying calculated odds through simulations.
BULL, K-M text for the	copies of English game text that were standing in as placeholder translations in BUG, od game text files. This concerns mostly French translations. Until v0.99, AdvCiv game BUG menu and the R&F option had also used copies of English text as placeholders for lian and Spanish; those have also been deleted now.
See also	This Git commit has enabled K-Mod to fall back on English text when a translation is missing.
Rationale	Makes the game text files a bit easier to scroll through and makes it more apparent where translations are missing. The downside is that any kind person who wants to add translations will have to copy the opening and closing tags, which is arguably a bit more work than deleting a placeholder text. On the other hand, the missing tags make it easy to search the text folder for all missing translations (e.g. the closing English tag being followed by a linebreak and then the opening German tag implies that the French translation is missing).
Tbd.	The game text could generally be organized better — I guess; not sure how. Civ4GameText_advc.xml is too big, and it's generally difficult to identify redefines that might clash when merging another mod into AdvCiv. At the least, a uniform comment should be placed at every text element that redefines a BtS key.
BUG mod	e copy of Civ4GameText_Events_BTS.xml (half a megabyte) that was included in the and replaced it with a file EventText_CorrectedTranslations.xml that includes only ts that the BUG mod had actually changed.
Rationale	As a rule, modders should be free to assume that a BtS text key that they wish to change isn't already included in the mod. Therefore, wholesale copying like that is bad.
Tbd.	Would be very nice to let the DLL check whether a text key gets loaded more than once. For GlobalDefines, this is already implemented through the CHECK_FOR_REDEFINES preprocessor flag (tagged with "advc.test"); harder to do for text I think.

003b	Misc. performance tweaks (tagged in the source code with "advc.opt")

004s uses a more efficient data structure for player statistics.

Brief chapter about <u>performance</u> in the main portion of the manual.

Tbd.

Test if this flat set implementation by alberts2 is more efficient than std::set in the UWAI component (UWAISet.h). Not easy to do because his flat set doesn't have quite the same interface as std::set. The implementation in Boost 1.35 seems to have the same interface, but it can't be easily isolated from the rest of that library and I don't want to switch from Boost 1.32 to 1.35. If I do upgrade Boost, then I should follow billw2015's example (C2C Git issue, branch) and upgrade to Boost 1.55.

I've tweaked various BtS functions that the Unit AI uses to quickly dismiss tiles when deciding where to move: CvUnitAI::AI plotValid, CvUnit::isEnemy, CvUnit::isPotentialEnemy and related functions at other classes. The "potential enemy" functions check for imminent war plans. so I've moved them to AI classes. Some are used by the AI to avoid danger – I've kept the name 'potentialEnemy" for those –, others are used for planning attacks – I've renamed those to "mayAttack". It's still a bit of a mess.

A few of my changes to calls of isEnemy are minor functional changes, bugfixes arguably, that only matter when a mod-mod makes additional units AlwaysHostile and when such a unit is near a friendly city or fort. I haven't marked those changes with any comment.

See also

Often, Unit AI code, especially BBAI code, checks whether a tile is in the same area as the unit. Change 030 (peaks and ice can separate areas) complicates some of those checks because submarines can now sometimes enter a different area. I've added functions CvUnit::canEnterArea, CvArea::canBeEntered and CvUnitAI::AI canEnterByLand for dealing with that.

Revised access to GlobalDefines. Integer GlobalDefines are now accessed in four different ways:

- Access through CvGlobals:: getDefineINT(char const*). This is still the default method for code that is clearly not going to affect the overall performance. In a few cases (e.g. in MapGenerator.cpp), I've at least moved getDefineINT calls out of loops and assigned their results to local consts instead.
- Assign the result of CvGlobals:: getDefineINT(char const*) to a local static variable. This is done when the value should only be used locally, i.e. when it's not really intended to be a "global" define.
- Enum value (enum GlobalDefines) in CvGlobals.h for fast access through CvGlobals::getDefineINT(GlobalDefines). For values used in multiple places or that may well be used in additional places in the future. The mapping between XML element strings and enum values is handled by a macro.
- Access through a dedicated function without parameters; e.g. getEVENT MESSAGE TIME(). For pre-AdvCiv functions that can't be easily removed because of DllExport or because of

Two different ways:

 CvGlobals::getDefineINT(char const*), which looks up the string argument in a stdext::hash map (FVariableSystem:: m mapVariableMap) that contains all the GlobalDefines tag names.

• For more than 50 frequently accessed tag names, there are individual variables cached at CvGlobals with a getter function, e.g. m iriver attack modifier and

a nign ni I did rem	umber of call locations. Most of these nove.	getRIVER_ATTACK_MODIFIER.
Rationale	GlobalDefines are needed pretty conthat performance doesn't matter, and CvGlobals is tedious and clutters that problem. The only reason I like to use conveys that the GlobalDefine is only	contexts where performance isn't a concern, but a monly in contexts where it's at least not obvious then, adding a data member with a getter to t class up. The GlobalDefines enum solves that e local static variables sometimes is that it accessed in a single place. Caveat about local if CvGlobals::setDefineINT is called. Another ables result in a branch instruction.
Credits	The local static idea came from Nigh	tinggale. <u>CFC post</u>
See also	I posted about the GlobalDefines enuthat idea was later included in C2C (um <u>here</u> in the C2C subforum, and a variant of Git commit).
Tbd.	CvBugOptions could use a cache as	well.
to-boolean	conversion (getDefineBOOL) to the G	when a tag isn't found in the hash map) and int- lobalDefines getters in CvGlobals. This has ions.h obsolete, so I commented those out.
Rationale	Treating integer defines as boolean is	s frequently needed and error-prone.
Faster func to CvPlot o	,, -	There are two functions for this mapping, both force-inlined, both returning a CvPlot*:
CvMap::plotValidXY returns a CvPlot*. Applies world-wrap, but doesn't check whether coordinates are -1. The compiler may or may not inline it		either coordinate equals -1. CvMap::plotSoren: Doesn't apply world-wrap, only checks for -1. CvPlot isn't generally used for data members; usually coordinates are used instead, and wher those coordinates aren't supposed to represent any tile, they're set to -1 (e.g. cvUnit::m_iReconv
replaces pl	Index (returning a CvPlot&) mostly lotByIndex. getPlotByIndex only the index is within the array's	For looking up a CvPlot by its index in CvMap::m_pMapPlots, plotByIndex is used. That function performs an out-of-bounds check and returns a CvPlot*.
Rationale	Speed and code clarity. plotSoren is least not used much anymore.	s a terrible function name. Now that fucntion is a
Tbd.	Functions shouldn't, for the most par	t, take coordinates as parameters; instead the

should take a CvPlot reference if the tile is guaranteed to be valid and a CvPlot pointer otherwise. That should get rid of most of the remaining plot calls and superfluous NULL checks. Could then perhaps rename plot to "plotSafe".

003c

Added an assertion that checks if XML data loaded through GC.getDefineINT actually exists. Found just one (unimportant) error this way and corrected it. Had to change some calls that happened before XML was even loaded; no functional change.

For values that CvGlobals caches, there is still no check if XML has been loaded. I've added an <code>isCachingDone</code> check to every getter function and found only one issue (<code>TechPrefs.py</code>; fixed). Then I removed the checks again because they were a bit unwieldy.

003d	Faster loading of savegames		
AdvCiv		BtS	
When using Shift+F8 to Quick Load in fullscreen mode, the game exits to the opening menu for a second before loading the Quick Save slot.		When loading any savegame while playing in fullscreen mode, the game hangs on "Initializing" (doing who-knows-what) for a period of time that appears to depend on the complexity of the game state. Can easily be 30 seconds. This delay does not occur when loading from the opening menu (nor when exiting to the opening menu).	
Rationale	only web sources I can find that men	nown, though these three <u>CFC</u> threads are the tion it. (Upd.: <u>Here</u> 's a more recent thread on pd.#2: Now I've <u>posted</u> about it.) It's possible that	
	My fix only covers Quick Load. Since probably all I can do. Workarounds:	the "Load Game" menu is outside the SDK this is	
	a) manually exit to the opening menu	ı before loading; or	
	b) play in windowed mode; or		
	c) press Alt+Tab two times when the stage immediately.	delay begins. This seems to finish the "Initializing"	
	Could easily replace the "Initializing" text with a recommendation to minimize the game if loading is taking long. I've tested this and found it quite helpful because I keep forgetting about this. But the recommendation would also show up when generating a map, and this is misleading because Alt+Tab does not speed up the map script. The replacement text also needs to be very short; no room to explain that it only applies when loading a savegame. Had to leave it at a regular loading screen hint (008d) that shows up randomly.		
See also	009 is a prerequisite because it repair where savegames are located.	rs BUG code for finding the My Games directory	
	004m is a prerequisite because it madoesn't affect the layers that are enal	kes sure that returning to the opening menu bled after loading.	

003e	Prevent accidental copying of objects	
AdvCiv	1	BtS
CvPlayer, CvTeam, CvGame, CvMap, CvEntity (base class of CvCity and CvUnit), CLinkList, CvInfoBase, CvScalableInfo, CvActionInfo (for the getInfo functions) and their subclasses are non-copyable, meaning that a line like		Calls to the (macro) functions GET_PLAYER, GET_TEAM, getGame and getMap are extremely common in the code base, and new code has to call them all the time too.
CvPlayerAI kPlayer = GET_PLAYER(ePlayer) leads to a compile-time error.		Such a line only leads to a runtime error, and one that is usually difficult to debug.
Rationale	Accidental copies are just something that comes with references as return values in C++, and I'm not going to make every class non-copyable that is returned as a reference somewhere, but securing these frequently used functions seems prudent.	
Credits	Git commit by Nightinggale (We the People mod). He does it only for CvInfoBase.	
See also	003k also makes a couple of classes non-copyable because it adds dynamically allocated memory to them. A public, implicitly-defined copy constructor for classes that free memory in the destructor violates the <u>rule of three</u> (but accidental copies are annoying even when they don't lead to use-after-free errors).	

advc.inl Function inlining [the change id was "advc.003f" until AdvCiv 0.97]

I haven't exhaustively checked every header for functions that may benefit from inlining (though I did scour some of them), but I think I've taken care of the bulk of the functions that are very short, are at least somewhat frequently called and don't contain any conditionals. In most cases, I've merely moved the definitions into the header file. I've added the "inline" keyword only where the linker requires it for the one-definition rule. Note that MSVC03 (contrary to the C++ standard I think) never requires the "inline" keyword for function templates and member functions of templates, regardless of whether they're defined in-class or out of class; I guess they're implicitly treated as inline. I've added the MSVC "__inline" keyword almost exclusively to free functions in implementation files; it seems that the Obl compiler option can't inline-expand such functions otherwise. I use "__forceinline" in only a couple of places where performance measurements have suggested that it's probably benefitial.

I've also removed most of the (rather few) "inline" and some "__forceinline" keywords from Firaxis code.

See also

Official documentation for the MSVC03 compiler: VS2003 CPP en-us.pdf

- "The ___inline keyword is equivalent to inline"
- "__forceinline [...] tells the compiler to go beyond the current inlining heuristics and to absolutely inline [...] except in cases in which inlining would be impossible."
- "/Ob1 expands only functions marked as inline or __inline or, in a C++ member function, defined within a class declaration."
- •"/GL allows the compiler to perform optimizations with information on all modules in the program [i.e.] optimize the use of registers across function boundaries [and] inline a function in a module even when the function is defined in another module."

advc.make: Use of compiler options by the AdvCiv game core DLL.

"We the People" <u>Git issue</u> about function inlining.

<u>003u</u> partially solves problems with dependencies between abstract non-Al classes and Al classes derived from them. This has allowed me to inline additional functions

	without undesirable header inclusions	S.	
Rationale	definitions into header files and with a compiler option), I estimate that the la DLL adds somewhere between 10% The use of /GL completely gets rid of don't use final-release builds during the complete of t	after moving groups of frequently used function and without whole-program optimization (/GL ack (by and large) of inline expansion in the BtS and 35% to AI turn times; a significant overhead. If this overhead in final-release builds; however, I development (nor for profiling), so inline definitions d, in my opinion, have no drawbacks with respect	
	I use "inline" and "inline" side by side in order to differentiate between cases where an inline keyword is required and cases where I only want to nudge the compiler toward inlining. This is only my personal convention though; the two keywords are equivalent.		
	Prior to AdvCiv 1.0 I had used inline keywords copiously, especially on wrapper functions, in order to reassure the reader that performance won't suffer (at all) or to point out functions that get very frequently called – as a warning against expanding those functions. I still think this latter rationale has some merit, but, on the bottom line, I've come to conclude that it's better to get rid of the inline clutter. In a test, the old code with all the inline keywords ran 5 permille faster than the newer code without them; since such measurements are affected by some noise, there may in fact be no difference in performance at all. That is, although the MSVC03 compiler is old and is by Microsoft, it does seem to have a solid, reliable logic for inlining.		
	locations has usually hurt performand misprediction. Hence, there is general	nat branch at runtime and have multiple call ce. I'm guessing that this is mainly due to branch ally no point in defining functions with branching in complex enough to affect readability).	
Tbd.	As a matter of uniform style, all one-l files – but this is pretty unimportant.	ine const accessors should be defined in header	
AdvCiv		BtS	
names and those funct const-corre I've rename and then ex through a n	nodule definition (.def) file.	The original developers have inlined only a few very frequently called functions. They've done so by defining them in-line and adding the inline keyword. No exported functions have been inlined – supposedly, in order to avoid inline-expansion at the call locations in the EXE; instead, separate non-exported functions with "INLINE" appended to their names (e.g. CvGlobals::getGameINLINE, CvPlot::getX_INLINE) were created for (all) DLL-internal calls, while the non-inline versions are only called externally. This convention has not been strictly followed, at least not in code added by the BtS expansion, and especially not by modders.	
Rationale	used in the DLL. (Now the inline ve	ke sure that only one version of each function is ersions are both faster and more readable than the for anyone to use the exported versions	
	functions works just fine in the DLL w	ally crucial here. Inline-expansion of exported vithout "inline", just so long as the function is a difference for inline-expansion at external call	

	locations, but I doubt it. So I guess the Firaxis developers may have been correct that separate functions for internal and external use are needed when in line-expansion isn't ruled out by defining the function in an implementation file.		
	That being said, so long as the source code of the EXE is unavailable, inline-expansion at external call locations isn't a problem. If it does become available (and that would seem like a remote possibility), then recompiling the EXE after any change to an exported function doesn't sound too problematic either.		
	It would be kind of nice to add aExternal version for all external functions and to export exclusively through the .def file. That would minimize the risk of breaking a DIIExport, would make it easy to make minor changes to the signatures of exported functions and could avoid problems with inlining if the source of the EXE is ever released. However, this is, for starters, a big effort, and I also don't think it's going to be all the helpful on the inlining front: If the source of the EXE becomes available, one will want to use a more recent compiler, which may use different name mangling and thereby break the .def file. Moreover, allowing the EXE to inline DLL calls would improve performance a bit.		
Credits	I learned about .def files from posts by alberts2 and Anq in the Caveman2Cosmos forum (thread). Until then, I thought that it was impossible to rename functions that the EXE calls.		
Config	The .def file is enabled through Makefile.project. Danny's/ Nightinggale's makefile had already supported .def files; only a linker argument had to be added.		
See also	CFC post explaining how to add a .def file to a mod		
Removed n checks.	Removed most of the _usrdll preprocessor checks. When disabled, the _usrdll flag hides functions preprocessor defines and enums that the EXE isn't supposed to access. That includes all exported inline functions.		
Rationale	Hiding the "INLINE" functions was, as far as I can tell, pointless because they weren't exported. Hiding enums and defines was prudent at the time, but may not be necessary if the source of the EXE is released (see above) and is, in any case, not going to be crucial. And currently, to be clear, _USRDLL is always enabled – as it needs to be when compiling the DLL without the EXE.		
See also	Two posts by EmperorFool about the _usrdll flag.		
ignoring the the bodies bDebug par don't perfor	CvPlot: Some frequently called functions have a (mandatory) bDebug parameter that allows ignoring the fog of war (for Debug mode), e.g. CvPlot::isRevealed(TeamTypes,bool). I've kept the bodies of those functions in CvPlot.cpp, but overloaded them with functions that don't take a bDebug parameter and inlined the bodies of those new functions. (This way, the inline versions don't perform any conditional branching.) Then I've removed bDebug=false from all call locations so that all non-UI code uses the inline functions.		
See also	advc.enum simplifies many getter and setter functions, making them candidates for inlining.		

003g	Utility functions for dealing with floating-point numbers
	(Still in place, but, as of AdvCiv 1.0 not used much anymore.)

The original game completely avoids floating-point math in all synchronized code, at least in the game core DLL. (I believe map scripts need to be synchronized, but they do use floating-point math.) The reason for this was, apparently, that floating-point operations are, in a sense, non-deterministic.

Much of the AdvCiv AI code, especially in the UWAI component, had initially used floating-point math, but, as of version 1.0, has been converted to fixed-point fractional math; only std::log is still used in a couple of places. K-Mod uses floating-point math for AI combat odds (via the LFB_USECOMBATODDS XML switch, which is enabled by default; BtS had used that code only for humans). Since K-Mod 1.46, floating-point math is also used for the AI evaluation of Cottages (Git commit).

So long as all players use copies of the same game core DLL, I don't think there can be a problem. The x87 (via the IEEE 754 standard), SSE and SSE2 instruction sets all guarantee the exact same results regardless of the specific CPU. I don't know if the MacOS version of Civ 4 is multiplayer-compatible with the PC version in the first place, but, since DLL mods run only on PCs, cross-platform multiplayer isn't a concern anyway.

One potential issue that I can see: A call to a DLL other than the game core DLL might change the floating-point precision or rounding mode, e.g. d3d9.d11, and a different version of that DLL might not make the same change under the exact same circumstances. That never seems to have occurred though (unsurprisingly I guess). I've added a test at game start that warns players when their floating point settings (apparently) differ, and, to my knowledge, no player has encountered that warning. (But, then, I've only heard from five or so multiplayer groups, and a test at startup can't catch problems caused by an FPU mode change in the middle of a game ...)

Tests prior to AdvCiv 1.0 (i.e. when floating-point math was heavily used) on a single machine with Microsoft's _controlfp function and different compiler flags suggested that inconsistent floating-point settings can indeed lead to unacceptably frequent OOS errors.

See also	My test at the start of a multiplayer game is based on the numbers in these two Stack Exchange questions: $\underline{1}$ $\underline{2}$
	advc.fract: Class for fixed-point fractional math
	<u>advc.make</u> : The AdvCiv makefile enables SSE2 instructions (but I haven't verified that they're actually being generated).
	Posts by AlAndy arguing that floating-point math, fundamentally, isn't a problem.
	Post by Nightinggale arguing that it's difficult to be certain.
Tbd.	If it turns out that libraries mess with the floating-point settings, I could try to repair that through _controlfp:
	"At app startup time we call: _controlfp(_PC_24, _MCW_PC) _controlfp(_RC_NEAR, _MCW_RC) Also, every tick we assert that these fpu settings are still set: gpAssert((_controlfp(0, 0) & _MCW_PC) == _PC_24); gpAssert((_controlfp(0, 0) & _MCW_RC) == _RC_NEAR); There are some MS API functions that can change the fpu model on you so you need to manually enforce the fpu mode after those calls to ensure the fpu stays the same across machines. The assert is there to catch if anyone has buggered the fpu mode. FYI We have the compiler floating point model set to Fast /fp:fast (but its not a requirement)" source, similar advice, cf. MS library
	The /fp:precise compiler flag could also help.
See also	001n also deals with OOS issues

fract	Data type for fixed-point arithmetic: ScaledNum	
See also/	CFC thread	
Tbd.	Comments that start with "tbd." in ScaledNum.h	
	See advc.enum about the integration with EnumMap.	
	003g: Concerns about floating-point math	
Rationale	To reduce rounding errors, for better readability and because a fractional power function is pretty indispensable for AI code in a game that revolves around exponential	

growth. Performance also improved a little (about 6% shorter AI turns) when I converted the UWAI code from <code>double</code> to <code>ScaledNum<2048></code>; however, I made some non-functional changes along with that conversion that could explain at least part of the performance gain. There is still potential for optimization through intrinsics in the <code>mulDiv</code> function.

003h	Cache maximal visibility range	
_	BtS goes through all improvements each time that the terrain or feature of a tile changes. That's a bit wasteful and easily amended.	
Credits	Adopted from the We The People mod (<u>Git commit</u> by devolution)	

003i	Removed unused DLLExports and X	ML cache	
AdvCiv		BtS	
Civ4Beyond Civ4Beyond have the "D unnecessar <u>Walker</u> outp unreachable	Functions called by the EXE have to have the DLLExport keyword, otherwise the game crash when the call happens. Beyond these functions are the "DLLExport" keyword. I've removed the innecessary DLLExports based on Dependency Malker output. Of course that tool can't detect inreachable code, so there may still be some innecessary DLLExports.		
added it to t calls except	ve removed DLLExport from structs and instead Indeed it to the individual functions that the EXE calls except for cases where every (explicit) aunction was called by the EXE. The DLL also declares some structs as DLLExport. This means (apparently) that all functions of the class, including implicit ones, called by the EXE.		
to add a par	For functions that do require DLLExport, if I have Patch 3.19 removed a lot of unused DLLExports add a parameter, I'm employing this pattern (in but not nearly all of them. the header file):		
param1) {	<pre>LLExport ReturnType functionName(Parameter1 aram1) { return functionName(param1, defaultVal);</pre>		
	eturnType functionName(Parameter1 param1, arameter2 param2);		
defaultVal	Where param2 is the new parameter and defaultVal its default value. In the source file, the new parameter is simply added to the function implementation.		
Credits	Nightinggale; the pattern for overload uses it on CvSelectionGroup::canh	ling a DLLExport I've adopted from karadoc (he MoveOrAttackInto).	
See also	See also These two threads on CFC		
Rationale	there is nothing to worry about. (Well functions to the EXE as pointers)	gnatures: If if it's not a DLLExport and not virtual, , the DLL also passes some of the pathfinding hat the EXE does when browsing the code.	
Tbd.		by of every exported function, append "External" by means of the module definition (.def) file (cf.	

advc.inl) and forward from the external version to the internal version. The external versions could be moved to the end of the class definitions (as I've already done it with most of the pure virtual functions, see <u>003u</u> – though the exported functions would have to retain their current visibility specifier). This way, one would never again have to worry about breaking a DLL export.

When the AdvCiv mod is loaded, it never attempts to read or write to the XML cache. The 2 times 19 read/write (FDataStreamBase*) functions in CvInfos, h are removed through a preprocessor flag. These functions are evidently only used for the XML cache.

cover all the relevant data. Well, probably – I can't verify that this is the case through tests. I've or 19 CyInfo objects are initialized from removed all code for compatibility with legacy cache formats.

Short version: I don't think the cache works at all in mods. Long version (partly guesswork):

When BtS is loaded, crc.dat in the XML cache is checked. (As for the cache location, see this post.) A checksum is computed from some of the XML files: it's not clear to me which ones and – if The serialization functions used by the cache still a mod is loaded – which version of the files. If the checksum matches the one in crc.dat. some 18 CIV4...Infos.dat files (binary format) in the cache, which is practically instantaneous. Otherwise, the Cylnfo objects are initialized by parsing the respective XML files and dat files created from their serialized data and the new checksum. This takes about a second for the unmodded game, but can take a couple of seconds when a mod is loaded (especially if a debugger is attached).

> The DisableCaching switch in the INI (Beyond the Sword\CivilizationIV.ini) prevents the cache read, but doesn't prevent the cache write. DisableFileCaching probably refers to the catalogCiv4Beyond Sword....dat files in the cache, but doesn't prevent them from being written. DisableCaching probably disables both the XML and the file cache from being read; difficult to verify.

When loading a mod: Regardless of the INI settings, in my experience, the XML cache is never written. Whether the EXE attempts to read the dat files written during an earlier (unmodded) launch is unclear. This would result in erroneous behavior (probably an immediate crash). Clearing the cache is a very common recommendation on CFC and other websites for players who have trouble loading a mod. It's conceivable though that these problems have been resolved by one of the official patches, perhaps by simply disabling cache accesses when loading a mod.

Another hypothesis: The XML cache has always been disabled for mods, and only the file cache (catalog files) has been causing crashes at launch.

It's also not clear what the effect is of holding down Shift during launch. I don't see any cache files getting deleted; perhaps it merely

suppresses the cache read.	
Credits	Nightinggale; <u>CFC</u> (same thread as above)
See also	alberts2 has also removed the read/write functions from Caveman2Cosmos: <u>SVN</u> revision
	The DLL can disable INI settings as shown here by Nightinggale. However, the (non-XML) file cache probably can't be disabled that way because the EXE either doesn't call the DLL in between reading the INI and dealing with the file cache, or because CvDLLUtilityIFaceBase doesn't get instantiated in time. Also, the DLL can't find out the original INI settings, so all it can do is change them blindly without ever restoring the original settings. That's poor form because the changed settings get stored on disk, typically in the global INI file, affecting the behavior of all mods and the unmodified game.
	Large mods can take longer to load when they are launched for the first time. This is probably caused by caching in the HDD (post by Nightinggale); the XML cache is only a minor factor and the file cache seems to have no noticeable benefit.
	I've been trying to get a hold of the contents of some user's cache that will cause a crash at launch (don't really care with which mod). keldath posted some files here , but I can't reproduce the problem and he can't rule out that his user profile was responsible for the crash. Related post in the Dawn of the Overlords thread
	As for backwards compatibility with old cache data: That would only matter if someone gets the cache to work for AdvCiv. And, then, there ought to be a better way, i.e. some way to disregard the whole cache on the first read after a version change.
Rationale	The slight speedup when launching would be worth something to me, but since it doesn't seem to work at all and might even lead to errors, it's clearly best to make sure that the cache is entirely disabled. Removing the read/write functions shaves 100 KB off the DLL file size.
Config/ Tbd.	The preprocessor flag is set in CvInfo_Base.h, and it's named ENABLE_XML_FILE_CACHE. Fixing the XML cache doesn't seem like an impossible task, and the read/write functions would be needed then. Perhaps those functions could also be used for other purposes.
	Regarding a rewrite of the XML cache code (I certainly won't do that): One would have to replace cacheWrite (declared in CvDLLUtilityIFaceBase), possibly cacheRead, and CvCacheObject, and write a new checksum test. String data in the EXE suggest that MD5 is used:
	NOT Using XML cache, failed to find crc.dat file NOT Using XML cache, cur md5=%s, cached md5=%s Using XML cache
	That part appears to be disabled (or broken) in the EXE.

003i Unused functions

Through Cppcheck, I've identified about 200 DLL functions that are neither called internally nor from the EXE (see 003i above). Some of these had been in the code since Vanilla Civ 4, others had been added by the BtS expansion or a mod; some had, apparently never been used, others had been obsoleted by later changes. Many unused functions were simple accessors, mutators or wrappers that might still become useful someday and don't do any harm – these I've left alone. Other, more complex, functions had been entirely replaced by better code; these I've commented out or removed them through the preprocessor. If it wasn't clear if a function could still be useful (and not just as a starting point for new code), I've added a comment or an FerrorMsg to warn

,	modders (such as myself) that these functions could be outdated. (If they're never called, runtime errors can't be noticed and corrected.)	
Tbd.	To identify unused functions that are exposed to Python, one would have to run <code>Cppcheckenable=unusedFunction</code> on a code base that excludes the Python interface classes and look each hit up in a repository of all Vanilla, Warlords, BtS and AdvCiv Python files.	
See also	kmodx – these bugfixes also seem to be the result of a code analysis tool.	
	The "We the People" mod has also been using Cppcheck, see e.g. this Git commit.	
Credits	I've deleted a bunch of CvInfo setter functions that were used only locally – without leaving comments in the code. Those setters were identified by MattOttawa (C2C; GitHub <u>pull request</u>).	
Config	Cppcheck is quite easy to use for a project like this. One basically just has to load the <code>.sln</code> file in the GUI. External headers aren't needed; I guess Cppcheck just ignores unrecognized symbols. Providing the <code>std</code> and <code>boost</code> headers, specifically, isn't even recommended. A checkmark can be placed for Windows libraries in the GUI; I guess that's prudent. I've also selected <code>Win32-unicode</code> as the target platform. "All build configurations" should probably be unchecked because, otherwise, the analysis will take several hours. The <code>ART_INFO_DECL</code> macro in <code>CvArtFileMgr.h</code> , <code>ART_INFO_DEFN</code> in <code>CvArtFileMgr.cpp</code> and K-Mod's <code>trait_info</code> macro had originally aborted the Cppcheck analysis. They had used the <code>##</code> operator in questionable ways; easy to fix, no need for some special VS build configuration disabling problematic code.	
	When reviewing the results, "suppress selected id" can be used to ignore a particular type of warning throughout the project. These suppressions get stored in the .cppcheck file, along with the target platform. I've committed my .cppcheck file to the Git repository.	

003k

Workaround for adding data members to classes with exported constructor for which a certain size is mandated by the EXE: CvSelectionGroup(AI), CvSelectionGroupAI, CvReplayInfo, CvXMLLoadUtility and CvRandom. In the first case, there were already comments about the issue in CvSelectionGroup.h, but, for CvReplayInfo, I had to guess based on otherwise inexplicable exceptions in the destructor, and CvXMLLoadUtility had, to my knowledge, only caused issues with Wine under Unix (crash at startup due to corrupted data in CvGlobals; cf. advc.wine), though adding further data members might've become a problem on any system.

My understanding is that this can be an issue for any class whose constructor or destructor gets called by the EXE. (But I'm not too worried about virtual destructors – which the EXE can in theory call, when the constructor isn't exported.)

I've verified that other classes whose size mustn't change (or at least not by much) are CvFractal, CvDiploParameters, FVariable, CvPopupInfo, CvPopupReturn and CvTalkingHeadMessage. I've put static assertions in the header files. For CvDiploParameters and FVariable, the order of the members must also remain intact. Looks like the EXE is making raw copies of instances.

CvInitCore is a special case. It doesn't get allocated externally (or at least I don't see how it could be), but the EXE still depends on parts of the memory layout (not just the size) remaining unchanged. Perhaps a memcopy call in the EXE? Warnings added, and an assertions for the class size – even though the class size isn't decisive.

Nested class (akin to Pimpl idiom) added to
CvSelectionGroup, CvSelectionGroupAI,

All these classes have exported constructors (CvSelectionGroup only via CvSelectionGroupAI)

CvReplayInfo and CvXMLLoadUtility. Also added copy constructors (C++ rule of three) and static assertions that ensure that the object size stays as in BtS.		
CvPopupR	etal, CvDiploParameters, CvPopupInfo, In CvSelectionGroup, there was already a eturn and CvTalkingHeadMessage, warning in the BtS code against adding data members.	
Rationale	I've added the nested classes as a workaround for those classes to which I wanted to add data members. It's prudent to at least warn about the issue because the potential memory errors can go unnoticed for a long time and then become very difficult to debug.	
	Not sure if it's perfectly safe to replace one int or pointer member with a pointer to an instance of the nested class, but storing the additional data in some completely unrelated place would be really awkward.	
Tbd.	My pointer-to-nested-class approach doesn't allow for const correctness. The accepted answer (class template PrivatePtr) to this Stack Overflow question sounds like a promising remedy.	
See also	The Visual Studio debug heap (disabled by default; see advc.make) can help discover memory corruption caused by exported constructors and destructors. Pinpointing the cause — not so much. E.g. after adding two booleans to CvXMLLoadUtility, I got a message "Heap block at 036262B8 modified at 036262D0 past requested size of 10" upon exiting from the opening menu (probably originating from the CvXMLLoadUtility destructor) and a breakpoint somewhere in ntd11.d11 . Without the debug heap, there was no overt adverse effect under Windows, but under Unix (cf. advc.wine), the mod crashed reliably at startup.	
	On a related note, Visual Leak Detector is also fairly easy to integrate with Visual Studio. Only need to install it and include <code><vld.h></vld.h></code> in some implementation file (I've put it in <code>CvMemoryManager.cpp</code>). That said, neither the VS debug heap nor VLD find <code>free</code> calls on uninitialized memory (well, that wouldn't be a leak either). Dr. Memory might be a better alternative, but it keeps crashing at startup (both versions 2.3.0-1 and 1.11.0-2) unless I use the <code>-no_track_allocs</code> , <code>-leaks_only</code> , <code>-no_count_leaks</code> and <code>-no_replace_malloc</code> options <code>-</code> which render the whole thing moot. Using the <code>/zi</code> compiler option (and the non-parallel "Debug" build config) instead of <code>/z7</code> may also be necessary (but hasn't helped me). Relevant documentation: <code>installation</code> , <code>compiler flags</code> , and the chapter "Running Dr. Memory" in the documentation included in the download. As command arguments in Visual Studio, the full path to the EXE in quotation marks needs to be used, followed by (not in quotation marks) the arguments for the EXE.	
	This CFC post about data loaded by the EXE from WBSave files might help explain how some CvInitCore data get initialized. Note that the previous post says that e.g. CvInitCore::setGameTurn is not used for this. So it might be that some function akin to CvDLLPythonIFaceBase::putSeqInArray is used to write a Python list into a blank CvInitCore instance.	
	unrelated to the above: Added an assertion to CvInitCore that warns when the total ader names and civ descriptions in a scenario file will (probably) crash the civ selection	
See also	CFC thread explaining the issue in some detail	
Rationale	Should another modder ever experiment with AdvCiv and a scenario with more than 50 civs – and also knows how to use an Assert or Debug DLL (lotta ifs) –, then this	

assertion could be a big help.	
--------------------------------	--

0031	Support added for ArtStyle-specific unit button graphics. This had mostly already been supported, except in the plot list (icons shown for units in a selected tile) and the Sevopedia.
Rationale	See these posts. Only relevant for mod-mods.
Tbd.	The list of units shown by Sevopedia when clicking on the category "Units" still shows the generic button graphic. Can be fixed (in <code>SevopediaMain.py</code>), but would take a bit of time. The "More Naval AI" mod may have some useful code fragement. (Git commit)
	(untested) UI support for unit and building classes without a default unit type, i.e. only exist for unique units.
Rationale	Seems easy enough to do; only relevant for mod-mods.
Credits	CFC users Toffer90 and Inthegrave: Git commit <u>1</u> <u>2</u>

003m	Variables added to CvTeam for keeping track of minor civ status and at-war counts.
Rationale	Speeds up the frequently used functions isMinorCiv and getAtWarCount.
	Note: Minor civs were probably introduced for the Vanilla Earth1000AD scenario. The BtS version of that scenario doesn't use minor civs, and I don't think official or bundled content does. However, mod-mods might want to use them, so minor civs should arguably remain supported,
See also	033 could have a performance problem without this.

003n	Make sure that AI attitude and memory of and toward Barbarians and minor civs are never used nor updated.
Rationale	The updates waste time and require the code that computes attitude to handle non-major civs gracefully.
	Code that uses the (memory) attitude of/toward non-majors is dubious; it's helpful for future testing to disallow this. Doing so has already revealed some potential issues, e.g. Barbarian cities assigning fewer defenders in "Always Peace" games.

0030	Changes to profiling code
See also	advc.make: Profiler settings in Makefile.project
Tbd.	Merge the internal profiler from MNAI (lfgr)/ C2C (Koshling): Git commit <u>1</u> <u>2</u>
	The DLL-internal profiler indeed seems unreliable. It looks like the time spent on collecting samples for a given function with PROFILE_FUNC adds to the total time of the callers of that function.
Moved memory management and tracking code from CvGameCoreDLL.cpp to a new file	
CvMemoryManager.cpp and moved (non-memory) profiling code from CvGameCoreDLL.cpp to a	
new file FProfiler.cpp.	
Rationale	Seems cleaner this way. The profiling code was actually difficult to find. CvGameCoreDLL.cpp is special insofar that it's the implementation file for the

precompiled header. Changing that implementation file causes the header to be rebuilt. That behavior might be desirable for the memory managment code, but I'd rather rebuild manually than place all sorts of unrelated code into CvGameCoreDll.cpp.

Removed calls to the DLL-internal profiler from some very frequently called functions:

CvPlayer::canBuild, CvPlayer::canTrain, CvPlot::verifyUnitValidPlot,
CvSelectionGroup::alwaysInvisible, CvUnitAI::AI_plotValid,
CvPlayerAI::AI unitValue, CvUnit::canMoveInto and various pathfinding functions.

And removed some least-concern functions just to make the profiler log easier to read.

Rationale

Also commented out some calls that I had added myself — as a reminder that those functions are called very frequently: CvPlot::isTradeNetworkConnected, CvPlot::isTradeNetwork, CvPlot::getPlotGroup, CvCity::canTrain

As a rule, I'd posit that any function called more than half a million times during one

	late-game turn shouldn't be routinely profiled. It seems that at least part of the profiling overhead of a function gets added to the times measured for its callers, so profiling very frequently called functions may lead to misleading results. Also don't want to make profile builds needlessly slow. It's better to use an external profiler (e.g. Very Sleepy) for identifying code that gets executed extremely often.
Tbd.	I've done what I could (mostly through inlining; see <u>advc.inl</u>) to speed the "hot" functions up. They still take up a considerable portion of the overall runtime. Will have to call them less frequently – by making the pathfinding code more efficient or by relying less on pathfinding.
AdvCiv	WtP

Profiler for counting CPU cycles based on the Time Stamp Counter register adopted from the "We the People" mod. For profiling functions that are fast but get called very frequently.

Config	/DUSE_TSC_PROFILER in Makefile.project. The target configuration needs to be "Profile" in addition.
Credits	Code by Nightinggale. Adopted from <u>this</u> Git commit.
Tbd.	Crash in the EXE upon exit (when TSC profiler enabled). Don't know if that also happens with Nightinggale's code; could be that the singleton pattern I implemented for the TSCProfiler class is causing this somehow. CvGlobals::uninit terminates correctly; the crash happens before the TSCProfiler instance is destroyed. Not a big problem; without a debug build, the crash isn't even noticeable.

Added a compiler flag PROFILE_AI_AUTO_PLAY to disable code fragments that may randomly skew results when profiling on Al Auto Play. So far used only to prevent the active player from receiving a map in trade.

003p	Improve performance of CvPlayer::	getGlobeLayerColors
AdvCiv	1	BtS
Resource la when the ac a new natio	ctive player obtains a new technology, nal wonder, a new religion or when apletes a wonder of the world.	The indicator help texts are (unfortunately) not computed when the mouse hovers over an indicator, but already (for all revealed tiles on the map) when a layer is enabled. Setting the GlobeLayer_DIRTY_BIT causes the currently active layer (if any) to be updated: indicator positions, colors and text. That bit is set when the

		active player discovers a technology, but also when a tile becomes revealed or when the owner of a tile changes.
		In BtS/K-Mod, the impact on performance seems to be negligible.
See also/ Rationale	004w increases the complexity of the resource text computation, not that much really, but enough to cause a noticeable delay (200 ms, say) whenever the Resource layer is updated. The cache practically eliminates that delay. The cache updates match the information displayed by 004w. (Though I'm not sure that the updates guarantee that the text is never out of date.)	
Tbd.	The updates still seem a bit wasteful to me. Should check which layer is active before setting the dirty-bit. For example, I don't think the unit layer needs to be updated when the owner of a tile changes.	

003q	Duplicate code in CvPlayer initializati	on moved into subroutines
AdvCiv		BBAI
CvPlayer:: component Also moved against the CvPlayer::	code shared by CvPlayer::init, initInGame and the Change Player is inside subroutines (not duplicated). war declarations of non-major civs new player from CvTeam::init to initInGame so that the player is ialized when the war declarations	BBAI has added CvPlayer::initInGame in order to fix errors that had occurred when a player was added dynamically, i.e. as a colonial vassal (or through a mod like Barbarian Civ). Comment by jdog5000: "copy of CvPlayer::init but with modifications for use in the middle of a game" That's about 100 lines of duplicate code. Then, for the Change Player mod component, parts of the init code are duplicated two more times.
Rationale	Some shoddy early work by jdog. Would've made adding new trait abilities a pain.	
See also	in the slot of a previously defeated pl	tions errors that occur when placing a new player ayer. aused by the BBAI initialization code (among

003s	Macros for list iteration	
See also	See the end of <u>003u</u> about the FLTA (FFreeListTrashArray) class.	
	CFC thread where I've posted about some of my macros.	
	C2C wraps the BtS list data structures into Boost iterators (<u>Git commit</u>) and then wraps those iterators into Boost macros with a functor algebra for filtering (<u>Git commit</u>). Powerful, but also a bit difficult to get used to and, more importantly, too much work to adopt, at least now that I've already implemented my own solutions; may even require a Boost upgrade. See also the (older, but still valid) comment about CLinkList traversal	

in C2C at the end of 003s.

AdvCiv

BtS

"FOR EACH ..." macros that expand to the BtS- Loops over FLTA elements have the following style loops:

```
FOR EACH CITY VAR (pCity, kOwner)
```

The iterator variable declared by the macro dets a unique name based on the line number LINE macro). For a const element pointer, or an AI element pointer, there are macros FOR EACH CITY, FOR EACH CITYAI, FOR EACH CITYAI VAR. (FOR EACH CITY with a non-AI const pointer is supposed to be the standard macro and the one most commonly used.) Same for CvUnit, CvSelectionGroup, CvArea and CvDeal.

I've replaced BtS-style loops with my macros everywhere in the game core code base.

A hints file (cpp.hint) is used to get Visual Studio to recognize the scope of the macros. Auto-completion (Ctrl+Space) still doesn't (reliably) suggest the name of the element variable (e.g. pCity), at least not in VS2010.

form (example):

```
int iLoop;
for (CvCity* pCity = kOwner.firstCity(&iLoop);
pCity != NULL; pCity =kOwner.nextCity(&iLoop))
```

The iloop variable should really be named "ilter" (which is the name of the formal parameter in firstCity and nextCity). It stores the FLTAinternal position of the iteration, and since the FLTA is a "non-packed array" (Firaxis comment), iloop is not equivalent to a loop counter.

See also

Comments in FreeListTraversal.h

advc.enum defines a for each enum macro.

Rationale

The BtS loops are very clunky and the iloop variable is a bit dangerous as it can be misinterpreted as a loop counter (I've been there once). A proper iterator like

```
for (CityIter it = kOwner.firstCity(); it != kOwner.lastCity(); ++it) {
      CvCity const& kCity = *it;
```

might be more idiomatic, but would've been more work to implement and the macros are rather more convenient to use. (Although I'd prefer to work with references.) Also, using iterators everywhere would lead to a lot of nested iterator loops with awkwardlynamed iterator variables (or bugs resulting from name clashes).

The auto-complete issue is only a little bit annoying and may be a nonissue with more recent versions of VS.

When iterating through CLinkList objects, const CLLNode pointers (and for IDInfo nodes also const CvUnit and CvCity pointers) are used when possible. When it was obvious that a loop doesn't modify the current node through some side-effect, while loops have been replaced with kPlot.headUnitNode(); for loops.

Typical form:

```
for (CLLNode<TradeData> const* pNode =
pFirstList->head(); pNode != NULL; pNode =
pFirstList->next(pNode))
   TradeData data = pNode->m_data;
   // ...
```

CLinkLists are used, primarily, for storing the units in a tile or AI group, the cities or units selected by a human player and the trade items in a deal. A typical loop looked like this:

```
CLLNode<IDInfo>* pNode =
while (pNode != NULL)
  CvUnit* pUnit = ::getUnit(pNode->m data);
  pNode = kPlot.nextUnitNode(pNode);
   // ...
```

For units (cities similar):

```
for (CLLNode<IDInfo> const* pNode =
kPlot.headUnitNode(); pNode != NULL; pNode =
kPlot.nextUnitNode(pNode))
{
   CvUnit const& kUnit = *::getUnit(
pNode->m_data);
   // ...
}
```

while loops like the one on the right are still used when there's a possibility that a node could be removed in the body of the loop.

Specifically for traversing the unit lists

CvPlot::m_units and CvSelectionGroup::
m_units, a macro FOR_EACH_UNIT_IN (with Al/
non-Al and const/ non-const variants) have
been added. CvPlot and CvSelectionGroup have
the same interface for accessing their m_units
member; therefore the same macro names can
be used for both.

For traversing the trade items in a deal, a macro FOR_EACH_TRADE_ITEM (again, with variants) has been added.

The macros that iterate over const units and nodes, come with an assertion that checks after each iteration whether the list length has changed. I've disabled those assertions after doing some tests. It seems pretty unlikely that accidental changes during traversal will go unnoticed even without the assertion.

Rationale

The while loops are error-prone; in particular, it's easy to mix up the order of the getUnit and nextUnitNode calls or to insert a statement in between them that causes the nextUnitNode call to be skipped. Such errors can be difficult to debug. The for loops are also dangerous; deleting pNode in the body will cause a crash. const qualifiers make these loops a bit safer. That said, the current node could still be deleted as a side-effect. For example, telling a unit to join a different selection group while iterating over its current selection group will delete the unit from the current CLinkList., leaving pNode as a dangling pointer. Killing a unit will immediately remove it from the unit list of its current tile; mustn't do that in a for loop over the units in that tile. const qualifiers on the CvUnit pointers should mostly prevent such mishaps.

while loops aren't entirely safe in that regard either. In the example on the upper right, it's OK to kill punit, but, once nextunitNode has been called, pNode mustn't be deleted, and the unit contained in that node (which could be any unit except punit) mustn't be killed.

It's preferable to wrap these details into macros, but it depends on the type parameter of the CLinkList what the macro needs to do exactly, and some frequently used lists are encapsulated by other classes and therefore not directly accessible to macros. The macros I've written cover a large portion of the CLinkList traversals in the codebase.

Nota bene: Whether a unit or city in a CLinkList can be <code>NULL</code> before the first iteration depends on the circumstances. Al groups and plot lists should be updated immediately when a unit is killed – I think (that should be assumed). I'm even less certain about

	human selection lists (handled by the EXE).
Tbd.	Should arguably add macros for dealing with CvDLLInterfaceIFaceBase:: nextSelectionListNode (used mainly in CvDLLWidgetData.cpp) and CvPlotGroup::nextPlotsNode.
See also	CFC thread about the dangers of CLinkList loops. Also suggests that dangling node pointers won't necessarily lead to visible errors and that, for better or worse, such errors could be more likely to result in crashes under Windows 10 due to more aggressive memory management.
	billw2015 has written iterator classes for the Caveman2Cosmos mod (CFC post; GitHub links $\underline{1}$ $\underline{2}$ $\underline{3}$ $\underline{4}$ $\underline{5}$ $\underline{6}$).
	C2C also has some special assertions for identifying indirect changes to CLinkList nodes during traversal.

Each CvPlot stores a list of its up to 8 adjacent plots. The lists aren't guaranteed to be in a particular order except that orthogonal neighbors plotDirection function (CvGameCoreUtils: always have an even index in the adjacency list and diagonal neighbors an odd index. An adjacency list can be traversed through the FOR EACH ADJ PLOT macro. Example:

```
bool CvPlot::isAdjacentToLand() const
   FOR EACH ADJ PLOT(*this)
      if (!pAdj->isWater())
         return true;
  return false;
```

Apart from const/ non-const versions, the macro has variants that skip over diagonal or orthogonal neighbors (for each orth add plot, FOR EACH DIAG ADJ PLOT).

Adjacent plots get computed on the fly by going through all 8 directions and calling the moved to CvMap in AdvCiv) for each. Example (already edited a bit for readability):

```
bool CvPlot::isAdjacentToLand() const
  for (int i = 0; i < NUM DIRECTION TYPES; i++)</pre>
      CvPlot* pAdjacentPlot = plotDirection(
           getX(), getY(), (DirectionTypes)i);
      if (pAdjacentPlot != NULL)
         if (!pAdjacentPlot->isWater())
            return true;
   return false;
```

Rationale/ See also

Even with the FOR EACH ENUM macro (see advc.enum), it's obviously clunky to get the neighbors via the DirectionTypes. The SquareIterator (advc.plotr) isn't as efficient as the BtS loops (not for range 1, that is). The BtS loops aren't all that efficient either. Even after some optimization on my part, plotDirection requires several conditionals in order to deal with the map's world-wrap settings (and, as a result, can't be efficiently inlined) and one multiplication and one (modulo) division. The adjacency lists increase the size of CvPlot by only 4 byte. Adjacency lists constantly need to be traversed during pathfinding. Thanks to K-Mod, all the pathfinding of AI units happens within the DLL and can therefore take advantage of the adjacency lists. I think the speed-up of AI turns I got from the adjacency lists was around 10%. That said, AdvCiv performs (far) more pathfinding than K-Mod does (see 104b).

ata with a map/ dictionary structure is as lists of pairs of elements. For example
í

SetVariableListTagPair functions (for various <FlankingStrikeV data types).

In most cases, the functions for accessing the CvInfo data were already performing a $_{\rm NULL}$ pointer check. However, for integer data, -1 was returned in the $_{\rm NULL}$ case. Normally, the proper default value is 0 though, so I've had to make changes in a few dozen accessor functions.

<FlankingStrike>
<FlankingStrikeUnitClass>UNITCLASS_CATAPULT<
/FlankingStrikeUnitClass>
<iFlankingStrength>100</iFlankingStrength>
</FlankingStrike>
<FlankingStrike>
<FlankingStrikeUnitClass>UNITCLASS_TREBUCHET
</FlankingStrikeUnitClass>
<iFlankingStrikeUnitClass>
<iFlankingStrikeUnitClass>
<iFlankingStrikeUnitClass>
<iFlankingStrikeUnitClass></FlankingStrength>100</iFlankingStrength>
</FlankingStrike>
</FlankingStrikes>

in Civ4UnitInfos.xml. The CvInfo classes store such data as arrays; e.g. for every unit an array with one integer entry for each unit class to store the flanking strike ability. If the list of pairs is empty (e.g. no flanking strike ability), all entries are 0.

This technique has been **superseded** by enum map classes and <u>glue</u> that makes them easy to use for XML loading, however, it's still used in some places, so I'm leaving the documentation in place until all of the code has been converted.

Rationale

To store the data more compactly. In total, I estimate that only a few MB (5 maybe) will be saved, but, especially for CvUnitInfo, I'm hoping that saving a few KB per object will improve the performance of the CPU cache.

Credits

Inspired by Caveman2Cosmos (specifically <u>this</u> thread).

Added isAny... functions for some of the tagpair-list arrays loaded from XML. The isAny... functions test if an array is allocated. Went through the call locations of the respective array accessor functions and inserted isAny... checks to avoid costly loops. In particular the checks avoid a loop over ...

- BuildingClassTypes in CvCity::canConstruct
- BonusTypes in the CvCity::getProductionModifier functions
- BonusTypes in the CvCity::CvCity::getAdditional...ByBuilding functions
- BuildingClassTypes in CvCityAI::AI bestBuildingThreshold
- BuildingClassTypes, ImprovementTypes in CvCityAI::AI buildingValue
- PromotionTypes in CvPlayerAI::AI_unitValue

For example, this loop in CvCityAI::

```
AI_buildingValue
for (int i = 0;
    i < GC.getNumBuildingClassInfos(); i++)
{
    if (kBuilding.
        getBuildingHappinessChanges(i) != 0)
        iValue += kBuilding.
        getBuildingHappinessChanges(i) * ...</pre>
```

goes through all ca. 125 building classes to check if any of them has the building-happiness-from-other-building ability – which is actually unused.

(Most of these loops are now handled by enum maps instead; see <u>below</u>.)

Rationale Not a great improvement overall, but could be helpful for future AI code.

See also "More Naval AI" uses a separate class CvInfoCache for such optimizations (including the one in AI_unitValue listed above). Git commit

Store lists of prerequisites as vectors.

The list length limits from GlobalDefines.xml are still checked through assertions (because Python code may rely on those limits).

Arrays of a size set in GlobalDefines.xml; e.g. NUM UNIT AND TECH PREREQS.

Rationale Avoids unnecessary iterations in loops over all prereqs and, more importantly, makes it unnecessary to check for non-requirements (NO ...), which also improves readability

	and makes loops over prereqs less error-prone.	
AdvCiv	1	BtS
Removed the <forcebuildings> XML tag for Civ4UnitInfos.xml.</forcebuildings>		That tag is no longer used since the BtS expansion. Unlike the <buildings> tag, <forcebuildings> causes any preconditions that could prevent the unit from constructing the building to be ignored. Warlords used it only for the Academy. I'm not sure why the Academy may have required this special treatment. Perhaps buildings without any tech requirement used to be impossible to construct.</forcebuildings></buildings>
Credits	The Caveman2Cosmos modders <u>noticed</u> that the tag is wasteful and unnecessary.	
Rationale	With the tag pair list changes above, the unused tag was actually no longer wasteful, but I can't think of a reasonable way to ever use this tag for anything.	

AdvCiv		BtS
from XML, a necessary of (also enabli- values) and insert the X between the made at co-	maps to store nested data loaded along with macros that make all the declarations in the <code>CvInfo.h</code> files ing fast iteration over non-default I CvXMLLoadUtility functions that ML data into the maps. The choice e available map types needs to be mpile time – by calling the appropriate to in the <code>CvInfo</code> header.	The nested data consists mostly of lists of pairs that map some element of play (represented by an enum type in the DLL) to an integer value or to a tuple of yield or commerce values or modifiers. The DLL stores that data in two- and three-dimensional arrays, filling in a default value (normally 0) for all enumerators not listed in XML. (See above for an example.)
See also	CvInfo class). The "We the People" mod uses a dat dimensional XML data. <u>CFC thread</u> (classes (which are also widely used outside the astructure specialized for dealing with three-By encoding yield and commerce tuples in a with mappings from keys to primitive values, rule that approach out.)
Rationale	onale I don't think much speed is being gained here over the my previous makeshift solut of collapsing empty arrays – which was already not a very significant improvement. The greater benefit is that the DEF macros unclutter the CvInfo classes and makes easier to add new two-dimensional XML data without worrying about performance.	
		e an enum map type at runtime based on the have added overhead for virtual function calls – y performance gains.
Tbd.	So far, I've converted only CvBuilding	gInfo from raw arrays to enum maps.

advc.tag	Non-nested XML tags as enum values	
Rationale	Make it easier to implement XML schema changes on the DLL side and – later mayle – to reduce code duplication in the read (CvXMLLoadUtility*) functions of classes (currently) derived from CvInfoBase.	
	I'm not sure if this is really a worthwhile approach. Anyway, it's optional; XML element tags can still be added as in BtS.	
See also	003t defines macros for loading two-dimensional (i.e. nested) from XML more easily	

	and efficiently. That technique is very	different from the one described here.
AdvCiv		BtS
Added an abstract class CvXMLInfo derived from CvInfoBase. To make a class that is derived from CvXMLInfo load an element tag from XML, it's enough to add the element name to an enumeration and to a virtual function named addElements, both in the header file. See CvImprovementInfo for an example. CvHotkeyInfo is derived from CvXMLInfo, i.e. all classes derived from CvHotkeyInfo are also derived from CvXMLInfo. However, so far CvBuildingInfo is the only CvHotkeyInfo class that I've added an addElements function to.		
		To load an additional element from XML, two additions need to be made in the header file: A public accessor function and a private data member. In the implementation file, the data member needs to be initialized by the constructor (not strictly necessary if the element is mandatory), the accessor function needs to be implemented (unless an inline definition is used) and, in read(CvXMLLoadUtility*), a few lines of code need to be added that do the actual loading through CvXMLLoadUtility. If the XML file is cached by BtS (many of the frequently changed XML files are), then any new element
	added in this way can be accessed	should arguably also be added to the read/write(FDataStreamBase*) functions. Example for an element access: kImprovement.getDefenseModifier()
through an overloaded get function; e.g. kImprovement.get(CvImprovementInfo:: DefenseModifier) if kImprovement is a reference to a CvImprovementInfo object.		XML elements can contain integers (ids and scalar values), booleans, floating point numbers, strings and mappings, typically mapping integers or pairs of integers to other integers (e.g.
Only intege supported	er and boolean elements are so far.	TerrainMakesValid, RouteYieldChanges in CvImprovementInfo).
Rationale Ideally, to add a new XML element tag, the name of the tag would have to be specially once in the DLL. This is possible through macro definitions and that works prowell for GlobalDefines (see advc.opt) but requires too much error-prone code to be added to each info class in the case of non-global XML elements. Still, having to not changes in 2 places (that are just a few lines apart) is better than the 4-7 places in BtS.		e through macro definitions and that works pretty but requires too much error-prone code to be of non-global XML elements. Still, having to make
	As for the new "CvXMLInfo" class: It represents XML element tags as enum values. That's probably not clear from the class name; don't want a long class name though because derived classes need to refer to some base members explicitly. At least one class (CvActionInfo) that doesn't get loaded (directly) from XML is derived from CvInfoBase, so one could argue that representing <i>only</i> XML data is a specialty of CvXMLInfo.	
		ndling directly at CvInfoBase, but that resulted in a nere is some class derived from CvInfoBase ustn't change (cf. <u>003k</u>).
Tbd.	By now I've typedef'd all references to CvInfo base classes, so "CvXMLInfo" could be changed to a somewhat longer and more informative name.	
See also	The HealthPercent tag added to CV	ImprovementInfo for <u>901</u> serves as an example.
		still like to keep the code for storing XML data on nfo class, this doesn't have to be done manually

	for every new XML element.		
	003t allows cached GlobalDefines to be accessed through enum values.		
	xmldefault introduces a new system for default values, but I've only implemented t for Civ4LeaderHeadInfos.xml so far		
	Nightinggale has written a <u>Perl script</u> that generates enum values from the type elements in XML. By parsing the schema files, essentially all code in the CvInfo classes could be generated by such a script. (Without an external code generator, or could only end up with something inefficient like the CvGlobals::getDefineINT(chaconst*) function.)		
elements to added for e definition p macro nee	Only rudimentary support for exposing XML elements to Python; a macro call needs to be added for every element to be exposed, and a definition pointing to the function declared by the macro needs to be added to one of the CylnfoPythonInterface files. Most of the Cylnfo accessor functions are exposed to Python. The CylnfoPythonInterface files contain pointers to the accessor functions.		
See also	Comment above the macro PY_GET_ELEMENT in CvInfo_Base.h.		
Rationale	I haven't found a way to expose my generic get functions to Python. That's a pity because it would be nice to make new XML elements available to Python scripts, and doing so manually is tedious.		
	When converting BtS elements to CvXMLInfo, all Python exports should be kept intac Exposing the generic get functions wouldn't help here; but the macro solution also isn't great as it requires a macro call for each tag exposed.		
Tbd.	To allow elements to be added as enum values to a CvInfo class not derived from CvHotkeyInfo, its base class will have to be changed from CvInfoBase to CvXMLInfo and all explicit calls to base class functions will have to be updated to call the new base class instead (this last part is no longer necessary, I've already taken care of that through typedefs). Also, even if derived from CvHotkeyInfo, an enum for each data type (int, bool) needs to be added to the header file and the addElements function needs to be overridden.		

xmldefault Default values for optional XML elements set through a special <info> ele</info>	
AdvCiv	BtS

Rationale	Mainly to make the behavior shared by all leaders easier to adjust, i.e. through a change in one place as opposed to 52. Uncluttering Civ4LeaderHeadInfos.xml is a nice bonus.	
	An alternative (more laborious) appro the DLL and get default values from t	pach would have been to parse the schema file in here.
See also	006b warns about all optional elements not found by the DLL unless a default value is explicitly set in the <code>GetChildXmlValByName</code> call (overriding the initial value set by the <code>CvInfo</code> constructor).	
	If the DEFAULTS were kept around past XML loading, they could be used for $\underline{004q}$ (see Tbd. there).	
	advc.rh also deals with modular loading.	
Tbd.		Infos.xml files, e.g. UnitInfos. This will require se I've made in CvInfos_Civilization.xml.

003u	Changes to the design of the AI classes	
AdvCiv		BtS
Same basic design. The AI found value computation has been split off from CvPlayerAI into a component class CitySiteEvaluator.		The AI code is split across the classes CvTeamAI, CvPlayerAI, CvCityAI, CvSelectionGroupAI, CvUnitAI and CvGameAI. Those classes are derived from non-AI classes representing the teams, players, cities, unit stacks, units and overarching game logic. E.g. CvUnitAI is derived from CvUnit.
Rationale	I suppose the Firaxis programmer just wanted the AI code in separate classes and still be able to directly call non-AI member functions. That may not be the best possible design, but it's fair enough. Not all e.g. player-related AI code should've been placed in a single CvPlayerAI class, but splitting parts off through object composition is no problem.	
Tbd.	I don't think polymorphism was the goal of using inheritance for the AI classes, but polymorphism could be useful for structuring the AI code. Separate classes for the Barbarians could make sense as the Barbarian AI behavior is in many ways completely different from the regular AI behavior. CvUnitAI could be split into LandUnitAI, SeaUnitAI and AirUnitAI – the three don't have much in common.	
See also	billw2015 has endorsed composition as his means of choice for breaking up the large BtS classes. <u>Git branch</u>	

Al functions that operate on a city or unit parameter take that parameter as a pointer or reference (const when appropriate) to a CvCityAl or CvUnitAl instance. Example:

CvUnitAI::AI allowGroup(CvUnitAI const&, ...)

Non-AI functions take pointers or references to base-class instances instead (as in BtS). AI functions generally return pointers or references to AI instances. The caller should upcast such a return value into a base-class pointer or reference variable unless the caller is also an AI function. Non-AI functions return pointers and references to base-class instances. Containers of units and cities usually have two sets of accessor functions – those from BtS, returning a pointer or reference to a base-class instance, and copies of those functions with "AI_" prepended to their name that return a pointer or reference to an AI instance. Example (CvPlayerAI):

```
inline CvUnitAI* AI_firstUnit(int *pIterIdx)
const {
    return m_units->beginIter(pIterIdx);
}
```

- alongside the BtS function CvPlayer::
firstUnit that returns a CvUnit* from that
same m units list.

(All the above mostly also applies to CvSelectionGroup/ CvSelectionGroupAl.)

While the non-Al classes are abstract and, as such, never instantiated, the interfaces frequently use pointers to those abstract classes; e.g.

CvUnitAI::AI_allowGroup takes a CvUnit const* argument and CvPlayer::firstUnit returns a CvUnit*. Pointers to CvUnitAI,

CvCityAI and CvSelectionGroupAI are very rarely used.

Rationale

So that AI functions can call other AI functions (BtS ensures that through virtual function declarations; see below) and so that non-AI functions can't easily call AI functions. The code duplication around containers is unfortunate, but it really isn't much code all in all and it's not code that is likely to be modified. As an alternative, the containers could always return (pointers/references to) AI instances and leave it up to the caller to store the return value in either an AI or non-AI variable, but upcasting would require the caller to include the header file that defines the relation between base class and derived AI class (i.e. CvUnitAI.h or CvCityAI.h). I want to avoid including AI headers in non-AI code.

(no change)	All Al functions have an "Al_" prefix attached to
	their name.

Rationale I guess the

I guess this is the Firaxis approach for making programmers aware when they mix AI and game rule code.

Tbd.

If my approach for separating AI/ non-AI code were fully implement (it isn't; see players and teams below), then there wouldn't be much of an argument in favor of the name prefixes anymore. Removing them wouldn't necessarily be a big task; mostly automated search and replace.

Added inline wrappers named simply "Al" for converting (downcasting) pointers and references through virtual function declarations (see below). to non-Al instances into references to Al instances. E.g. CvCityAl& CvCity::Al()

Rationale

While there should be a bit of a barrier against non-AI code calling AI functions, such function calls have to happen sometimes due to the basic (Firaxis) design. An explicit

downcast would be too unidiomatic and cumbersome (maybe even unsafe – it's a reinterpret cast if the respective AI header file isn't included). Hence the wrappers. Example: When CvCity::alterWorkingPlot needs to update the AI citizen assignment, it does so by calling AI().AI addBestCitizen(...).

Credits

Nightinggale suggested the wrappers here.

functions, and I've turned any virtual functions added by K-Mod into non-virtual functions. Same functions can, in theory, be called by the EXE for all the virtual AI functions in CvCity and CvUnit (the EXE, apparently, calls none of those).

The remaining virtual AI functions from the original code I've turned into mere wrappers that call non-virtual functions. I've moved the declarations of the wrappers into the private section of the base classes and appended 'External" to the function names. For the wrapper implementations, I've created a new file CvVirtualWrappers.cpp.

Any AI functions added by AdyCiv are non-virtual All AI functions are declared as pure virtual functions at the abstract base class. All virtual through the vtable, and the EXE indeed calls some of the virtual functions in CvPlayer, CvTeam, CvGame and CvSelectionGroup. (One can't be absolutely certain that the EXE does not call some particular virtual function, but if a such a call is never observed in any game mode or menu, then it's a pretty safe bet.)

Rationale

I don't need to call AI functions through a base class pointer or reference. Having to declare each AI function in two places and keeping the declarations consistent is tedious and error-prone. So I'd like to just get rid of the pure virtual declarations, but the vtable position of those functions that the EXE calls mustn't be changed. This means that most of the virtual functions need to be preserved. For a call through the vtable to succeed, it seems that, apart from the table position, only the data types of the parameters must be compatible with the data that the EXE provides. So, changing the accessibility and function names is fine. I've done that to make sure that the wrappers aren't called within the DLL.

With the wrappers in place, the non-virtual functions can safely be modified; the compiler will then point out that the call in the wrapper function also needs to be modified. (The wrapper then acts as an adapter.) It's not generally safe to add any virtual functions. There should also be no need; but if need be, then any of the wrappers that the EXE doesn't call can be replaced with a new virtual function.

See also

About deleting some of the virtual wrappers, see comments in CvVirtualWrappers.cpp.

About adding data members to CvSelectionGroup (kind of related): 003k

CvGlobals::getGame returns a CvGame&. A new function CvGlobals::AI getGame returns a CvGameAI&.

Regrettably, players and teams are still usually passed as ids. I've renamed the static functions to AI getPlayer and AI getTeam and created counterparts getPlayer and getTeam at CvPlayer and CvTeam that return non-Al references. I have not created separate wrapper macros for AI and non-AI references. Instead, CvGamePlay.h defines GET PLAYER and GET TEAM as wrappers of CvPlayer::getPlayer and CvTeam::getTeam and CoreAI.h redefines the macros (with precedence over

The singleton CvGameAI instance is accessed (only) through CvGlobals::getGame, which returns a CvGameAI&.

Players and teams are usually passed to functions as enum type ids and the macros GET PLAYER and GET TEAM map those ids to CvPlaverAI and CvTeamAI references. The macros are shorthands for static functions CvPlayerAI::getPlayer and CvTeamAI:: getTeam.

CvGamePlay.h) as wrappers of CvPlayerAI:: AI getPlayer and CvTeamAI::AI getTeam. This means that access to AI references requires the inclusion of CoreAI.h. References to player, team and game instances In functions that make more than two function are rarely stored in variables; instead, calls on the same player or team instance. I GET PLAYER, GET TEAM and getGame are called usually store a reference in a variable. If I don't over and over. call any AI functions. I give that variable a non-AI type. Returning only AI types forces client code to include the respective AI headers; don't Rationale want that when the client function isn't an AI function. was tempted to introduce new macros "PLAYERAI" and "TEAMAI" for AI references, but figured that it's just too much work to change all those call locations. The redefined macro provides only minimal separation between AI code and non-AI code. See also See advc.make about the CvGamePlay, AlCore headers. 003 allows the GET TEAM macro to take a PlayerTypes parameter and adds a TEAMID macro. And passes CvArea instances always as references or pointers and never by I see no good reason to pass and return players and teams by id. Type information is Tbd. lost that way (Al/non-Al, const) and the macro calls make the code harder to read. It's a good thing that most classes have getID functions because ids are needed for several purposes (serialization, Python interface, std::sort), but it's much more common that member functions need to be called. So all function signatures should be changed from PlayerTypes and TeamTypes to CvPlayer const& and CvTeam const& (or a less strict type when necessary). This can be done little by little. Afterwards, if PlayerTypes and TeamTypes are still commonplace, one could consider adding pairs of const/non-const functions CvPlayer::team returning a CvTeam reference; and CvPlayerAI::AI team returning a CvTeamAI reference – to shorten code like GET TEAM(kPlayer.getTeam()). Similar situation, by the way, with CvInfo ids in function signatures. That said, the CvInfo classes lack getID functions, which aren't necessarily easy to add. The life cycle of CvPlayer and All serializable classes are also reusable, i.e. they have reset CvTeam can't really be changed functions that return the instance to a blank state. For CvPlayer because the EXE is involved. I'll and CvTeam, the life cycle of an instance plays out as follows: just document how it works on the 19 instances (MAX PLAYERS) are created as soon as the mod right. starts loading: The EXE calls CvGlobals::init, which calls the initStatics functions, which allocate the player and team arrays, call the CvPlayer and CvTeam constructors and assign the array index as the player or team id between 0 and 18. The constructors allocate memory for array data members. (Not for all of them; I won't bother to describe that in detail because <u>advc.enum</u> implements lazy allocation for all member arrays.) reset and AI reset are called from the base constructors and call uninit and AI uninit – which get mostly obsoleted by advc.enum. The reset functions then initialize most data members to some blank value, usually 0 or -1.

While setting up a new game (e.g. Custom Game screen),

CvInitCore may call some player and team functions, e.g. CvPlayer::updateHuman.

When a new game is started, init gets called from the EXE, which calls reset once more, properly initializes the data members, in particular sets the alive status (and e.g. CvPlayer::init processes leader traits) and calls AI init. The final initialization steps only happen for players and teams alive - once the EXE calls CyGame::setInitialItems.

When the game is saved, the EXE calls the virtual and overridden write function of the derived class, which calls the write function of the base class. Likewise, when loading a game, the EXE calls the read functions. Before reading from the byte stream provided by the EXE, reset and AI reset are called.

When returning to the opening menu, all 19 instances are reset.

Only when exiting to the desktop, destructors are called, which free any dynamic memory, either through the uninit function or directly. (advc.enum takes over most of the memory managment.)

My best guess as to why the player and team instances are created upfront and Rationale reused is that the original developers wanted to store information about slot and team assignment in those instances during the setup of a new game. Not a good reason I think, but there's no changing it now.

Tbd. Perhaps at least the interaction between base class and derived class could be straightened out a bit. Also, the reset call from init is mostly unnecessary (only the !bConstructorCall branch needs to be executed).

See also <u>003q</u> refactors CvPlayer::init and its subroutines.

Cities, units and groups are still as described on the right. (I'm describing it in some detail because that design pattern is alien to me.) I've merged the and made init a virtual function overridden by the derived AI classes.

CvCity, CvUnit and CvSelectionGroup have the same functions managed by FFreeListTrashArray as CvPlayer and CvTeam for initialization and cleanup, but their life cycle is quite different. In particular, they exist only during a running game. All instances are stored as elements of FFreeListThrashArray (short: FLTA) instances owned by CvPlayer instances. (A comment in that class says "Firaxis reset functions of CvCity(AI) and Game Engine", so I suppose that's what the initial "F" stands CvUnit(AI) into the init functions for.) The FLTA class is responsible for allocating, deallocating and serializing its elements.

> The creation of a city, unit or group is always initiated from within the DLL. CvPlayer provides factory functions initUnit, initCity and addSelectionGroup, which in turn call FLTA::add. add calls the respective default constructor, which calls reset functions for a blank state.

add also stores a pointer to the element and stores an id at the element by calling its setID function. FLTA::getAt can map that id very effiently to the element pointer. The id is only guaranteed to be unique within the given FLTA. As a globally unique id, the IDInfo struct is used (most importantly in serialized CLLinkLists), which couples the FLTA-internal id with the id of the player that owns the FLTA. Lookup of an IDInfo

happens through e.g. getCity (CvGameCoreUtils) via CvPlayer::getCity.

Once add returns, the factory function (or, in the case of CvSelectionGroup: CvUnit::joinGroup) calls init on the blank instance, providing some crucial data such as plot coordinates.

The destruction of a unit, city or group gets initiated through a kill call on that instance. kill calls a delete... helper function on CvPlayer (deleteSelectionGroup, deleteUnit, deleteCity). which calls removeAt on the FLTA. The FLTA calls the element's destructors, which call uninit and AI uninit. Finally, the FLTA removes the element pointer from its internal array.

When saving or loading, CvPlayer calls the write or read functions of its FLTAs, and those functions call the write and read functions of the elements stored in the FLTA. The element functions call reset / AI reset before reading data from the byte stream.

When exiting to the opening menu or desktop, CvPlayer::uninit calls FLTA::uninit, removing all elements.

Rationale

Cities, units and groups don't need to be reusable, so there is no need for reset functions. I would've liked to also merge the init functions into the constructors, but FLTA requires a default constructor. A virtual init function is consistent with the virtual read and write functions and avoids calling the init function of the derived class from the base class (which isn't how inheritance is supposed to work). I haven't made the same changes for CvSelectionGroup because CvSelectionGroup::reset is called from the EXE (DLL export) and I don't know under which circumstances that happens.

See <u>advc.agent</u> about the player and team count being hardcoded (and how that could be changed).

billw2015 has experimented with replacing the FLTA with a hash map and reported inconclusive results when it came to performance. Git issue

Removed the unused sibling class and merged FLTA with its base class. Moved all code that calls functions of the template argument into an implementation file with explicit instantiations for all template arguments used in the game core code. Added an optional second template parameter so that the first parameter can be instantiated with an abstract base class (CvUnit, data members of CvPlayer, the type parameters CvCity, CvSelectionGroup) and the second with a are CvUnitAI, CvCityAI and CvSelectionGroupAI. concrete derived class (CvUnitAI, CvCityAI, CvSelectionGroupAI). The FLTA functions for iteration (beginIter, nextIter, getAt) then return a pointer to an abstract (non-AI) instance and counterparts AI beginIter, AI nextIter and AI getAt return a pointer to an AI instance.

The FLTA (see above) is implemented as a header-only class derived from an abstract base class. The code base includes an unused class FFreeListArray derived from the same base class as FLTA. All those classes take a type parameter, which has to be a concrete serializable class with getID and setID functions. For the three FLTA

Comments in FFreeListTrashArray.h

	Caveman2Cosmos also merges FLTA with its base class: Git commit
Rationale	The problem with the Firaxis design is that all files that iterate over an FLTA need to include the header file that defines the template argument, e.g. <code>CvCityAI.h,-</code> because <code>FLTA::getAt</code> calls <code>getID</code> on the template argument and the implementation of <code>getAt</code> gets included as part of the FLTA header. More abstractly speaking, I think the root of the problem is that FLTA is more closely coupled with its elements than container classes normally are. That doesn't necessarily make it a bad design; the problem with header inclusions can be solved by moving the <code>getAt</code> implementation (which is too complex to be inlined anyway) out of the FLTA header. (Which requires explicit instantiations, but writing those really doesn't bother me.)
	The remaining dependency problem is the result of FLTA working only with types that it can instantiate and the AI classes being derived from abstract base classes. In BtS, FLTA <cvunitai>::getAt returns a CvUnitAI*. Non-AI code can't implicitly cast that to a CvUnit* without including CvUnitAI.h. Adding a second type parameter to FLTA is a somewhat clumsy solution (that also involves explicit casts in the FLTA header), but at least it encapsulates the problem and allows for clean client code.</cvunitai>
	I've merged FLTA with its base class mostly to make the changes above easier to implement. The virtual functions weren't suitable for inlining anyway, so performance wasn't a rationale. That said, removing the FLTA header dependencies has allowed me to inline all the iteration wrapper functions at CvPlayer, CvGame (FLTA <cvdeal>) and CvMap (FLTA<cvarea>), e.g. CvPlayer::nextUnit.</cvarea></cvdeal>
Tbd.	I feel that it should be possible to implement the <code>getAt</code> function without any conditionals; or perhaps a more narrow function that can replace most of the <code>getAt</code> calls. Could the <code>nextIter</code> function be inlined?
	If CvUnitAI is going to have derived classes (see <i>Tbd.</i> higher up), then a class CvUnitList should be derived from <code>FLTA<cvunit,cvunitai></cvunit,cvunitai></code> with a factory function <code>add(DomainTypes)</code> that calls a <code>protected function FLTA::add(AITypes*)</code> to insert the newly created element. And <code>CvUnitList::add(void)</code> should <code>FAssert(false)</code> . That way, <code>FLTA</code> can maintain full ownership of its elements despite both template parameters being abstract classes.
calls with d CvUnit::m But in CvUn	cpp, I've replaced any getUnitInfo it's usually done without a getUnitInfo call. initAI.cpp, I've replaced all direct accesses with getUnitInfo calls.
Rationale	This way, it'll be easier to move CvUnitAI code into component classes that aren't derived from CvUnit. (No concrete plans for that.)

003v	Don't load unused XML data	
AdvCiv		BtS
until a game events enab Similarly, the	e is started or loaded that has random bled.	All XML files are loaded either when BtS (or a mod) is launched or when a game is started (new game or saved game). Random events and throne room are loaded at game start regardless of game options.
Room scree		(The Throne Room screen is an unfinished screen from Vanilla Civ 4 that can be accessed
		via the Debug menu – Ctrl+Shift+D in Debug

	mode.)	
Rationale	To speed up XML loading (many players disable random events) and save memory. However, the speedup is just a (few?) hundred milliseconds and the memory savings are probably also entirely negligible.	
See also	003i: The most effective way to speed up XML loading would be to get the XML cache to work.	
Tbd.	A consequence of this change is that, in games with disabled events, the event data may or may not have been loaded through an earlier game. That could possibly lead to trouble. As a precaution, I'm already loading the event data in network games regardless of whether events are enabled. Should revert this change entirely if it causes problems.	

003w	Layer in between XML data classes	and game objects
AdvCiv		BtS
operate sol	unctions in CvGameCoreUtils that ely on CvInfo instances into member some static) of CvInfo classes.	The CvInfo classes are pure data classes, which is to say that their interfaces correspond almost exactly to the structure and tag names of the XML files. For the most part, the classes that represent the game state and the AI work directly with that interface. In some cases, global functions in CvGameCoreUtils act as an intermediate layer, for example isTechRequiredForBuilding(TechTypes, BuildingTypes) Or isWorldWonderClass(BuildingClassTypes).
See also	Comments in CvGameCoreUtils.h say how the removed functions have been replaced.	
Rationale	It should be commonplace that the DLL adapts the XML-derived interface, so it's not something that should be handled by a handful of global "helper" functions. My tentative approach is to include that extra layer (or "enhanced interface") in the CvInfo classes until enough functions have accumulated to justify a separate class. Also, functions in CvGameCoreUtils can rarely be inlined without messing up header inclusions. (CvGameCoreUtils.h is part of the precompiled header.)	
New class CvCivilization that handles the mapping between unit and building classes and unit and building types. CvCivilization precomputes the units and buildings that a civilization can ever produce.		The terminology, just to be clear, is that e.g. Axeman is both a unit class and the default unit type for that class, while Vulture is a unique unit type of the Axeman class. Loops over all units (similar for buildings) usually
Replaced many loops over all units or buildings that a particular player owns or considers to produce with e.g.: CvCivilization const& kCiv = getCivilization(); for (int i = 0; i < kCiv.getNumUnits(); i++) { UnitTypes eUnit = kCiv.unitAt(i);		<pre>take either the form (CvCity::canTrain(UnitCombatTypes)) for (int i = 0; i < GC.getNumUnitClassInfos();</pre>

	or simply (CvPlayerAI::AI_bonusTrade):		
	for (iI = 0; iI < GC.getNumUnitInfos(); iI++)		
See also	Comments in CvCivilization.h		
Rationale	Mainly to make unit and building loops easier to read. I had also hoped that replacing some of the loops over all unit or building types would yield a bit of a speedup, but there's no real difference. (If a mod-mod were to add more unique types, that could change.)		
Credits	Nightinggale's <u>CivEffects</u> class in "We the People" has been an inspiration. That class also forms a (cache) layer between XML data and game state – though CivEffects deals with player-specific effects from various sources. If that concept were applied to BtS, then e.g. leader traits would be "civ effects" and wonder abilities like Notre Dame's +2 happiness in the owner's cities would also be "civ effects".		

003x	Changes to the design of the CvInfo classes		
AdvCiv		BtS	
those include each other though and many are included in CvGameCoreDLL.h; so the the overall number of include directives in the code hasn't increased much.		CvInfos.h essentially defines one class for every non-schema XML file in the subfolders of Assets\XML. The BtS version of CvInfos.cpp has more than 20000 lines, making it the largest implementation file (though not by far; in AdvCiv, CvPlayerAI.cpp has always been larger).	
Rationale	To make the CvInfo code easier to work with, to reduce compilation time and to encourage encapsulation.		
	For rationales for this particular way of partitioning CvInfos.h, see the comments in the new CvInfo_*.h files.		
See also	Caveman2Cosmos has also split up CvInfos (in a coarser way), and has been considering a more fine-grained split (<u>Git commit</u>) that I took some inspiration from.		
Tbd.	Perhaps move CvUnitInfo from CvInfo_Unit.h (which also includes e.g. CvPromotionInfo) into a separate header, and perhaps include that header in CvGameCoreDLL.h. Currently, CvInfo_Unit.h gets included in CvUnit.h for inlining and CvUnit.h itself is frequently included in implementation files, so the whole CvInfo_Unit.h gets recompiled frequently, but only CvUnitInfo is actually needed by CvUnit.h.		
Removed unhelpful comments (i.e. most comments) from CvInfo code. Removed empty default constructors and destructors. Replaced pairs of FAssertMsg calls with a single FAssertBounds call. Replaced if/else sequences with switch in the implementation of CvActionInfo.			
Rationale	Rationale To unclutter the CvInfo code (while I was at it moving the code around).		
Removed the unused iInfoBaseSize parameter from the CvXMLLoadUtility:: SetVariableListTagPair functions.			
Rationale To remove unnecessary dependencies on the info classes.			
Replaced integers in some of the CvInfo member The CvInfo signatures don't use enum types at function signatures with enum types. Preserved the old signatures in private wrapper functions that are exposed to Python. The CvInfo signatures don't use enum types at all. Presumably, to avoid having to write a Python wrapper class for each CvInfo class to handle the casts. (This doesn't really explain the absence of			

	enum return types, which aren't a problem for Python.) This leads to frequent explicit type casts in DLL code that calls the CvInfo functions.	
Tbd.	Only CvBuildInfo fully and CvBuildingInfo and CvUnitInfo partly done so far.	
Rationale	Return types: Encapsulating the int-enum casts in the CvInfo classes leads to cleaner code everywhere else.	
	Argument types: Improved type safety. Due to the changes under <u>advc.enum</u> , the caller knows the correct enum type most of the time (or the surrounding code should be easy to refactor accordingly).	
See also	O See CyInfoWrapper.h about the Python wrappers.	
	"We the People" Git <u>issue</u> that proposes to use enum types in signatures where possible (not specifically in the CvInfo classes – anywhere). Should take care of that through macros that define enum maps and their (typesafe) accessor functions, see <u>advc.003t</u> .	

003y	Separate class for DLL-to-Python ca	alls
AdvCiv		BtS
	CvPythonCaller with essentially a nction for every type of Python call.	Python calls in the DLL use a fairly low-level API, which results in verbose code, for example:
bool bCo if (GC.g canCr bCont return t if (!GET canCr bTest return f if (GC.g can bCo	PLAYER(getOwner()). reate(eProject, bContinue, EVisible)) false; getPythonCaller()-> enotCreateOverride(*this, eProject, entinue, bTestVisible)) en false;	<pre>bool CvCity::canCreate(ProjectTypes eProject, bool bContinue, bool bTestVisible) const { CyCity* pyCity = new CyCity((CvCity*)this); CyArgsList argsList; argsList.add(gDLL->getPythonIFace() ->makePythonObject(pyCity)); argsList.add(bContinue); argsList.add(bContinue); argsList.add(bTestVisible); long lResult=0; gDLL->getPythonIFace()-> callFunction(PYGameModule, "canCreate", argsList.makeFunctionArgs(), &lResult); delete pyCity; if (lResult == 1) return true; if (!(GET_PLAYER(getOwnerINLINE()). canCreate(eProject, bContinue, bTestVisible))) { return false; } pyCity = new CyCity((CvCity*)this); CyArgsList argsList2; argsList2.add(gDLL->getPythonIFace() ->makePythonObject(pyCity)); argsList2.add(bContinue); argsList2.add(bTestVisible); lResult=0; gDLL->getPythonIFace() ->callFunction(PYGameModule, "cannotCreate", argsList2.makeFunctionArgs(), &lResult); delete pyCity; if (lResult == 1)</pre>

		return false;
		return true; }
Rationale	Mainly to make the Python calls – ma Python side – less visible. They really	any of them callbacks that are unused on the y clutter the DLL code in BtS.
See also	003 similarly moves some logging co	de into a separate class (CvDLLLogger).
	interface more compact. Git commit of C2C also has started to get rid of the NULL instead of dummy objects. This requires some changes to Python co None). Git commit (again, there may	removes a lot of clutter on the C++ side, but also de (replacing all isNone calls with built in is
	CvPythonCaller asserts that the ction was successfully called.	A Python call fails if the target function doesn't exist in Python or if the call parameters don't

adve anum	Enum map classes, traits for global e	num types and related code
Rationale	Memory optimization (for improved CPU cache performance); improved code readability, extensibility. Well, the enum map and traits code is highly reliant on templates and as such far from being easy to read; but the code that employs enum maps replaces a great volume of error-prone boilerplate dealing with naked arrays.	
	handled by component classes. For ϵ	nuch of the two-dimensional data would be example, a class that represents all knowledge team instead of a bunch of data structures that tic about that team.
	"We the People" mod (WtP). By now	ly based on Nightinggale's <u>EnumMap</u> class in the (Jan 2022), both WtP and AdvCiv have largely d the results don't have very much in common.
See also	003t integrates enum maps with XML	. loading code.
AdvCiv		BtS
Use enum maps for storing mappings from one or two enum types to some other – usually integral – type. This concerns multi-dimensional data loaded from XML, class members that store the (serializable) game state and, at times, local variables and function arguments.		Uses two- and three-dimensional arrays. Memory for those arrays is, in most cases, allocated in constructors or functions called from there. (Notable exception: CvPlayer and CvTeam allocate their arrays upon being set to "alive" status.) Most of the arrays have serialization
list (implement those key-var default value time through This data straighter non-defar macros FOR_EACH_N for a (single)	enum map, ListEnumMap, keeps a ented as a resizable array) of only alue pairs whose value differs from a e. The default value is set at compile a template parameter (as in WtP). ructure allows for fast iteration over ault data, and, to this end, there are _EACH_NON_DEFAULT_PAIR and ION_DEFAULT_KEY. Finding the value) given key involves traversing the list that operation is not super fast.	code in one of the read/write functions, and are accessed in get, set and change functions with assertions that check the array bounds.

The other essential type of enum map is ArrayEnumMap, which stores a value for every possible key in a non-resizable array. Lookup (random access) is fast, but large arrays can negatively affect the performance of the CPU cache. Two optimizations to reduce memory use (both from WtP) allocate the array lazily upon setting a non-default value, and store boolean values in a bit array. AdvCiv allows these optimizations to be disabled through template parameters. (Lazy allocation is counterproductive when non-default values are guaranteed to be stored.) Another WtP optimization

supported by ArrayEnumMap is the use of automatically allocated memory when the array requires only a few byte. This avoids overhead for dynamic allocation (especially helpful for local variables) and improves memory locality.

For the list-based approach, I've implemented bit arrays only for the special case of mappings to bool loaded from XML. Mappings to bool can be interpreted as (mathematical) sets, so I've named the respective enum map type OfflineListEnumSet.

Another WtP optimization, the use of two-byte or single-byte types for storing values of an enum type, is implemented for all enum map types. Moreover, any (sensible) data type can be specified for the internal storage of the value type. For example, a map storing the yield rates of a tile can use int in its public interface and use char internally. Assertions to ensure that the limits of the internal type aren't exceeded can be enabled through a preprocessor switch.

For three-dimensional data, i.e. mappings from pairs of enum keys to (single) values, there's an <code>EnumMap2D</code> class that maps the first (outer) key type to (a pointer to) an inner enum map, which in turn maps the second (inner) key type to the (inner) value type. This is similar to the pre-2022 <code>EnumMap2D</code> class in WtP — but more flexible insofar as <code>ListEnumMap</code> and <code>ArrayEnumMap</code> can be freely combined for the outer and inner map type.

Often, one of the key types is a yield or commerce type and the value represents a yield or commerce rate, rate change or percent modifier. In that case, the mapping can be interpreted as associating an outer key type with a 3- or 4-tuple of yield or commerce statistics small enough to be encoded in a single (unsigned) int or long long int value. The Enum2IntEncMap class uses a simple (non-nested) enum map internally (avoiding dynamic allocation of inner enum map instances) and provides the same interface as EnumMap2D externally.

The subscript operator has been overridden — but only for ArrayEnumMap, so it's generally better to stick to the get, set and arithmetic functions so that an ArrayEnumMap can be easily replaced with a ListEnumMap.

See also (cont.)

Comments in EnumMap.h.

C2C has a class <u>IDValueMap</u> that fulfills a similar role as my ListEnumMap. IDValueMap uses std::pair internally. I use two separate arrays for keys and values (but had used a single array of std::pair in an earlier version of my code; I don't think there's a significant difference in performance).

C2C also stores some boolean arrays as simple lists (vectors); SVN revision.

Replacing CvArea member arrays with EnumMaps has resulted in a <u>speed-up of almost 5%</u>, in part, because change <u>030</u> tends to increase the number of separate water areas on the map.

For CvPlot, WtP uses an additional data structure called "RevealedPlotData". The premise is that the route and improvement revealed to a team are "usually used together." I think that's not really true for the AdvCiv code. Routes are important for movement, improvements for tile yields; there isn't much code that deals with both.

karadoc had started (slowly) to replace some arrays with vectors: Git commit

<u>advc.fract</u>: The ScaledNum class is fully supported as a value type for enum maps. (<u>This CFC post</u> by Nightinggale advising me on how to integrate ScaledNum with his EnumMap class is outdated.)

Tbd.

CvPlayerAI, CvCityAI and essentially all CvInfo classes except those defined in CvInfo_Building.h still use arrays instead of enum maps. Just haven't gotten around to refactoring them. Searching the code base for all occurrences of "new int" or "new bool" should identify all classes that still need work.

I had implemented a ListAndArrayEnumMap class storing data redundantly in order to maximize the speed of both random access and iteration, but I haven't bothered to

	reimplement it after merging my CvInfoEnumMap hierarchy (aimed only at data from XML) with the "We the People" EnumMap class. Could still bring this class back if a use arises – but I doubt that it will. The latest source code is here: GitHub
Rationale (cont. – list-based maps)	Apart from sparse data loaded from XML, list-based enum maps are important for perciv data stored at CvPlot. Some of that data, e.g. data about nearby cities, gets allocated for a large portion of plots, but is used only for a small number of players. When the civ count is increased beyond 18, the unused memory allocated by the (array-based) WtP enum map (or the BtS arrays) seemed to have a significant impact on cache performance. In a test with the Earth18 scenario, a DLL allowing 31 civs (i.e. 32 players including the Barbarians) had about 28% longer turn times than one allowing 18 civs if only WtP enum maps were used for the CvPlot member data. After converting some of the enum maps to ListEnumMap (to a precursor named "SparseEnumMap" – to be exact), this performance penalty for allowing (but not using) thirteen additional civs decreased to 9.5%. Earlier tests suggest that the performance penalty is smaller on Huge random maps (which have smaller dimensions than Earth18); it was 8% the last time I tested it and might be as low as 5% now, which would mean that AdvCiv can switch to a 31-civ DLL whenever (or if ever) I'm comfortable with breaking savegame compatibility.
See also (cont.)	056 facilitates tests like the one with Earth18: scenarios no longer need to contain data about every civ id that the DLL recognizes.
	advc.agent has also helped reduce the performance penalty for unused civs.
Tbd. (cont.)	Experiment with some other per-civ data. That said, no class looks particularly promising for this. CvArea has a lot of per-civ data, but most of it doesn't get allocated for uninhabited areas. Perhaps some more CvPlot data – through the preprocessor, we can use an array-based enum map when the civ limit is 18 and a list-based one when it's (considerably) higher.
	nap classes are based on a type traits system that associates most of the global enum

The enum map classes are based on a type traits system that associates most of the global enum types (CvEnums.h) with information about its (maximal) length and with the smallest (signed) integer type that can safely store all values of the enum type.

The enum traits are mostly generated by the preprocessor based on type lists in a new header CvEnumMacros.h. That header also provides increment operators for most enum types and several macros described below.

A header for arithmetic type traits treats (global) enum types and ScaledNum as arithmetic and thus allows the enum map classes to apply simple arithmetic operations on enum and ScaledNum values.

AdvCiv	WtP (in the year 2021)
For enum types whose length is only known at runtime, the integer type is hardcoded, but assertions after XML loading verify that those integer types are indeed sufficiently large.	To determine the internal array size (and the number of bytes to store per value when mapping to an enum type), the WtP <code>EnumMap</code> obtains the number of enum values from a <code>NUMTYPES</code> enumerator at the end of every supported enum type. Those enumerators are generated by an external <code>Perl script</code> that parses the "info" XML files. As a result, adding any <code>type</code> elements to an XML file requires the game core <code>DLL</code> to be recompiled. For enum types with a dynamic range, the length needs to be hardcoded by defining an <code>ArrayLength</code> function and a byte size (1 or 2 bytes).
Rationale I don't want to adopt the Perl code of	enerator. It adds another dependency to the build

95

environment (could port the script to Python to avoid that I guess) and requires a special DLL to be deployed for XML modders who are unable to recompile the DLL. My approach is more portable insofar – although not as powerful: the preprocessor isn't as flexible as an external script and length information known at compile time allows for better code optimization. My enum map classes serialize data in (mostly) Savegame writer class that uses a compact the same compact (binary) format that they use annotated format – for persistent enum maps and internally. They can read data in various (less all other persistent data. compact) formats that BtS uses for serializing arrays. See also Nightinggale on the WtP savegame format: CFC link WtP wiki: Savegame format Getting the deserialization functions for the BtS format right was a lot of work. If I ever Rationale change my serialization functions, it'll again be a lot of work to maintain compatibility with my current format. An annotated format really is the saner approach, but adopting the WtP format is too big a task for now – seeing that it concerns not just enum maps but all persistent data. Tbd. If AdvCiv moves beyond version 1.0x, then I'll want to break savegame compatibility eventually, and, at that point, adopting the WtP format should be more feasible. Macro for each enum added for iterating over Macro FOREACH that gets used mostly in an enum type. Takes an XML type name as its conjunction with EnumMap. (I don't think it's only parameter and defines a loop counter supposed to replace all loops over enum types in variable eLoop{Name}. the WtP DLL code base.) Those loops have the following form in BtS: For cases where "eLoop{Name}" is too long for (int i = 0; i < GC.getNumBuildingInfos(); because the loop variable gets referenced i++) numerous times, I've added a variant FOR EACH ENUM2 that takes a variable name as a BuildingTypes eBuilding = (BuildingTypes)i; second parameter. Added for each enum rev for cases when reversing the order will speed up the search for a particular element. Credits It's mostly Nightinggale's work; see this WtP Git issue. Thd. Parts of CvGame, CvGameTextMgr, CvPlayerAI, CvUnitAI don't use the macro yet. Rationale/ As for the lengthy variable name: Tbd. A nondescript name like "eBuilding" has a good chance of clashing with a variable name in an enclosing scope (no zc:forscope option in MSVC03). Enclosing the loop in curly braces would be possible through a pair of macros (as Nightinggale had contemplated), and that would also allow the macro to define a reference to an info object; e.g. FOR EACH INFO START (Building, LoopBuilding) if (eLoopBuilding == ... kLoopBuilding.get... END FOR EACH Or, optionally with braces. VS IntelliSense can handle such macros, but they're still cumbersome, and always fetching the CvInfo instance can lead to unnecessary cache misses when only the enum IDs are needed in the body of loop. Note that it's impossible to define a CvInfo reference before the body of a loop because a reference can't be reassigned. Even exposing the vectors stored at

CvGlobals wouldn't change that. See also 003s defines macros for iterating over lists. All those macros are listed in cpp.hint to fix problems with IntelliSense. advc.agent: The Agentiterator classes should usually be preferred over FOR EACH ENUM when looping over players and teams. Defined macros LOOP INFO (TypeName), SET LOOP INFO (TypeName) for obtaining or defining a reference to an XML info object in the body of a for EACH ENUM loop. These macros call preprocessor-generated functions CvGlobal::getLoopInfo that don't check array bounds (not even in assert builds). Examples: • SET LOOP INFO (Building); instead of: CvBuildingInfo const& kLoopBuilding = GC.getInfo(eLoopBuilding); LOOP INFO(Building).getBuildingClassType(); instead of: GC.getInfo(eLoopBuilding).getBuildingClassType(); Commented out for now. The array-bounds assertions are unnecessary when looping over all instances with Rationale FOR EACH ENUM, and they get in the way of /ob1-inlining in assert builds (which isn't a big concern, but still). Perhaps more importantly, the SET LOOP INFO macro saves the user from having to type the enum name three times. Most for Each Enum loops in the codebase don't define a CvInfo reference, but many of those loops obtain such a reference from CvGlobals in one or two places. So it wouldn't be much trouble to deploy the SET LOOP INFO macro everywhere it makes sense, but doing the same for LOOP INFO seems like too much work. I feel it would be a bit inconsistent to remove the array-bounds checks only from loops where a Cylnfo reference is explicitly stored in a variable. Therefore, I'm not using either macro. FOR EACH ENUM RAND macro that goes through the enum types in a random order. Rationale Rarely done in the BtS code, but should perhaps be done more often. I'm pretty sure that there are some loops in the AI code where the fixed order causes a bias toward low enum values. With this macro, shuffling takes practically no extra implementation effort. (Though shuffling isn't free in terms of computing time of course.) See also advc.agent: For players and teams, AgentIterator has a randomization parameter. FAssertEnumBounds macro that takes a single enum value as parameter and asserts that it is nonnegative and less than the enum length. FAssertInfoEnum is the same except that it also allows -1. Both based on enum type traits. One step beyond the FAssertBounds macro (see 006f). I don't use it very widely Rationale because the CvInfo classes mostly use integer indices (they shouldn't; see Tbd. under 003x) and because many bounds assertions have been made unnecessary by enum maps. And for player and team arrays, it's not clear enough whether the upper bound should include the Barbarians. See also 006j applies FASSETTINFOERUM to simple (non-nested) enum elements loaded from XML. (But not when the DLL stores those elements as int; again, see 003x.) BtS/WtP AdvCiv New (header-only) class CityPlotIterator. Usage WtP uses the FOR EACH macro for those loops; example: BtS: for (CityPlotIter it(kCity); it.hasNext(); for (int iI = 0; iI < NUM CITY PLOTS; iI++)</pre> ++it) CvPlot* pPlot = plotCity(kCity.getX(),

if (pPlot != NULL)

kCity.getY(), iPlot);

CvPlot const& kPlot = *it;

CityPlotTypes const ePlot = it.currID();

Can also take a CvPlot parameter and bIncludeCenter=false to exclude the center tile. And there are derived classes for excluding unworked or unworkable tiles and randomizing the order of traversal.

The enum type "CityPlotTypes" is also new.

Replaced all the BtS-style loops with CityPlotIterators and a few with FOR EACH ENUM (when NULL plots aren't supposed to be skipped).

```
// ...
```

To exclude the center, iI==CITY HOME PLOT is checked. The efficient way to do that is in the initialization of iI (as CITY HOME PLOT is 0); BtS usually checks it in the body of the loop instead.

See also

The syntax is consistent with <u>advc.agent</u>; see rationales there.

Fairly detailed comments in CityPlotIter.h.

advc.plotr: An iterator for square areas of tiles.

Rationale

Can't beat the speed of the BtS code, or even match it. The iteration overhead is about two times worse than in BtS, and I think that's the best one can do with an iterator. Speed matters because these loops occur very frequently, but avoiding the NULL check (in the user's code) and not having to remember three unrelated identifiers (NUM CITY PLOTS, plotCity, CITY HOME PLOT) is worth the very slight performance penalty.

NearbyCityIter for iterating over all cities that have a given tile in their radius. Implemented as a wrapper around CityPlotIter (because such cities can only exist within the city radius around the given tile).

```
for (NearbyCityIter itCity(*this);
 itCity.hasNext(); ++itCity)
itCity->updateSurroundingHealthHappiness();
```

Explicitly goes through the city radius of the given tile and checks for cities. This is done in about 10 places, e.g. in CvPlot::setFeature:

```
for (iI = 0; iI < NUM CITY PLOTS; ++iI)</pre>
 pLoopPlot = plotCity(getX(), getY(), iI);
 if (pLoopPlot != NULL)
   pLoopCity = pLoopPlot->getPlotCitv();
   if (pLoopCity != NULL)
     pLoopCity->updateFeatureHealth();
     pLoopCity->updateFeatureHappiness();
 }
```

Rationale

Easier to read. Also to make it easier to implement a dynamic city radius. To that end, it's helpful to reduce the number of city radius loops around non-city tiles (and to avoid using the NUM CITY PLOTS compile-time constant). Loop around city tiles are easy to handle for mods with a dynamic city radius – can guery the CvCity instance for its radius. Specifically, keldath was interested in implementing dynamic city radii in his Dawn of the Overlords mod.

The "nearby" in the name is not as precise as I'd like, but more specific terms like 'encompassing" or "reaching" are too cumbersome or puzzling.

Enum type PlotNumTypes added for the CvPlot ids computed by CvMap::plotNum.

Stored as int16 in enum maps unless MAX CIV PLAYERS has been increased beyond 31; in that case. of int16 is 32768, so that's now the map size

CvMap::plotNum returns an int and plotByIndex takes an int argument.

I don't think WtP allows plot ids in EnumMap.

Players have been able to start games with int32 is used. The upper limit 200x200 tiles and probably more, but no one finishes those games. Apart from unplayable limit (e.g. 256x128 or 181x181) for DLLs allowing experiments and the C2C Ultimate Earth Map,

fewer than	32 civs	the biggest scenario that I'm aware of is the
Tower train	02 0, 40.	Gigantic Accurate Earth Map with 232x112 plots. Huge maps have ca. 50% more tiles than Large maps. If that progression is continued, then two sizes beyond Huge would still have fewer than 25000 plots. SmartMap has a 512x512 setting, but it's reportedly not really playable.
Tbd.	traverse the entire map will have to b (rare), FOR_EACH_ENUM(PlotNum) wi CvPlot instances; an iterator should be	Int argument. If I change that, then all loops that be revised. For loops that only deal with plot ids II be adequate; most loops need to go through the pe written for that. "MapIter" could be filters (land/ water)? Should be tagged with
Rationale	For now, the enum type is mainly for starting position calculation (027).	enum maps, specifically for their use in the

declared fo enum types TeamTypes operators, s result in a li	•	overloaded operators didn't reveal any errors in BtS code (but several in AdvCiv code).
Rationale	A compiler error would be more helpf function has any call locations.	ul, but only the linker can tell whether a global

Tbd.	Should perhaps declare comparison operators for all enum types used in the DLL. I'm not sure if those thousands of declarations would slow down the compiler though.
	It would be nice to get rid of most of the enum type comparisons, e.g. by writing if (kPlayer.isTeam(eTeam)) in the example above. Inlining such an isTeam function (without whole-program optimization) would require CvTeam.h and CvPlayer.h to include each other. CvPlayer::operator==(PlayerTypes) etc. is also worth considering.
See also	It's easy to get the No enumerators and NULL mixed up, and such an error can go unnoticed for quite some time. I've written code for prohibiting all equality tests between integers and enums (commented out in CvEnums.h), but, currently, this would require too many explicit casts. Maybe once the AgentIterator classes are used more widely (see advc.agent) and once the CvInfo classes use enum types instead of integers (see 0.03x) when possible.
	The "We the People" mod makes all int and enum comparisons type-safe through static assertions: Git commit I don't think the static assertions can work with my approach of forbidding only (certain) enum-enum comparisons; one of the parameters in the comparison would have to be a template type.
overloaded for the victo	bitmasks that were defined through the preprocessor in AI_Defines.h into enums with I bitwise operators and renamed the header to "AlStrategies.h". I've named the enumory strategies "AlVictoryStage" and renamed the AIVictoryStrategy functions AI, CvTeamAI) accordingly. Also turned some bitmask definitions in CvDefines.h into
Rationale	The two types of strategy defines were easy to confuse; type-safety was badly needed. The name change is also intended to make the strategy types more distinct. The old function names were also very long. C++11 has strongly typed enums, but in MSVC03, overloading the bitwise operators seems to be the best one can do. (I think it's fine.)
See also	I've found three bugs through this change, listed somewhere under <u>001</u> .
Tbd.	There are some other uses of bitmasks in the codebase that could benefit from the same treatment. Also, bitmasks could be used in additional places, in particular to shorten parameter list, for example of the BestDefender function. C2C does that too (Git commit).

advc.age	ent Iterator classes for looping over "age	nts" – i.e. players and teams
Tbd.	Currently, the caches at CvAgents are only updated under very specific circumstances, e.g. when a new colony is created. Will probably have to use more generic update functions (e.g. whenever the "alive" status of an agent changes) to make sure that the caches are up to date during game initialization. So far, I've refrained from using agent iterators in any initialization code, erring on the side of caution. See also comment in AgentIterator.h.	
AdvCiv		BtS
	ator class with parameters for frequently equences of agents. For example:	A loop over all non-minor, non-Barbarian teams alive looks like this (CvGame::testVictory):
{	<pre>Iter<major_civ> it; it.hasNext(); ++it) m& kLoopTeam = *it;</major_civ></pre>	<pre>for (int iI = 0; iI < MAX_CIV_TEAMS; iI++) { CvTeam& kLoopTeam = GET_TEAM((TeamTypes)iI); if (kLoopTeam.isAlive())</pre>

(where "MAJOR_CIV" means non-Barbarian, non-minor civ alive)

```
// ...
}
```

Or written a bit more nicely:

```
for (int i = 0; i < MAX_CIV_TEAMS; i++)
{
    CvTeam& kLoopTeam = GET_TEAM((TeamTypes)i);
    if (!kLoopTeam.isAlive() && !kLoopTeam.isMinorCiv())
        continue;
    // ...
}</pre>
```

Example 2:

```
for (PlayerAIIter<ALIVE,MEMBER_OF> it(getID());
   it.hasNext(); ++it)
{
    CvPlayerAI const& kPlayer = *it;
    // ...
}
```

That can be shortened further:

```
for (MemberAIIter it(getID()); it.hasNext(); ++it)
{
    CvPlayerAI const& kPlayer= *it;
    // ...
}
```

```
Example 2: A loop over all living members of "this" team (from CvTeamAI::
```

AI_calculateAreaAIType). This actually contained a bug (fixed by the unofficial patch) — the loop index was named "iPlayer", but "il" from an earlier loop was passed to GET_PLAYER; corrected code:

Rationale

The iterator syntax is shorter and less error-prone. Range-based loops would be even shorter, but we don't have ranges in C++03. The available template parameters also steer programmers toward sensible restrictions. E.g. excluding minor civs from a loop but not Barbarians is suspicious, or counting a player's vassals but not its teammates.

Efficiency:

For MAX_CIV_PLAYERS=18, the BtS loops are actually very efficient, even if half of the players aren't used. I guess CPU branch prediction works very well for <code>isAlive</code> and other commonly used checks. Loops with small bodies also get partly unrolled by the compiler (into a <code>for i=0 to 3</code> loop with six repetitions in its body). However, when <code>MAX_CIV_PLAYERS</code> is increased, the BtS loops become somewhat inefficient when most players remain unused. That's one reason why 8-player games run more slowly with a 48-civ DLL than with an 18-civ DLL (another reason is that a higher <code>MAX_CIV_PLAYERS</code> value causes memory to be allocated for the unused players). Excluding agents that have never been alive from most of the loops is a step toward distributing only a single (31-civ) DLL. In any case, it's important that the agent iterators are efficient as agent loops occur very frequently throughout the code base.

I use two sets of enum values to specify predicates that the agents need to satisfy. The first says something about the status of the agent, e.g. whether it is alive, a major civ, a vassal; the second enum requires a particular relation with a second agent, e.g. being on the same team, not having the same master or having met. Bitmasks would be more flexible, allowing arbitrary logical operators, but I don't think that much flexibility is actually needed: The frequently needed predicates are mostly mutually exclusive. Bitmasks would also make a (highly) efficient implementation more difficult, and I don't want to use bitwise logic all the time in loop headers.

Not every combination of the two predicates should correspond to a cached sequence of agents. It might be fastest to cache most of them (hard to say), but implementing

cache updates at the proper code locations is clearly not always worth the programming effort. Therefore, there's a third enum that lists the available cached sequences, e.g. CIVS_ALIVE (all non-Barbarians players and teams currently alive). The task of an agent iterator is to map the given predicate(s) to a cached sequence and to check any predicates not implied by the sequence on the fly; for example, if the predicate is FREE_MAJOR_CIV and the cached sequence MAJOR_CIV, then isAVassal needs to be checked for each agent in the sequence as the iterator advances. The iterator also hides the available cache data from the user.

Syntactically, I would have preferred to take the predicates as constructor arguments. I've implemented that too (<u>Git commit</u>), but it turned out to be a bit slower than I'd like. With the predicates as template parameters, much of the logic can be resolved at compile time. In particular, when a cached sequence matches the predicates exactly, the optimized assembly is essentially equivalent to an iteration over a vector.

I've run some performance tests (AgentIteratorTest.cpp) using the TSC profiler (see 0030): For example, in a game with 8 players and up to 18 allowed, a loop over all major teams alive took 104 CPU cycles using BtS code, 106 cycles using an agent iterator and 96 cycles (arguably the fastest possible) directly using a vector. A loop over all players alive took 160 cycles with BtS code, 119 with an agent iterator and 102 with a (raw) vector. All members of a team: 124 (BtS), 68 (iterator), 52 (vector). For sequences that aren't (fully) cached, the iterator still performs a bit worse than the BtS code. Going through all free major teams alive took 384 cycles compared with 100 in BtS. One reason for this is that the iterator code can't be inline-expanded in this case (otherwise, header inclusions would get messed up), but that should not be a problem in final-release builds with whole-program optimization. If there's still a significant difference in performance, more cached sequences can be added. When up to 48 civs are allowed and only 8 used, the iterators outperform the BtS code in most cases, e.g 167 vs. 406 cycles for players alive. I'm not sure why the maximal number of civs affects the performance of the iterators at all; must be some side-effect.

As for the iterator interface, I've stuck to the C++ idiom of treating iterators as pointers, which is nicely compact, but I use a Java-style hasNext function rather than a comparison with some end-of-sequence constant.

See also

056 allows scenario files to be read that were created with a DLL allowing fewer civs than the current DLL.

advc.enum reduces the memory allocated for unused players.

In the process of converting BtS/K-Mod loops to agent iterators, I've made minor functional changes that aren't always marked in the code. Most of these changes concern the treatment of Barbarians, minor civs, dead agents or unmet agents.

advc.plotr	Iterators over plot ranges	
See also	CityPlotIterator under <u>advc.enum</u> (because that one is coupled with the introduction of a "CityPlotTypes" enum).	
	Comments in PlotRadiusIterator	.h.
	C2C has a rectangle iterator: Git com (At least for AI purposes, that doesn't	n <u>mit</u> t seem like a very helpful generalization.)
AdvCiv		BtS
Example:		BtS style:
	<pre>Iter it(kCenter, iRange, false); ext(); ++it)</pre>	<pre>for (int iDX = -iRange; iDX <= iRange; iDX++) {</pre>

```
{
    CvPlot& kPlot = *it;
    // ...
}
```

This will traverse the non-NULL tiles in a square of length 2*iRange+1 centered at a given tile or unit with the exception of the center itself (bIncludeCenter=false). The order of traversal is a spiral, i.e. tiles at a step distance of i are traversed before those at a step distance of i+1.

There is also a "PlotCircleIter" that uses the same algorithm but skips tiles at the corners of the square, returning only tiles within a plot distance of at most <code>iRange</code>. (For <code>iRange=2</code>, this makes PlotCircleIter a less efficient implementation of CityPlotIter.)

Almost all the BtS-style loops over square and (approximately) circular areas have been replaced with SquareIter, PlotCircleIter and CityPlotIter loops.

The 0-check can take different forms, e.g. pPlot == &kCenter.

Since the movement radius of a unit is a square ("step distance" metric), these loops are quite frequent in the Unit AI code. For unit movement, the center (current location of the unit) is usually disregarded.

Rationale

Readability mostly; the verbosity of the BtS code also makes it error-prone. (Other modders had fixed a couple of errors; I didn't find any new ones.)

A more general "plot range" iterator might be neater, but there isn't much code duplication between SquareIter and CityPlotIter (the algorithms for generating the tile coordinates are completely different), and they were easier for me to write separately.

The spiral pattern is intended to act as a sensible tie-breaker for argmax computations. It could, in principle, also speed those computations up, but that would require checks that cut the evaluation of a tile short when its value can no longer exceed the current maximum. For the most part, such checks don't exist, but perhaps they could be added in expensive tile evaluation loops. In terms of overhead, spiral traversal should not be appreciably slower than scanline traversal. (I haven't profiled it though; it might be that the memory layout of the CvPlot array favors a scanline.) Starting at the center has the advantage that the center tile can be skipped without any checks in subsequent iterations. In any case, having the square range traversal in a single place will make it easier to optimize if needs be.

Tbd.

A parameter for skipping tiles in other areas would be nice to have.

Since the iterators return CvPlot references, it seems that CvPlot& is now more commonly used overall than CvPlot*. So, I think it's time to change function parameters to CvPlot const& or CvPlot& when possible.

Iterator over the whole map. See *Tbd*. under advc.enum.

004	Minor usability improvements

004l: Sentry Heal

004m: Default settings for camera distance, FoV, active map layer

004n: Show all garrisoned units on city screen through a single click

004o: No start-revolution choice on new-civic popup

004p: No commerce breakdown on city screen if slider at 0

004q: Show sum of diplo modifiers in leader hover text

004r: Changes to the announcement of resources revealed by newly acquired tech

004s: Changes to commerce and yield curves on Graphs tab

004t: Option to disable click-on-map exit from city screen

004u: More info in announcements of Great General deaths

004w: Streamlining, omission of misc. help text that wasn't really helpful

004x cancels redundant minimized popups.

004y: Full-screen Sevopedia and other tweaks to 'Pedia

004z: Tweaks to map layers

101 adds help text about occupation and revolts to the Nationality bar (city screen).

120c allows hiding the espionage slider when it's at 0.

251 shows the start turn on the Settings tab when it isn't turn 0.

085 lets the scoreboard expand on mouse-over.

210 adds a few BUG-style alerts.

106: Various changes to on-screen announcements and the replay log

071 adds an option for notifications about first contacts (on-screen message or diplopopup) to the "Alerts" tab.

151 shows the previous religion or civic in messages about changed civics/ religions.

152 shows currently offered war trades on the Glance tab.

153: Automatically split up human unit groups at certain convenient times

075: Automatically wake units in cargo (at certain convenient times)

047 Tweaks to resource tile help text

<u>048</u>: Combat odds help text (including some changes to ACO)

<u>059</u> shows health/ happiness effects of features and improvements in tile hover text.

060 suppresses the add-to-spaceship popup.

061 makes the hover text for unit stacks on the main map more compact.

063 shows additional Actual Effects when Alt is held down.

064 adds BULL help text to the Whip button and allows hurry tick marks to be disabled.

064b adds overflow info to the production yield hover on the city screen.

<u>065</u> removes the "Show Culture Turns" option; always shows culture turns.

<u>106d</u> changes BUG default settings for Civ4lerts and the scoreboard.

kekm.30 adds civ and leader icons to the scoreboard (disabled by default).

066 frees up some space on the Foreign Advisor.

067 overhauls the BUG game clock.

068 lets changes to the BUG options for tech era coloring take effect without a restart.

069: Changes to the PLE component

070 replaces BUG's "Gold Rate Warning" option.

078 allows disabling BUG's GP bars until there is some progress toward a GP.

072 extends the show-deal-turns BUG option a bit.

073 Trade denial hovers from BULL; revises the layout of the "Resources" tab.

074 excludes some "must-be-joking" items from the Trade screen.

077 revises the "Demographics" tab (Info screen).

154: Unit cycling button

088: Key combination for unselecting all units

<u>090</u>: Longer FoV slider, more sensitive toward the right end.

091: Score graph sometimes shown when unable to see demographics

092: The size of most elements of the main/ city screen HUD scale with the resolution

093: More help text when a unit can't be gifted

094: Production decay warnings from BULL

095: Option for wide city bars (not available in K-Mod, not optional in BUG)

096: Some tech tree hover text reflects the current game state

076 revises the player options menu (Ctrl+O).

002f: Changes to city bar icons

011b: Tile hover for partial worker builds

099f: Tile hover for culture on unowned tiles

190: Additions to the Settings tab (Victory screen)

910: Tech hover text shows speed-up from knowing multiple alternative requirements.

106m adjusts the dimensions of the replay screen to the screen resolution.

104m cancels expired peace treaties at the start of a round.

0021 deals with sounds being played too many times at once.

172 removes culture rates from the Religion Advisor (because they no longer depend on the current state religion)

<u>186</u>: Enhanced city bar hover text, mostly from BULL.

188: Tweaks to BUG anger timer on city screen

189: Starvation turns on the city bar

190: Additional info on the Settings tab (Victory screen)

mnai: Detailed civic info for civic buttons on tech tree

653: Hovering in Nuke mode shows the range of the explosion.

Tbd. BULL merge:

Widescreen for Foreign Advisor; coloring of ratios on the Espionage screen (just use one coloring scheme; no options); some misc. city screen hovers; spaceship countdowns on Victory tab. Something like the BULL Members tab (Foreign Advisor) to help the player tally votes. Maybe HUD civics from BAT (requested here).

Auto Save options: DLL code (just two lines) already merged; tagged with "BULL -

AutoSave". Will need to add gameStartSave and gameEndSave to

CvAppInterface.py. An option to make a second auto-save upon pressing "End Turn" would be nice to have. (But the BULL code doesn't do that.)

Unit starting XP (tie that to the Alt key; no option needed); possibly tooltip for Drafting from BUFFY. City Bar Tile Hover and/or City Tile Highlights (SVN revisions $\underline{1} \ \underline{2} \ \underline{3} \ \underline{4} \ \underline{5} \ \underline{6}$ $\underline{7} \ \underline{8}$)

Platy UI merge:

Smaller leader/civ icons on Military Advisor; Platy's Religion and Corporation Advisors (but keep the BUG Religion Advisor as an option); enhanced Statistics tab. Military Advisor should also be enlarged; this MNAI commit along with these (updated links: 1 2 3 4 5) could be helpful; though I don't think I'll bother with the overblown BUG Military Advisor. MNAI also refactors the Customizable Domestic Advisor. Enlarging the BUG/Vanilla Religion Advisor isn't a priority if I'll merge Platy's version (which is already full-screen). Perhaps the Platy Religion Advisor should sort the cities by the selected religion (but not when only hovering over a religion button); related CFC post. CFC post with some screenshots: link

From History Rewritten: CFC post by me

Espionage screen – beige panels, maybe reset weight button (requested here), go-to-city, investigate city buttons; Dawn of Man screen – see 704; Victory tab – leader icons, move Time victory to the bottom; I don't think I want to adopt anything from the city screen (change 092 takes care of that).

C2C has progress bars on the tech tree: Git commit, screenshot

Probably too much work. Also, I think I'd like a wider bar across the tech name with a higher alpha value so that it stands out less and so that the tech boxes don't need to be enlarged.

Some mods have additional automation options. One that has been <u>requested</u> for AdvCiv (I don't think any mod has this): Automated workers never replace Towns and Villages and replace Forts only on workable tiles.

Another automation request: interface mode that allows protecting individual tiles from automated workers. The implementation should store the protected tiles as a serialized vector<CvPlot const*> at CvPlayer, add a function isAutomationProtected like the CvPlayer::isAutomationSafe function I've already added (call locations should also overlap; also check uses of PLAYEROPTION_LEAVE_FORESTS), add a new interface mode akin to Sign mode that can either add or remove protection from a plot. Hotkey should be Alt+P. CvGame::updateColoredPlots should apply some light hue of blue, red or white, not sure in which PlotStyle. The cursor should ideally use the same style with higher opacity. A loading screen hint and entry in the Pedia shortcut list should be enough for visibility. Don't want players to go and "look for uses" for this feature – there probably aren't many.

Misc:

Show the turns-left countdown only when at most 30 turns away from time victory (instead of 100); inspired by RFCEurope.

Announce when a tech that grants a free Great Person is first discovered. Credit: Civ 4 Reimagined <u>1.4</u>.

The choose-production popup always includes the city name (BtS says "in this city" sometimes).

The UI never shows damaged units at full strength nor at 0.0 strength. E.g. a Warrior with 98/100 hitpoints is shown with strength 1.9/2 instead of 2.0/2 (exact value: 1.96/2).

Overhaul of the BUG menu: headings, help text, layout, color palette, default settings. Changed some colors of the "Detailed Food Info" option through BUG_CIV4GameText.xml. Mainly this Git commit.

Merged some misc. hover text from BULL: Code tagged with "BULL - Trade Hover", "BULL-Finance Advisor", "BULL - Leaderhead Relations", "BULL - Food Rate Hover". <u>086</u> and <u>087</u> streamline that text a bit.

Help text for units that cause collateral damage says how many defenders can be affected.

Upon closing the Military Advisor screen, the game forgets which players were selected. (BtS: Remembers which players were selected and selects the active human player in addition when reopening the screen.)

Military Advisor shows leader help in hover text.

The non-customizable Domestic Advisor screen shows the strength (bicep) icon instead of the defense (tower) icon above the column that shows the number of military units stationed at a city. And the maintenance column shows costs including inflation (as on the city screen).

Update the status of the city unhappiness indicator on the main map in CvCity::changeMilitaryHappinessUnits, i.e. when unit moves into or out of a city.

Resource icons on the city screen are ordered by importance: Biggest effect (e.g. +2 happiness from Silver with Forge) first, then highest number of available instances, then by ID (order in XML).

Show effects of routes (Railroad) in hover text of improvements.

(CvGameTextMgr::setImprovementHelp)

Make sure that an announcement is shown when the active player pillages an improvement (by ensuring in CvUnit::pillage that the pillage gold is at least 1).

The "BUG Statistics" tab is no longer optional – all it does is add statistics about terrain improvements; those are now always shown. And all the statistics are sorted alphabetically when the screen is loaded (rather than sorting by internal IDs).

When pairing cities for trade routes (CvCity::updateTradeRoutes), count trade route profit at times-100 precision. *Rationale*: Should lead to fewer ties (which are currently broken arbitrarily based on player and city ids) and should make it more likely that foreign trade routes are chosen over domestic ones. *See also*: It can be confusing when only domestic trade routes are shown despite available foreign partner cities as in this CFC thread.

Hide help text explaining unit commands (e.g. gift-unit) when the command button is visible but grayed out. *Rationale*: That text is quite verbose, don't show it if the command isn't possible anyway.

Disabled the global-rank columns of the Customizable Domestic Advisor because they leak information. Show "?" in the coordinate columns until the world map has been centered. *Credits*: Inspired by the "Close to Home" mod (<u>Git commit</u>).

The citizen assignment of AI cities gets updated at the end of an AI turn, not (only) at the start. This way, human players get to see the current assignment when inspecting an AI city. In BtS, when an AI city had just grown, the new citizen wasn't shown at all. Note that it's important not to update the citizen assignment already *during* the end-of-turn sequence because, then, the new citizen would immediately generate production or Great Person points, and then the remaining production turns calculated by UI and AI would no longer be reliable.

Hide gold from trade inventories when the one side has already put gold on the trade table. Disabled this again in order to keep the amount of available gold on display; the code is commented out in CvPlayer::updateTradeList.

004a UI support for the Discover ("bulb") ability		
AdvCiv		K-Mod/BUG
The help text for the bulb button of a GP unit shows all techs that the GP will be able to discover if an additional tech is researched, e.g. "next tech: Astronomy (with Printing Press)".		The help text only says which tech the GP can discover right now.
GP Research on the Tech Advisor disabled by default.		BUG's "GP Research" option shows bulb paths on the Tech Advisor. Enabled by default.
Rationale	For players who don't plan their bulbs (long) in advance, the added help text should usually suffice. I'd like to show only the tech tree on the Tech Advisor.	
Config	of GP Research can be enabled on the Advisors tab of the in-game BUG menu.	
If GP Research is enabled, info about techs that a GP could currently discover is shown in the footer area of the Tech Advisor.		Shown to the left of the tech tree, overlapping with the first column of techs. This looks like a bug; the whole tech tree is probably supposed to move to the right a bit.
Credits	Idea from <u>RFC: Dawn of Civilization;</u> I've also seen it in <u>Platy's Tech Screen</u> , so perhaps it's his work originally.	
Rationale Want to give the tech tree as much room as possible. Some Advisor screens use the footer for tabs, but, since the Tech Advisor has no tabs, it's unused space.		
For each type of GP, the following info is shown if applicable:		
 Preference order: All techs that the GP could possibly discover, sorted by priority. 		• (same)
 Current tech: Tech that the GP would currently be able to discover. 		• (same)
Missing requirements: Techs that have a higher priority than the current tech and don't		Techs with lower priority than the current tech for which all tech requirements are met.

require the current tech. These are techs that will replace the current tech if their preregs are researched.

· After research: The tech that the GP would be able to discover if all techs currently queued for research were already discovered.

Improved the help text a bit, though it's still not easy to understand I think.

These are techs that the GP could discover if the requirements for the current tech weren't met.

- (same)
- Techs with lower priority than the current tech for which all tech requirements will be met after finishing all gueued research.

Difficult to guess from the help text (and layout) how all this works. E.g. the "after research" techs are just called "Future Technologies".

Rationale

For optimal bulb paths, it can be necessary to avoid certain techs (example). I'm guessing that's why the BUG mod shows the lower-priority techs. Or the idea was to show which tech the GP would get if its current tech was discovered, but that's not always true (because the current tech could unlock another high-priority tech). So the BUG info is complicated and misleading. I don't think tech avoidance matters very often, and players that use this tactic probably have their bulb paths memorized or know how to figure them out from the preference order.

The missing-requirements list should make the player aware of techs that the GP will be able to discover if one more tech is researched through other means. Example: If the current tech for a Great Scientist (GSc) is Compass, the player can switch his/her research to Compass to find out that the GSc will be able to discover Aesthetics once Compass is finished. This works the same way in BUG as in AdvCiv. But how to tell in BUG that the GSc could also discover Philosophy if Meditation was researched? AdvCiv lists Philosophy (and Paper) under "requirements missing".

Config

Implemented mostly in CvTechChooser.py.

AdvCiv

BtS

No "can be researched by a (e.g.) Great Scientist" help text on technologies.

Help text on a technology says whether that technology could currently be discovered by a particular GP.

Rationale

If the player does have such a GP, then the player can consult the Discover button of the GP to find out which techs it can discover. If the player doesn't have the GP, then, by the time a GP is born, the information may no longer be accurate. Most of the time. the help text is just distracting. If the player needs to know about bulb paths, he/she should consult the BUG Tech Advisor.

004b

Cost projections in action button help text

AdvCiv

BtS

The help text for the found ("Build City") button shows how much the Total Expenses (Economics found to see how costs will increase. Advisor) will increase if a city is founded on the current tile. Does *not* project the gold income of the new city, e.g. from trade routes.

The increase is computed as inflation times

- + maintenance for the new city, including State Property, vassal cities etc.
- + increased maintenance in other cities, including those temporarily exempt because of disorder or celebrations
- + increased civic upkeep
- + decrease in unit cost (from the +1 population)
- + decrease in unit supply and cost from the lost Settler

No such projection. Can only quicksave and

Tbd.	Should also show free initial building the number of trade routes (predicting	s (Palace, more with Medieval start or later) and

AdvCiv		BtS
	rd at 0 defense in order to prevent from recovering.	Can't bombard cities with 0 defense. If a city isn't bombarded for a turn, its defense begins to recover on the next turn.
defensive be increased to example, where the complex from a Cast bombarded defense is re Units that ig defense, the	d siege units with the ability to ignore uildings have their bomb(ard) rate o match the building defense. For hen a city that has 100% defense le but just 60% from culture, is by a Cannon (bombard rate 12), city educed by 20 percentage points. nore defensive buildings see 48% e others 80%.	The ability of Wall and Castle says "+ defense (except vs. Gunpowder-based units)" and those Gunpowder-based units have the XML tag IgnoreBuildingDefense. However, Siege units with the tag don't actually ignore defensive buildings; they only ignore the bombardment reduction effect that Wall and Castle also have. In the example on the left, the Cannon player would see 60% before bombardment, and 52% after.
Rationale	units, but the implementation is unac often consist entirely of units that ign	ving defensive abilities against post-Medieval ceptable from a UI pov. By the Modern era, stacks ore building defense, and then the player only which somehow doesn't decrease as fast as it
	unit is selected; in the example, the p 100% to 88%. Not trivial to implemen because siege units still need to igno	now city defense including buildings when a siege player would then see defense decrease from at (can't just take away IgnoreBuildingDefense are bombardment reduction), and my solution is siege units entirely ignore defensive buildings.

When applying bombardment damage Defense damage is stored as an integer (computed as described above), the city's percentage, meaning that the bombardment defense damage percentage is set so that the damage needs to be converted into a percentage city's defense modifier decreases by an amount and rounded. In BtS, the rounding can lead to a exactly equal to the bombardment damage. counterintuitive loss of 1 bombardment damage. In formulas: The damage percentage d₁ after Example: A city with a 60% defense modifier gets applying bombardment damage b should be bombarded by 5 Catapults. 8 bombardment chosen such that the new defense modifier m₁ is damage is taken times 100/60 and rounded down b less than the present defense modifier m₀. As in order to convert the damage into a percentage: in BtS, m₀ and m₁ are computed from the that's 13% per Catapult. After 4 shots, the city damage percentages d_0 and d_1 and the city's has 52% damage, i.e. is 48% undamaged. To maximal defense t (defense modifier when compute the defense modifier, the 48% are taken undamaged): times 60 and the result is rounded down: 28%. $m_1 = floor((100 - d_1) * t / 100)$ That's as expected: 60-4*8=28. The fifth shot, From this, one can derive the following equation however, results in 65% damage and 35%*60% for d₁: rounds down to 21% – the defense modifier has $d_1 = 100 - ceil((m_0 - b) * 100 / t)$ only decreased by 7. Simply store the defense damage as the sum of the bombardment damage? This Tbd. might lead to unexpected results in some circumstances, but I can't think of any. E.g. if a city constructs Walls during a siege, then subtracting the bombardment damage so far from the increased maximal defense would be pretty intuitive. Help text for Walls and Castle says that defense Says "+50% defense" for both. is "raised to" 50% and 100% respectively. Defense is represented by the tower icon. Rationale "+50%" is misleading because building defense isn't cumulative with culture defense. Config Implemented through a new XML tag "RaiseDefense". Walls have RaiseDefense 50 and Castle 100, i.e. this new tag is non-cumulative when it comes to building defense. The old "DefenseModifier" tag still works but is unused. Don't count defensive abilities in AI evaluation of building obsoletion (looks like K-Mod did count them). Help text of Bombard button and in Air Bomb Generic help text saying that bombardment mode says by how much the defense modifier decreases the defense modifier. No help at all will decrease. while hovering in Air Bomb mode. Rationale Not obvious when buildings and gunpowder units are involved (see above). Tbd. A breakdown would be nice – showing reduction from buildings, increase from ignoring building defense. When hovering over an enemy improvement in The probability is shown nowhere (and isn't even Air Bomb mode, the probability of destroying that explicitly computed). Not even the values that improvement through an Air Bomb mission is enter into the probability (current air bomb rate, shown. improvement's air bomb defense) are shown anywhere. Tbd. Should Air Bomb missions be allowed to target routes? (Only improvements currently.) All missions that can be intercepted (air bomb, air No such probability display. Can only scan the strike, paradrop) show the best visible enemy nearby tiles for units with an intercept chance. interceptor and the interception probability while Unit help text shows that chance, correctly hovering for the mission target or for combat adjusted to hitpoints in the case of damaged odds (right mouse button or Alt+hover). Except fighter aircraft. when that probability is 0. When multiple units are selected, also show which unit will get

	(i.e. which unit will execute its	
mission firs Rationale	A player generally can't be certain ab could be a Fighter somewhere in the Fighter: 10 tiles). Still, showing the pr	out the interception probability because there fog of war up to 6 tiles away from the target (jet robability of visible units seems much better than
	Alt+hover (no odds really, but the air of the non-air defender). But I think it (e.g. terrain info) is shown in addition detailed combat info (Alt+hover or rig	bat odds in Air Strike mode, i.e. the same info as strength of the attacker and the combat strength would be too much text if non-combat help text. Currently, the player can choose between the mouse drag) and civilian info plus interception he latter is what players intuitively use.
Tbd.	The next step would be to show odds	s for air combat. Big task.
		ssion (assuming that multiple are selected) should rceptor. I'm just not sure exactly how to phrase

AdvCiv		K-Mod

Closed some fog-of-war information leaks K-Mod already takes care of somemore caused by the Air Bomb mission; Tile ownership, legregious leaks, Still guarantees that any Air unrevealed cities, removed improvements. Bomb mission that can be ordered will also find a depleted city defense. Ordered Air Bomb target. missions are no longer guaranteed to find a target; can e.g. happen that the targeted improvement no longer exists. In that case, the recon effect is the only result of the mission, and a special announcement is shown. See also 001i deals with leaked info about routes in the fog of war. AdvCiv BtS When a group of (human or AI) units is ordered The missions are executed in the internal order to bombard a city, then the missions are of the group. I'm not sure what that order is, but it executed (until city defense reaches 0) based on seems pretty unpredictable. a priority function that takes into account bombardment rate (the higher the rate, the higher the priority, but avoid overshooting), city attack odds, collateral damage (try not to bombard with effective city attackers) and promotions (only for human units). When the city is expected to fall easily, then damaged units (despite having poor attack odds) are deprioritized – so that they can heal earlier. Requested by Leoreth (CFC post; see 3rd item), and he also provided concrete ideas Credits for the priority function a few posts below. Rationale Requested as a UI feature, but I think there is a tangible benefit for the AI as well; AI bombardment missions are generally executed by stacks, not individual units. If not all selected units are needed to bombard a city down to 0 defense, then 153 See also splits off units that didn't get to bombard into a separate group and selects that group. 114c deals with other AI changes regarding bombardment. After each AI bombard mission, a city attack by Seems that city-attack stacks can only either units in the same tile (with remaining movement bombard or attack on any given turn. points) is re-evaluated. Rationale Attacking one turn earlier not so rarely makes the difference in avoiding a deadlock. When a group is ordered to air bomb a city, then Executed in the internal order of the group. the missions are executed (until city defense reaches 0) in an order that prioritizes units with high defense damage, tries to avoid overshooting and (more of a tiebreaker) deprioritizes valuable units (high production cost, XP). I had written this simpler heuristic for both air bomb and bombardment missions. I Rationale don't think it was guite up to snuff for bombardment (see Leoreth's criticism in the thread linked above), but it may still be good enough for air bombing. At least it's predictable. The new bombardment code isn't suitable for air bombing. K-Mod AdvCiv When a group of units is ordered to air bomb an The internal order of the group is used for air bomb missions, but, for pillaging, fast-moving improvement, then the missions are executed

units are preferred. (BBAI had disabled group

(until the improvement is destroyed) in an order

that prioritizes the current air bomb rate (and thus

slight adjus	the default FoV value; with only a stment to screen dimensions. FoV idden by default.	BUG introduced the FoV slider; previously, the value was only adjustable through XML. K-Mod hides the slider by default and adjusts the default FoV value based on the screen dimensions:
	ief explanation of the field-of-view ne hover text of the option on the BUG	"higger FoW for higger monitors"
Config	View" is checked, the value on the sl	ap" tab of the BUG menu. If "Remember Field of ider is stored in My Games\Beyond the Sword\ rface.ini. "Field of View" can then be unchecked
Rationale	The lower the value, the smaller the field of view, i.e. fewer tiles are shown on the main interface and the city screen. If fewer tiles are shown, one has to zoom out closer to the Globe view boundary to get an overview. This, in turn, means that the camera angle becomes more top-down, which is what I want. A larger screen can show a larger field of view, however, that will make the resource bubbles (if enabled) appear very large. They scale (only) with the screen resolution (cf. <i>Tbd.</i> under <u>004z</u>).

	090 makes some changes to the field	d-of-view slider.
Increased t	the height of the Globe view boundary a bit.	
Rationale		er angle that I can't seem to achieve just through would have to be so small that the workable city screen.
Config	XML\Misc\Civ4DetailManager.xml	-
See also	CFC post by Toffer90 about the setting	ngs in Civ4DetailManager.xml.
	002h disables the passing clouds.	
Tbd.	I'd like to increase the height of the Globe view boundary further. Currently, I play near that boundary so that the camera pitch is almost top-down; but it would be nice to be able to zoom out a bit farther from there without entering Globe view. The camera pitch can be set arbitrarily through CyCamera.setBasePitch; see the BlueMod for example. It might be possible to intercept the mouse wheel input and set a steeper pitch. (Letting players freely adjust the pitch won't work well because the mouse wheel will zoom beyond a perpendicular angle when the base pitch is steeper than the BtS default.)	
AdvCiv		BtS
Let the DLI	_set the camera_start_distance	Set statically in GlobalDefines. Determines the default camera distance, but also affects music

value based	on the FoV value and era.	volume and zoom granularity.
Rationale		nd flat, especially when loading a savegame – a high FoV value; it seems that players who use a ngle.
Config	Option on the Map tab of the BUG menu. By default, the camera start distance is set automatically as described above, but players can also configure a fixed value.	
Tbd.	(see links below); a fixed value might players. On the other hand, more pla only somewhat; perhaps better to ma screen hint.) It's also not clear what a	default. Players keep running into this problem to be less likely to not work well at all for some yers could then end up with a value that works ake players aware. 004s	Economy ("GNP") curve doesn't cour moving average	nt culture and espionage; yield curves show
See also	091: Changes to score graph	
AdvCiv		K-Mod
		Called "GNP (Gold)" and shows the sum of all commerce produced by cities, including culture

of the gold generated by all cities plus the sum of and espionage. (So far, as in BtS.) Gold is the research generated by all cities. This sum doesn't include any costs (e.g. city maintenance or civic upkeep). It does include (no change) all gold and research modifiers (e.g. Bank, Library) and commerce from trade routes, buildings (Shrine) and specialists.

reduced by the sum of all gold costs, including inflation. Research is increased based on modifiers that apply to the currently researched tech: from tech diffusion and from knowing multiple prerequisite techs.

All the yield curves show moving averages based All curves show the game state at a given turn, on three samples.

not an average.

Economy and Industry ("goods produced") curves show a (very short) straight line for revolution turns.

When a revolution turn is sampled for one of the curves, a sharp, brief decline is shown.

Rationale

Culture and Espionage have their own curves. Both can reach far higher rates than research and gold normally do; e.g. a settled Great Spy produces 12 espionage per turn, a settled Great Scientist only 6 research. This makes it hard to tell from the Economy curve if a civ has a strong economy or if it's merely focusing on culture or espionage. A single curve for gold and research is OK; they're on the same scale.

By including costs, the curve would essentially become a research curve, which is probably more useful than some commerce curve, but then it would seem like a "Gold" curve is missing. Excluding costs is also consistent with the Agriculture curve ("crop yield"), which doesn't include food consumption.

As for research modifiers: Any modifiers that apply only to the currently researched tech (which can change any turn) are misleading.

Moving average: The Economy and Industry curve fluctuate a lot in BtS, to the point of being hard to read, and removing culture and espionage (which rarely fluctuate) from the Economy curve makes it worse. (One cause of the fluctuation is AI juggling of citizens.) Apart from usability, the average is also supposed to obscure the changes from one turn to the next a bit. I can't make much sense of them, but it might be possible to derive some specific information, e.g. about AI war planning or wonder building, that the player isn't supposed to have. The power curve has that issue too: however, it might be confusing if the enemy power curve doesn't immediately drop after defeating an enemy stack.

Revolution turns: The negative spikes are ugly, and confusing because revolution turns aren't always sampled when drawing the curves.

Tbd.

'GNP" is a bad name because "Goods produced" would have to be included in a GNP. Showing yield icons instead of the words "production", "culture" etc. would be nice, but it seems that the Python drop-down menus don't support icons in their labels.

See also

077 makes lets the "Demographics" tab use the moving averages of the "Graphs" tab. That change also uses some of the same game text as 004s.

038 uses the GNP curve to determine which civs are "wealthy".

132 uses the GNP curve to predict the cost of anarchy.

UWAI uses the GNP curve for converting war utility into trade value and vice versa, and the production curve for estimating military build-up.

Moved the player statistics into a separate class and switched to a more efficient data structure.

The mapping of turn numbers to statistical data is handled by an STL hash map.

As a side-effect, the graphs on the Info tab no longer show a discontinuity when the active player is switched through Alt+Z.

Rationale

Now that the AI accesses this data, the access needs to be fast.

See also	advc.opt: Other performance optimizations.

004t	Cick-to-exit-city-screen disabled	
AdvCiv		BtS
tab of the BUG menu, enabled by default), then the city screen can't be (accidentally or deliberately) exited through a left-click on a tile outside the city radius. <i>Double</i> clicking outside the city radius always exits, and all other		The city screen can always be exited through middle-click, left-click on the mini-map, Esc, Enter, Space, by selecting a garrisoned unit or by accessing an Advisor screen through a function key. Left-click on a non-workable tile also exits the screen; since the BtS expansion, there is an XML switch to disable this.
CITY_SCREE longer has a	EN_CLICK_WILL_EXIT in XML no any effect.	
	g text "Press <esc> to return" is no vn on the city screen.</esc>

Config	This change has (understandably) kept bothering players, so I've moved the option from XML to the BUG menu (City tab).	
See also	One of the CFC posts inquiring about other such posts over the years, one	t the click-to-exit behavior. I think there were two by keldath.
	002n disables the flashing end-turn n	nessage.
Double click on the city tile no longer exits the city screen. Instead, right-click on the city tile (city city tile re-enables citizen automation if it has been disabled. A double click does that too city tile toggles citizen automation, a double-click toggles it twice, clearing all forced assignments. When the city screen is up, a single click on the been disabled. A double click does that too before exiting the city screen. If a working city has been assigned to a tile manually right-click undoes this assignment.		city tile re-enables citizen automation if it has been disabled. A double click does that too before exiting the city screen.
When right-click is used for exiting, the camera centers on the city tile afterwards.		After exiting the city screen, the camera always center on the selected units (if any).
Rationale	Normally, a player that isn't aware of the single click behavior will notice that citizens are being reassigned, but if the city screen is exited in addition, the player may easily not notice his/her accident. Moreover, letting double click toggle automation twice gives players a quick way to clear forced citizen assignments when automation is enabled.	
		anything previously because the working city of ne camera jump is usually annoying, however,

	when inspecting the capital through the flag button (i.e. without moving the camera over the capital first), then jumping back to the selected units is welcome. So I don't want to disable that. (Ideally, perhaps, the camera would always return to its previous locations, but I don't think that can be implemented.)
Tbd.	Can I somehow tell when a city screen has been entered from the Domestic Advisor? In that case, exit via right-click should work the same way as the other methods, i.e. should not move the camera.

004u	More info in message about Great G	eneral (GG) death

004x	Cancel redundant minimized popups; other changes to civics/religion popups	
No minimiz	No minimized popups are canceled in networked multiplayer games.	
Rationale	Rationale I can't work out the proper timing. If the multiplayer checks added in this Git commit are removed, then popups will sometimes appear multiple times. Simply adding a delay to the cancellation (using the setUpdateTimer function added for 004j and a queue of popups to be canceled) doesn't solve the problem either; too many popups get killed then.	
AdvCiv		BtS
When a choose-tech popup is launched or the player chooses a tech, all pending choose-tech		When research finishes on a tech and no tech is queued for research, a choose-tech popup is

popups are killed.

When a change-civics popup is launched or civics are changed, all pending change-civics popups are killed.

When a change-religion popup is launched or the next tech, another minimized popup is launched. player converts to a religion, all pending change-religion popups are killed.

All but the latest popup will show outdated research options (not taking into account all the

When anarchy breaks out, all choose-production and choose-tech popups are killed. They reappear when order is restored.

launched and appears minimized at the start of the next turn (if playing with the "minimize popups" option; otherwise there isn't a problem). For each additional tech that the player receives through e.g. tech trade before choosing his/her next tech, another minimized popup is launched. All but the latest popup will show outdated research options (not taking into account all the additional techs discovered). Once the next tech is chosen, any remaining popups disappear once maximized.

Similarly, multiple change-civics and changereligion popups can appear and don't disappear when the player changes civics/ religion through an advisor screen.

I don't think multiple choose-production popups for the same city can appear, but the single popup fails to disappear when the player chooses production through the city screen.

Rationale

I'd actually prefer to allow multiple change-civics and change-religion popups, but it's difficult to do this consistently as there appears to be a mechanism in the EXE for preventing multiple change-civics popups, it just doesn't always work. E.g. after discovering Feudalism, BtS shows only one popup for Serfdom and none for Vassalage (intended behavior I think, but I'd like it better to also have a popup for Vassalage), but when trading for, say, Code of Laws while the change-to-Serfdom popup is waiting, another change-civics popup will appear for Caste System (OK, but inconsistent with the missing Vassalage popup).

See also

During anarchy and before the first city is founded, civs have 0 research rate and production rate, and the research bar shows the remaining anarchy turns even if no tech is currently selected. All game text that normally shows the remaining research or production turns doesn't show that information when the rate is 0.

When the BASE_RESEARCH_RATE is active (i.e. once a city has been founded and while not in anarchy), the research rate shown on the main interface includes the 1 free beaker.

The BASE_RESEARCH_RATE (set to 1 in the Vanilla GlobalDefines.xml) applies even during anarchy. When no tech is chosen during anarchy, choose-tech buttons are shown on the research bar. Game text shows the remaining research and production turns based on a rate of 1 per turn during anarchy.

The research rate on the main interface shows only research from city commerce.

Rationale

During anarchy, the turns to complete can't be properly computed, therefore, research and city production shouldn't be chosen. Setting the <u>research</u> rate to 0 makes it easier to communicate this, and makes sure that there is no incentive to choose research.

Tbd.

Get rid of the BASE_RESEARCH_RATE. Can instead increase the commerce from Palace by 1 or even 2, which will make Gold, Gems and Silver less powerful. That said, commerce modifiers in the capital would become even more powerful this way, so perhaps give Palace 10 commerce minus 1 for every other city, or 5 + max{0, 5 - number of other cities}.

When the Pyramids or Shwedagon Paya is completed, a change-civics popup is shown

•	player already had access to all t/ Religion civics.		
technology (revolution is	v civic becomes available (through a or a wonder) at a time when no possible, then the popup is delayed yer can change civics again.		
_	ame starts in an era later than hange-civics popup is shown on the	No such popup. It's normally best to change civics on the initial turn – but easy to forget.	
Rationale	I've forgotten about switching civics after completing the Pyramids one time too many.		
Tbd.	Should also delay change-religion popups. Could then, as part of an overhaul of the leader traits, restrict the fiddly ability of the Spiritual trait so that a free revolution is allowed only on a turn on which a change-civics or change-religion popup occurs (and perhaps once per era in addition).		
	When the active player enters the Civics screen, all minimized change-civics popups of that player are canceled. Same for the Religion screen and change-religion popups.		
Rationale	The player probably noticed the new civic or religion when or before viewing the respective screen, making the popup reminder unnecessary.		

004y	Changes to Civilopedia formatting; S	evopedia
See also	905b turns the "Allows" box in articles about resources into a "Units" box in order to accommodate the extra moves that ships can receive from resources.	
Tbd.	Mongoose Mod may include some improvements for the link and jump code that I could merge. See the mod's changelog and v4.1 release notes.	
	Perhaps information shown in hover text shouldn't take into account the current game state when the Civilopedia (Sevopedia or original) is opened within an ongoing game. For example, hover text for religious buildings currently shows a gold rate when the active (human) player owns the Spiral Minaret. CvGameTextMgr in the DLL can tell whether help text is being composed for a Civilopedia article and whether Civilopedia is being accessed from the opening menu, but it doesn't the context of hover text. That could be remedied by passing a special value as iData2 (currently unused) to the help text widgets in the 'Pedia Python code. CvGameTextMgr could then treat 'Pedia hover text the same in an ongoing game as when accessing the 'Pedia from the opening menu (by treating the active player as NO_PLAYER). All that being said, perhaps it's better to reflect the current game state in 'Pedia help text as is the status quo; the static abilities are still shown in the actual articles.	
AdvCiv		Sevopedia
	ncreased the width and height of the Sevopedia The code for the dimensions is mostly copie from the original Civilopedia. The size of the panel doesn't scale with the screen dimension

Rationale	Strategy advice doesn't fit under "His	story".
Config	Through Civ4GameText_advc.xml	
the trait button icons. the trait button icons. the list of a button icons. are reuse		There is a GameFont icon for each trait shown in the list of traits (I didn't remove those icons) and a button icon shown in the article. All the icons are reused, e.g. the "Heal" action button for the Expansive trait.
Rationale	The traits category comes with strate I've kept that aspect disabled.	egy advice, which is tedious to keep updated, so
	Trait buttons with hover text could be useful elsewhere in the UI, but unique icons would be needed for that, and currently there is no hover text, so the Sevopedia trait buttons serve no real purpose.	
Config	To remove these categories again, it's probably easiest to comment out one or two lines in setPediaCommonWidgets (SevoPediaMain.py). Adding the TraitsPedia_CIV4GameText.xml file from BUG should suffice to restore the strategy advice on traits.	
Credits	The shortcut lists are originally <u>Ekmek</u> 's work, the traits Sisiutil's. A couple of shortcuts that I've added I got from dj_anion's <u>BtS reference</u> guide.	
See also	002b: Had to add/remove some tabs to get the shortcut info properly aligned.	
Tbd.	I've only made stylistic changes to th include some mistakes (because the	e English version. The other languages probably ir keyboard layouts are different).
		effect, not by the key combination. People don't particular key combination does, they want to

	know whether there's a hotkey for a certain effect.		
	Would be nice to add a subcategory for cheat/ debug shortcuts (see <u>007b</u>).		
AdvCiv. And	Added a box named "Changes" for pointing out balance changes to traits made by K-Mod and AdvCiv. And articles about civics now include strategy help texts (previously only shown as a short summary in change-civic popups) with notes about K-Mod and AdvCiv changes appended.		
Tbd.	Several other categories of articles still lack a space for balance changes: promotions, improvements, specialists, projects, corporations, leaders (would be nice to mention significant changes to the AI behavior of individual leaders).		
Opening an	Advisor screen no longer causes the Civilopedia button to be hidden.		
Rationale	Hiding the button means that an extra click is required to get from an Advisor to the Civilopedia. Ideally, the Advisor screens should include direct Civilopedia links to all relevant information, but that isn't currently the case.		

004z	Changes to layers		
See also	009c (removal of Map Finder) makes room for the options on the BUG menu. 004m stores the currently active layer in savegames.		
AdvCiv		BtS	
	ce layer always shows all resources; Globe view for filtering the shown	In Globe view, all resources are shown by default, and a selection box opens for showing only happiness, only health or only strategic resources.	
	The Unit layer shows all units by default regardless of Globe view. The unit layer shows "Enemies in Territory" by default. In Globe view "All Units" is the default, and several other options can be selected (still the case in AdvCiv). It appears that the "Enemie in Territory" option was added by the BtS expansion.		
Config	Option on the "Map" tab of the BUG menu. The default option for the Unit layer can only be changed through the DLL (a hack was required). Can hide the Unit layer options through GlobalDefines_advc.xml.		
Rationale	The Resource options seem almost useless to me. Could make it easier to check which rivals have access to a particular resource, but I've never once used it for that. I'm less sure about the Unit options. Even when one is only interested in e.g. enemy units, showing allied units (in a different color) along with enemies doesn't seem like much of a distraction; after all, they can't occupy the same tiles. That said, showing only "Domestic" units is useful for locating Spies and Workers, though I think few players ever use this. In any case, "Enemies in Territory" isn't a good default option in Standard view as, normally, there are none. Makes it seem like the Unit layer is broken (help text doesn't say which units are shown).		
Tbd.	It would be nice if the Unit layer could somehow communicate stack sizes more clearly and not just in Globe view.		
	When a layer without options is selected, the scoreboard is never shown in Globe view.		
Config	Option on the "Map" tab of the BUG menu		
Rationale	Should be possible to access to the scoreboard in Globe view, e.g. for following <u>all-Algames</u> from a high viewpoint. When there are no options to display, the space might		

	as well be used for the scoreboard.	
Tbd.	one has to go back to Standard view	toggles the scoreboard in Globe view. Currently, in order to disable the scoreboard. Above the r plenty of layer buttons. Doesn't seem trivial to
when the "/ unit action causes hut	rce layer also highlights goody huts All Resources" option is selected. The recommendations (UAR) option s to be highlighted when any nearby t is selected (can be a Recon unit, but ye to be). Rationale	Don't want resources and huts in the same place because the resource layer can't show both.	
See also	108 deals with other changes to the	normalization step.
indicators",	When in Globe view, layer icons ("plot ndicators", "bubbles") are shown at a smaller diameter than in Standard (non-Globe) view. Resource icons are the same size in Globe vie as in Standard view. It might be that their size relative to the size of a tile increases with the screen resolution; one CFC user describes the icons as "ridiculously big at 1920x1200". (link)	
Rationale	Unfortunately, there appears to be no Shrinking them in Globe view is bette	way to shrink the indicators in Standard view. er than nothing.
	Based on asaf's Fourth Yield mod, it might — with a lot of work — be possible to show the resource icons as overlayed symbols like the Yield Display, but I've made a mockup and it looked uglier and less functional than the large bubbles. One remote possibility that I haven't really looked into: Using CVDLLFlagEntityIFaceBase to place smaller resource icons on flag poles.	
See also	I've posted several times on CFC ab	out resizing the plot indicators, most recently here.
	merijn_v1 created this mod comp to allow yields greater than 9 to be displayed on the map. That's not going to help with the resource display, but it's essentially a bugfix that I might want to adopt. Through random events, yields of 10 production or commerce are possible. However, I don't care much for random events and yield display, and the mod would add nearly 100 KB to my download size. If I do merge it, it would be easiest from this Git commit (code looks a bit redundant though?).	
Tbd.	Ideas for decreasing the plot indicator size:	
	1	

In principle, it's possible to inject code into the EXE – but one has to pinpoint where (disassembly) the EXE sets the indicator size. My best bet is a breakpoint in CvArtFileMgr::getInterfaceArtInfo (preprocessor-generated in CvArtFileMgr.cpp):

```
FAssert(strcmp(szArtDefineTag, "INTERFACE PLOTPICKER ARROW") != 0);
```

This appears to be the first relevant graphic loaded by the EXE after receiving the vector of CvPlotIndicatorData from CvPlayer::getGlobeLayerColors. Feels like a long shot to find the size in there.

A different approach would be to embed resource icons as flat billboards in the resource (3D) graphics. Players could then still switch the indicators on and off by swapping the modified graphics and the original graphics; it might even be possible to let the indicators protrude onto adjacent tiles and swap between left and right arrow direction as the camera position changes. Making a test with a single resource shouldn't be so difficult, but I've no experience with modifying the .kfm files. Perhaps I could ask for a single example in the graphics modding forum. However, this approach won't work for the unit layer.

Another idea is to place the resource icons through CyGInterfaceScreen

```
CyGInterfaceScreen("MainInterface", CvScreenEnums.MAIN_INTERFACE).
setImageButton("Clam", gc.getBonusInfo(10).getButton(),
iX, iY, 48, 48,
WidgetTypes.WIDGET PEDIA JUMP TO BONUS TRADE, 10, -1)
```

There are several challenges to overcome: It should be possible to calculate the image position (ix, iy) from the target tile's world coordinates (CyPlot::getPoint), the camera's coordinates (CyCamera. GetCurrentPosition), the camera's pitch (CyCamera::GetBasePitch?) and the field-of-view value, but this is not trivial. If the image is placed by CvMainInterface.redraw (after checking whether the camera position has changed since the last call), then the image position seems to lack behind camera movement, presumably, because the camera gets moved and the viewport (if that's the right term) updated before redrawing the main interface. Predicting camera movement based on past changes to the camera position results in an opposed but equally distracting effect. Temporarily setting a higher (HUD?) update rate while the camera is in motion (through CyEngine.setUpdateRate) doesn't seem to help either. Perhaps the image could be drawn asynchronously through Python code invoked by the DLL, but I don't suppose camera movement can be detected in time. Another obstacle is that the mouse focus gets stuck on the HUD after hovering over a resource button image. The workground performed by change 001w might impede performance too much in this case. Perhaps it'll be enough to surround the resource icon with a panel-like widget that can't trigger hover text. I'm also not sure how to cover up the corners of a resource icon; the plotpicker mask doesn't do the trick. The arrow portion of the indicator really only needs to be shown at two particular orientations. Can probably put together all the appropriate (static) graphics in an image processing program. May have to do so for every player color; I don't think CyGInterfaceScreen can apply that dynamically.

I don't think the PlotIndicator.fx shader can be any help, and feigning Globe view or a low rendering resolution to the EXE also seems infeasible.

The Trade layer colors all revealed tiles according to the trade network grouping except some very small groups like water tiles enclosed by sea ice.

The Trade layer colors only tiles owned by the (human) player's team.

Cities that are actively visible to the player (i.e. not fogged) and not connected to their owner's

No special marker for disconnected cities.

capital are	marked in black.	
Rationale	rules. Showing trade along unowned It would be nice if the layer could also coloring is entirely based on the player is that it can give away information along providing info about currently	etting a better understanding of the trade group coasts (with Sailing) should be an improvement. It is show the trade networks of rivals – in BtS, the er's civ. The problem with showing rival networks bout unrevealed coastlines and routes. Therefore, we visible cities. The black mark should be helpful een cut off from the capital, e.g. through a naval

Config	GlobalDefines_advc.xml	
units is call show a nor units are pr based on a Great Persoworker/ Wo		Called "Domestics". Some commented-out code suggests that, in some earlier version (Warlords?), only units within the active player's borders were shown, but BtS highlights all tiles with visible non-military units. The plot indicator on a highlighted tile shows the tile's top defender. That's a military unit when the tiles contains both military and non-military units. Air units aren't recognized as military units.
Rationale		
For fogged tiles, the culture layer uses only the color of the last known owner at a fixed brightness (alpha value).		The culture layer doesn't distinguish between fogged and actively visible tiles. Shows the colors of up to four civs that have culture in the tile. The brightness is set based on the culture values. Outside the culture layer, culture percentages are shown in hover text for actively visible tiles, whereas, for fogged tiles, only the last known owner is indicated (through cultural borders).
Rationale	There's no need for letting the culture fact, the map looks tidier with mono-	layer (partially) bypass the fog-of-war rules. In colored tiles in the fog of war.
		age (say, 20%) should grant visibility. Then again, a civilization wouldn't know all the places that the spread to.
See also	001f reveals the new owner of a fogged city after conquest by a third party. In that case, BtS is quite restrictive about revealing cultural ownership in fogged tiles.	
Tbd.	Add indicator bubbles for (actively visible) cities with a positive revolt chance (icon civics_popup.dds?), cities in occupation (that orange fist icon), with hover text stating the revolt probability and occupation countdown, and cities relevant for culture victory (how to measure that?), especially foreign cities, which aren't covered by the Domestic Advisor. Would have to review the code that sets the globe layers dirty-bit (see 003p).	
AdvCiv		K-Mod
even if that	layer shows the tile owner's color civ has less than 20% tile culture, e.g conquering a faraway city.	Only the colors of civs with at least 20% tile culture are shown.

	Since borders aren't shown in Globe view (and can't be shown through the SDK), the Culture layer is the only way to highlight territories in Globe view. Too easy to overlook a recently conquered area when it is shown entirely in other civs' colors.	
See also	099f shows culture on unowned tiles in tile hover.	
AdvCiv		BtS
, , , , , , , , , , , , , , , , , , , ,		brightness.
	The differences in brightness are very subtle, almost useless really for multi-colored tiles. After my change, it's easy to tell which tiles are contested, and which ones have only a significant minority culture.	
	Prompted by this old CFC succession game. Several players complained about the culture layer in K-Mod.	

005	Minor flavor changes

AdvCiv		BtS	
MaxWarMinA	djacentLandPercent=2 for Bismarck .	Was 0. It's a preference for long-distance land wars, ranging between 0 and 4. 0 means Bismarck treats neighboring civs	

While he eventually gave up his rejuctance to off-shore colonies, he was never keen on distant parts of Europe (let alone Asia): "The Balkans are not worth the healthy bones of a single Pomeranian grenadier." The Realism Invictus mod even sets it to 4.

Also lowered his attitude threshold for defensive pacts to Cautious (realpolitik, Triple Alliance), and increased his weight for diplomatic victory and lowered the one for domination victory. Conversely, gave Brennus higher weight for domination and lowered weight for diplo.

While I was at it (further minor changes): Shifted Catherine's weights from conquest toward domination and science. Added a bit of science weight to Ramesses, and reduced his conquest weight. Increased Saladin's weight for diplomacy a bit at the expense of conquest and space.

MaxWarDistantPowerRatio=70 for Napoleon. Napoleonic France fought few off-shore wars and even ceded Louisiana to the US.

MaxWarMinAdjacentLandPercent=2 for Charlemagne and Cyrus. Charlemagne extended his borders gradually in all directions; Cyrus conquered several empires that weren't exactly at his doorstep.

MaxWarRand=150 for Willem, i.e. now a bit less willing to start "total" wars. In part, because wars of conquest seem out of character for the small Netherlands; in part, because he's doing a bit too well in AdvCiv games in my experience (and

and made him a little less interested in dogpile wars. And increased NoWarAttitude when Pleased to 90.

Increased Roosevelt's NoWarAttitudeProb at Pleased to 100 and at Cautious to 70 but increased his BuildUnitProb to 25. Decreased NoWarAttitudeProb for Brennus at Cautious to 50 and for Darius at Pleased to 90.

Negotiating a trade embargo against Gandhi results in a -1 relations penalty. Agreeing to an embargo against him still carries no penalty. Gandhi doesn't mind being voted against Buddhism. Primary Gold, secondary Culture. Gandhi is the

Suryvarman's favorite religion is Hinduism, primary flavor is Religion and fav. civic Caste System. He was a Hindu and built large temples. (Some later Khmer kings were Buddhists.)

Overhauled Unit AI weight modifiers and reduced their impact to at most +50% per Unit AI type. And two small accompanying changes to CvPlayerAI::AI unitValue.

Also overhauled AI improvement weight modifiers and increased their impact to up to 30% per improvement type.

See also: 131 makes minor changes to AI bestUnit, and AI getImprovementValue (both in CvCityAI.cpp), the functions that apply the weight modifiers. Civ 4 Reimagined has also overhauled unit and improvement weight modifiers: Git commit

no different from other civs on the same continent when it comes to war planning.

Threshold is at Pleased, like most other leaders.

Victory condition weights have been added by BBAI. I don't think they actually have a big impact on the game.

Was 100. A preference for naval war. Napoleon is tied for the highest value, while his MaxWarNearbyPowerRatio (land wars) is only moderate.

Was 1 and 3 respectively.

Was 100.

Was 80, tied for the lowest value with Alexander, Louis, Also shifted his victory weight a bit from Conquest to Culture 19 leaders who attack when Pleased

> Was 90 at Pleased, 50 at Cautious, 20 BuildUnitProb. Was 70 (Brennus, Cautious) and 100 (Darius, Pleased).

Embargoes against Gandhi carry no penalty for either side. Voting against him carries the usual -2 penalty.

only Hindu.

Fav. civic: Organized Religion; Wang Kon is the only Caste System proponent.

Each leader (except Hatshepsut) has 100% weight bonus for one particular Unit AI type, namely Worker (Pacal, Frederick, Gandhi), Explorer (Mansa Musa), Attack (Alexander, Brennus, Cyrus, Hannibal, Justinian, Montezuma, Peter), Attack City (Augustus, Chalemagne, Kublai Khan, Louis, Suleiman), Counter (Catherine, Julius, Napoleon, Roosevelt, Saladin, Wang Kon, Willem), City Counter (Darius, Huayna Capac, Lincoln, Tokugawa), City Defense (Churchill, Gilgamesh, Hammurabi, Sitting Bull, Zara Yagob), *Reserve* (Ashoka, Ramesses, Suryavarman, Washington), Pillage (Boudica, Genghis Khan, Mao, Shaka), Collateral (Bismarck, Mehmed, Qin), Attack Sea (Isabella, Pericles, Peter), Reserve Sea (Victoria), Assault Sea (Ragnar), Explore Sea (Elizabeth, Joao), ICBM (De Gaulle).

31 leaders have 10% weight bonuses for one or two improvements, namely Farm (Bismarck, De Gaulle, Shaka). Farm & Windmill (Brennus, Boudica, Churchill, Elizabeth, Willem, Napoleon, Peter, Pericles, Cyrus, Hammurabi, Mehmed, Suleiman, Isabella, Joao, Pacal, Washington), Cottage.. Town (Darius, Frederick, Huayna Capac, Ragnar, Victoria, Wang Kon), Cottage.. Town & Windmill (Gandhi, Hannibal, Lincoln, Mansa Musa), Workshop & Watermill

(Mao, Stalin).

Rationale

Roosevelt change: 90/50 NoWarAttitudeProb is the same as the Mongol leaders or Napoleon. Some peaceful leaders like Mansa Musa and Elizabeth also have it, but along with a low BuildUnitProb. This makes for leaders that are ruthless but powerless. This doesn't fit for Roosevelt at all. He's the leader most representative of the present-day America that doesn't invade partners, but has a big military. Changed Brennus and Darius to keep the overall balance. I don't know if that balance is exactly right, but, if anything, there are too many leaders that don't normally attack at Pleased.

Suryavarman's fav. civic: Asking others to change into Organized Religion (or Theocracy, Pacifism) generally doesn't make much sense unless the state religions happen to match. This was especially annoying in Sury's case because his change-civics requests apply a -2 relations penalty when rebuked.

Unit AI weights: Doubling the weight seems extreme, and, for most leaders, a preference for a particular Unit AI type doesn't even make much sense. See <code>civ4LeaderHeadInfos.xml</code> for the new weights and some handwave rationales. I've tried to avoid reinforcing the AI type(s) of the unique units because the AI already trains these more frequently than the unit stats would justify. About Worker weights, note that Workers are rarely trained through <code>AI_bestUnit</code>, so these have very little impact. This may also apply to other unusual bonuses (e.g. Spy).

Improvement weights: I can't make much sense of the BtS weights. Looks like the Al didn't build enough Windmills and the developers decided to amend this through weights for all civs that have ever built windmills. This reason should be obsolete because of K-Mod changes in the DLL, and 10% is very little (it said 20% in XML, but the DLL halved that). I've given most leaders two 20% bonuses (no longer halved), and some a single bonus of 30%. The impact of these bonuses still seems very small, perhaps too small. The choice of the improvement is now vaguely based on the leaders' historical policies. I didn't take into account whether an improvement supports a leader's traits, favorite civics or playstyle; the DLL can handle that, and I don't want to make the playstyles (even) more predetermined.

Tbd.

Considering (low-key) changes to make certain leaders more distinct, improve historicity and to increase the number of warlike leaders. Under consideration for becoming more dangerous: Augustus, Brennus, Cyrus, Darius, Churchill, Frederick, Hammurabi, Justinian, Ramesses.

Willem is still too aggressive. May need a thorough overhaul to become a small civinterested in culture and only slightly feisty.

Increased cap for the relations penalty from shared borders to 3 for Mao, Stalin and Darius, and decreased the cap to 3 for Qin and to 2 for Roosevelt.

2 for Mao, Stalin and Darius, 4 for Qin, 3 for Roosevelt. The cap is between 1 (only Willem has this value) and 4 (most of the typical warmongers).

Rationale

Modern China has plenty of border problems with pretty much all its neighbors. In Mao's time, border tensions with the Soviet Union escalated. Stalin was impossible to get along with for his western neighbors. I'd set both caps to 4, but that change would be a bit drastic. Both Persian kings invaded most of their neighbors, but let's keep Cyrus somewhat peaceable for now. To counter the increased caps, I've reduced Roosevelt (I don't see why he should be particularly sensitive about border tiles) and Qin. The Qin dynasty secured its northern border with the Wall, but that doesn't quite justify a cap of 4. And it's strange to give Qin a higher cap than Mao.

Partially revised the CONTACT_DEMAND_TRIBUTE divisors.

A high divisor means that the AI leader is unlikely to demand tribute.

Ragnar, Mehmed, Shaka, Kublai Khan and

All five 1000.

Brennus set to 25. Montezuma set to 50. 25 1000, 1000, Charlemagne, Wang Kon, Hammurabi, Gilgamesh, Suryavarman, 500, 500, 500, Joao, Julius Caesar, 50, 50, Napoleon and Genghis Khan set to 250. 25. 25 respectively. Louis set to 500. 50 50 Catherine set to 750. De Gaulle, Sitting Bull and Isabella set to 1000. 25, 25 and 50. Rationale For change 079 (bragging about units based on the demand-tribute divisor), I'd like early warmongers to have a low divisor so that they blab. That said, the divisors also need to make sense historically, which, to me, wasn't the case at all in most of the cases that I've changed. In that regard, it should matter e.g. whether the ruler or the dynasty he or she represents had exacted tribute or similar payments (though tax-like tribute from provinces or satrapies shouldn't count) and if tribute was customary in their cultural area. It can make sense to let leaders that represent non-expansionistic powers ask for tribute frequently – they prefer tribute over conquest, and vice versa. However, for modern peaceful leaders (e.g. Lincoln; not changed), it makes more sense to let them start wars (for reasons that are somehow principled) than to let them extort payments. Tbd. I'm also not happy with most of the 33 leaders that I haven't changed. Should address those as part of a comprehensive leader overhaul. See also 104m adjusts the probability for an AI tribute demand based on war utility. Pleased/Cautious/Annoyed/Furious Gave Gandhi the highest no-war percentage at Annoyed attitude, namely 50, the second highest Gandhi: 100/70/30/0 at Cautious (80 after Sitting Bull who has 90) and Sitting Bull: 100/90/50/0 made him the only leader with a no-war Lincoln: 100/80/40/0 percentage at Furious: 20. Decreased Sitting Justinian: 100/80/30/0 Bull's percentage at Annoyed to 40 and Lincoln's For reference: to 30. Also decreased Justinian's percentage at Ashoka, Augustus, Churchill, Cyrus and Cautious to 70. several others: 100/70/20/0 A faithful representation of Gandhi should be 100/100/100. Not sure about the last Rationale two numbers; Gandhi did have a pragmatic side. Cf. Gandhi on Indian involvement in WW2 (Wikipedia). More importantly, players tend to assume that Gandhi acts very peacefully in the game. In BtS and even K-Mod, his high WarRand values make it very unlikely for him to start wars and his military budget, the only factor that can dynamically lower the WarRand values in BtS/K-Mod, is virtually always small. **UWAL** introduces a bunch of other opportunistic factors, making the WarRand values far less relevant in situations when starting a war is highly beneficial. I didn't want to increase the no-war percentages overall – if anything, I feel that they're too high overall –, so I shuffled them around: Gandhi takes his Annoyed percentage from Sitting Bull, Sitting Bull from Lincoln, Lincoln from Gandhi. Gandhi swaps his Cautious percentage with Justinian. Sitting Bull can't be more peace-loving than Gandhi overall. I did preserve his especially high reluctance at Cautious attitude. Justinian's unusually high no-war percentages don't seem to have any historical basis. It's OK that he's not supposed to

fight civs that share his religion, but, given his very high SameReligionAttitude ChangeLimit, Cautious attitude shouldn't affect that behavior. Lincoln: want the 40 for

	Sitting Bull. 30 is still unusually high.	
005b	GP names assigned chronologically	
AdvCiv		BtS
in Civ4Uni date of birth every secon game) nam names aren There is an	tInfo.xml, i.e. roughly ordered by	When a GP is born, the name is chosen uniformly at random from among the GP with matching type. Heisenberg is just as likely to be the first Great Scientist as Socrates.
skipped. Corrected a "Frank" Kaf	a few misspelled GP names, e.g. fka.	
appear as o	he two Great Generals that also civ leaders with two new ones gne → Zizka; Boudica → Hai Ba Trung).	
Names of p from the 20	playtesters replaced with actual spies th century.	The last 10 names for Great Spies are the real names or nicknames of BtS playtesters.
"Malian" as	the ethnonym of Mali	"Malinese"
Credits	The new spy names are taken from a the RFC: Dawn of Civilization mod.	a list that etiennefd (Steb on CFC) compiled for
	This CFC post by Phil Bowles made been popularized by the Civ series.	me aware that "Malinese" has apparently only
See also	038 picks historians that somewhat n the "most powerful civilizations").	natch the type of civ ranking (e.g. Machiavelli for
Tbd.	Perhaps separate lists of GP names	for every civ. DoC should have lists for most civs.
	Though I'd like the following better for AdvCiv: Assign a list of GP names to each technology and pick a name based on the current bulb tech when a GP is born. Use the BtS list as a fallback (and for Great Generals). May have to add a separate list for each GP type to each entry in Civ4TechInfo for this.	
	Another potential name for a Great S Lawrence	py (from Realism Invictus): Thomas Edward
005с	City ruins bear the name of the former city	
Help text shows the name of the most recent city in a tile with city ruins. Can't pillage city ruins, meaning they can only be removed by building an improvement on top.		
Rationale	For flavor. No pillaging because the name of a destroyed city could have strategic importance (albeit very little), and I wouldn't want players to destroy ruins in order to monopolize information (in multiplayer). Also, while Sennacherib boasted to have "removed the dust of Babylon for presents to be sent to the most distant peoples," the idea of pillaging ruins doesn't immediately make sense.	
005d	Spurious/ misattributed tech quotes corrected or marked as "ascribed to" (only English and German)	
Credits	CFC discussion about Civ6 tech quot	es: <u>link;</u> offshoot about BtS: <u>link</u>

	CFC user Steb pointed out a few more in the Dawn of Civilization subforum: link		
005e	German text: Changed the name of Galley from "Triere" to "Galeere" and the name Trireme from "Trireme" to "Triere" because "Triere" and "Trireme" are synonyms.		
	The names are also problematic in English: A trireme is a special kind of galley. The Warlords Civilopedia text says that the Galley unit is supposed to be a pentekonter. Apparently, they didn't want to give Galley that rather obscure name.		
005f	City art style based on highest culture		
	The art style of a city's 3D models is that of the city owner's art style is used.		
Rationale	The style of the buildings shouldn't immediately change upon conquest. (It kind of did in the New World, but in these cases much of the former population and its culture was also gone.) It's nice to have more traces of the past on the map.		
	Disabled this change again after realizing that there is no way to make the same change for Cottages, Hamlets etc. Looks like the code in the EXE checks the owner of the improved tile, calls CvPlayer::getArtStyleType on the owner and uses the returned ArtStyle.		
Config	XML switch in GlobalDefines_advc		
Credits	Idea from Xyth's History Rewritten <u>v1.25</u>		

005g	City name tweaks	
Tbd.	All the city lists could use an overhaul: Higher priority for ancient capitals; avoid high priority for cities that were very close to each other; include more remote cities, maybe even some in client states that don't appear in the game. Mods like Realism Invictus and DoC could be of help.	
AdvCiv		BtS
Angkor Wat removed from the Khmer city list. It's in position 4. Yasodharapura is in position		It's in position 4. Yasodharapura is in position 1.
Rationale	The temple was in Yasodharapura, also known as Angkor ("capital") but not as Angkor Wat ("capital temple"). The temple district could be seen as its own city but isn't commonly seen that way, and having a wonder and a city of the same name is awkward.	
Tbd.	Chichen Itza: Should rename the wonder in this case (Temple of Kukulcan).	

005h	Changes to Actual Quotes diplo text	
AdvCiv		Actual Quotes
Rename the Actual Quotes game text file to Civ4ActualQuotesText.xml and include only text that differs from Vanilla Civ 4. Added in-line comments about changes to game text that isn't leader-specific.		The Actual Quotes game text file is a copy of CIV4DiplomacyText.xml from Vanilla Civ 4. Many texts have been modified (English only), many haven't been. It's clear enough that most of the leader-specific texts have been replaced, but there are also changes to generic texts.
Having everything in one place has advantages, but that's not the case anyway because Warlords and the BtS expansion have their own diplomacy text files; and being able to review the changes made by Actual Quotes seems more important.		
Restored a few whimsical texts from Vanilla Civ 4 Willowmound seems to have gone after highly		

that Actual C		colloquial texts and especially texts that make the AI leaders appear as opponents in a boardgame as opposed to historical figures. Texts that belittle the human player also have been targeted (perhaps, in part, because they don't fit well in situations when the human player is doing far very well).
	I get why those lighthearted texts were disabled, but some them are kind of classic, especially some of the insulting ones. They don't mix well with the Actual Quotes texts, but there are plenty of old (generic) texts that don't fit well with the new texts either. And some of the Actual Quotes replacements for the "offending" texts were pretty bland. On that note, many of the leader-specific texts should've been paraphrased more loosely in my opinion; they're too stilted.	
Added one text for a declaration of war (DoW) by Gandhi and one by Alexander.		Actual Quotes pretty much only replaces Vanilla text, and there are no leader-specific texts in Vanilla for DoW.
Rationale	I happened to come across some quotes that seemed suitable for those two leaders. Could be an inspiration for someone to add more leader-specific DoW texts.	

006	Assertions		
	Disabled a few assertions that are supposed to be rare and were still under investigation by earlied modders, and are probably false positives or mostly harmless and difficult to resolve.		
006b	Enabled assertions in CvXMLLoadUtility that warn when an XML tag expected by the DLL isn't found in XML – unless a default value is passed to CvXMLLoadUtility:: GetChildXmlValByName.		
Rationale	If the tag is defined in the schema, then the EXE will warn about it anyway, but the new assertions should help when a tag is also missing from the schema and, in particular, when the tag is mistyped in CvInfos::read(CvXMLLoadUtility*). And they warn about missing default values for non-mandatory tags — although a default of 0, false or an empty string as used by BtS is usually fine. I pass default values to GetChildXmlValByName where they are now necessary.		
See also	No assertion triggers when a default value is set through <u>xmldefault</u> .		
Tbd.	Can I somehow warn about tags that are entirely unused?		
006с	Define assertion and profiling macros as (void) 0 when disabled.		
Rationale	Mainly to avoid errors like this:		
	<pre>if() FAssert() foo();</pre>		
	If FAssert is entirely removed (as in BtS), then the foo call will move into the if branch without any compiler error.		
	With my change, macro calls have to be terminated with a semicolon.		
006d	Warn when reading an XML element with an empty value (e.g. <imoves></imoves>)		
Credits	Adopted from More Naval Al		
006e	Show current XML file in error messages only if the error occurs while loading an XM file.		

Credits	A couple of lines from these two MNAI commits.	
See also	advc.rh: Adopted a similar (redundant?) change from rheinig's mod.	
006f	Show the name of the enclosing function in in FAssert popups through theFUNCTION macro; remove the (now redundant) function name parameter from FAssertBounds (formerly named FASSERT_BOUNDS).	
Credits	From <u>Caveman2Cosmos</u> (billw2015)	
Tbd.	Would be nice to include stack trace as well; that would arguably require some library; C2C uses <u>Stack Walker</u> .	
See also	advc.enum introduces a macro for asserting the bounds of info enum types.	
006g	Show a failed assertion instead of a windows error message (ErrorMessage) when XML loading fails while debugging.	
Rationale	The assert popup is much more helpful for debugging.	
	Windows error messages are still shown by the DLL-internal profiler (CvGameCoreDLL.cpp). I haven't changed those because one doesn't normally debug while profiling	
006h	When an assertion fails in a debug build, the condition is evaluated for a second time.	
Rationale	So that the user can immediately step through the evaluation of the condition. It's not always obvious why it evaluates to false.	
	I don't think there's any downside to this. Failed assertions are rare, so performance isn't consideration. Assertion conditions must never have side-effects. And just pressing F10 will skip to the line after the FAssert/FAssertMsg call as before.	
006i	Macro FErrorMsg instead of FAssertMsg(false,)	
Credits	From Caveman2Cosmos: Git commit	
006j	After storing a simple integer element from XML in an enum variable, the limits of the enum type are asserted.	
See also	Based on the enum traits code written for advc.enum.	
006k	Warn when loading a CvInfo element from XML for a second time despite modular loading being disabled.	
Rationale	Not going to leak memory, but probably not intended by the XML modder.	
0061	Button for stopping Al Auto Play added to the assertion-failed popup.	
Credits	Based on this WtP commit by Erik. I've done the layout a bit more nicely, and m button only ignores the current failure, not subsequent ones (can use the ignore always button for that if the assertion keeps triggering).	

Changes to info shown in Debug mode; logging

- No confirmation needed for entering WorldBuilder if already in Debug mode.
- Red circles from BBAI only shown if Show-Yields view was enabled before entering Debug mode. (Can also toggle the circles by toggling Show-Yields and entering and leaving a city screen.)
- Military Advisor shows all foreign units.
- Privateer owner revealed.
- Alt while hovering over a leader portrait in Debug mode shows the leader's id (slot number).

- Alt+Ctrl on an owned tile shows the Al resource trade counter (which is divided by 50 to yield the "appreciate the years" relations bonus).
- Alt+Shift on an owned land tile shows the number of Al Workers needed in the tile's area.
- Can no longer show Info, Victory, Espionage and Foreign Advisor screen for Barbarians. These screens aren't helpful and some had been leading to failed assertions.
- The Wonders tab (Info screen) shows all wonders in Debug mode unless a player other than the active player is selected from the Debug menu. (The menu would be moot if all info was always shown regardless of the selected player.)
- When Alt is held down on a tile, the tile's found values are recomputed ignoring overlap with planned city sites. This value is shown first, then the cached value (planned sites taken into account). (BtS shows the cached value first, then a recomputed value that normally equals the cached value and then then a value computed as if the map was empty, marked with an "s" for "starting location". AdvCiv does not compute this "s"-value.)
- Alt-text on the scoreboard shows culture info only when Alt+Ctrl is held or when a civ is close to a culture victory.
- Don't show espionage help for rival spies; e.g. no "unit has moved/ can't conduct mission" message in red letters.
- Some changes to the information shown by the contact-player widget on the scoreboard about unmet players when in Debug mode. (CvDLLWidgetData::parseContactCivHelp)
- Add a bForce parameter to CvPlayerAI::AI_isDoStrategy that CvGameTextMgr and CvDLLWidgetData can use in order to ignore CvPlayer::isHuman. So that the scoreboard in Debug mode will show human strategies.
- No time stamps in the BBAI log. (I've never needed them for anything and they're very annoying when comparing logs in order to debug synchronization problems.)
- The BBAI log only shows game score breakdowns only if an interval parameter is explicitly set in BBAILog.h.
- Ctrl+Alt while hovering on a capital shows Al tech values (was Ctrl+Shift on any owned tile)
- Need to hold down Shift in order to see stack compare values along with combat odds.

See also 001d fixes some Debug mode bugs in various Advisor screens.

085 shows a score breakdown when Ctrl is held in Debug mode while hovering over a score value on the scoreboard.

<u>058</u> deals with concealed player identities – and makes sure that they're not concealed in Debug mode.

XML switch PER_PLAYER_MESSAGE_CONTROL_LOG for creating multiple MPLog.txt when testing multiplayer games on a single PC. These will have to be deleted manually. In networked multiplayer games, the id of the active player always gets appended to the name of the BBAI log (no XML switch for that one).

Procedure: Set LoggingEnabled=1, OverwriteLogs=1, and RandLog=1 in CivilizationIV.ini. Will probably also have to set MessageLog=1 and SynchLog=1. Or rather, put these in a copy of CivilizationIV.ini (say, MPDebug.ini), set Mod = Mods\AdvCiv and FullScreen = 0 in the copy and place it in the same folder as Civ4BeyondSword.exe; then create a shortcut targeting "C:\Program Files (x86)\Sid Meier's Civilization 4\Beyond the Sword\Civ4BeyondSword.exe" ini=advcMP.ini multiple, Where multiple is for allowing multiple instances of the BtS process. Launch the game twice through that shortcut, create a Direct IP game named chipotle (see 135c) with one process and join it with the other by connecting to 127.0.0.1.

Rationale	Need an MPLog.txt from each player in order to debug OOS errors. The BBAI log can also be helpful.
See also	001n fixes OOS errors 135c allows debug tools in multiplayer and refactors CvGameTextMgr::setPlotHelp.
Disabled some log output from CvEventManager.pv. City growth, border expansion and saves are	

now only lo	ogged if the respectiveLog variables in the CvEventManager constructor are set.
Rationale	Probably an oversight by the (Vanilla) Civ 4 developers. Most of the other log output was already tied to LOG variables. (Savegames were probably being logged on
	purpose, but that leads to a lot of uninteresting log output when autosaving every turn.)

A short guide about the various logfiles:				
LoggingEnabled (CivilizationIV.ini)	Enables several log files, most importantly PythonErr.log and PythonDbg.log.			
	Use CvUtil.pyPrint, print, or BugUtil.debug to write to PythonDbg.log. In the DLL, CvDLLUtilityIFaceBase::logMsg(logFileName,) can be used.			
	The BUG Python logs have an extra switch on the System tab of the BUG menu.			
	LoggingEnabled also enables: - audio.log - xml.log - network*.txt - app.log (mostly seems to record the Civ 4 window gaining or losing system focus) - resmgr.log (failures to load .dds graphics; models and animations too?) - initmgr.log (apparently for profiling game initialization), - LSystem.log (some type of graphics warnings) - combat.txt (K-Mod – requires LOG_COMBAT_OUTCOMES to be defined in CvUnit.cpp in addition).			
	Disabling LoggingEnabled doesn't stop all messages written to xml.log, I guess because of the timing inside the EXE. Also probably by accident, some messages still appear in the network-*.txt logs.			
	There seems to be no way to check the value of LoggingEnabled programmatically; only the EXE knows. That said, the DLL can enable or disable LoggingEnabled (or any other key in CivilizationIV.ini) through gDLL->ChangeINIKeyValue. One can probably also use CVDLLIniParserIFaceBase to re-parse CivilizationIV.ini.			
PythonErr2.log	Can't be disabled, seems to be used only by compiled Python code from the Warlords expansion. Basically never of interest.			
SynchLog (CivilizationIV.ini)	Mainly seems to write "DBG: SYNCLOG: All Checked In" messages to network-*.txt. That happens exclusively in the EXE; it doesn't look like the DLL can write to that logfile.			
	To check whether SynchLog is enabled, use CvGlobals::isSynchLogging. I think LoggingEnabled is required in addition.			
MessageLog (CivilizationIV.ini)	Enables the "message control log" MPLog.txt. It's mostly a combat log (less detailed than the in-game log and combat.txt).			
	Use CvDLLUtilityIFaceBase::messageControlLog to write to MPLog.txt. 003 wraps a class CvDLLLogger around that function.			
	Use CvGlobals::isLogging to check if the log is enabled. Note that this isn't the same as LoggingEnabled (see above), which is not a prerequisite here.			

	The EXE shows a warning on the Staging Room screen if a player has the message control log enabled.
	advc.mapstat writes to the message control log if LOG_MAP_STATS is set in GlobalDefines_devel.xml.
	If PER_PLAYER_MESSAGE_CONTROL_LOG is set in GlobalDefines_devel.xml, then multiple files MPLog*.log are created in multiplayer games. Cf. <u>135c</u> .
OOS log	When the game recognizes an out-of-sync error in a network game and MessageLog is enabled, OOSLogger.py creates a file OOSLog*.txt and writes all data that the OOS checksum is computed from to that file.
	Comparing the message logs of all players can give a clue about the cause of an OOS error. The log is no help, however, if only one player has MessageLog enabled. Realistically, it's only useful for OOS debugging with multiple program instances on a single machine. Cf. kekm.27.
RandLog (CivilizationIV.ini)	Logs all pseudo-random numbers generated by an instance of CvRandom. Writes to MPLog.txt, so MessageLog needs to be enabled in addition. (To find the combat log messages in between the PRNG messages, one can search for "kombat".)
	Through advc.007c, log output of the global non-synchronized RNG CvGlobals::m_asyncRand are written to ASyncRand.log instead of MPLog.txt. I.e. MessageLog.txt isn't required for this RNG.
	Use CvGlobals::isRandLogging to check if RandLog is enabled.
LOG_AI (BBAILog.h)	Need to recompile to toggle this log. Pretty comprehensive AI logging (with some blank areas). Thus also useful for OOS debugging. Writes to BBAI.log. Requires LoggingEnabled=1.
	Use logBBAI to write to BBAI.log. Such calls should be preceded by a gLogLevel check ("g" for global), otherwise, the call will take up time even if the BBAI log is disabled. (In CitySiteEvaluator.cpp, I've wrapped that check together with the logBBAI call into a macro.)
UWAI reports (GlobalDefines_ devel.xml)	Reports about AI war planning by the UWAI component; written to files named UWAI*.log once per team turn if the game turn number is divisible by REPORT_INTERVAL in GlobalDefines_devel.xml. Additionally requires LoggingEnabled and — to avoid cheating — MessageLogging in multiplayer games.
	Use WarAndPeaceReport::log to write to the current game turn's UWAI*.log.
	Use WarAndPeaceReport::isSilent Or isMute to check whether the report object is enabled. If not silent, then temporary mute status can be toggled through WarAndPeaceReport::mute(bool).
	Unfortunately, re-launching Civ 4 doesn't cause old reports to be overwritten; will append instead. The AdvCiv makefile has a YOURLOGS variable though that will cause all .log files to be deleted after recompilation.
StartingPos.log	Requires recompilation to toggle the SPI_LOG switch in
	StartingPositionIteration.cpp. LoggingEnabled=1 is also required. The log documents the steps taken by the starting position iteration algorithm; see <u>027</u> .

Profiler log	The DLL-internal profiler, if enabled, writes to IFP log.txt. See <u>0030</u> and Makefile.project about that.
ThemeParseLog.txt	Gets created in the BtS install directory!
	When launched from within Visual Studio, debug builds write some messages to the "Output" window of Visual Studio. The DLL can write such messages through OutputDebugString, defined in CvGameCoreDLL.h. Messages written by the EXE might be helpful for diagnosing program instability; though the "first-class exceptions" are generally no cause for concern. If the Visual Studio debug heap is enabled, then messages about memory errors are also written to the Output window when Civ has exited.

mapstat	Log file with statistics about a generated map	
AdvCiv		BtS
If LOG_MAP_STATS is set in GlobalDefines_devel.xml, and MessageLog enabled in CivilizationIV.ini, then, each time a map is generated, some statistics like land/ sea ratio, terrain, elevation and resource frequencies, resources per player are written to MPLog.txt.		There is a "Map Details" screen available in Debug mode through Shift+F2.
Rationale The Map Details screen is difficult to read and lacks terrain info.		read and lacks terrain info.

007b	Cheat and debug shortcuts disabled	unless in Debug mode
AdvCiv		K-Mod
(enter Debu debugging), Ctrl+Alt+T (I viewer), Ctrl Ctrl+Shift+P [Shift+]Z (sv Auto Play) a	Unless in Debug mode, only the shortcuts Ctrl+Z (enter Debug mode), Ctrl+D (menu for graphics debugging), Ctrl+U (unit graphics debugging), Ctrl+Alt+T (reset game text), Ctrl+Alt+A (audio viewer), Ctrl+Alt+L (reset city layout), Ctrl+Shift+P (change civ), Ctrl+Shift+L, Alt+Shift+P (change civ), Ctrl+Shift+L, Alt+Shift+JZ (switch player) and Ctrl+Shift+X/B (Al Auto Play) are enabled. (There could be others that I'm unaware of.)	
		Ctrl+Alt+R crashes the game, also in BtS; probably one of the expansions has broken it.
Rationale	Rationale If players actually want to use these shortcuts for cheating a little, then it could be annoying that Debug mode is required because Debug mode reveals the map, which can be a spoiler (and so does WorldBuilder). Still, for development purposes, I need to have Debug mode at hand, so I need the cheat mode ("chipotle"), but I don't want to run into other cheat commands, perhaps without even noticing.	
See also	Chapter on <u>all-Al games</u> : The spectator mode requires Debug mode, which in turn requires cheats to be enabled, so regular players may end up leaving cheats enabled permanently. Don't want these players to stumble onto cheat commands.	

Tbd. Could add an override in GlobalDefines to allow cheat commands without Debug mode.

Perhaps the reloading of Art Defines wouldn't be so difficult to fix.

Would like to block the reset/reload shortcuts when not in Debug mode. onKbdEvent in BUG/CvEventManager doesn't help — apparently, the key press gets processed by the EXE before that handler is called. The only way I see: During initialization, store gDLL->getChtLv1() in a (serialized) variable at CvGame and set gDLL->setChtLv1(0). This will disable all cheats. When Ctrl+Z is pressed (I think BUG handles that already) and not currently in Debug mode, ask CvGame what the cheat level is supposed to be, and, if it's greater than 0, call gDLL->setChtLv1(1) just before CvGame::toggleDebugMode. When Ctrl+Z is pressed in Debug mode, call gDLL->setChtLv1(0) after toggleDebugMode. Will have to integrate this with 135c, which allows Debug mode in multiplayer.

Would also like to block Ctrl+Alt+F4 (kills the process – or simply exits to desktop without confirmation; not sure). This might be an OS thing, but the fact that it doesn't work in the opening menu suggests to me that it's implemented in the EXE.

Enabled some debug tools that the BUG mod had (accidentally I guess) made unavailable. Now they require Debug mode (probably only required cheat mode in BtS):

Shift+T: Award tech or gold. Shift+Ctrl+W: View wonder movie

Shift+] on unit: Heal 10 HP Shift+[on unit: Damage 10 HP Shift+F1: View replay

Shift+F2: "Debug Info" screen with various per-civ statistics

Shift+F3: View Dan Quayle screen
Shift+F4: View UN victory screen

Each cheat command is triggered only by one combination of modifier keys; e.g. Shift+Ctrl+T will not open the tech/gold menu.

Rationale Reduce the risk of clashing shortcuts, i.e. one event handler pre-empting another.

AdvCiv BUG

Removed handlers for keyboard inputs from CvEventManager.py handles keyboard inputs.

Rationale Removal of dead code.

007с	Added macros for RNG calls that make the logging side less tedious – by simply writing the current function name and line number into the log. Replaced all calls to CvGame::m_sorenRand and CvGame::m_mapRand with those macros.	
	Output of the global non-synchronized RNG is written to AsyncRand.log instead of MPLog.txt. (If RandLog is enabled in CivilizationIV.ini.)	
Rationale	I'm not sure if a log file for the non-synchronized RNG is helpful at all. In any case, having synchronized and non-synchronized numbers in one place is potentially confusing and makes it harder to debug OOS errors. The Firaxis developers had sometimes added "ASYNC" to messages from the non-synchronized RNG, to make them stand out I guess. This is no longer necessary, and removing those suffixes has allowed me to simplify CvPlayerAI::AI_techValue a bit.	

Might be better not to use any random numbers in CvPlayerAI::AI_techValue when the function is called asynchronously, i.e. when recommending techs to a human player.
<u>advc.fract</u> : The RNG macros , apart from integer percentages and limits, also support the ScaledNum type.

008	Changes to Civilopedia content and hints	
I've updated some content that is no longer accurate. For some Game Concept pages, I left the content alone, and merely added a warning at the top that the info could be outdated.		
I've only changed the English and German version. I haven't updated the German list of keyboard shortcuts (004y); it's still as in the BUG version of Sevopedia. Other than that, I think the German translations in Civilopedia are complete.		
Config	The modified bits are in a separate file called CIV4GameText_advc_pedia.xml. I've also moved the one text changed by K-Mod into that file (from Civ4GameText_K-Mod.xml).	
Tbd.	Not all the strategy advice is up to date. Especially the tech and building advice is a lot of work to maintain, and much of it is redundant. The tech advice is only shown when Sid's Tips are enabled. Would be best to somehow disable these texts completely for anything past the Ancient era (simply check the tech's era along with each check for the player option); the early-game texts actually do contain some advice.	
See also	004y: Changes to Civilopedia formatting 033 shows the Privateer's plunder ability in Civilopedia 179 shows the production bonus of the Apostolic Palace in Civilopedia	
008a	Hide abilities in Civilopedia when they don't apply	
Rationale	To unclutter the Civilopedia

AdvCiv	BtS	
starts" restr current gan applies to tl Civilopedia the restriction	Showing the "Can be built on X era and earlier starts" restriction only when X is smaller than the current game's start era, i.e. when the restriction applies to the current game. When the Civilopedia is accessed from the opening menu, the restriction is shown when X is not equal to the wonder's tech era plus 1.	
Shwedagon Paya not available on Renaissance Both wonders were added in BtS. Shwed is available on Renaissance start and earlier and start. Both wonders were added in BtS. Shwed is available on Renaissance start and earlier and zeus only on Ancient start.		available on Renaissance start and earlier and
Versailles n	rsailles not available on Industrial start. Industrial start or earlier.	
Rationale	Most wonders become unavailable when starting two eras after their tech era; spell ou only these exceptional cases (e.g. most Ancient wonders are available when starting ir the Classical era, but Stonehenge isn't).	
	The changes to individual wonders reduce the number of exceptions that the Civilopedia needs to mention.	
See also	310 changes the start era restriction of the Great Wall	
Tbd.	Civilopedia should list the free buildings from later-era start along with the descriptions	

	of the later-era start settings.		
	Perhaps prevent civs from constructing a wonder once they reach the threshold era – regardless of the game's start era. This could make wonders scarcer in games with few civs.		
		ctory must be enabled") only when accessing ctory condition is disabled in the current game.	
008b	(unassigned)		
008c	Updated some of the hints that are shown while loading savegames (only English and German)		
008d	New hints about AdvCiv changes and a few K-Mod changes that weren't previously covered. Gave all hints about modded content a higher probability of being shown than the hints from Vanilla and BtS (Warlords didn't add any). Tried to mimic the tone of the original hints. Only in English and German.		
Config	Increased the probability by duplicating entries in CIV4Hints.xml. Separate file for the new hints: CIV4GameText_advc_hints.xml.		
008e	Changes to the names of wonders and	d projects	
	vonder or project name starts with "The" or other article (translations). Totally inconsistent; e.g. "Angkor Wat", but "The Taj Mahal".		
Rationale	Makes it easier to find wonders in Civilopedia and on the Wonders tab. Just "Pyramids" is a little strange, but most of the names work fine without an article. Could make it "Great Pyramids" (joining Great Lighthouse, Great Wall and Great Library), but I guess "Pyramids" is OK.		
Config	Separate file CIV4GameText_advc_wonders.xml. Further changes to wonder names will have to be made there. Can delete the file to undo all name changes.		
See also	Caveman to Cosmos also does this (but I haven't checked how they've implemented it). SourceForge <u>revision</u>		

009	Setup of configuration files: BUG settings, GlobalDefines, BUG and BBAI help files	
See also	002b also deals with file paths	
AdvCiv		K-Mod
Included the BUG help files in three languages (no French and Spanish translation seem to exist).		No BUG help files included; clicking on "BUG Mod Help" in the BUG options menu results in an error message.
Rationale	The help files also include developer credits; gotta have those.	
Tbd.	Would be nice to use the <u>SourceForge URL</u> that <code>BugHelp.py</code> tries to access for Mac installations – as a fallback when help files aren't found locally.	
folder explaining its purpose. files of the Unit Naming and Custom Domestic Advisor components. BULL instead has a fold Mods\BULL\UserSettings that contains all in files used by the mod. The presence of these files prevents BUG/BULL from creating them		,
Rationale The folder is confusing in two ways:		1

	actually only for two particular mod cob) The contents of the folder are copined settings when the mod is started for	s important global settings, but the settings are omponents, which are even disabled by default. ed to My Games\Beyond The Sword\AdvCiv\r the first time, so it seems that the folder in true, but only once the copy has been created, ded in the download archive.	
Tbd.	If I'd store all ini files in Mods\AdvCiv, a copy under My Games would no longer be created. This would also make it easier to uninstall the mod. That said, it can lead to issues with Windows rights management (example), and fallback behaviors for that would be too difficult to implement for me. And I wouldn't want to include all the ini files in the download; this can perhaps be avoided by giving Mods\AdvCiv higher priority than My Games in BugPath.findSettingsFile.		
		ent name for the Settings folder Though, ideally, the game should then continue to don't have to update manually (by moving their

appear nei GreenFace size of thes	ther in the DLL nor in any of BUG's XMe.dds, RedFace.dds, YellowFace.dds	older that appear to be unused (the file names IL and Python file): Arm.dds, Foot.dds, , Star.dds, Trade.dds. The total compressed	
009b	BUG initialization (only relevant for de	evelopers)	
AdvCiv		BUG	
When a Python script file is modified while the game is running, Python scripts will sometimes, in part, fail to be reloaded. The likelihood (race condition) of such an error depends on which file was modified. As workaround, it usually suffices to save the file one or two more times. Or to save a different file. Reloading fails almost always and leads to an unresponsive UI and nonfunctional alerts until the game is restarted. So, unlike in unmodded BtS, Python changes at runtime aren't really possible in BUG-based mods. This post by platyping confirms that this is an issue with BUG and not just K-Mod/AdvCiv.			
	Some of the errors are caused by the Civ4lerts and Field-of-View slider components. But there are probably also problems with circular dependencies and/ or the proper order of reinitialization.		
		I suspect that these problems were introduced late in the development of the BUG mod because developing such a complex Python mod without the possibility of changing scripts at runtime would've been very difficult.	
Rationale	I haven't been able to fix this entirely.		
Tbd.	Perhaps it's mainly a problem with changeHandler.handle (BugOption	nange handler functions ("dirty") referenced by s.py)?	
-			

009с	Removed Map Finder, BUFFY integrity checks	
AdvCiv		K-Mod
scripts of the been remove commented files has been	ration files, text files and Python e Map Finder mod component have ed, and references to them out. One of the BUFFY game text en removed, the other mostly deleted, e in Python kept commented out.	Map Finder is included in the BUG mod, so it seems that karadoc disabled it (by commenting out a few lines in BugMapOptionsTab.py.
Rationale	Generally, I don't want to remove any BUG/BULL features entirely, even if I don't think I'll ever use them personally, but Map Finder and the BUFFY checks are really features for competitive HoF players, which doesn't make any sense in a mod like this. I don't think it can be used as a developer tool either, e.g. to find out how commonly some very poor or powerful combinations of tiles occur, or only with major modifications. The compressed size of the removed files is 12 KB (negligible), but it also reduces the number of files to browse through when making changes to other BUG components.	
Config	Not terribly difficult to re-enable: Rest made any changes), uncomment any	ore the removed files from BUFFY (K-Mod hadn't code marked with change id 009c.
See also	The space on the BUG menu is now	used for <u>004m, 004h</u> and <u>004z</u> .

009d	More graceful handling of bad data in BUG ini files	
Config	BugOptions.py, BugOptionsTab.py	
AdvCiv	1	BUG
number for (My Games\B not within th Assets\Cor	seyond The Sword\AdvCiv\Settings) is ne valid range, the default (set in afig) is used by the menu and stored e, replacing the invalid index number.	The index number is treated as 0 in such a case, meaning that the BUG menu (correctly) shows the first menu item as active. The invalid index number remains in the ini file. Index numbers in ini files can easily become invalid if the range of a list option is changed in Assets\Config.
Rationale	I'm changing some option ranges for v0.95. Using the 0 th item is clearly inferior to using the default, and probably not what the BUG developers had intended either.	
Tbd.	My changes don't correct the invalid index until the BUG menu is opened. That's acceptable for now because I expect that players (if any) who have used the fairly exotic values that I've removed will take a look at the revised BUG menu after updating to v0.95.	
	been able to figure it out.	Index (BugOptions.py), but somehow I haven't
Fixed some minor bugs in the error handling code in BugOptionsTab.py. These bugfixes are tagged with id 001.		
comments a AdvCiv earl	No comments are written to BUG ini files. If comments are already present (from a version of AdvCiv earlier than 0.95), those comments emain unchanged. When the mod is launched for the first time (and no settings are stored from an earlier installation), it creates an ini file for every xml file in Assets\Config and fills the ini with the defaults	

		set in xml. (This is still the case in AdvCiv.) Additionally, BUG adds a comment to each value in the ini file that includes, again, the default and the hover text for the option, read from the correspondingOptions.xml file in Assets\ XML\Text. These comments are, as far as I can tell, never updated, so if the default or hover text changes from one version of AdvCiv to the next, the comments won't reflect this unless the user clears the settings.
Rationale	Ideally, BUG would read the comments in the ini at startup (along with the actual values), check if they're outdated and update them if necessary. I don't think the comments are read at all though, so this would be quite an effort to implement. Updating the comments always isn't easy enough to do for me either, and might affect performance. I don't think the ini files should be manually edited anyway, so comments really don't seem necessary. They also take up a little bit of disk space.	

010	Restrictions on capturing of workers	
AdvCiv		BtS
An attack on a worker or settler yields a captured worker only with a probability of 50%. If the attack happens on the same turn as declaring war on the owner of the attacked unit, the probability is 0. If no worker is captured, the attacked unit is still destroyed (as in BtS).		Always yields a captured worker. The attacked unit is, technically, destroyed.
Config	BASE_UNIT_CAPTURE_CHANCE and D	OW_UNIT_CAPTURE_CHANCE in
	GlobalDefines_advc.xml.	
See also	<u>Discussion</u> on CFC	
	Post about making worker stealing harder through AI improvements	
	162 was going to impose some further restriction on the turn that war is declared, but that change is disabled (through XML).	
	130r makes surprise attacks on AI workers less costly because it lets the "declared war on us" penalty decay.	
Rationale	Until AdvCiv 1.05, I had disabled worker stealing entirely because, as Leoreth put it in the thread linked to above, "[g]aining an extra worker right at the start is incredibly powerful, losing your only worker is incredibly cripping, and causes a runaway effect []." I might add that worker stealing especially undermines the highest difficulty levels, which let the AI start with a free worker. Moreover, worker stealing puts the AI at a major disadvantage as the AI never attempts to steal workers; see under Tbd. If the AI were able to harass human workers (there is some unfinished BtS AI code in a function named "AI_poach"), it would probably be detrimental to the enjoyment of the game, so this is a game design issue in my book, not an AI issue.	
	The problems above only concern surprise attacks on workers, and such attacks are, for the most part, only possible right after declaring war. Capturing workers in cities isn't a big problem. Since workers usually manage to escape until a civ gets conquered entirely, they tend to be a small extra prize for the captor. However, receiving too many workers can be unenjoyable when there is nothing much to do for	

them, so let's make it probabilistic.

I've considered making the probability dependent on the distance to the nearest tile owned by the captor, modelling, on a high level, the distance that the captives would have to be transported and guarded in reality. In the early game, distances tend to be long, so the capture probability would be 0 or near 0. This solution would feel more organic than the one based on the timing of the declaration of war, but it would still allow high-stakes gambles when civs start close together. Distance-based probabilities are also conceptually more complex.

Disabling worker stealing entirely was nicely simple, but it's strange (perhaps disquieting) when civilian units never survive combat. There were also rare situations in which a Barbarian worker became "orphaned" through the sudden conquest of the only nearby Barbarian city. In that situation, a human player had no reason to attack the worker, so it would just sit there. More importantly, I think that (severely) restricting worker stealing will go over better with players than disabling it entirely; psychological thing.

Another idea was to delay worker stealing through a civic or tech requirement. Slavery would be the obvious choice, but, in its current state, clearly can't have another powerful effect. Moreover, I don't think worker stealing should be contingent on running particular civic; should never be disabled entirely. As for techs, Monarchy comes at about the right time, but doesn#t have the right flavor. Code of Laws also seems rather farfetched.

Tbd.

Al workers getting destroyed through human surprise attacks is still a problem. Could be addressed through a rule change maybe, difficult to address through Al changes. Keeping workers safe has an economic cost that can easily exceed the cost for letting a Warrior patrol along the borders of an Al civ. The appropriate response to such harassment would be to declare war and destroy the Warrior. Just guarding the affected worker for a while would also work, but this mustn't imperil the defense of the nearby city. This is all complex behavior with little margin for error. I've written some Al code and archived it in this Git commit, but I think it would hurt more than help.

Al civs may delete workers (ca. 25% chance) in a No such scorched-earth behavior. city that is all but certain to be conquered on the next turn. They don't delete workers if the city is the last remaining city.

Rationale

I guess it doesn't hurt to reduce the number of workers captured a bit further. Not really necessary, but it's just dumb to let the aggressor have those workers (but if it's the final city, then it doesn't matter), and often it's very obvious that a city will fall. If this were the only mechanism to deny workers upon city conquest, then the AI would have to be more subtle – wouldn't want human players to send in fewer units just so that the defenders don't lose hope and commit suicide. Older notes on that: "When losing badly at war, too many workers overall and too many assigned to a local city, then disband 1 local worker (only in the city tile?) per turn. May disband another if evacuating. Should probably keep 1 worker assigned per city in any case."

The AI deletes captured workers only if there is no AI city nearby or if the capturing unit is badly outnumbered by nearby enemy units.

Captured workers are deleted unless there is a friendly city nearby or unless there is no potential attack at all against the capturing unit.

Rationale A worker getting re-captured is not actually a big deal, especially now that there's only a 50% chance.

See also Rise of Mankind never lets the AI delete captured workers.

Combat help shows the odds of capturing a Help text doesn't tel worker and informs the player when the odds are might get captured.

O due to a recent declaration of war or when war

Help text doesn't tell the player about units that might get captured.

when a milita	declared yet. No such help is shown ary unit is going to defend, i.e. when uld only be captured upon defeating r.	
Rationale	Important to make players aware of the rule changes, especially the artificial special rule for the turn during which war is declared. Not showing capture help when there will be fighting simply because that turned out to be complex to implement.	
Show a message on the main interface when a noncombat unit is destroyed through an attack.		No message. Can't happen for workers, but can happen for ships in port and landed aircraft. For captured workers, there's a message.
Rationale	So that destroyed workers don't disappear without notice. But also very useful to have such a message for units that can't defend because of their domain type.	

011	Decay of invested Worker turns	
AdvCiv		BtS
Once per round, when no progress has been made on any of a plot's unfinished Worker builds for the 8th turn in a row, the number of invested Worker turns is reduced by one for all unfinished builds in that plot.		No decay of invested Worker turns.
Rationale	BtS allows for some very fiddly micro-optimization, especially pre-chopping but also e.g. pre-building of Forts to protect strategic resources.	
	e.g. until a Barbarian unit has been o	eaving an improvement unfinished for some turns, dealt with, but I want decay to be fast enough to tic. This balance is a bit difficult to get right.
Config	Can be adjusted or disabled through DELAY_UNTIL_BUILD_DECAY in GlobalDefines_advc.xml	
011b	Partial builds	
AdvCiv		K-Mod
build comma	When the Ctrl key is held down while issuing a build command, the build is stopped one turn before completion. BULL has an option to always stop short of completion when the build removes a Forest. K-Mod hasn't adopted this.	
When Ctrl is held down while hovering over a tile, K-Mod shows no such info. BULL shows it the progress on all unfinished builds is shown. Added an option on BUG's map tab to always show that information.		
Credits	Some code adopted from BULL; tha	code is tagged with 011c .
See also	This open K-Mod issue states that the BULL implementation isn't safe for multiplayer games – which I can confirm. My own implementation is multiplayer-safe.	
Rationale	The pre-build command isn't really necessary now that build progress decays, but didn't take me long to implement, and it's something that other mods might want to adopt as my implementation is more flexible (can e.g. also be queued) and works in multiplayer. Also, players might disable the decay through XML.	
	Showing partial progress in game text is helpful in any case. Showing it through the Ctrl key seems like a good solution for everyone; the BUG option is mainly there to make players aware of the feature. I've also written a loading screen hint for that	

	purpose.
Tbd.	One downside of my implementation is that keyboard shortcuts (e.g. Alt+C for chopping) don't work when Ctrl is pressed. They do work in BULL when the "pre-chop" option is enabled, but then all chop commands have to be issued twice, which is, I think, a much bigger downside. I could make keyboard build commands work by using a letter key, say Y, instead of (or in addition to) Ctrl. Only the modifier keys Ctrl, Shift and Alt interfere with the build shortcuts; I suppose that's why karadoc decided to use the X key for suppression of unit cycling. However, pressing Alt+Y+C (or even Ctrl+Alt+C) to pre-chop really isn't convenient, so I don't think I'll bother with this.
	Like BULL; I'm showing a message when a build is suspended. That's perhaps more annoying than helpful. Also, the message would be timed better at the start of a turn. Currently, Workers abandon their build missions right after making the move that brings the progress to <i>x</i> -1 of <i>x</i> turns (perhaps this should happen at the start of the next turn instead) and the message is shown; often, Workers don't move until the player presses "end turn", and then the message is shown only very briefly, which looks strange.

012	Forest/Jungle defense reduced	
AdvCiv		BtS
Forest and Jungle provide no defense if the attacker owns the attacked tile, otherwise 25% defense.		50% regardless of ownership.
àbilities or V	ack/defense bonuses from unit Voodsman promotion still apply of tile ownership.)	
Rationale	Some players complain that removing Forests in the inner ring of a city is a no-b because the defense bonus for invading armies is too dangerous. I'm more both by the implausibly high defense bonus from Forest and Jungle, which leads to gaplay problems too, such as Barbarians refusing to attack fortified units. Forested chokepoints are difficult to handle for the AI.	
It makes some sense that units can defend well in forests (forests offer map palisades etc.), and it makes sense that the civ that knows its way around (i.e. the tile owner) has an advantage; I'm assuming that these two factors when units in a Forest are attacked by the tile owner.		that the civ that knows its way around in a forest e; I'm assuming that these two factors cancel out
Config	Tag RivalDefense added to Civ4FeatureInfos.xml. Can set that to 0 and Defense to 50 to restore BtS behavior.	
Tbd.	The Woodsman promotions should Jungle. Currently, only Woodsman I	provide a (net) attack bonus against Forest and II does.

014	Capitulated vassals don't pursue victory strategies	
AdvCiv	dvCiv BtS	
Capitulated vassals can't be elected AP or UN A vassal votes for its master unless the vassal leader, and can't be on the ticket for diplo victory. itself stands to be elected; no restriction on that		
Rationale	When even a capitulated vassal has more votes than the master civ's biggest rival, then the game is decided, and the master civ should win a diplo victory with the votes	

	of its minions. And of course a capitulated vassal shouldn't win.	
AdvCiv		BBAI/BtS
Capitulated vassals don't pursue victory strategies, don't build team projects and don't build wonders of the world except Shrines.		Capitulated vassals pursue victory strategies and can actually win the game.
Rationale	Internet and Manhattan are things that the master may not want the vassal to build; SDI is covered by the master (change <u>143b</u>); the other projects are for space victory. Capitulated vassal shouldn't build wonders that the master might want to build or that could hurt the master (UN, AP); it's simplest to block them all.	
See also	130v about capitulated vassals voting along with their master and generally behaving like zombies. 112 about voluntary vassals breaking free when approaching victory. 143b scraps nukes upon capitulation.	

015	Changes to Great People (GP)	
Tbd.	Will probably allow Priest and Artist to hurry certain wonders; move culture bomb to Spy.	
015a	Changes to tech flavor values	
See also	020: Changes to non-tech flavor values. Tech flavor is special because it affects the GP discover abilities, while the other flavor values are mostly only relevant for the AI.	
AdvCiv	BtS	
		3 production flavor, 4 gold, 2 culture, 2 growth. Thus a tech that Great Engineers can (and may have to) discover.
Rationale	Engineers inventing constitutions is too far a stretch.	
Tbd.	Fascism is also dubious (6 production flavor).	

016	Extra tile yields from random events not added to city tile yields	
AdvCiv		BtS
On city center tiles, extra yields from random events are added to the natural tile yield before raising the yields to at least 2 food, 1 production, 1 commerce.		City tile yield is computed as the yield from terrain, hill, unimproved bonus and river, all assuming that features (incl. Flood Plains) are removed. The result is raised to at least 2 food, 1 production, 1 commerce. Finally, extra yields from random events and yield bonuses from Golden Age are added.
Rationale	Should be treated like all the other yield effects; counterintuitive in BtS.	
Credit	Pointed out <u>here</u> on CFC by traius.	
Tbd.	Considering to change the city tile yield formula so that bonuses are applied after the raise step.	
See also	004b shows the city tile yield before founding	
Count extra yields even for impassable tiles.		No natural yields on impassable tiles. Non- natural yields (e.g. extra yields) can make

		impassable tiles workable.
Rationale	So that Python modders can make p	eaks workable.
Credit	Post by CFC user xyx

017	Al trains fewer units when its military	is already very large and drafts less in general
See also	121b: Al hurries production less, especially units. 018: Reduced impact of Crush strategy 107: Fewer Al defenders 110: Changes to Al military buildup	
AdvCiv		BtS
reduced bas strongest po	sed on the military power of the stential enemy. Not as much when	The military power of other civs affects the number of trained units only indirectly through the "Area AI type"; generally keeps building units so long as the maintenance is affordable.
Rationale		than to train excessive armies. Al stacks of doom human player is behind when Drafting and Rifling
	Need to be careful not to throttle military production too early when aiming at a r victory. Those often have to race against a peaceful victory of a rival and may re overwhelming numbers to succeed in time. Moreover, the bigger an empire gets more units are tied down as garrisons (while still counting toward the military por rating).	
Decreased the base probability to train a military unit by 2 percentage points overall. Added an upper and lower bound for the city-specific train-unit probability based on the number of cities: The AI only gets to use very high or low probabilities once it has about five cities.		By the midgame, the probability is effectively 3 higher than set (per Al leader) in XML because the experience from Barracks is added in.
Rationale	The average probability to train a unit was about one in three, which seems a bit much in a situation where there is no war on the horizon.	
AdvCiv	1	K-Mod
	b build Barracks before training a unding a second city.	About three times more likely than in AdvCiv.
Tbd.	Want to give Barracks a tech require	ement.
Don't draft away more than a third of a city's population unless defenders are urgently needed. (K-Mod has the same condition but doesn't apply it to Rifleman.) Don't draft at all when there is neither a war plan, nor a reason to reduce population.		Draft as many units as allowed except when there are angry citizens or upkeep gets too costly (that's a high ceiling). Stricter rules when drafting sth. other than Riflemen.
When it's not urgent, only draft with a per-turn probability equal to the normal buildUnitProb.		No randomness in drafting.

	I utility value for Nationhood civic dy paying high unit upkeep.	Utility is only reduced when maxUnitSpending is exceeded.	
Nationhood. If the player can stay o		Al stacks once/ if the Al hits Rifling and switches to ut of harm's way through diplomacy, it becomes cally. One third of the population is still a lot.	
	once they're needed. Probably shou either. The change to civic evaluation	Drafting without planning war is generally a bad idea; can draft units pretty quickly once they're needed. Probably shouldn't adopt the Nationhood civic without war plans wither. The change to civic evaluation may help with that. Don't want to make war plans a hard requirement for Nationhood though – that would give away the Al's intentions.	
	The probability should make AI draft	ing less abrupt, and reduce it a bit overall.	
Tbd.		o account in a more meaningful way: currently ever, need to change the drafting rules before oo efficient currently.	
The target number of warships to escort a naval assault is adjusted based on the number of coastal cities owned by the enemy and the game era.		matters, and whether they can defend	
Potential bug fixed in BBAI code that may have lead to large AI fleets when only a "minimal attack force" had been intended.			
The AI trains fewer sea explorers if the file name of the map script is "Pangaea".			
Rationale	No need for an expensive escort if the enemy has very few ships. Can't be sure of that, but the number of coastal cities should be a pretty good predictor (and don't want to count enemy ships that the AI can't see).		
Tbd.	Should check if the enemy can even train any dangerous ship; no need to protect (Industrial-era) Transports if the enemy ships are Frigates.		
	Once that's implemented, should probably use relativeNavyPower if <u>UWAl</u> is enabled.		
See also	 905a buffs Trireme and stops the AI from using (and training) Caravels as escorts. Not sure if this has lead to fewer or more AI ships. 081 is supposed to train more ships when they're needed. 		
AdvCiv		BBAI	
Reduced the number of attackers that the AI trains when there is no war plan.		BBAI added that behavior for "building [a] city hunting stack" that is also supposed to "to produce early rushes on tight maps" (comments in the code). May train as many as 12 attackers for this.	

017b	Dynamic changes of unit AI type	
AdvCiv		BtS
Caravels (and Carracks) trained by the AI as	Land units can turn into (land) explorers, and
attackers (UNITAI_ATTACK_SEA) can turn into	there is a narrow rule that can turn a Galley into
explorers (UNITAL EXPLORE SEA) if there is		an explorer after transporting a Settler; but
nothing to	attack and there are too few	Caravels can only act as explorers if they've been

Lowered the priority of quarding seafood when in		trained for that purpose. Explorers can adopt various other roles if exploration isn't needed anymore.
Relaxed conditions for changing from UNITAL_SETTLER_SEA tO UNITAL_ASSAULT_SEA.		
UNITAI_EXP		Al won't train Caravels for exploration if it already has enough exploring Galleys.
Rationale	Should lead to fewer Caravels; that's	s why I'm grouping this with change 017.
Tbd.	There are probably other sensible AI type changes that the BtS code doesn't consider. A comment by the Vanilla developers also suggests this: "move some of this into a function? maybe useful elsewhere." However, one must be careful to keep UnitAI and CityAI/PlayerAI consistent, otherwise, the AI can end up training more and more unnecessary units.	
Fixed an issue in BBAI code that had caused the AI to train at least one ship per sea area for transporting Settlers, even if those areas didn't have access to any city sites. Combined with the Unit AI type changes above, this had lead to large stacks of Galleys in water areas that didn't need ships at all.		

018	Impact of Crush AI strategy reduced	
AdvCiv		K-Mod
train more units overall, and doesn't shift its yield focus to production. On the contrary, the Al		Crush makes the AI prioritize production. It also (no change in AdvCiv) lets the AI mobilize some of its defensive units as invaders, and trains more city attackers instead of defenders.
clear that the enemy doesn't pose much of a		At least with Aggressive AI enabled, some AI leaders adopt Crush in any "total" war that isn't going badly.
		The Crush strategy has been introduced by BBAI.
	In K-Mod, Crush seems to be used in situations where the AI might be able to win a decisive victory by concentrating all its resources on the war. This leads the AI to go all-in more often than I'd like. The AI can easily end up training far more units than would be needed in these all-out wars, which sets it on a road toward a military victory. The AI goes for military victories too often in K-Mod.	
	Now the AI should use Crush only to anyway.	bring war to a quick conclusion when it's winning
See also	115 and 104c also make the Al less	willing to go for a military victory.

019	Lower impact of Aggressive AI mode (AAI) in BBAI/K-Mod code	
AdvCiv		K-Mod
		Especially K-Mod behavior depends on AAI in many places.
Rationale	For experienced players, I think there is a happy medium between aggressive and	

	non-aggressive AI, and really no need for two modes. Even for inexperienced playe it would be better to tie AI aggressiveness to the difficulty setting instead of a separagame option. (To be fair, BtS does that too: iAIDeclareWarProb is based on difficult	
	In the original Civ 4 code, the non-AAI behavior is very passive, especially on the low and medium difficulty settings; this has been a recurrent player complaint since the Civ 4 release. Therefore, I haven't reduced the impact of Aggressive AI in the original code.	
See also	AAI can only be disabled through XML; see chapter on <u>UWAI</u> . <u>120b</u> : No impact of AAI on malicious espionage.	
	<u>Posts</u> by Blake about Aggressive AI in BtS. (Note, however, that the option existed already in Vanilla Civ 4.)	

020	Changes to AI flavor values	
See also	015a deals with tech flavor changes that determine which techs can be discovered b Great People.	
AdvCiv		BtS/Warlords
maintenance city defense with govern maintenance flavor of coadded to me (Hollywood flavor reduce and Cathers some happed Broadcast Religion flamissing?). Plus some buildings. No flavor nousually avoany one flapreferences types). Espionage Pentagon a	e. Gold flavor no longer associated iment center (reduced distance ce) and reduced on Courthouse. Gold rporate HQ reduced. Culture flavor indern entertainment wonders of Rock'n'Roll, Broadway) and Growth ced. Culture flavor also on Temples drals (in addition to Religion), and on wonders. Growth flavor added to inness buildings (Colosseum, Market, Tower) and National Epic. Added wor to Apostolic Palace (how was that minor changes. I went through all Many buildings that had just one type we have two. In these cases, I've bided assigning the full 10 points to wor type (to avoid extreme so of AI leaders that match both flavor flavor removed from West Point, and Forbidden Palace. Instead, AI	Since Warlords, each Al leader has one or two flavor values, and prioritizes buildings (and technologies) that match those values. Military flavor is on buildings that increase city defense, grant free XP, increase unit production or reduce war weariness. Gold flavor for extra trade routes, increased gold rate or reduced maintenance. Culture for some of the buildings that generate culture (Monument, Stonehenge, Theater, National Epic, Hermitage, Sistine Chapel, Eiffel Tower). Growth on buildings that improve health or spur population growth, and on a few that increase happiness (Notre Dame, Globe Theater). Espionage flavor for buildings that produce espionage points or Great Spy points. Religion for religious buildings. Production for buildings with (generic) production bonuses.
Great Pers	consider flavor when evaluating on points.	
Rationale	Military leaders don't usually want to get on the defensive and, therefore, shouldn't build Walls and Castles. I'm not removing the military flavor entirely because warlike leaders are also prone to counterattacks, and, (pre-)historically, militaristic cultures tended to build fortifications. Note that Protective leaders are still more inclined to build defensive buildings because of the production discount from the Protective tramany of the Protective leaders have Military flavor.	

	Reduced maintenance leads to a high science rate, which conflicts with buildings like Market that increase gold output. Gold flavor does give some incentives for growing wide (trade route bonuses), but I still think it's more important not to have the same flavor on Courthouse and Market. The next best choice seems Military; militaristic leaders tend to conquer wide empires.		
Corporations aren't there for generating gold. The HQs pair well with +gold b but Gold-flavored leaders try to build Markets everywhere, not just in the HQ The missing Culture flavor on Hollywood etc. seems like an oversight. While Cathedrals are more of a religious thing, they're so instrumental to Culture victory should also have Culture flavor.			
		ing, they're so instrumental to Culture victory that	
If Growth is supposed to support tall cities, it needs an even mix of hea happiness.			
Tbd.	The Trade Mission ability of the Great buildings.	at Merchant also clashes with the plus-gold-rate	
Apply the te	Apply the tech flavor values multiplicatively. Additively; i.e. a flavor-based value between 0 and about 100 is added to the utility value of each tech. The utility value tends to increase we the economic output of a civ.		
Reduced the impact of flavor on building evaluation, so that flavor typically makes about a 20-30% difference.		Additive in BtS, K-Mod replaced it with a multiplicative formula. Flavor can make up to a 100% difference, though 40-50% seems more typical. Since the building evaluation also affects the tech evaluation in K-Mod (not in BtS), building flavor indirectly affects tech evaluation too.	
Rationale	The BtS formula means that the impact of flavor decreases with the economic output, so that a civ starts making more rational choices when it's doing well, and that flavor matters more when all eligible techs have a low utility value. None of this makes sense to me.		
Tbd.	The flavor values in <code>Civ4TechInfos.xml</code> look loopy; need an overhaul. Doesn't take into account that the utility value counted for unlocked buildings includes the flavor values assigned in <code>Civ4BuildingInfos.xml</code> . Should perhaps treat units and civics in a similar way, i.e. assign flavor values through <code>Civ4UnitInfos.xml</code> (most would simply get sth. like 5 Military flavor) and <code>Civ4CivicInfos.xml</code> (no flavor tag yet) and count them only indirectly in the tech evaluation. This way, the flavor value would be reduced along with the unit value when a tech doesn't immediately unlock a unit, and the flavor values would not have to be changed when making changes to tech requirements.		
	Should ignore first-to-discover abilities when assigning flavor values: already addressed through custom code.		
	Revised flavor values will change GP "bulb" paths though; bad for players who have them memorized.		

021	Adjusted map scripts with simulated tectonics; see also chapter <u>PerfectMongoose</u> .
	Since these map scripts frequently produce mountain chains and large areas of uniform terrain, the improved AI handling of areas separated by Peaks (<u>030</u>) and the reduced probability of large resource lumps (<u>129</u>) are especially relevant.

	Also tend to generate oblong continues selection of starting areas in such care	ents near the poles, and <u>027</u> improves the ases.	
021a	Tectonics		
AdvCiv	1	BtS	
Uses the late Tectonics ma	est version 3.16 (Nov 2008) of the ap script.	Uses version 3.15. (Although Dresden's Unofficial Patch had <u>included</u> the update to 3.16 and was, otherwise, mostly adopted by BtS 3.19.)	
has a nice lo	more rivers. [] Terra option now poking Arabia instead of some and islands."	otherwise, mostly adopted by BtS 3.19.)	
Plains. The i very minor; r Grassland a	ots are allowed to place Jungle on impact on most map scripts seems most tiles at the equator are nyway. A sample (non-Tectonics)	Jungle can only be placed on Grassland. Since Tectonics maps have lots of Plains near the equator, these maps end up with very little Jungle.	
Grassland Jethere would without my c	3 ,	The following resources can be placed on Jungle: Oil (Grassland), Uranium (any terrain), Banana (Grassland), Pig (Grassland), Rice (Grassland), Dye (Grassland), Gems (Grassland), Ivory	
	gar and Ivory can be placed on e (in addition to Grassland Jungle).	(Grassland – or non-Jungle Plains), Spices (Grassland, Plains), Sugar (Grassland).	
Credits	It's <u>LDiCesare</u> 's map script. It was included in BtS patch 3.17, and he updated it once more after that.		
Config	The Jungle-on-Plains change is done in XML (Civ4FeatureInfos.xml).		
Rationale	I've not allowed Dye to be placed on Jungle Plains because the Jungle is almost impossible to see then. It's also a problem with Grassland Jungle Dye, but somehow it's not quite as bad – and players are used to it. Not important for gameplay; the map generator normally still finds enough Grassland Jungle to place the target number of Dye resources.		
Tbd.		ps instead of Grassland. Shifting resources away d) should be healthy for game balance.	
See also	165 reduces the grid size of Tectonics.		
AdvCiv		Tectonics 3.16	
Increased the elevation thresholds for hills and peaks so that they occur less frequently. And made hill placement more random.		Places far more hills and peaks than most map scripts (although it varies quite a bit too). Since the placement is based on (absolute) elevation values, which are, in turn, derived from the geological model, large regions of the map can end up without any hills.	
Rationale	To make Tectonics play more like the standard map scripts. Typically, hills and peaks are still more common on Tectonics maps – because that helps avoid regions with very low production capacity. The randomness also helps with that.		
(I think it's a better approach to place hills based (mainly) on local difference elevation, but I don't want to turn Tectonics into PerfectMongoose.)			
	Tectonics landmass type options "Earthlike" 80%, Only 70% and 60% 70% and 60%		
	Reduced the number of rivers for all landmass was supposed to be reduced (perhaps to the level of v3.15) only for Pangaea, but due to an		

	apparent bug affected (only) 60% water instead.	
Rationale	Corresponding to High, Medium and Low sea level. My 80% option actually does the same as the 70% option in the original script, the new 70% corresponds to the old 60%, and the new 60% is a new setting. I've noticed that far less land is generated than the old percentages said. My percentages are still too high. Actually, the ratios vary a lot. The new 60% option sometimes does lead to 40% land, but at other times just 23%	
	3.16 generally had more rivers than e.g. Fractal; I didn't like that. Not sure if Pangaea really needs special treatment. Seems to receive fewer rivers in any case (albeit longer ones than on maps with smaller continents).	
Tbd.	Make the script produce reasonable land ratios reliably. Should be the same as Fractal.	
Credits	4Dingo4 and LDiCesare have suggested formulas for the 50% setting <u>here</u> .	
	oximate land percentages also for the Percentages only given for the "earthlike" choices.	
Rationale	So that players can choose an appropriate player count. E.g. Islands supports far fewer players than the other choices.	
021b	PerfectMongoose (PM)	
Credits	I've adopted a few changes from Toffer90's c2c_World.py script (Caveman2Cosmos). Apart from that, see chapter PerfectMongoose for credits.	
Config	The "Perlin Noise" option is equivalent to the "PerfectWorld 3 Landmasses" option in PM 3.3. The "Plate Tectonics" option is equivalent to "Perfect World 2 Landmasses". This option affects continent sizes and shapes and the distribution of hills and peaks. Perlin noise has more varied results, landmasses tend to be smaller and snakier and hills and peaks more widely distributed. Since AdvCiv 1.06, Plate Tectonics is the default.	
	The "Break Pangaea" option has been removed from the menu; it's now implied by "Old World Start".	
	All options that I've removed should still be fully functional; they just can't be selecte on the menu anymore. (I.e. it's easy to restore them by editing the map script.)	
	To make PM maps reproducible, in addition to setting fixed RNG seeds in CivilizationIV.ini, the Python RNG needs to be disabled (self.UsePythonRandom False) in PM. It should not be necessary to disable the Python RNG in multiplayer games: out-of-synch errors reported about the predecessor PW2 have been fixed b AIAndy.	
	Some debug output gets written to PythonDbg.log if Python logging is enabled. Unfortunately, this can't currently be toggled in the script.	
See also	The latest version of my changes that should be fully portable to other mods and unmodified BtS: <u>Git commit</u> After that, I made changes that are specific to AdvCiv. That said, I've also made some more non-AdvCiv tweaks that could (easily) be merged into the portable version. Maybe I'll do that at some point and post the result in the PM thread on CFC. <u>This version</u> I had posted earlier is now outdated.	
	I've used version 3.3 as my starting point. LunarMongoose never made that version available as a standalone script, so I took it from the latest version of MongooseMod, version 4.2a. It's the same version that cephalo has posted here in the PM thread. Then I've stripped away all the code specific to MongooseMod. (Realism Invictus has	

taken the same approach – its version of PM is also based on v3.3.) In Oct 2018, cephalo published "PerfectWorld6" as a Lua script for Civ 6 (link), which "might be the best PerfectWorld yet." The Perlin noise generator doesn't seem to have been altered (same as in LunarMongoose's Civ 5 port), apart from a small tweak to the "twist frequency" that I had already arrived at independently. The rainfall formulas are also unchanged. Most of the new code is dedicated to lakes and rivers: "I have [...] incorporated lakes into the river system, so that rivers can flow into lakes, and lakes can flow into other lakes [...]." To me, this doesn't seem worth the trouble of attempting a back-port. The <u>LoR SDK ModMod</u> makes some changes to PerfectWorld2, but these are probably obsoleted by LunarMongoose's work. Changes by Fuyu in RevDCM are minor and obsoleted by my own changes. Likewise those by Antmanbrooks for Realism Invictus, Mongoose Mod makes numerous changes beyond those in the standalone version of the script (see in particular the v4.1 release notes), but nothing that I'd like to merge (or very little). Tbd. My changes are getting extensive enough to justify a name change. I'd like to lose the nonsensical "Mongoose" part. "Mundus," in a way, means both world and perfection and would still be a nod to LunarMongoose's user name. Or "Ad Mundum" – that would not cover the perfection part (not what I strive for anyway ...) but allude to the AdvCiv mod; and it sounds like a motto for modders ("to the world"). Unless the starting position iteration algorithm ("SPI"; 027) is disabled, the See also PerfectMongoose algorithm for starting positions only designates the New World when the Old World Start option is used. I've used the mapstat log for measuring the relative frequencies of terrain, feature types, elevations, rivers and resources on Fractal maps (customized by change <u>129</u>). I've tried to get PM to match those frequencies. For reference, these are the relevant Fractal statistics under default settings: Total tile count: 4368 (84x52); Land: 20.4%; Resources per player: 21.63 Land breakdown: Hills: 16.7%; Peak: 5.5%; Grassland: 50%; Plains: 27%; Desert: 12%; Tundra: 4.5%; Ice: 4%; Jungle: 14%; Oasis: 0.2%; Flood Plains: 1.5%; Forest: 21.5%; River plots: 20% Water breakdown: Ice: 20% AdvCiv PM 3.3 A larger tile grid is used for all map sizes, leading Same map sizes as Fractal. I've also aimed at the same terrain frequencies (see above) with to about 40% more tiles. The land-sea ratio is some exceptions: I've set the land-sea ratio, and about 28%. On the other hand, Grassland and frequency of hills, forests and plains a little bit Plains cover only 40% of the land area and much higher – but still far lower than PM 3.3. My of the Grassland is covered by Jungle. Hills are Tundra frequency is (on average) closer to PM almost twice as common as on Fractal maps. 3.3 than to Fractal – around 10% – at the making arable land even more scarce. expense of Grassland, which lands somewhere between 40% and 50% on average. No attenuation at the poles (though PerfectWorld6 does use 75% attenuation). The Toward the poles, land becomes less likely to attenuation factor (if used) also affects altitudes occur (59% "attenuation"). Eliminated the above 0; altitude differences caused by elevation artifacts resulting from attenuation. attenuation can make peaks and hills more common near the poles. Rationale Apart from using different overall terrain frequencies, PM generates, locally, more uniform terrain than Fractal, i.e. larger deserts, steppes and mountain ranges (clusters of peaks and hills). I see that as a strength as it gives the various regions of the map more character and a more Earth-like feel, and results in city sites of marginal value

that can present a third choice between stopping to expand and waging war. As

cephalo's pitch for PerfectWorld6 puts it: "a believable map that makes exploration more fun and adds extra challenge to the game." The balance problem posed by civs starting near poor terrain should be much lessened by AdvCiv's starting position algorithm.

Keeping the Tundra frequency relatively high is in line with these considerations. It's really a matter of the amount of land generated in high latitudes; Fractal (and also e.g. Pangaea) generate very little land anywhere near the poles. PM could easily mimic that through a very low attenuation factor – but shouldn't in my opinion. That being said, without attenuation, it's pretty common that large continents get connected by some sort of elongated Antarctica. This is unrealistic (armies can't traverse a polar desert) and doesn't play well either as it diminishes the importance of ships.

It's important to me that the same player counts can be used for PM as for the standard map scripts. To this end, I've set a slightly higher land-sea ratio for PM than for Fractal because city sites on PM maps tend to be spaced a bit farther apart and there tend to be more small, initially uninhabited continents that civs can't immediately expand onto. On the other hand, PM maps have longer coastlines than Fractal maps and therefore more seafood and a higher number of viable coastal city sites.

It would be nice if the land-sea ratio were closer to the real-word value, which should be around 28% if we assume that Antarctica is mostly represented by the ice sheets shown above and below the map edges in Globe view. One could change this for PM or all map scripts and keep the player counts as before by decreasing map sizes. Maybe this would place continents too close together, especially when using PM's Old World Start option. There's always the Low sea level option. Generally, the maps don't have to be scale models of the Earth, but getting somewhat close to the terrestrial proportions would be nice.

Some discussion about the terrain proportions: CFC link

Tweaked the method for placing peaks and hills so that the altitude of both the lowest orthogonal and lowest diagonal neighbor is taken into account and so that water tiles are treated as having higher altitude than the seafloor; removed the Absolute Height option.

Peaks and hills are placed based on altitude differences unless the "Absolue Height" option (introduced in v3.3) is enabled. cephalo's script use the difference between a tile's altitude (as generated by either plate tectonics or Perlin noise) and the mean of its neighbors' altitudes.

Peaks and hills are placed based on altitude differences unless the "Absolue Height" option (introduced in v3.3) is enabled. cephalo's scripts use the difference between a tile's altitude (as generated by either plate tectonics or Perlin noise) and the mean of its neighbors' altitudes. LunarMongoose uses the minimum of the neighbors instead of the mean. All these methods result in peaks and hills forming bigger clusters than on Fractal maps. The difference-based methods – and also absolute heights when combined with plate tectonics – result in a bias for peaks and hills on or adjacent to coastal tiles.

Rationale

Hills really mustn't clump together too much; some terrain here and there with highly unbalanced yields can be fun, but not large swaths of it. Clumps of peaks don't have this problem, but similar methods need to be used for peaks and hill placement, otherwise peaks won't have surrounding foothills. Placing hills based on absolute altitude is pretty obviously bad for gameplay, and hills also aren't a convincing representation of plateaus, which may well be irrigable; — so I've removed that option.

Apart from finding a good balance between representing Himalayan-size mountain ranges and spreading hills out, there is also the issue of arranging peaks, hills and flat tiles into natural-looking patterns. Distinguishing orthogonal and diagonal neighbors seems helpful in that regard.

maps with lit denser to co when there i occurrence o	ttle tropical land, Jungle can only get	A fraction of the hottest and wettest tiles become Jungle, meaning that the latitudes where Jungle can occur expand when there is little land near the equator and shrink when there is much land near the equator. In v3.2, the temperature requirement was still absolute, meaning that the Jungle coverage was more dependent on the latitudes of the continents.
Rationale	can be a problem; that can be addre	important for game balance. Too much Jungle ssed well enough by making the Jungle sparser. jarring (and I don't think players will interpret it as
rather than Grassland. Jungle can occur on plains but is a bit more common on grassland. occur in the tropics than on other maps (that the default terrain generator). Jungle is place		All wet plots become Grassland. Still, more plains occur in the tropics than on other maps (that use the default terrain generator). Jungle is placed only on grassland. As a result, jungles are less dense than on other maps.
Rationale	least in terms of food yield; the color	epresentation of tropical soils than grassland (at of plains also fits for clay-rich soils). Also, rassland makes the jungles less scattered.
Avoid placin	g Jungle adjacent to Desert.	In theory, the rainfall map should be somewhat smooth, which would avoid Jungle next to Desert. Perhaps it's less of a problem on larger maps.
Rationale	I like the alpine tundra idea, but snow-covered mountains (or jungles) next to desert are jarring (even on small maps, where such contrasts may not be so unrealistic considering the scale of the model).	
Tbd.	Desert next to Grassland is still quite	common.
Land Ice and Tundra only appear in the polar latitudes with the exception of Ice hills, which may occur on high-altitude tiles with at least moderate rainfall in temperate latitudes.		Tundra and Ice are placed on any tiles that are sufficiently cold and (in the case of Tundra) wet. Tundra and Ice are used (also) to represent alpine tundra, i.e. in plots that have a high elevation but aren't rugged or high enough to make them impassable.
Credits	Adopted some code from c2c_World.py that adjusts per-tile temperature values to the tile's distance from the sea.	
Rationale	Mixing some Ice hills into clusters of Peaks seems like a nice way to represent mountain passes. That should be intuitive enough; I don't think players will interpret it	

		at medium altitude in a temperate zone. Apart ce at medium or low latitudes look too strange, belts.
Tbd.		choice for mountain passes; representing also in types should be used – this only concerns a
	have to be surrounded by desert; a st non-desert tiles are OK. No cold r the poles.	Oases only on tiles entirely surrounded by desert. Sometimes large deserts are placed right next to tundra.
Rationale	Oases that are totally surrounded by	desert are rarely useful.
Attempt to to with a 50%		Comment in the script (by Cephalo probably): "It looks bad to have a lake, fed by a river, sitting right next to the coast. This function tries to minimize that occurrence []."
Rationale	I think those lakes are fine if they do their occurrence.	n't occur too frequently; don't want to "minimize"
rivers, the regenerator in	est are placed by the standard river the DLL. And I've tweaked the PM discourage rivers in extreme	By default, v3.3 lets the DLL place all rivers. Optionally, the PM river generator (pretty much unchanged since PerfecWorld 2) can be used instead. The PM generator is based on the rainfall map and tends to place most of the rivers in extreme latitudes, especially near the equator. This can leave few rivers for the temperate areas, and Desert Flood Plains are also pretty rare. The PM rivers also tend to be shorter than the rivers placed by the DLL.
Rationale	Rivers through the rainforest have, h	count how crucial a river is for human habitation. nistorically, not been as important as, say, the Nile cs with rivers also exacerbates the problem of egion.
	more short rivers (placed by PM) maincreases realism and may also, indunits more relevant. Letting the DLL	nt entirely from the precipitation model, and some ake coastal regions more valuable, which irectly, help the game balance by making naval place some of the rivers seems like a good easonable coverage with rivers across the map.
Tbd.	_	es to the river generator in c2c_World.py, but his nat doesn't look like it's straightforward to port.
starting plot functions the	The balancing ("normalization") of the tiles near starting plots is handled entirely by the DLL functions that most other map scripts use for normalization. In v3.2, all the standard normalization function are disabled and replaced with custom code to seems very reluctant to make any changes: Normalization. rivers or lakes are added, no bad terrain (tund converted, jungles and peaks only removed when they occur in large numbers. v3.3 has reenabled the addition of rivers and lakes through the DLL.	
Rationale	Rationale The PM normalization code can lead to awful starting locations. BtS might do a bit too much balancing (especially for a map that's supposed to look natural), but, fortunately l've already made changes (id 108, 027) that make the balancing less aggressive.	
Added some	e code that encourages one starting	The PM code for assigning starting sites tries to

site per continent to be placed inland. However, this only matters if the Starting Position Iteration (SPI) algorithm is disabled through XML; when SPI is enabled, the DLL takes over the assignment of starting sites.

(after narrowing the search to a few dozen candidate sites) maximize the distances between starting sites. This means civs frequently start on the tip of some peninsula (where they may easily get boxed in) and virtually never on a non-coastal tile.

Rationale

The PM code also suffers from using custom functions ("potential value") for tile evaluation, which, I'm confident, are inferior to the ones in the DLL that have been improved a lot through changes <u>031</u> and <u>027</u>.

Tbd.

The potential value functions are still used for splitting up the map inot New and Old World for the Old World Start option. Ideally, the found value function in the DLL should be used instead – or the DLL should handle the split entirely (Old World Start game option usable for all map scripts).

It might also be nice to use the starting sites assigned by PM as the initial solution of SPI. That's awkward to implement; see comment in PM's findStartingArea function. Or, if the current initial solution (i.e. the BtS algorithm in the DLL) actually works better, then PM should not waste time computing its own starting position. Seems a bit difficult, though, to separate the Old/ New World split from the computation of specific starting sites.

Resources are placed in the standard way (CvMapGenerator).

Fur can only be placed on flat tiles, and only above a latitude of 35°. This applies to all map scripts.

Custom code for resource placement. Seems to be largely the same as in CvMapGenerator. I guess cephalo wanted to make some changes without changing files other than the map script.

The BtS map generator places Fur on flat and hilly Tundra and Ice tiles at any latitude. Since PM uses Tundra and Ice (usually as hills but not always) to represent high elevations, Fur can appear fairly close to the equator. Deer is restricted to latitudes above 30°.

Rationale

I want my own, more extensive, changes (<u>129</u>) in CvMapGenerator to apply instead of the PM changes. (The PM BonusPlacer class also seems to be quite slow, but that's only based on one sloppy test.)

The Fur change isn't really relevant for PM anymore now that I've restricted Tundra and Ice based on latitude. It could matter for other map scripts.

Fur near the equator could represent savanna fauna, but, in BtS, that's clearly not the idea. 35° is still pretty far away from the poles, but, in combination with the no-hill restriction, it should be OK. Fur on hills doesn't make perfect sense to me anyway as the most widely known fur-bearing animals (beaver, ermine, mink) live near water, which tends to be more abundant in flatlands (mountain valleys too, I guess). Perhaps fresh water should be required?

Option for using the PerfectWorld 2 Climate System removed. Also can't opt for the hexbased PerfectWorld 3 landmass generator. I've kept the Perfect World 2 landmass generator as an option (renamed to "Plate Tectonics").

Options "PW3 Generator (Square Grid -Accurate)", "PW3 Generator (Hex Grid -Interesting)" and "PW2 Generator" for landmass generation; and "PW3 Climate System" and "PW2 Climate System" for climate.

Rationale

I want to remove experimental options in order to make the script easier to use.

The hex-based generator seems like an intermediate result of back-porting the Civ 5 code. I guess it adds some noise to the process; doesn't look particularly interesting to me. As for the Climate Systems, it looks like cephalo ported the PW2 system to Civ 5,

	made some adjustments, and then L PM, keeping the older version as an	unarMongoose copied the Civ 5 code back to option.
	Should probably just delete the PW2 option from the menu).	climate code (so far, I've only removed the

Enabled the Old World Start option is set. maximal number of meteors and er. Inside that diameter, the elevation. The decrement is maximal in the ecomes gradually smaller toward the erater. This way, there are usually no astlines created by meteors. eteor, the sea level now gets estore the land-sea ratio. (Meaning r will eliminate land tiles in one place ly- create new land tiles in other	If the Break Pangaea option is enabled (which it is by default), the script checks in the end if there is a single group of continents (spearated only by coastal water) containing more than 70% of the land tiles; if so, circular groups of land tiles are removed (explained as meteor strikes) until all continents have at most 70% of the (remaining) land tiles. The impact sites are chosen based on (I think) the betweenness centrality metric. The number of meteors is limited to 15, the average diameter appears to be about 9 tiles depending on map size. All tiles in the diameter have their elevation set to 0. Since Peaks are placed (in a later step) based on differences in elevation, coastlines created by meteors are (always?) covered by Peaks. Since the total number of Peaks to be placed is limited by a target ratio, few or no Peaks get placed inland.
The meteors	can strike only land.	The meteors may strike coastal water. This doesn't necessarily turn the coastal water into ocean because that's a matter of distance to land and not elevation.
	The sea level update is inspired by c subject: $\underline{1} \mid \underline{2}$	2C_World.py. CFC posts by Toffer90 on the
		plaining the Pangaea split algorithm, but the ndentifiable on the map – meteors don't really could also leak map knowledge.

Rationale	Latitude is a simplistic heuristic; a qu	ick stopgap change.

	Perlin noise and (more so) Plate ndmass generator to encourage ents.	Both map generators rarely, if ever, produce a continent of Eurasian proportions. The Perlin noise (PerfectWorld 3) often yields results similar to the "Snaky Continents" option of other map scripts.
		For PerfectWorld6, cephalo has made the same tweak as I (increased twistMinFreq) to the Perlin noise generator.
Rationale	More massive continents are more E Should occur at least sometimes.	Earth-like and make diplomacy more interesting.
Tbd.	Still not massive enough. I don't think the Perlin noise generator has a suitable parameter. Reducing the resolution (hmWidth, hmHeight) should, in theory(?), result in coarser structures, but lowering the resolution quickly results in block artifacts. I guess one would have to combine Perlin noise with a different input – e.g. the Plate Tectonics (PerfectWorld 2) generator.	
<u> </u>	g lakes, the map areas are now only once in the end.	They're recomputed after every added water tile. This adds a couple of seconds to the total map
	if this is purely a nonfunctional at least I'm not seeing any adverse	generation time.
Tbd.	DLL. That said, it's difficult to determ through the DLL-to-map-script calls	ance substantially by moving some code into the line which parts are slow. So far, I've only stepped in the debugger to get an impression. The lake still only a small portion of the total time.
The elevation map (i.e. early in the process of generating terrain) gets shifted sideways by an offset in a way that minimizes elevation values at the western and eastern map boundaries. Both landmass generators seem to make some effort to avoid land at the map boundaries, but the result is not reliably optimal.		
Credits	Credits Based on code in Totestra (<u>Git commit</u>). Though the latest, "streamlined" version has thrown that code out (<u>Git commit</u>).	
Rationale	Still doesn't reliably avoid land at the boundaries. It's not even possible to do when continents overlap horizontally. And my algorithm optimizes a (weighted) sum of elevation values; a more exact result could be achieved by calculating the sea level threshold and counting the plots above the threshold. However, making use of the target land-sea ratio this early in the map generation process might be a bit messy. Ir any case, based on some limited testing, the current solution does improve things.

Increased paranoia based on the threatening civ's tech era; up to a factor of 1.5 in the Future era.		Paranoia ratings are not adjusted to the game progress.
Rationale	Al civs become more willing to conquer faraway cities over the course of a game (because maintenance becomes less of an issue and unit mobility increases).	
Tbd.	Perhaps the "closeness" values that enter into the paranoia calculation should already be adjusted to the game progress.	

023	Occupation countdown based on revolt probability	
AdvCiv	BtS/ K-Mod	

Size. A revolt sets the timer to 2 plus the number of prior revolts. Damaged units have their culture garrison strength reduced proportionally to the damage. The per-turn chance to decrease the occupation timer is shown on the main interface (city tile help text) and on the city screen (Nationality bar help text). Rationale BtS occupation times get too long in Renaissance; one reason why it's difficult to catch up at that point. 10 turns is a very long time when the game may last just 100 more turns, and the city may still have to spend some 20 turns on essential buildings before it starts paying off. By basing the occupation duration on the revolt probability, I hope to reward players that conquer only one or a few cities at a time and can then afford to sit in them to make occupation end quickly. Generally, occupation durations are still going to increase as the game progresses — mature cities tend to have high revolt probabilities. Now, 3 turns is often just the time that units need for healing anyway, s this would hardly slow down conquests if it weren't for the reduced garrison strength of damaged units. I'm not showing a message when an occupation counter is decremented; could become too much when occupying several conquered cities. Config The conversion of revolt probability into the probability of decrementing occupation can be tweaked in GlobalDefines_advc.xml. Can also restore the BtS rules there (longer but deterministic occupation). See also 101 reverts the K-Mod changes to revolt probability. Revolts can't happen in occupied cities (conquestNo revolts during occupation.

or prior revolt) if the city owner is at war with the cultural owner. If they're not at war, a revolt in occupation is possible but mitigated by the following special rules:

- The revolt test is only executed if the decrement-timer test has failed.
- Revolt probability is halved while in occupation
- A revolt during occupation does not increase the occupation timer; it does increase the revolt counter and can flip the city.

Being at war does not increase culture garrison strength.

Culture garrison strength doubled while at war.

Rationale

If revolts were impossible during occupation, a player could withdraw all units to deliberately prolong occupation, which makes the city worthless for the current owner – but also for the cultural owner (can't flip).

Regular revolts during occupation would be too punishing though. The halved probability only makes up for the loss of garrison strength when units are damaged as part of a revolt.

I don't like having complicated special rules for revolt during occupation, but I don't see a better solution. Or perhaps a city should flip deterministically after spending 10 consecutive turns under occupation (unless at war)? That would be a bit simpler.

It's a bit problematic that cities can remain under occupation indefinitely while at war, but the above rules would lead to small probabilities of potentially painful revolts pretty regularly. I guess a grace period would have to be added (there's already a timer for cultural ownership after conquest), and maybe if foreign culture strength were halved (quartered? martial law does make it easier to put down a rebellion) instead of halving revolt probability, it could work, but that wouldn't work so well for peacetime occupation – would usually drop revolt chance to 0 once a revolt occurs. (Or maybe that's OK?) Pretty sure that allowing revolts while at war would further complicate the rules. Revolts while at war would also have to be counted as a war success of the revolt (AI) player.

See also

Brief <u>CFC discussion</u> about revolts under occupation.

An occupied city heals units only as fast as a friendly non-city tile (15 HP per turn).

An occupied city heals as fast as an unoccupied one (20 HP per turn) except that Hospital doesn't count while in occupation.

Rationale

For plausibility and to slow wars of conquest down a bit more. 10 HP per turn (heal rate in neutral territory) might be even more appropriate, but then players could heal units faster by moving them onto some owned tile adjacent to an occupied city, which would be counterintuitive and tedious.

024	Order in which AI contacts other AI randomized	
AdvCiv	1	BtS
When contacting other AI civs for trades, the AI goes through them in a randomized order.		Fixed order based on the player slot id.
	Some deals aren't mutually exclusive, but the AI can e.g. give away a resource only once, and may only have enough gold to convince one civ of a joint war. The fixed order leads to a slight bias for trading with AI civs with low ids.	

025	Reduced culture spread by capitulated vassal onto master's tiles	
AdvCiv		K-Mod
The tile culture spread by a city onto a tile is halved if the city owner is a capitulated vassal of the tile owner. Capitulated vassals spread their culture normal control of the tile owner.		Capitulated vassals spread their culture normally.
Rationale	Even if cities can't flip to vassals (change <u>099c</u>), the revolt-inciting culture spread is still a good reason not to accept capitulations. It's OK if capitulation isn't always the correct choice, and perhaps this is an interesting dilemma, but capitulation should be correct more often than not, and 099c makes it much harder overall to keep revolts in check.	
Config	Through GlobalDefines_advc.xml

offer, when trying to balance both sides of the		The AI can offer deals that are slightly more favorable to the player, but the portion of the AI treasury offered for trade isn't increased.
Rationale	The aim of the K-Mod change was to make it "worth considering the deal the AI offers [] rather than going straight to the renegotiate button" (from the K-Mod 1.07 changelog). But a worthwhile offer still seemed very rare, so, while worth considering, it didn't exactly hurt to never consider AI proposals.	
Config	AI_OFFER_EXTRA_GOLD_PERCENT in	GlobalDefines-advc.xml
Tbd.	A general problem with any one-time offers: If the player can't just click "renegotiate", then the player doesn't know what else the AI might have. Encourages the player to routinely enter the Foreign Advisor during diplo. The only fix I can think of (other than removing the one-time offers) is to have the AI remember its initial offer. Then, if the deal is renegotiated, that offer remains available through "what would make this deal work": If the player offers to give the AI what it had originally asked for (or that and sth. in addition), or asks for what the AI had originally offered (or a subset of it), the AI suggests the original offer unless it finds an even better one. This way, the player would again always renegotiate, but would still take a look at the original offer in order to possibly get back to it.	
	For now, I've added a loading screen	n hint about opening the Advisors during diplo.
Another way to make one-time offers more attractive: Increase the trade value for "fair and forthright" trade if an AI offer is accepted without rene (but don't increase the trade value for trade with worst enemy). Or even d trade memory if an AI offer is rejected. Or, another idea: Relax trade denia e.g. by randomly treating the relations modifier as a couple of points higher making attitude-based checks while putting together an AI-to-human trade		e if an AI offer is accepted without renegotiation or trade with worst enemy). Or even decrease faired. Or, another idea: Relax trade denial checks, ns modifier as a couple of points higher when
		des are often worse than the trade resulting from make this deal work?". Should check a tech trade to the player.

027	Changes to the selection of starting	sites; starting position iteration (SPI) algorithm
See also	021b: PerfectMongoose has its own algorithm for assigning starting locations, which SPI, if enabled, supersedes. 108: "Normalization" of starting sites (based on the results of SPI). 108b may swap starting sites between players (based on the results of SPI). 031: Changes to AI city site evaluation – which is the basis for the initial selection of starting sites. Many of those changes also factor into the evaluation of the space for expansion performed by SPI. CFC thread about SPI	
AdvCiv		BtS
If the map script doesn't override any starting position function, then SPI treats the position		There are three DLL functions concerned with starting positions that map scripts can override:
found by CvGame::assignStartingPlots as an assignStartingPlots, findStartingPlot		assignStartingPlots, findStartingPlot and

initial solution (to the problem of finding a balanced starting position, i.e. an assignment of one starting site to every civ) that it tries to improve on iteratively. Upfront, SPI computes a selection of alternative starting sites, typically 5 to Medium_and_Small, Hemispheres, Great_Plains, 10 times as many as the number of civs in the game. Those sites are selected in a way that balances maximal found-city values (evaluating only city radii, not surroundings) against maximal dispersal across the map. Each iteration then considers moving one or two of the current starting sites to alternative sites. If a (single or double) move is found that significantly improves assigns a starting site to one player at a time by that move. Then the next iteration starts unless the new solution is already deemed good enough select the least crowded landmass, and then or a time limit is reached. SPI also terminates if none of the considered moves would be an improvement. I'll briefly describe below how starting positions are evaluated, i.e. what attributes are treated as desirable, and which moves are taken into consideration.

If a map script overrides findStartingArea, then SPI considers only alternative sites on landmasses where at least one starting site is located in the initial solution. I've modified PerfectMongoose so that it overrides findStartingArea instead of assignStartingPlots. when the Old World Start option is used and otherwise leaves the starting position entirely to the DLL.

SPI will freely change starting positions in nonteam games on Pangaea. For Pangaea team games and for any other scripts that override assignStartingPlots Or findStartingPlot, SPI takes no action.

findStartingArea. The following official/ bundled scripts override none of them:

Fractal, Continents, Balanced, Big and Small, Tilted Axis, Ice Age. Likewise, K-Mod's not too Big or Small doesn't override any starting position functions, nor does AdvCiv's Mixed Continents (advc.mxc).

Those scripts leave it to CvGame::

assignStartingPlots in the DLL to assign a starting site to each player. That function greedily the attributes of the position, then SPI commits to calling CvPlayer::findStartingPlot, which, in turn, calls CvPlayer::findStartingArea to selects the starting site with the highest foundcity value on that landmass. The found-city value computation penalizes short air distances to any starting sites already occupied by other players (CvPlayer::startingPlotDistanceFactor), and takes into account workable tiles on the same landmass in a 11x11 (K-Mod: 13x13) square centered at the prospective starting site.

> The scripts Lakes and FantasyRealm override only findStartingArea. I think in a pretty inconsequential way since those scripts create only one major landmass anyway; so they basically work as described above.

The remaining scripts (offical, bundled and also all scripts from the PerfectWorld family) override assignStartingPlots Or findStartingPlot. Most of them merely limit the set of potentially valid starting sites and then let the global findStartingPlot function defined in CvMapGeneratorUtil.py greedily select the valid sites with the highest found values. Effectively the same thing as CvPlayer:: findStartingPlot in the DLL except that the crowdedness of the landmasses isn't explicitly taken into account.

Donut and Pangaea only allow coastal starts; the latter applies that restriction only in team games.

Highlands, Boreal and Rainforest don't restrict starting positions but perform some cleanup around the sites found by CvMapGeneratorUtil.py.

Tectonics, Earth2, Terra and NewWorld rule out New World starts. Earth2 also has more than 15000 tiles at Huge size. GlobalHighlands has nearly as many; also problematic.

The other scripts impose various non-trivial

SPI also handles players in scenarios that have no fixed starting coordinates, i.e. players with RandomStartLocation=true or any players that didn't get one of the plots designated as StartingPlot. And I've dialed down the randomness resulting from the RandomStartLocation flag.

restrictions.

Scenarios without fixed starting coordinates (StartingX=/ Y=) and without preplaced cities (CityPopulation=) use

CvGame::assignStartingPlots. If those scenarios have plots flagged as StartingPlot, then those plots are randomly distributed among the players. If there are more players than starting plots, then CvGame::

assignStartingPlots will find additional starting sites – as it would e.g. for Fractal. Exception: Players set to

RandomStartLocation=true in the scenario file can't receive one of the designated starting plots; the WB scenario parser will instead call CvPlayer::findStartingPlot with bRandomize=true. That parameter adds (a lot of) random noise to found-city values. The BtS version of the Europe scenario is the only scenario that uses RandomStartLocation=true. The six starting plots from the Vanilla version of that scenario still exist in BtS, but are no longer used (because all players receive random starts).

Config

SPI can be disabled through ENABLE_STARTING_POSITION_ITERATION in GlobalDefines_advc.xml. For PerfectMongoose, the map's own algorithm can be re-enabled (to take precedence over SPI) in PerfectMongoose.py (search for "advc.027"). The exception for the Pangaea map script is hardcoded in StartingPositionIteration.cpp.

Debug output can be enabled in StartingPositionIteration.cpp (SPI_LOG, DEBUG_SPACE_BREAKDOWN). For debugging, MapRandSeed and SyncRandSeed should be set to a value greater than 1 in CivilizationIV.ini; otherwise generated maps aren't reproducible. For PerfectMongoose, self.UsePythonRandom = False has to be set in addition in PerfectMongoose.py.

Regarding scenarios with RandomStartLocation, the randomization of found-city values can make sense to avoid getting the same starting sites in every game. That said, the Europe scenario has random resources anyway, and, in any case, the randomness was overdosed.

Rationale

Desirable properties of a starting position (some obviously conflicting):

- Fairness giving every civ a realistic chance to compete with every other civ.
 Some degree of unfairness is in my opinion also desirable because this magnifies the effect of the StartingLocPercent handicap (see 108b) and thus can be a fairly organic way to make the game more challenging.
- Tension if sites are close together, the early game tends to be too tense, even if
 the respective civs all have enough room for expansion to, in theory, coexist
 peacefully. If sites are far apart, in particular, if one civ is alone its landmass, then
 there is too little tension in the first half of the game.
- Plausibility the starting sites represent the cradles of civilization; they shouldn't be mediocre sites.
- Variation a great variety of starting sites in terms of available yields, resources, freshwater, terrain features, coast/ inland, latitudes, distance to other civs and room for expansion increases replayability.

I think the BtS algorithm – with a fair number of tweaks by various modders – does a pretty good job at finding the next best site. The main problem is that it's a greedy algorithm, placing one player after another. The last site that gets placed and its neighborhood often have too little space. On concave landmasse, the use of air distances is another significant shortcoming. The PerfectMongoose (PM) algorithm is less greedy and uses path distances across land, but neither BtS nor PM can deal with shallow-water connections, which is a significant problem for PM because its maps tend to be quite watery. The PM algorithm also tries too hard to maximize distances between starting sites, which results in coastal starts all around.

On the bottom line, the unfair starting positions on "scraggly" maps like PM or the Big/Small family seriously affect their playability, and also Fractal maps that are supposed to be somewhat crowded (which is what the AdvCiv standard settings aim at) often end up giving one or several players far too little room.

The motivation for using an iterative algorithm is that an evaluation of a given starting position, while a complex task, is conceptually straightforward and computationally feasible, while I'd have no clue how to devise an efficient algorithm that somehow places all players simultaneously at their final starting sites. For centroidal Voronoi tesselations, iterative algorithms that move one centroid at a time (Voronoi iteration) have been used with some success. A Voronoi diagram isn't exactly what I need because, in Civ, a) not every map tile is equally important, b) the distance metric needs to account for obstacles, and c) tiles that are close to multiple starting sites should not be counted for just one site. Nevertheless, the two problems have similarities and the same type of algorithm might work for both. (That was my intuition anyway.) It's also nice that the BtS algorithm doesn't get discarded; it's put to good use for a strong initial solution.

Partitioning space is computationally hard. The pre-selection of alternative starting sites goes a long way toward making the effort manageable. Typically, only a small portion of land tiles are suitable as starting sites anyway (sufficiently high found-city value), and dispersal, i.e. the elimination of all but one or two potential sites in a cluster, only means that SPI isn't able to adjust starting sites by just one or two tiles; such fine-tuning shouldn't be necessary either. Still, among dozens or, on (super-)Huge maps, even a few hundred of alternative sites, it's infeasible to evaluate every possible starting position. So the iterative algorithm is still needed for a heuristic search in the solution space. I suppose that, given a function for evaluating starting positions, one could apply genetic programming or reinforcement learning, but a starting position evaluation is not cheap computationally and I don't think those generic, off-the-shelf algorithms are frugal enough. Also, devising my own algorithm was probably less work than integrating an external library.

One further desirable property – that I had taken for granted initially:

Meaningful choice to move the starting settler

Initially, SPI made it optimal to settle in place most of the time. The first decision in the game – arguably shouldn't be as consequential as it is – but even more importantly shouldn't be boring. I've taken a number of small measures to improve the situation: Increased the overall resource density a bit again (see 129); randomized the selection of potential sites a little bit so that they're not always quite optimal locally; increased found-city values a bit when there is a resource or other high-yield tile just out of reach; increased the lake placement chance (normalization; see 108) a bit again; introduced a bias for the inner ring when placing extra resources (normalization; see 108).

Tbd. Would like to use SPI for all map scripts, but will have look at them one by one to figure out how SPI can respect the restrictions that they impose. E.g. for the New

World scripts, it should be possible to have them override only findStartingArea. For others, it might be easiest to let the DLL ignore the restrictions in the script (going by the map script name as I've done it for Pangaea) and to reimplement those restrictions in the DLL. This way, the mod won't have to include modified copies of unconventional scripts that I don't want to be listed near the top on the Custom game screen.

030 treats land cordoned off by peaks as a separate continent. Does that solve the problem with having to open up "pockets" of peaks on Highlands, Boreal and Rainforest? Depends on how many there are; mustn't take too much land off-limits (as SPI would probably do) when assigning starting sites. Should be OK at least for Boreal and Rainforest; ought to have fewer peaks than Highlands. I've already adjusted the starting site evaluation (under id 027, but regardless of whether SPI is enabled) so as to avoid starts near a land area boundary. This is problematic on any map because, if the normalization step ends up breaking the boundary, a starting site that was previously isolated by a mountain chain can become unexpectedly powerful.

Some more specifics about SPI (rationales included):

When evaluating a postion, several statistics are computed that correspond to the goals of high fairness, high plausibility and medium tension stated in the "rationale" box above. As for fairness, a "start value" is computed for each of the current start sites, expressing how favorable the site is for whichever civ that starts there, and the distribution of those start values (especially its outliers) determines how fair the position is. The sum of the start values is a measure of the position's overall plausibility. Tension is covered by a "volatility value." All those values combine into an overall "starting position value."

The start value of a site is computed from its found-city value (counting only the city radius), a "space value" for the surrounding land, or really any land that a civ starting at the site might be able to claim, and modifiers accounting for possible trade and warfare. Those modifiers also take into account game options, most importantly "No Tech Trading" and "Always Peace." The "space value" is based on path distances and tile "yield" values (perhaps a bit of a misnomer because trade values of resources also factor in). All path distances and yield values are precomputed before the first iteration; doing so repeatedly during the iterations would not be computationally feasible. Since we're only interested in distances that involve potential city sites, the distance table takes up a few megabytes of memory at worst. I use Dijkstra's algorithm with a distance metric that assigns a high – but not necessarily prohibitive – cost to transitions from land to shallow water and from shallow water to deep water.

The path distances still don't fully solve the problem of civs getting cut off by a rival city at a chokepoint. Specifically, path distances fail when such a chokepoint is closer to the rival while much of the terrain beyond the chokepoint is about equally close to both civs. I think this could only be addressed by actually simulating how the civs will expand from a given starting position.

The order in which moves are considered is important because the algorithm commits to the first decent move that it finds. Apart from saving time (by cutting the current iteration step short), this isn't necessarily a worse strategy than selecting the move that offers the greatest immediate improvement; such a move might lead into a local optimum. The algorithm considers moving outliers (in terms of start values) first; negative outliers have especially high priority. Sites with high volatility are also prioritized. Within the same continent, only moves to neighboring sites are considered, the rationale/ intuition being that the initial solution can often be made to work with minor local changes. The algorithm also considers destinations on other continents, but only a single site per continent; this leaves it to subsequent iterations to optimize the placement within that continent.

Moving just one site at a time doesn't seem promising, considering that every iteration step has to improve the start position value. Often, moving one site from A to B will give some other site(s) near A too much space or some site(s) near B too little, and the starting position value might only

improve if other sites are moved to compensate and then further sites to compensate for those moves (ripple effect). The more the merrier, but I don't think moving more than two sites at a time is computationally feasible, and it doesn't seem to be necessary either as the current algorithm works well enough.

In team games, SPI computes starting sites as normal (see above) and then swaps sites between players in order to let teammates start near each other and to avoid one team getting outnumbered by another on any continent. A greedy algorithm is used. After SPI is through, the BtS algorithm may make further swaps, but only when swapping significantly decreases distances between teammates and never between continents.

Exception: For very large team games (high player count, high average team size), SPI isn't used at all.

108b makes some minor changes to the BtS algorithm. I've summarized the BtS algorithm for starting site assignment in team games under that change id.

CFC post by me

Rationale

The BtS algorithm doesn't take into account civ counts per continent. It's obviously very unfair when e.g. all three members of team A start on the larger of two continents together with a single of team B, while the remaining members of team B start on the smaller continent. In such a case, a symmetrical starting position (two members of each team on the larger continent) should be preferred. Fairness shouldn't always overrule vicinity though; players of team games are used to starting near each other most of the time, I guess it's important for the collaborative feeling. Also, having teammates start far apart reveals more information about the map early on, which diminishes the element of exploration.

I could've modified the BtS algorithm so that the distribution of players across continents is taken into account, but I wanted to make use of the path distances computed by SPI (which take into account shallow-water paths), and that was easier to implement within the SPI class. The BtS approach of processing all possible swaps (of starting sites between pairs of players) in an arbitrary order is also a bit suspect to me. I've been too lazy to implement a sensible heuristic for ordering the swaps. My greedy algorithm doesn't work great though; therefore I'm still running the BtS algorithm afterwards with some restrictions. It seems to work especially badly for large (or rather Huge) maps with large teams (more than 2 members). Teams can get split up across three continents then even though the (main) continents are so large that one team outnumbering another isn't a major concern. For now, I'm leaving such maps completely to the BtS algorithm (i.e. no SPI at all). Perhaps there would be no harm in letting SPI at least make the initial selection of starting sites (but on Huge maps, SPI doesn't usually fare much better than BtS because of the time limit on the number of iterations) ...

In summary, the Starting Position Iteration algorithm is, so far, used for the following map scripts:

Fractal, Pangaea (except team games), Continents, PerfectMongoose, Mixed Continents, not too Big or Small, Big and Small, Medium and Small, Hemispheres, Balanced, Tilted Axis, Great Plains, Lakes, Ice Age, Fantasy Realm, <u>Savemap</u> (New Starts option).

It also fills in missing starting sites in the following scenarios when the player count exceeds the number of starting sites designated by the scenario:

Africa, Battle, East Asia, Eastern United States, Planet, South America, Europe (In the BtS version of Europe, all sites get assigned by SPI.)

SPI is never used for maps with more than 12000 tiles. Huge normally has about 10000; Huge PerfectMongoose and Terra are a bit larger, but still under 12000. SPI also isn't used for large team games (specifically: if the product of player count and average team size exceeds 36).

Hemispheres	StartingDistanceModifier Of s and not_too_Big_or_Small.	16 of the official and bundled map scripts set a MinStartingDistanceModifier that affects the minimal distance at which the DLL can place starting sites: Hemispheres, Big_and_Small, Arboria, Boreal, Donut, Earth2, Global Highlands, Highlands, Rainforest, RandomScriptMap, Team_Battleground, Terra, Custom_Continents, FantasyRealm, Great_Plains, Mirror.
Rationale		erfere with the starting site selection. For the more nough. Custom_Continents: Don't want to copy

continent, co tiles that are Take the land the number of	uting the starting area score for a punt only those rivers and coastal n't peaks, tundra, ice or dry desert. It tile count times 0.5. Add 1.5 times of bonus resources. Oled, then this change only matters solution.	When starting locations are not determined by the map script (and most map scripts don't), then a starting continent is chosen for each player by CvPlayer::findStartingArea. That function computes a score for each continent and selects the one with the highest score. Part of the score formula is the number of river edges, the number of coastal land tiles (to account for the water surrounding the continent) and the total land tile count. Bonus resources don't count directly, but the total of all tile yields does.
Rationale	Too many civs had been placed on	continents near the poles.
Tbd.	Would be better to evaluate the surrounding water directly (than to count coastal land tiles); should be pretty easy to do through the Shelf class that I've added in change 300.	
See also	kekm.35: Further changes to address the same problem. 031 disables K-Mod city evaluation code that was trying to steer starting locations toward an even distribution of players among landmasses.	
If cheats are enabled, Shift+Ctrl+mouseover on a land tile without any units shows a breakdown of the starting area score. Various combinations of Ctrl, Shift and Alt reveal various internals for development purposes.		
Rationale	l've used this to figure out where the assignment of starting areas goes wrong, and left it in the code for future adjustments.	

		
	illages located directly at a starting oved. Exception: Not in scenarios.	Tiles with tribal villages are disregarded when looking for a starting site.

the sites wer values of the determine w If the site tha	ssigning starting sites to players, if re selected by SPI, then the start e SPI final solution are used to hich site is the strongest.	Starting sites are selected without regard to which player will start at which site. Technically, the sites still need to be assigned to players; this preliminary assignment is arbitrary. The proper assignment is done based on StartingLocPercent from the difficulty level, which, apart from some
volatility valu similarly stro has a signific	v based on difficulty has a high le (as computed by SPI) and a leng site (in terms of SPI start value) cantly lower volatility, then the humar en the low-volatility site.	scenarios, is going to be the same for all AI civs. I.e. human civs are supposed to receive a better or worse start than AI civs depending on the
Rationale	Found-city values aren't reliable when it comes to the space available for expansion (see somewhere above); they also put too much emphasis on the tiles within the city radius.	
	SPI tries to avoid selecting high-volatility sites, but this isn't always possible. Not assigning those sites to human players should significantly reduce the ratio of unplayable starts encountered by human players. That's worth compromising on StartingLocPercent (although I like handicapping humans through their starting site). High-volatility can just mean isolated on a somewhat small landmass or quite close to rivals (but not necessarily boxed in). I wouldn't want to make such starts exceedingly rare for humans, so it's good that the volatility avoidance mechanism doesn't guarantee low volatility.	
Tbd.	It would be better to not to (re-)assign sites until after the normalization step. As it is normalization can strengthen sites that looked weak, in some cases even drastically, in particular, when a removed peak removes a barrier between two continents.	
See also	108b: Other changes to the reassignment procedure.	
be improved game makes was used for start values conly for the capplies to rabut can also	ng whether a starting site needs to during the normalization step, the suse of data computed by SPI (if SP computing the starting sites). Both and found-city values (accounting city radius) are used. This mostly ndom extra resources and features, lower the target amount of food for food isn't already abundant.	Based on found-city values with the bStartingLoc parameter (AdvCiv: bNormalize I— if SPI isn't used), i.e. taking into account the city radius and its surroundings. The food target is not affected by found-city values.
Rationale	Use the best data available.

027b	Store RNG seeds used for map generation	
AdvCiv		BtS
game start a displayed in while hoverii main interfac	re stored in savegames and Debug mode when holding Ctrl ng over the big flag button on the ce. When the map is regenerated, ap RNG seed is updated.	Maps are generated based on the map RNG, but the sync RNG determines the civ and leader selection at game start if "Random" is chosen during game setup. The two RNGs are seeded by the EXE(?) with some random number (perhaps from the system RNG) unless MapRandSeed or SyncRandSeed are set to a value above 0 in CivilizationIV.ini. The game doesn't store the seeds, so map generation is only reproducible if the seeds come from the .ini file.
Rationale	For development purposes. Reading the seeds off the flag button and entering them into the .ini file is tedious, but at least there is now some way to reproduce the map generation process when something unusual happens.	
_	tarting site normalization process, RNG is used.	Normalization uses both RNGs, pretty haphazardly.
Rationale	To reproduce a regenerated map, the sync RNG seed of the original map needs to be used because only that seed will result in the same selection of civs and leaders. The seed mustn't be used for normalizing the regenerated map though. It's also just cleaner to commit to one of the two RNGs.	

028	Submarines as escorts	
AdvCiv		BtS
attacked, the against the bunit may repordered, i.e. defender (coodds). Invisible unit in the tile are attacker can	k with invisible and visible units is attacking player sees combat odds best visible defender, but an invisible lace that defender once the attack is if the invisible unit is the better ensidering unit cost and combat as don't defend if all the team's units invisible (same in BtS), i.e. an 't stumble upon an invisible stack, units don't defend units of other	- ,
Rationale	Not plausible for a Submarine to sit by while e.g. a fully loaded Transport gets attacked by another Sub. The new behavior makes Subs worse in situations when the defenders are outnumbered by modern ships, e.g. a Transport (or just a Work Boat) and a Sub against four Battleships. That said, players can easily prevent this by not stacking Subs with visible units. All in all, the change should make Subs (and Stealth Destroyers) a bit more useful.

029	Changes to air recon missions	
AdvCiv	I	BtS/ BBAI
until the end	of the subsequent turn of the recon or until the unit carries out another	Visibility ends on the <i>start</i> of the owner's subsequent turn. If the options for showing foreign moves are enabled, the player still sees all foreign moves before the fog of war returns.
Consequently, it doesn't matter much if a recon mission is carried out early in a turn (manually), or after all other units have moved (auto recon o queued mission).		BBAI introduced auto-recon for air units. The changelog says: "Air units can now be set to explore, they use the same explore logic as AI planes and then have extra logic if that doesn't push a mission. Note that planes on auto explore always move at the very beginning of your turn."
		The latter part doesn't seem to work; auto-recon (and queued recon missions) are barely usable because tiles are only visible from the end of one turn to the start of the next.
Rationale	During the owner's turn, nothing happens in the fog of war, so there isn't much of a point in hiding the tiles at the start of a turn. (It can make a difference for air strikes.) The advantage of my change is that players no longer need to remember which units had been visible, and it makes it easier to automate recon.	
	Would still be nice the have a "Recon until canceled" mission that repeats recon on the same tile every turn (akin to the Blockade mission; on that note "Blockade for one turn" would be nice to have too). OrionVeteran had started to implement something like this but didn't finish it.	
	I'd like to nerf recon a bit by allowing units on recon to be intercepted, ideally even when not at war (and no OB). And reduce the number of revealed tiles (-2 radius), especially for non-recon air missions (-3 radius).	
AdvCiv		BBAI
target when a Consider the around each Don't prefer		Only tiles adjacent to a candidate target are taken into account. Unowned tiles and water tiles are preferred.
Rationale	It seems that the BBAI code was written with the (only) goal of spotting enemy transports. I want to be able to also spot incoming forces on land.	
	A crucial bugfix in one of BBAI's auto-recon functions (CvUnitAI:: AI_exploreAirPlotValue, AI_exploreAirRange) is tagged with advc.001.	
	650 also lets the AI use the auto-rec	on code.

is not suppor	ous canMoveAllTerrain unit ability rted by my code. (Shouldn't crash, on't be aware of potential attacks.)	I don't think the BtS AI supports it either. Anyway, no unit actually has this ability. (Gunships can't enter water.)	
global warmi recalculated,	added or removed (WorldBuilder, ing), the water areas are not , i.e. the AI remains unaware if e.g. st Passage opens up.		
of fewer than like Lighthou	A city adjacent only to an ice-locked water area of fewer than 10 tiles can't construct buildings ike Lighthouse that require an adjacent water area of at least 10 tiles.		
Rationale	Shipbuilding in ice-locked cities makes the AI look very bad.		
Tbd.	Can't recalculate the water areas in a running game because various statistics and AI data are stored at the CvArea objects; hence the exceptions for scenarios and global warming. Another issue is that placing a Peak through WorldBuilder currently leads to recalculated land areas, which should be fine when creating a scenario, but bad when play is supposed to continue after exiting WorldBuilder. Should bite the bullet and write code that preserves per-area data after recalculation. Starting site normalization can also remove peaks; not sure if those recalcs are safe.		
	Also, plot groups (for trade network) aren't currently updated after removing ice. (That's not an issue introduced by change 030, but still)		

Or, if I can't do the above, I should at least change global warming so that Ice can only melt when it is orthogonally surrounded by water (so that water areas are unaffected by global warming). Could limit the (step) diameter of water areas (by limiting the search depth of the calculateAreas visit function), which might help the Al when the geography resembles the American continent (minus the Panama Canal). Then again, distances between coastal cities are rarely long enough to make naval movement between them impractical. Regarding Lighthouses in ice-locked cities: Easier to implement this way. Also plausible that a lighthouse isn't helpful in a city that is locked away from maritime trade. Even more true for Harbor, Customs House, Great Lighthouse ... I've cut some corners in the AI danger checks, meaning that the AI won't recognize that an enemy submarine can attack across Ice that fully separates two water areas. Seeing that submarines are normally invisible anyway, this will probably never be an issue (and if 315 allows Explorers to enter Peaks, they'll still only be able to attack Barbarians, and the Peak will probably block the Barbarians' sight anyway). If there is a problem after all: I've left the code for handling such situations commented out in the AI danger functions; the performance penalty is still going to be very small. See also 003b: Lists functions introduced for dealing with submarine movement across Ice. 033: The checks for naval blockade had relied on water areas not being adjacent to each other, so I had to change these checks. 051 is responsible for calculating areas in scenarios. 041 does allow Dry Dock and ship production in ice-locked cities. Hover text on water tiles whose water area is adjacent to sea Ice and has a size of less than 10 says that the tile is "ice-locked". Rationale To give some warning to the player that cities won't be able to construct most coastal buildings (and that ships, while allowed, may not be able to move anywhere). While the new text is pretty low-key and players aren't going to inspect icelocked water tiles often, I still would've preferred showing "ice-locked" only when a settler is selected or when a city has been founded adjacent to the water area. But I think the latter part would be confusing because water areas without a city would appear not to be ice-locked. Credits CFC user crullerdonut pointed the problem out to me. Tbd. Show it only when a settler is selected? AdvCiv BtS Fractal-based map scripts are two times less It seems that Peaks are just as likely near water likely to place a Peak on tiles orthogonally as inland. A Peak that is orthogonally adjacent to water can make part of a landmass inaccessible adjacent to water than on other tiles. via land. (Inland Peaks could do that too in theory but would have to form a circle.) Almost(?) all map scripts bundled with Civ 4/Warlords/BtS are based on Fractal, but <u>PerfectMongoose</u> isn't. Rationale On Earth, a drop in height from above the tree line to sea level is rarely so abrupt that it would justify a Peak next to a water tile, though there are some examples, in particular in the Central Andes. Still, there is (always?) a coastal strip wide enough to be traversed even by an army, so Peaks completely denying land access to an area is not realistic. Then again, the Darién Gap does prevent traffic by land between the Americas. This is a case of swamps more than mountains, but Civ doesn't have a swamp terrain type. As a compromise, I'm making Peaks that block coastal movement

	less likely rather than impossible.	
	This discussion on CFC is somewhat related.	
Config	Implemented in Python (CvMapGeneratorUtil.py)	

030b	Al doesn't train cargo units for naval assault in land/ice-locked waterbodies	
AdvCiv		BBAI
		Build cargo units for naval assault in all coastal cities that don't have a land path to an enemy city.
Rationale	Change 030 generally prevents cities that aren't adjacent to "relevant" water areas from building ships, but doesn't address the specific case of building up for a naval assault.	
Tbd.	The tracking of city counts per water area may not be totally reliable in scenarios. See comment in CvPlot::processArea.	

031	Changes to AI found value: Revised most of the code, rearranged it a bit and made several additions	
See also	108 makes changes to the found value of the initial city (which is important for starting site normalization). 040 assigns a found value to unrevealed tiles. 052: changes AI found behavior in scenarios 007 makes some changes to the found values computed when the Alt key is held down in Debug mode. 036b: changes to resource evaluation (few so far; affecting both city placement and resource trade)	
Tbd.	I don't think the found value comput	ation takes city specialization into account at all.
		ifier is quite primitive. The culture rates of nearby K-Mod comment about that in (what's now) eModifier.
	Perhaps introduce a personality-based factor that e.g. makes Willem (Netherlands) want to found cities more closely together (i.e. worry less about overlap) and Genghis Khan (Mongolia) farther apart.

resource ir to work at tiles withou		Tiles without a good bonus resource in the city radius are disregarded; resources that the AI doesn't have access to yet and food resources are considered as "good".
		Strong and uncapped impact of distance in all eras, making the AI highly reluctant to settle e.g. the New World on Terra.
Rationale	A river (or oasis) without resources i Flood Plains).	s rare, but can be worth settling on (esp. with
	About the impact of distance: Need to be careful not to revive the AI habit of plantic colonies on a far edge of foreign territory. I think that used to happen in Vanilla Civ	

and in Civ 3.

Fixed a likely bug in the K-Mod evaluation of additional copies of a resource near a city site.

Utility of happiness/health/strategic resources (i.e. not the utility from yield) halved when the resource can't be connected yet. Further reduced account. This leads the AI to aggressively settle if there is already an improved copy available.

Reduced the penalty for bad tiles near a city site by subtracting a multiple of the number of bad tiles rather than dividing by it. Decreased the base utility that the found value starts at.

Utility reduced when a site has very little food; to The code that checks the available food only the point of making the AI unwilling to settle completely dry areas. The penalty is not applied to resource trade values though, so the AI could e.g. settle in the middle of a desert in order to get account e.g. regular Grassland Farms, and the access to Oil.

Ice, desert and tundra hills counted as bad tiles. Ocean tiles count as half bad.

When a resource enables units, the AI power values (from XML) of those units are factored into the utility value of the resource (which, in turn, factors into found value).

Increased the utility counted for yields from bonus resources, especially if these yields are provided from a small number of powerful resources.

The per-tile utility values are decreased by a constant, then sorted in descending order and multiplied by decreasing weights. The total is multiplied by a normalization factor to keep it on a similar scale as in BtS. The special penalty for bad tiles is much lower than in BtS.

Especially extra copies of strategic resources had been way overrated.

Utility computed as if the resource could be connected. Unimproved copies not taken into near any Oil sources when Oil isn't vet workable.

Sites with 10 or more bad tiles practically never settled. The bad-tiles check seems to be the main guard against settling land that isn't (ever) worth settling.

takes into account food on resource tiles, along the lines of "the Grassland Cow will allow this city to work its Plains Hill Gold" but doesn't take into low-food penalty is rather moderate. It applies to the trade values of resources though (although trading/ sharing of resources does not require the tile to be worked).

Hill and ocean tiles are never counted as bad (nor half bad).

Evaluates the unlocked units only based on how useful they are compared with other currently available units. Tends to overrate Iron and underrate Oil and Uranium (once they can be worked).

Utility is assigned based on the total yield from bonus resources (assuming they're all improved and worked); the number of resources doesn't matter in this context.

The per-tile values are mostly based on tile yields. The values are summed up without weights (or with uniform weights if you will). A special penalty is applied for "bad" tiles toward the end of the found value computation.

Rationale

The subtracted constant represents the food consumed by the citizen working the tile and largely replaces the bad-tile penalty. The food consumption is the reason why e.g. a yield of 2 food and 2 production is about twice as good as 2 food and 1 production. The weights give the AI a tendency to prefer a few good tiles over a lot of mediocre (or marginal) ones. A few powerful resources (e.g. Gold, Pig) are preferable to several weak resources (e.g. Silk, Fur) because, in the latter case, it takes longer and costs more food to grow the city enough to work all the resources. Also, while cities with few worthwhile tiles aren't very profitable, they also don't cost much maintenance because the population stays small.

Tbd.

Shouldn't count bad tiles at all. The "special" yields from resources are also dubious; should be possible to cover these through the tile weight distribution. The "taken" tiles count also seems redundant. Try this:

Count for each tile in the city radius (and the city center) a yield vector that is the sum

of the nature yield and, if applicable, resource improvement yield. Subtract the 2 food consumed per citizen. Compute from the yield vector a tile yield value that should also include a base value to account for a run-of-the-mill improvement and (negative) maintenance and civic upkeep paid for the extra citizen. (Predicting the improvement type gets too far into the weeds I think.) Also compute a food surplus value for each tile — or perhaps better two values: a natural food surplus and an improved surplus that assumes Farm and Lighthouse if those are legal. Perhaps just assume another +1 improved surplus in the Industrial era to account for Biology and food corporations. From the tile yield values, culture modifiers, the sequence of decreasing weights and the per-tile food surplus values, AIFoundValue::sumUpPlotValues needs to compute the tile value, essentially simulating the growth of the city population, applying penalties when the cumulative food surplus runs low or when the city relies on food from culturally contested tiles. This should get rid of all the "special" variables and the bad tile and taken tile counting.

When there is no easy means of generating culture, unowned tiles in the outer ring and all foreign owned tiles should be penalized. This could be accomplished by changing the criterion by which tile values are sorted before computing the weighted sum. E.g. the first two positions could be reserved for tiles that can be worked without expanding borders. Sorting should also be biased toward a high food surplus. Will need a (private) CityPlot class for the sort criterion; should also be useful for tidying up the main tile evaluation loop in AlFoundValue::evaluate.

Apart from the overall yield value, the weighted sum could also provide (a rough guess at) the maximal city size and the cumulative yields upon reaching that size. Those yields could be used to reward cities that specialize on one type of yield. The maximal city size should also be useful for evaluating health.

Utility threshold for founding a city increases throughout the second half of the game.

Threshold lowered based on the number of owned corporate HQs.

Increases only based on number-of-cities maintenance, not game progress.

Threshold lowered based on total city maintenance (to prevent overexpansion), which includes corporation maintenance and can lead to very high thresholds once corporations have spread.

Rationale

Toward the end of the game, too little time remains for cities to become profitable and amortize.

Corporations can cause high city maintenance before the Modern era, i.e. not that late in the game. At that point, high city maintenance shouldn't worry the AI too much because the corporations bring in high yields that can be turned into gold if necessary.

AdvCiv

BBAI

Reduced the utility assigned for access to the sea, especially when the site doesn't offer much production, when already having many coastal cities and when playing on Pangaea.

Nothing to encourage the AI to found at least 25% of its cities at a coast.

Code added to encourage coastal cities for more AI shipbuilding but doesn't take into account how much production these cities would actually have. Also adds a clause that gives a substantial extra boost to coastal sites when fewer than 25% of the owned cities (rounded down) are coastal. This can lead to coastal cities in totally awful sites.

Rationale

The current code may still encourage more AI coastal cities than would be rational, and that's OK with me if it helps make naval units viable. But I see no reason to have every AI civ found at least a few coastal cities – being entirely landlocked isn't a particular disadvantage.

Taking the map script name into ac AdvCiv	ccount could help in other parts of the AI too. K-Mod
Bug fixed: Tech requirement for removing Jungl had not been taken into account.	e The Al happily settles its second city in the middle of Jungle.
Great reluctance to settle sites that will lose foo due to bad health during the Ancient and Classical era. No change for other eras (except for the bugfix).	
Some extra utility for chopping opportunities, utility from good health capped.	Chopping only accounted for indirectly through good health.
See also 119 allows chopping only on owner	d tiles.
When computing the total potential production rate at a city site, count 1 production for non-Hil land tiles only if a worthwhile improvement that grants production (i.e. a Workshop with +2 production) can actually be built there.	Count 1 production for any non-Hill land tile, eve a Peak and regardless of available technology.
2 production per Hill (no change).	
Some utility is counted for tiles in the radii of other cities, i.e. tiles that could be stolen from rival cities or shared with a friendly city. Such tile are not counted as bad tiles. Stolen tiles: Tile utility is reduced through	Tiles within the radius of a city (rival or friendly) are counted as "bad tiles" and otherwise disregarded. For tiles outside city radii that are within rival borders, tile utility is decreased (a bit, say, by 25%) based on the amount of foreign tile
essentially the same formula that K-Mod uses for tiles that have a rival owner but aren't in any city radius. I'm making that formula more pessimistic overall and especially for tiles in a rival city radio because the rival city owner is more likely to focus on culture when there is a contested workable tile. A second (new) formula accounts for potential diplomatic (or not so diplomatic) consequences of stealing tiles. This formula is personality-based (Protective trait, power threshold for limited war).	The AI can place cities close to each other, it just doesn't expect the new city to win any contested ustiles.
Shared tiles: I'm counting only those tiles that a going to be assigned to the new city, and only tiles that the old city is probably not going to new in the medium term (i.e. not until it grows three more times). Even then, the old city is normally going to miss the tile at some point, and I'm reducing the yield value counted for the new city to about 40% to account for this. The tile is counted fully for deciding whether the new city it going to have sufficient food and production. I haven't changed the AI code that assigns	When the radii of two cities owned by the same Al civ overlap, the tiles are assigned based on step distance with orthogonal vs. diagonal as a tiebreaker. K-Mod adds a routine for reassigning tiles when close to a culture victory
shared tiles to cities.	(CvCityAI::AI_getCityImportance).
floodplains) more densely than reg	settle map regions with abundant resources (or gions with normal or scarce resources, in particular place a lot of resources in Europe). Multiple cities ster than a single city can.

	K-Mod comment in CvPlayerA::AI is counted for taken tiles. Tile sharin	_foundValue_bulk: "it kind of sucks that no value g / stealing should be allowed."	
	As for counting bad tiles: Tiles in a city radius that the new city is very unlikely to win are really bad tiles, but it's difficult to count them as such because of the structure of the code. The bad-tile counting is a kludge anyway; I'm not sure that it's needed anymore at all (or maybe just as a shortcut to improve performance).		
	karadoc on the bad-tile clause (CvPlayerA::AI_foundValue_bulk): "this final condition is not something I intend to keep permanently."

settle at a pl		Growth flavor biases the AI toward settling at a plot distance of 6 or more(!) from the nearest city. Plot distance is computed as max{deltaX,deltaY} + floor(0.5 * min{deltaX,deltaY}).	
Rationale	Growth flavor should mean that a leader likes big cities, so the city radii shouldn't overlap much. Cities that are 6 tiles apart don't overlap; shouldn't encourage even larger distances that may lead to unworkable tiles (or a another city getting crammed in later on) and high distance maintenance in the early game.		
When a tile connects two seas (non-Lake water areas), found value is increased based on the size of the smaller of the two seas. The possibility of a canal does not affect found value. The AI considers canals when placing Forts but only under narrow conditions and no on workable tiles, meaning that the AI can't establish a canal after settling in the city radius around the tile that allows for a canal.			
		establish a canal after settling in the city radius around the tile that allows for a canal.	
See also	121 (partly) deals with the Worker A	around the tile that allows for a canal.

	ock of BtS code that had increased A the first colony on a landmass where	Al found values by 20% to 50% unless the city was a rival civ already had a city.	
Rationale	This was apparently supposed to discourage AI colonies on continents dominated by rivals. Such cities are indeed difficult to hold onto. However, the checks were much too coarse (a single city owned by a rival – perhaps even a friendly one – should not discourage colonization) and the positive-reinforcement approach lead to a high bottom for found values on the home continent, making the AI willing to settle anywhere where an abundance of outright "bad" tiles didn't prevent it. Also, the code did little to drop the found values of exposed colonies below the found threshold, meaning that they were merely deprioritized compared with local cities. That's something that the K-Mod evaluation for distances and empire shape will also accomplish.		
	ock of K-Mod code that was trying to of players among landmasses.	steer starting locations toward an even	
Rationale	This should be the responsibility of	CvPlayer::findStartingAreas.	
AdvCiv	1	BtS	
	All landmasses are counted, up to a maximum the player count. This tends to lead to unachievable target distances on Huge maps.		
Rationale	Looks like an oversight.		
See also	137 adjusts the target distance to th	e greater default player counts in AdvCiv.	
AdvCiv		BtS/ K-Mod	
Deleted the	"greed" personality modifier.	A BtS comment said that "Greedy founding means getting the best possible sites - fitting maximum resources into the fat cross." K-Mod introduced modifiers "easy culture" and "ambitious" that, taken together, are based on the same leader personality values and affect the found value computation in similar ways.	
Tbd.	"Greed" in the sense of cannibalizing other potential city sites could make sense. For situations when there is abundant space for expansion; possibly also based on leaded personality.		
See also	For the latest version of the deleted code (greed and the deletions mentioned above) see this Git commit.		
Lower thresh	nold for founding cities when nearing	a Domination victory.	
Rationale	Cities on marginal land can be a significant contribution toward meeting the target land percentage, which is usually the tougher of the two Domination conditions.		
See also	115b makes the AI more willing to grow city populations when approaching a Diplo victory.		
	vay with all or nearly all fog-of-war e evaluation of city sites.	Resources had been handled correctly in K-Mod I think (probably not in BtS), but the fog of war had been ignored for tile ownership. This also meant that city sites recommended to human players gave away AI cities in the fog of war. The BUFFY mod (not included in K-Mod) had shown recommendations only on actively visible tiles, (presumably) to fix this info leak.	

AdvCiv		K-Mod
When normalizing starting sites (i.e. when determining whether a site needs additional resources), some value is counted for Tribal Villages in the starting city radius.		Tribal Villages aren't accounted for at all.
	Iso 027 will deal with Tribal Villages beyond the starting city radius. Also allows removing Tribal Villages in order to free up a starting site.	

031b	Al trains Settlers only probabilistically when city sites are poor	
AdvCiv		BtS/BBAI(?)
Settlers based on the found value of the best city site, the current found value threshold (which is, among other factors, based on expenses) and the game options Always War and Always Peace. Protective leaders and voluntary vassals prioritize Settlers more highly. When all necessary requirements (no change)		whose found value is above the threshold; OK for city to halt growth), AI governors train Settlers with 100% probability regardless of the quality of
for training a Settler are met, the probability of training a Settler is based on the priority value. During the first 100 turns (Normal speed), the probability is typically 100%; so the change tends to matter most between turn 100 and 150.		
See also	CFC user keldath has pointed out to me <u>here</u> (and in a private conversation) that the AI tends to expand too recklessly.	
Rationale	In part as a consequence of my changes to AI found value (id 031), the AI will claim any land where a city can develop if it has relatively few cities (and no better land is available); I think that's working as intended. However, the AI shouldn't be quick to claim land that is barely worth settling. Delaying a Settler for some 5-10 turns can open up new avenues, e.g. through revealing additional tiles or resources. Or perhaps some other civ will claim the site, one whose capital is closer to it; that's also fair enough.	
Al may decide to cancel the production of a Settler when there is no city site.		Unless in a defensive war or financial trouble, Settlers are always completed once started. The Settler is then disbanded after 20 turns unless a city site becomes available.

031c	Log file for AI found value computation	
AdvCiv	BI	BAI/K-Mod

·		BBAI has added a global function logBBAI for AI
found value log whenever a breakdown and for the r	computation is written to the BBAI er an AI civ founds a city. In addition, n for the next best adjacent city site next best city site is written to the log down is also written when placing a ation and when "normalizing" (cf. 108)	logging. It doesn't cover the AI found value computation though. K-Mod added a little bit of information that enters into the found value computation (e.g. about deadlocked resource tiles) to the tile hover text in Debug mode.
Rationale	It's a complex computation and, so far, my only means of testing it has been the debugger, and that only worked with a savegame from right before the founding of the city.	
See also	003: Moved the found value computation into a separate class and refactored it. The logging code was crucial for testing those changes.	
Tbd.	I've disabled the display of deadlocked resources display in hover text because I wanted to move that computation into <code>CitySiteEvaluator.cpp</code> (it isn't used elsewhere), and that has made it awkward to expose the function to CvGameTextMgr.	

031d	Al exploration in the early game	
AdvCiv		BtS
When moving an exploration unit, the AI prioritizes unrevealed tiles near its (preliminary) city sites over other unrevealed tiles.		City sites play no role in exploration.
Rationale	The AI found value logs showed that the AI is sometimes placed its second city one of two tiles away from a superior location due to unrevealed tiles – even when starting with a free Scout. Also, prioritizing exploration near the capital tends to delay meetings with rival players, especially with human players, which is in my opinion better for overall gameplay.	
Al explorers are discouraged from exploring far away from their owners' cities and city sites.		Distance to cities is not a factor. The AI tends to explore in a depth-first manner.
Rationale	Experienced human players tend to explore in a spiral pattern (akin to a breadth-first traversal when looking at it as a graph problem) – at least when Tribal Villages are disabled. That helps finding city sites and fending off Barbarians. More importantly, it's a bit of a spoiler for human players to meet all AI civs on their continent during the first 50 turns. If humans want that (and exploit it for tech trades), let them do the exploration work. If the AI takes it slow (especially on difficulty levels that don't give every AI a free Scout), there's a decent chance that border expansion will block exploration paths until Writing becomes widespread.	
See also	314 weakens the outcomes of Tribal Villages.	

DNormalize flag for city site evaluation function

Mostly a refactoring change. When placing starting sites and when deciding how to normalize starting sites, found-city values need to be computed with some special provisions; not quite the same in both cases. BtS had a flag bStartingLoc and normalization was determined based on that and by checking if starting locations had already been assigned. Meaning that, by default, the bStartingLoc behavior had applied also when normalizing.

l also made some minor changes to the normalizing vs. start-placing behavior.

Rationale	Better to be explicit about this.
	This change also allows found values to be computed "as if normalizing" before starting sites have been assigned. That might be helpful for <u>027</u> (though I don't think I'll make use of it after all).

031f	Adjustments to city site evaluation in scenarios	
When evaluating city sites for a scenario with randomized starting locations (e.g. Africa), some adjustments are applied in order to make up for the lack of a normalization step.		
Rationale	Without normalization as a fallback, food resources and freshwater need to be given higher priority.	
	Perhaps needs to be more pronuonced. I'm still getting starts with just one weak resource or none sometimes in e.g. the Europe scenario. That said, all the scenarios based on the Earth's continents have regions with very sparse resources.	

032	Signing a dual deal when there alrea	ady is one causes turns-to-cancel to be reset
AdvCiv		BtS
pact is signed between two civs that already have such a deal, then the turns-to-cancel are reset to 10 turns. This can happen through a diplo vote, or (peace treaty only) sponsored war (due to change 146) or city trade (change advc.ctr). I don't think gifts and demands are possible when there is already a peace treaty. OB and DP votes are nevertheless only allowed		Signing a peace treaty has no effect if there is already a peace treaty. Same for OB, DP.
(as in BtS) when some pair of full members doesn't already have an OB or DP deal. I.e. the vote can't be put forth just to reset the turns-to-cancel of existing deals. (Nor can it be used just to force deals with non-full voting members – although this BtS restriction is a bit curious.)		
	Rationale More intuitive this way. Otherwise, e.g. the target of a UN peace proposal could get attacked just one turn after the vote. Or Open Borders could be canceled shortly afte they've been enforced by the Apostolic Palace.	

033	Changes to naval blockades, Privateer	
Try excluding Privateers from "show enemy moves". When are messages pillaging and Privateer combat shown to the player then? Combat log? Is possible to deduce the owner of a Privateer from the turn order? Try delay messages too.		
	The movement bonus from circumnavigation can also reveal a Privateer's identity; I intend to replace that ability with some trade route bonus.	
	Or give up the secrecy; seems historically dubious anyway. (Wikipedia: "The convention was a vessel must hoist her true colors before firing the first shot.")	
See also	007 reveals the owners of Privateers when in Debug mode 905b gives Privateer (and Frigate) +1 speed	

AdvCiv		BBAI
When collecting gold from Privateers, compute the plunder range based on path distance (e.g. not across an isthmus).		BtS does it all based on air distance. BBAI uses path distance for blockaded tiles, but jdog seems to have forgotten to change the plunder code as well.
Rationale	Or they had been worried about per blockaded plots, which should be qu	formance, but I'm only checking cities adjacent to uick.
See also	030 (ice-locked water areas) depen 124: Can use blockade to let trade ¡	_
AdvCiv		BtS (BBAI and K-Mod made some changes to the Privateer AI, but the basics are unchanged)
leader's attitutech known to doesn't use I improvementhis context cattitude is equatticate. This to attack. This to	ing a city to plunder, the AI takes its ude toward the city owner and the to the city owner into account. The APrivateers against ships and its of partners. What a "partner" is in depends on the AI personality. If the pual to DeclareWarThemRefuse reshold or worse, AI Privateers will threshold is Pleased, Cautious or all leaders except Catherine	Al Privateers behave largely like Barbarians and treat all civs except the Privateer's team alike.
Rationale	It's not smart to use Privateers against one's partners, especially not for attacks and pillaging. An attack puts the Privateer at risk for no gain and the gold from pillaging water improvements is negligible. Plundering a partner should be OK when there is no one else to plunder.	
Tbd.	Privateer attacks on ships should have some upside for the Privateer owner. Stalking ships is fun but just not rewarding. A ransom mechanism would be nice because it would also curb the losses of the owner of the attacked ship but too much work to implement at this point, and no other mod seems to have implemented this either. A chance to steal the ship (in a damaged state, and any cargo transformed into a single Worker)? Captured Caravels wouldn't be very useful though	
See also	130v makes vassals Friendly toward	d their master.
Civs in a vassal-master relationship can't pillage each other's improvements with Privateers, can't block tiles from being worked (CvUnit:: canSiege) and can't blockade each other's cities. They can still attack each other's ships through Privateers, and no restrictions apply to vassals of the same master.		
The AI never attacks ships of its vassals or master. (That's the idea anyway. Seems difficult to guarantee this)		Al Privateers attack anything that comes near them.

Rationale	be OK, but a master plundering its vassals (voluntary or not) is jarring; the mast supposed to protect the vassal. An AI change wouldn't stop a human master from harassing his/her vassals, so this has to be prevented on the rules level.		
	l've considered changing CvUnit::isEnemy and getCombatOwner so that Privateers of vassal/master behave as if they're on the same team, and revealing the Privateer owners' identities between vassal and master. This would entail the following: • can't attack each other and can coexist in the same tile • can heal in each other's territory and enter each other's cities • can't blockade each other • moves shown as friendly • Privateers not seen as a threat by the AI		
	This would be a pretty clean approach, but goes a bit too far I think. Implausible that everyone on the vassal's and master's side knows a Privateer's identity, but other civs have no clue. Submarines aren't revealed between vassal and master either.		
	possible (for humans) to attack Priva And if Privateers can be attacked, th	teer is to remain secret, then it has to remain ateers; otherwise one could tell who the owner is. ney should also be allowed to fight back, so, no a little strange that combat is possible, but not solution for this.	
Credits	Cruiser76 raised the issue <u>here</u> on CFC.		
See also	123e makes it impossible to plunder Barbarian cities		
Tbd.	When using a Privateer to attack a unit that the Privateer owner is not at war with, and hovering for combat odds, the mouse cursor shows a white circle. I think it should be a red circle like for all other attacks. This isn't a result of my changes; it's a white circle in BtS too.		
somehow ha	vassals only train Privateers if they ave no other general purpose naval	Capitulation doesn't affect the training and behavior of Al Privateers.	
unit.		There is a unit "viability" check	
All civs stop enters the In	training Privateers once the game adustrial era.	(CvPlayerAI::AI_calculateUnitAIViability) to prevent the production of outdated units, but that's based only on units that the same civ can train, not the global tech level.	
See also	130v makes capitulated vassals subservient to their master in most regards.		
Rationale	Capitulated vassals shouldn't even indirectly interfere with their master's goals. Don't want them to use Privateers against civs that the master might like (with a human master, one can never tell) and don't want a blockading Privateer to affect the master indirectly e.g. by cutting off some important sealane.		
	er's plunder ability is listed in and help text.	Only mentioned on the BtS concept page about trade blockades. For the Privateer, only the hidden nationality ability is listed.	
		A feat message ("Congratulations, you have trained your first Privateer") also explains plundering, but that's a one-time notice.	

Rationale	Technically, the Privateer doesn't have a special plunder ability. Any ship can collect plunder if it can manage to blockade a city without declaring war. This rule is very obscure though; need to list plundering as a separate ability.		
	Also, when a player wonders why a Privateer can't plunder a vassal, that player may look up the Privateer in Civilopedia, and there it'll now say that Privateers have the ability to plunder <i>rival</i> cities.		
Al civs don't	blockade Barbarian cities.	Not sure if the BtS code actually targets Barbarian cities for blockades or only ends up blockading them opportunistically while bombarding.	
Rationale	No gain in starving Barbarian cities.		
Tbd.	Naval bombardments of Barbarian cities might still happen, and then the AI would also blockade. There's no point in this because Barbarian cities normally only have building defense, and by the time Frigates become available, most AI land units ignore building defense.		
Only Private	Only Privateers can blockade at peacetime. All warships can blockade inside the Open Borders of other civs. This only affects the trade of the ship owner's war enemies (if any).		
Rationale	Confusing; makes it look like the tile owner is being blockaded. Also not realistic that a civ that has Open Borders with both sides of a war would allow a blockade in its waters.		
Non-Privatee	er units can't blockade at all if not at v	var with any civ.	
Rationale	Rationale Blocking Barbarian trade doesn't make sense. The advantage is that blockading units will be woken up (with the change below) once a war ends (well, once all wars end). It's easy to forget about blockading units after making peace.		
units in the ti	When the owner of a tile changes, blockading units in the tile are only woken up if the blockade is no longer legal.		
if the blocka the owner of	units are awoken at the end of a turn de is no longer legal; e.g. because the current tile has capitulated, or no longer fighting any war.	Will blockade (to no effect?) indefinitely unless manually woken up.	
Added a function CvUnit::blockadeRange for code shared by updatePlunder, collectBlockadeGold and CvGame::updateColoredPlots. This should also address some minor inconsistencies between them. Also replaced some duplicate/ inconsistent code with calls to CvUnit::canPlunder.			
because that calculateP	Now using a pathfinder function written for <u>104b</u> for computing the tiles affected by a blockade because that function has a range limit (whereas the BtS function CvMap:: calculatePathDistance is quite slow when tiles are unreachable) and can handle movement restrictions of non-oceangoing ships.		
Removed some unnecessary updates of plot groups and trade routes. This change mostly eliminates the delay after starting/ending a blockade with a non-Privateer unit; doesn't really help with Privateers though.			
See also	Without 003m (which caches atward	Count), this could be slightly slow.	

Temporary Open Borders after war (optional through XML, disab	led by default)
--	-----------------

AdvCiv		BtS
agreement is former bellig that agreeme number of tu special OB a "disengagen	ends, an Open Borders (OB) s automatically signed between the erents. Units aren't bumped until ent ends after a configurable trns (recommended: 3 to 5). It's a agreement, internally called a nent" agreement, that does not and diplomacy; only a right of units.	When a war ends, units are immediately bumped out of rival territory, teleporting to the nearest tile that they can legally occupy. The AI is not programmed to anticipate this.
Details abou	t the temporary OB agreement:	
 No movem 	nent bonus from roads and railroads.	
 No risk of some Spies. 	getting caught for idle and moving	
signed, or	when a proper OB agreement is when a Vassal Agreement or t Alliance is signed.	
	"Open Borders (x turns)" on the d and in other help text.	
the first tur	n which peace is made counts as rn. When it says "1 turn" remains, greement is canceled at the end of	
Unaffected	d by embargoes.	
Rationale	To allow the AI to reposition its units after a war, in particular, to prevent large AI stacks from getting stranded. This happens quite regularly when the AI conquers a remote city, and it can be very harmful for the AI because it still counts on those units when when deciding on war/peace against a third party and when calculating needed floating defenders. The change also reduces unit bumping, which is a pretty strange mechanism. The ability to explore the territory of a former war enemy just after the war ends is	
	highly immersion-breaking though. It's worse than I had anticipated before implementing this change.	
Config	Increase disengage_length in Glo	balDefines_advc.xml to enable this change.
Tbd.	Not properly tested.	
	The "You have made peace with" m mention the Open Borders.	essage (CvTeam::makePeace) should also
See also	035 (also disabled) would also address the problem of stranded units. 099b (tile culture decay) addresses it a little bit. 046: Al improvements for units stranded on a different landmass and changes to the bump algorithm.	

035	While at peace, civs own all tiles that no other civ could work	
-----	---	--

	Currently disabled (including the AI changes) through the <code>OWN_EXCLUSIVE_RADIUS</code> switch in <code>GlobalDefines_advc.xml</code> . Has been disabled for some time, but, as of v0.96, it still seems to work correctly as reported here .	
	099b replaces 035. If 035 is enabled, then the CITY_RADIUS_DECAY part of 099b should arguably be disabled. Revolt chance (101) is adjusted to 035 if it's enabled.	
	Try letting civs only own those tiles in the exclusive radius where they're somewhat close to having the majority culture; e.g. set a multiplier $m := 75\%$ and let civ A own tile T in its city radius if culture(A,T) > m *culture(B,T) for every civ B that does not have T in a city radius, and culture(A,T)>culture(C,T) for every civ $C \neq A$ that does have T in a city radius. I guess inner and outer radius should be distinguished too. Perhaps too complicated, but, other than that, it might play better than the decay in 099b.	
AdvCiv		BtS
within the (w cities, or whe cities that the cities own all no rival city of value only m radii and for war, tile cultu between the may flip whe is made. A ui	I tiles that they could work and that could work, and the highest culture	The civ with the highest tile culture owns a tile so long as that tile is within the culture range of one of the civ's cities (up to 6 tiles depending the city's culture level). Thus, tiles within a city's radius can belong to a civ that is too far away to work the tile, meaning that no civ can work it. War/ peace does not affect tile ownership.
Minor AI cha	<u>nges</u> (more below)	
Forts: Don't l at war.	build them on tiles that will flip when	
war is not ye going to flip t	When moving to hostile territory and at declared, try to avoid tiles that are to the enemy upon DoW, and prefer that are going to become friendly.	
Rationale It's implausible that tiles near a city can't be worked by anyone. At least, this shouldn't happen as commonly as it does in BtS. It's a mechanism that encourages culture, but it does so mostly through punishment (loss of workable tiles). A civ with high culture gains tiles, but it's not much of a reward because that civ can't work them; it only gets bonus resources and a tactical advantage, which is somewhat neutralized by the diplopenalty for stealing tiles. My change preserves the tactical advantage.		
	uld flip when at war add to border te	overlapping city radii count 50% more than in BtS. nsions; the civ that would own them when at war
	The rules change result in fewer stolen tiles, but I don't want less border tension. The diplo penalty for tiles that flip when at war works against civs with low culture (good), whereas the diplo penalty for stolen tiles works against civs with high culture (not good, as in BtS).	
See also	147 also changes the border tensions formula.	

Al found value: Don't worry much about foreign culture on tiles near a city site, so long as those tiles are not within the radius of a foreign city. Take into account which tiles will flip when settling near a rival city. Rationale The AI should still avoid foreign culture a bit because tiles around the city will flip when the owner of the foreign culture founds a city nearby or when war is declared (making the city difficult to defend). Foreign culture will also add to border tensions (see above), and can cause the city to revolt. See also 031 makes other changes to found value. <u>UWAI</u>: Reduced utility penalty from culture-pressure penalty (GreedForAssets aspect). Tiles lost by war enemies are counted as "lost assets", making the AI more reluctant to make peace when this will flip tiles to the enemy. Flipped tiles could also motivate the AI to start a war that otherwise looks like a stalemate. A peace treaty practically cedes the tiles around any lost cities to the conqueror. The Rationale Al needs to be reluctant to do that and factor it into reparations.

	This change should also make attitu	ide matter more when tech trading is disabled.
	Exception for capitulated vassals: D plunder the vassal.	on't want the master or the master's friends to
AI memory a decays.	about cash traded to other civs	The AI keeps track of how much gold it has traded to every other civ. That amount is subtracted from the cash that the AI is willing to trade to another civ. This subtrahend tends to become negligible over time because the AI

		generally becomes willing to trade larger and larger sums of gold as the game progresses.	
Rationale	memory) can stagnate, and then the	ng to trade (prior to subtracting gold-traded BtS AI can stay unwilling to trade any gold er AI memory decays in AdvCiv (cf. <u>130r</u>).	
add resource civ has only	When asked to "make this deal work," the AI may Never adds non-surplus resources to the table. add resources to the trade table that the human civ has only one copy of if the human civ doesn't have enough gold per turn available for trade.		
AI, then the turn if the cu otherwise tri- return and us	player is offering resources to the AI offers to buy them with gold per rrent human income is negative, and es offering surplus resources in ses gold per turn to balance the deal n-surplus resources as a final option.		
Rationale	Had to adjust the counter-propose a behavior (which involved refactoring	gorithm to the more flexible AI trade denial the entire function).	
	gold or in resources: Just change the preferable because the Al doesn't pa	it up to players whether they want the AI to pay in e gold slider for a moment. Resources are often by much gold, but gold can also be preferable, eed the resources of the AI. Players shouldn't al and error then.	
surplus reso	The AI refuses to give away more than 2 non- surplus resources of the same kind (happiness or surplus resources to their masters. Other civs health) at once, and refuses to accept more than never give away non-surplus resources.		
The precomp	or a kind at once. Duted resource values are updated or canceling a trade.	No limit on resources accepted at once. Resource values are precomputed (since the BtS expansion) for efficiency and only updated once per turn.	
Rationale	Now that the AI evaluates happiness and health from resources situationally, it must be careful not to buy too many resources at once because the evaluation is done for each resource independently. I.e. the AI knows what e.g. one more happiness is worth, and simply triples that value when three happiness resources are offered (but perhaps needs only one). Similarly, the AI can tell whether it can spare e.g. one non-surplus happiness resource, but it can't tell if it can spare more than that.		
Tbd.	Should call AI_updateBonusValue each time that the AI connects a resource to its city network (easier said than done). Currently, an AI civ updates its resource values at the start of its turn, so resources connected during the AI civ's turn aren't taken into account until the next turn of that AI civ.		
Once per round, all Al-Al deals are checked for cases in which two civs A and B sell resources to each other. If one deal is found in which A sells exactly one resource to B, and another in which B sells exactly one resource to A, and both deals can be canceled, then they're canceled and immediately replaced by a resource-for-resource deal in which one side may additionally have to pay some gold.			
Rational	Now that AI civs are able to import resources from other AI civs for gold per turn, resource-for-resource deals have become rather rare because often only one side has a suitable resource available. Sales are harder to read on the Foreign Advisor screen than barters and take up more space. Therefore try to collapse sales into barters.		

	g one resource for another with a Al never asks for 1 gold per turn in	Not an issue because all health and happiness resources have the same trade value.
Rationale	Adding the 1 gold to the trade table	s tedious, and it makes the AI look petty.
AdvCiv		BtS/K-Mod
of bonus impas Cow Pas the value of yet been rev	tech evaluation to increase the value provements with high tile yields (such ture or Corn Farm) and to decrease military units whose bonuses haven't realed (such as Axeman and multiplier now 60%).	Military units requiring unrevealed honuses are
Rationale	values of Agriculture and Animal Husadjustment, the AI often went for Ironhad a Cow next to its capital. (Actua	w (correctly) counted as unimportant, the AI tech sbandry need to be adjusted. 		ord evaluation (AI_techUnitValue): ause otherwise we'd risk undervaluing axemen in m currently.
Tbd.	Animal Husbandry is still be a bit underappreciated. The strategic value counted for Horse might be too low. The fact that Wheel enables Chariot complicates matters. That said, the evaluation of the resource yields also needs more work. Needs to check whether a new terrain improvement will immediately increase city yields in the very early game.	
See also	k146 increases the tech value counted for chopping Forests and Jungles; I've also reduced that effect a bit.	
AdvCiv	1	BtS
potential for	es surplus resources based on the trading them away, and (as in BtS) rporation yields.	Unless consumed by a corporation, a surplus resource is valued at 20% of the first copy. This value is sometimes so low that the AI doesn't connect surplus resources. (Perhaps also due to K-Mod changes to the Worker AI and the evaluation of the first copy; not sure if this is a problem in unmodded BtS.)
Rationale	The value of the first copy shouldn't affect the value of surplus copies; one resource for trade is as good as another. Tradeable strategic resources might be a bit more valuable than luxury and food resources, but not much; difficult to find buyers for strategics. And the AI needs to connect all its (surplus) resources; it's the correct play most of the time, and can't really hurt.	
See also	Prior to v0.92, this change was tagged with advc.121. Change 121 deals with Al Worker builds.	
	modifiers for the AI trade value of source types to 0.	Some strategic resources have an "AITradeModifier" of 10 to 30% set in XML that increases the trade value assigned by the AI to those resources.
Rationale	The BtS/K-Mod code for evaluating	strategic resources should have this covered. (If

	Change 040 shares some code with	<u>121</u> .
Tbd.	CvCityAI::AI_countNumBonuses S landmasses in some contexts now the	hould perhaps count resources on other nat the AI can hook them up.

041	Can train ships in any coastal cities	
AdvCiv		BtS
train ships (except Work Boat – treated as in BtS) and construct a Dry Dock. The Al ignores this change, i.e. builds ships/ Dry Dock only in		Can train ships and construct Dry Dock only in cities adjacent to a water area of at least 20 tiles. A Work Boat can also be trained when there is at least one water resource in an adjacent water area.
		Other coastal buildings require only 10 water tiles, which is also the threshold for a salt water lake.
Rationale	Since BtS, it can make sense to train naval units in small water areas because Forts can act as canals into larger water areas. For inland seas and ice-locked water areas, such a Fort is pretty commonly possibe. Implausible that this should not be allowed. Since the AI doesn't have a notion of canals, it needs to stick to the old rules though.	
		fusion about two different area size thresholds (10 now either proper coastal cities, or only (fresh
	options on the city screen of some in	akes because it's confusing to see shipbuilding nland city with a 1-tile lake. Dawn of Mankind lakes aren't deep enough for constructing and
	a canal, players might as well produ	en there are no resources because, even if there is ce their Work Boats in other cities; they're cheap. y Work Boat as the only naval production option in arships may not be on their minds.
Tbd.	By allowing Lighthouse in lake-side cities, I could remove the awkward incentive for founding in tiles that are both coastal and lake-side.	
		ng a terrain different from Coast and Ocean, and Colossus, Moai); then give Lake +1 food, -1 asis but 1 less commerce).
See also	030 treats ice-locked water as a sep such cities.	parate water area and prevents coastal buildings in

042	Anticipate border expansion when considering to train Work Boat	
AdvCiv		BtS
	Al predicts border expansion 5 turns	E.g. if the capital has seafood in its outer ring, the AI doesn't consider Work Boat as its very first order. Or in a new city that can expand its borders quickly through the leader trait or Culture process.
Rationale	This was a somewhat disproportionaneed it for Japan in the <u>EuroWorld</u> s	ate amount of work to implement. Though I do cenario.

043	Dan Quayle scale adjusted	
AdvCiv		BtS
For a "Julius Caesar" victory, a normalized score 15 000 suffice for the best victory, the next		

victory is at	thresholds are 14 000, 13 000, Dan Quayle is 50 000, then 50 000, 40 000 1000 below 3000. o avoid the worst title (Dan Quayle).	
Rationale	Almost all my victories have been "Julius Caesar", so this is apparently too easy to reach for an experienced player. More of a logarithmic scale now, covering a wider interval of scores. It's possible that the original scale worked OK in Vanilla Civ 4; hasn't been changed in either of the expansions.	
Tbd.	The score formula needs work too; increase the weight of victory date and difficulty. The main incentive should be to win as early as possible on the highest possible difficulty. Though the bigger issue is that yields increase too much in the Industrial era, so a lot of points can scored by drawing the game out.	
	Should also move the formula into the DLL so that R&F can access it (see comment in RFTotalScore::updateString).	
See also	707: The Rise & Fall scores are normalized to match this new scale.	

044	Changes to the timing of autosaves	Changes to the timing of autosaves

There's still a map, which	an autosave after regenerating the replaces the initial auto-save and	When the initial autosave is loaded, the game immediately autosaves again, overwriting the savegame just loaded and deleting all other autosaves.	
Rationale		pading, and the deletion of other auto-saves is happen when a new game is started (via the	
created before displaying or popups. The and votes we messages a won't reapper Exception: Visimultaneou	active player's turn. Specifically, the savegame is created before diplo popups and votes and after displaying on-screen messages and non-diplo popups. Therefore, after reloading, diplo popups and votes will be shown again (as in BtS), but messages and e.g. the new-era splash screen won't reappear. Exception: When playing multiplayer with simultaneous turns, autosaves happen at the start of a game turn as in BtS.		
Rationale	Not sure if the exact timing is ideal v	vith regard to messages and popups.	
	Saving at the start of the active play human player isn't necessarily in slo	er's turn is much better in scenarios, when the t 0.	
	savegames, so saving at the start of (parts of?) their turns.	of the player turns is randomized and not stored in f a player turn could lead to other players missing	
See also	game turn. It's important for testing (happens at about the same time as several consecutive turns will have a time. (E.g. if Auto Play ends before t	start of the human turn instead of the start of the (reproducibility of errors) that the autosave AI Auto Play ends; otherwise, AI Auto Play for a different result than AI Auto Play for one turn at a the start of the human turn, then the AI will never humitsPost when running one turn at a time.)	

045	Hide rival buildings	
AdvCiv		BtS
unit and that wonders (sm and building yield change 3D models o	re the player's team doesn't have a he/she can't investigate, only hall and great), defensive buildings is that can be inferred from their plot (Lighthouse, Levee) are shown as on the main interface. Whether a city of war (still) doesn't matter.	

Rationale	Too much information. If a player has all cities of a rival revealed, he/she could check every turn whether a building was completed, and infer that units or wonders are being produced when no (ordinary) building gets completed for some time. With detailed knowledge about the AI code, it might also be possible to deduce the AI strategies and war plans. No one does this, but the game still shouldn't reward it.
	The change could improve performance, but probably just reduces the main memory usage, which isn't an issue in AdvCiv.
	And it makes the important buildings (wonders, Walls, Castles) easier to spot.
	Would be more realistic to show the buildings whenever a city is visible (i.e. not fogged), but hiding them seems better for gameplay; I think showing them only when a unit is inside is a good compromise.
	I'm not updating city layouts when entering or exiting WorldBuilder or Debug mode because doing so seems to (hard to say) prolong the already quite noticeable delay (at least with debug builds).
Config	XML switch TREAT_REVEALED_BUILDINGS_AS_VISIBLE in GlobalDefines_advc.xml.
Credits	From Rise of Mankind, though they don't check if the city could be investigated or if there's a unit, and don't show Lighthouse and Levee. Link to source code (1 MB file): Sourceforge.net
Tbd.	K-Mod comment in CvUnitAI::AI_nukeValue: "It is possible to see which buildings the city has by looking at the map. This is not secret information." No longer true, so AI_nukeValue should instead estimate the value of the city's buildings.
	Fog of war should apply to the shown buildings, i.e. only those buildings should be shown that were present when the city was last visible. Doesn't seem that hard to implement. Since only a handful of buildings are ever shown in the fog of war now, the additional memory usage should be negligible. On a related note, fog of war for terrain features would also be desirable. Can currently spot rival cities in the fog of war by paying attention to disappearing forests.
	A Civ4lert about completed buildings. Now that the player doesn't learn about most buildings, this wouldn't necessarily generate too many messages. See also Tbd. under <u>210</u> .
See also	120d removes the Sabotage Building cost from the Espionage screen; could otherwise use that cost to learn about the cheapest building in a city.

046	Pickup of stranded units	
AdvCiv		K-Mod
		Units can get stranded on landmasses without friendly cities by razing the only cities or by making peace without conquering any. I think the BtS AI just leaves them there. BBAI has added AI routines for picking up such units, though, judging by the K-Mod changelog, the BBAI code worked only in certain cases.
Tbd.	land units in land areas with an ene	on low-level AI functions. units when evaluating the tactical situation: Count my city and no friendly city. Could add these (with nits or so. Get the relevant areas by going through

	the enemy cities – iterating through all areas is often costlier because of islands and sea ice.	
Credits	CFC user vedg <u>reported</u> units not getting picked up in K-Mod 1.46 and provided savegames.	
See also	040 and 082 also deal with the transportation AI.	
	When a unit needs to be removed from the territory of a rival because of an ended war or canceled Open Borders agreement, that unit gets "bumped" to the nearest tile it can legally occupy Tiles on the unit's current landmass are preferred (tiles on a different landmass are effectively considered to be 1.5 times more distant than their air-line distance).	
Rationale	Might make stranded units a bit less common, especially on tiny islands. I don't want to enforce teleportation to a friendly city because this could be exploited for moving units quickly between theaters of war. At least for now, distance should remain the primary criterion.	
See also	034 (disabled) was an attempt to avoid bumping altogether. 163 spends the movement points of bumped units.	
Added a clause to discourage teleportation of ships into lakes.		
		ne ships could be irretrievably lost. I've never had he "We the People" mod suggests to me that it

047	Help text for resource tiles revised	
AdvCiv		K-Mod
with a resour more concise There was a (marked with giving away In the examp says: "Grassland, Uranium (wit Mine Road" If there is no "Grassland, Uranium (wit Uranium (wit	Iso a minor Vanilla Civ 4 bug id 001 in my code) that had been rival improvements in the fog of war. ble on the right, the text now simply 2 food, 2 production, 3 commerce h Fission) Mine:	karadoc already made some improvements; a comment says: "I've rearranged and edited some of the code in this section to fix some bugs." E.g. says for a Uranium Mine owned by the player when the player has Physics but not Fission: "Grassland, 2 food, 2 production, 3 commerce Uranium, Research: Fission, Requires: Mine +2 production, +3 commerce (with Mine) Mine Road"
Rationale	The example is what prompted my o	changes.
See also	Somewhat dependent on 135c, which refactors CvGameTextMgr::setPlotHelp.	

048	Changes to combat odds text	
AdvCiv		K-Mod
attacker, the	combat odds help text shows which ed units is about to attack.	When more than one unit is selected, the next attacking unit is chosen for the human player by the AI. Which unit is chosen can only be inferred
attacking unit (i.e. generic combat modifiers) are shown under the name of that unit along with the attcker's first strikes. Then info about the defending unit is shown, then the combat modifiers that get applied to the defender (i.e. all non-generic combat modifiers) and the		from the strength value and odds breakdown. In BtS, the same goes for the defending unit. K-Mod indicates the defending unit through the 3D model shown on the map, but, on the attacker's tile, 3D models of multiple units are shown when multiple units are selected. When ACO is disabled, combat modifiers that are tied to an ability of the defender are shown first
(The shown unit info is a one-line short		and always in red; then modifiers for river crossing and attack from cargo (which are tied to the attacker insofar that the attacker could
whether it ge color (red or	he combat modifier indicates ets subtracted or added and the green) whether it benefits the s applies regardless of the ACO	eliminate those modifiers through the Amphibious promotion) are shown in red; then the remaining modifiers tied to the attacker are shown in green. The signs are as stated in the unit abilities. ACO instead shows the sign that gets applied in the firepower calculation, i.e. it flips the sign for nongeneric modifiers of the attacker because they actually get applied to the defender.
If ACO is enabled, both the attacking and defending unit are shown by default. ACO is still disabled by default (as in K-Mod).		By default, ACO shows the defending unit as a one-line short description with promotions. The attacking unit is not shown by default.
No separate info about hitpoints.		If either of the two combatants is damaged, the current hitpoints are shown after the combat odds.
menu, the m	enu text, default settings and in-	The settings "always", "never", "normal" and "alternate" are a bit difficult to understand in the original menu.

	Hitpoints: The one-line descriptions already include the current strength and the total strength, which is how the UI usually represents hitpoints.	
	only have one sign. K-Mod's Disorga mod-mods based on AdvCiv may wa the BtS approach of showing the sig	nd ACO assume that each combat modifier can anized promotion breaks this assumption and ant to break it in additional places. I'm not sure if yn as stated in the ability (thereby hiding the about non-generic modifiers always applying to

	the defender) could be salvaged. I the modes of displaying the modifiers is	ink it's better to tell it as it is and maintaining two extra work.	
See also	I've implemented most of these changes also in a mod-mod of Rise of Mankind – A New Dawn 2: <u>Git commit</u>		
Tbd.	This <u>Git commit</u> could be ported to AdvCiv. Might be nice for mod-mods that use negative modifiers a lot; not sure. Complicates the program logic a bit (and slows it down, but that probably doesn't matter at all).		
AdvCiv	1	BtS	
changes aboview the unit held while or attack. If the to make a sr	ove: Can hold down the Alt key to t with the highest survival odds or, if rdering the attack, to force that unit to Alt key is not held, the game is free marter attack. Either way, the odds ws which unit is about to attack.	When an attack is ordered with multiple units selected, the game always makes a "smart" choice that also takes into account a) how valuable the potential attackers are and b) whether they inflict collateral damage. a) was added by the BtS expansion and it seems that they forgot to update the odds display, which is only based on b), meaning that the displayed odds often don't match what happens when an attack is ordered.	
Config	If the smart choice does not have the highest survival odds, a hint about pressing Alt is shown. This can be disabled through GlobalDefines_advc.xml. If ACO is enabled ("Odds" tab of the BUG menu), then disabling the "Instructions" option will also disable the hint about the Alt key.		
Rationale	At first I just wanted to fix the inconsistency in BtS by showing only the smart choice, but then I figured that there also needs to be a way to just see the best odds.		
Tbd.	If I can manage to show the proper 3D models (see <i>Tbd.</i> above), there will also be issue of updating the shown model whenever the Alt key is pressed and released. sure if that's doable.		
	Perhaps the smart choice should prictive exact same procedure as for Al ConselectionGroupAl::Al_getBest	•	
See also	The Alt key functionality depends on	The Alt key functionality depends on <u>011b</u> (Ctrl key for pre-building).	
048b	Replaced a few uses of the word "retreat" with "withdraw" in help text.		
Rationale	Game terms should be used consistently. Plus I may want to use the term "retreat" in the context of a <u>combat round limit</u> in the future.		

advc.pf	Changes to pathfinder (previously advc.049)
See also	104b uses the new TeamPathFinder class for measuring path lengths between cities.
	082 lets AI units avoids entering enemy borders earlier than necessary when about to start a war.
	001i makes the pathfinder respect fog of war on routes.
	003s speeds up pathfinding code by precomputing tile adjacency lists.
	035 (disabled) let's the AI take into account which tiles will flip upon declaring war.
Refactoring	changes, performance optimization:
Moved path	finding code that cares about (specific) selection groups and units into a separate class

GroupPathFinder, derived from the KmodPathFinder class.

Derived a class TeamPathFinder from KmodPathFinder for computing paths for "typical" (hypothetical) units of a team. BBAI had implemented largely the same functionality on top of the FAStar pathfinder in the EXE (e.g. in CvPlot::calculatePathDistanceToPlot). TeamPathFinder replaces that (much slower) BBAI code entirely. CvMap::calculatePathDistance remains in use. That BtS function treats only land/ water and impassable tiles as obstacles, whereas TeamPathFinder also takes into account foreign borders and can distinguish between shallow water (Coast) and deep water (Ocean) movement. TeamPathFinder can replace calculate PathDistance, but the latter is more convenient to use, so I'm keeping it in places where performance isn't a concern.

Simplified the logic of karadoc's A* implementation a bit. The original implementation (for unit groups) is still in the codebase for testing purposes. Also changed the public interface a bit (mostly in pedantic ways, e.g. capitalization).

Some tweaks to memory allocation in KmodPathFinder and CvSelectionGroup (function getClearPathFinder).

Use a more compact data structure for the nodes in KmodPathFinder. K-Mod had used the same data structure as the FAStar pathfinder.

Created an enum type for the group movement flags in CvDefines.h.

Moved the BtS pathfinding functions that don't deal with unit movement from CvGameCoreUtils into a new header FAStarFunc.h.

Cached the presence of isthmuses on the map. The check for isthmuses blocking sea movement is the only check that the pathfinders have to make on a per-edge basis (as opposed to per node).

I've included a guess at that memory layout of the FAStar class in CVDLLFASTARIFACEBASE.h. In the future, this could perhaps be used to replace the results of the FAStar instance that the EXE uses for displaying waypoints with paths computed by GroupPathFinder. Currently, to keep the waypoints consistent with the actual paths taken, GroupPathFinder has to compute the exact same paths as FAStar for human units. This isn't really a problem because we simply want a minimal-cost path, and that's what FAStar computes. Paths of equal cost can be a problem, but aren't currently. Related CFC discussion

AdvCiv		BtS/ K-Mod
of equal move path that ent preferred over	vement costs for a human player, a ers a smaller number of tiles is	For human player, straight moves are preferred over diagonal moves for aethetic reasons. Taken together with a K-Mod tie-breaker that is supposed to prevent two paths from having the exact same cost, the preference for entering fewer tiles can be outweighed. This results in paths with counterintuitive detours.

AdvCiv	BtS	
(But may upgrade human roads to railroads.) through human territory and the human and player have an Open Borders agreement, t		If the shortest path between two AI cities passes through human territory and the human and AI player have an Open Borders agreement, the AI may build roads through the human territory.
Rationale	If the human pillages those roads, the AI keeps rebuilding them, which can permanently occupy several AI Workers. Also, ultimately, humans should be in control over the roads in their territory.	
Tbd.	Implemented through a new pathfinder flag. I'm not sure that I'm using that flag in all the right places; should take another look some time to make sure I'm not preventing pathfinder instances from being reused, which could hurt performance.	

The <u>EuroWorld</u> scenario is not part of AdvCiv yet, but I've already made some changes in AdvCiv to accommodate that scenario:

300 prevents large deserts from filling up with Lions.

140 reduces the effects of various world-size modifiers. Earth scenarios tend to be crammed despite their great size, so the BtS modifiers don't work well.

171 lets the AI pick religions in chronological order ("Choose Religions" option) when no favorite is available.

<u>040</u> allows the AI to improve tiles on small islands in the radius of a mainland city (e.g. needed for Sardinia, which is in the city radius of Rome).

042 (city AI anticipates border expansion) is helpful for the Tokugawa AI – perhaps also in other Earth scenarios.

And all the changes with id 05-something.

Designer's notes: In a scenario, when holding down ALT while hovering over a tile with a resource, the game displays a short text that explains why the resource was placed there if the scenario comes with a game text file containing such designer's notes. See

Civ4GameText_Earth18Civs.xml for an example.

Disabled when in Debug mode (because ALT key has a different function then).

Known issue (won't fix) with the Legacy (Aggressive) AI: Lots of civs getting hired for nonsensical long-distance wars. It's the same with the original K-Mod, i.e. this is an issue in the BtS/K-Mod AI.

I'm not sure if I'm ever going to use this – would have to be done for most resource locations (if not all) to make sense. If I do it, I'd let the Java program that I use for generating scenario file also generate the game text file.
ALT key shows combat odds instead of plot help when hovering over a unit. <u>089</u> disables this when the unit is owned by the player – one can't attack one's own units.

051	Initial game state in scenarios	
AdvCiv		BtS

In scenarios, civs receive free tech from the game difficulty in addition to any free techs defined by the scenario.		Only free units are received based on the game difficulty (but only if the scenario doesn't define any free cities or units; no change).	
Rationale		re a smaller impact in scenarios like Earth18Civs ence of free Archers leads to problems with very arios.

053	No Tundra Farms	
Tbd.	Want to allow Farms only on Grassland, Plains and Floodplains. Not implemented yet but I'm letting the AI already treat Tundra river tiles with caution. When the change is made, Tundra river without Forest should also be counted as a "bad" tile.	
AdvCiv BtS		BtS
, , , , , , , , , , , , , , , , , , , ,		Tundra river tiles are treated the same as other river tiles; quite a bit of utility is added for the river.
Rationale	Earth scenarios have large taiga areas along rivers, and these areas are not supposed to be deforested and farmed. Taiga soils are very badly suited for agriculture (and actual tundra soils are even worse). On randomized maps, this shouldn't make a big difference as they generate few Tundra rivers. Settling the far north can still be worthwhile when there are bonus resources.	

054	Visibility of game options	
See also	250b: Advanced Start and SPaH	
AdvCiv		BtS
The "Permanent War or Peace" game option is shown on the Custom Scenario screen but not or the Custom Game screen.		The option is visible on both screens, but it's equivalent to "Always Peace" unless a scenario sets certain civs to be at war from the beginning.
Rationale	The option is confusing and superfluous in non-scenario games.	
	Set to invisible in Civ4GameOptionInfos.xml. Can be toggled to make the option visible on the Custom Game screen too (as in BtS). The AdvCiv DLL makes the option visible on the Custom Scenario screen regardless of the XML setting.	
	Would be nicer to add a field to Civ4GameOptionInfos.xml that determines whether an option shows up on Custom Scenario.	
"Lock Modified Assets" is never shown on the (multiplayer) Staging Room screen.		Shown both in singleplayer and multiplayer but has no effect in multiplayer. (CvGame::init disables the option, ignoring the setting on the Staging Room screen.)
Rationale	Not sure why the original developers disabled this (it's already that way in the Vanilla	

	Civ 4 code). Perhaps modified assets will result in OOS errors anyway.	
Tbd.	Should temporarily disable the code in CvGame::init and give this a try. If the option actually works, it could be nice to have for some players.	
"New Random Seed" on reload is never shown on the Staging Room screen. The option is ignored in multiplayer. No new is generated (confirmed here by Afforess). The said, with simultaneous turns, CvGame:: updateMoves constantly uses numbers from synchronized RNG for randomizing the turn order, and this makes random outcomes non reproducible.		
Tbd.	d. If the EXE reports the Staging Room setting to the DLL (I haven't checked), it will be easy enough to the <code>isNetworkMultiPlayer</code> check from <code>CvGame::read</code> . Could the re-enable the option (though it'll still be meaningless with simultaneous turns).	
Can something be done to make randomness reproducible with simultaneous to Can't really debug with this option currently. Mongoose Mod might fix it, but is consolered (change log, 20 Dec 2010: "devised a simple, effective way to lock rand seeds in Network Multiplayer games when the NewRandomSeedOnReload open not enabled").		currently. Mongoose Mod might fix it, but is closed- devised a simple, effective way to lock random

055	Global Warming (GW)

AdvCiv	1	K-Mod	
feature is rer unchanged.	When GW hits a Plains Forest or Jungle, the feature is removed and the terrain remains unchanged. Vegetation on other terrain types is unaffected by GW (but the underlying terrain can change). GW events always turn Grassland Forest and Plains Forest into Jungle, and remove Grasslar Jungle and Plains Jungle. This behavior may have been adopted from the Global Warming Mod.		
Rationale	Forest to Jungle seems quite unrealistic to me. The bad health makes sense (think of the spread of the tiger mosquito), but vegetation becoming denser or wetter is too strange.		
	Removing vegetation is generally problematic because late-game maps tend to be mostly cleared before GW even begins.		
Config	Can set PROTECT_FEATURE_ON_NON_DRY_TERRAIN in GlobalDefinesAlt.xml to 0 in order to allow GW to remove vegetation from Grassland as well. That should probably be done when giving Forest Preserve the ability to protect vegetation (see below).		
See also	CFC post where I weigh the change described above against the alternative change described below.

	Forest and, failing that, turns the	
	sert), then no GW event takes place	
	. the target tile isn't re-rolled.	
Credits	Proposed by Cruiser76 (post)	
Rationale	Since the goal is to buff Forest Preserves (or at least not to hurt them with the Forest removal change), I didn't want to block terrain changes – those will often change Tundra to Grassland. Protecting the Forest Preserve improvement itself (which requires a feature) might be more elegant, but it's difficult to ensure that a GW event won't destroy an improvement (in general; not for the Forest Preserve in particular).	
Config	New optional XML tag for improvements: GWFeatureProtection If a (positive) value less than 100 is used, then the feature is protected only probabilistically.	
<i>Upd</i> .: Reducintroduced a	e per-turn probability of GW events to 3/5 of its value in K-Mod. sed it again in AdvCiv 1.03, this time to 1/2 of the K-Mod value. And, in AdvCiv 1.04, a multiplier based on the initial team count to decrease the value (further) on maps with initial teams and to increase it on maps with more than 8 initial teams.	
Config	Through GlobalDefinesAlt.xml (but the team count adjustment is hardcoded in the DLL).	
Rationale	Player feedback suggests that GW was starting unexpectedly early. The warning about the sustainability threshold still comes as early as before, but isn't as much of a concern as the GW events, which alert the player turn after turn. crullerdonut's play reports also say that GW anger wasn't much of an issue. So, as a stopgap measure, let's deal with the event probability.	
	I suspect that the issue is mainly that tech costs are higher in AdvCiv than in K-Mod – at least on the higher difficulty levels – leading to longer games and (far) more GW events overall.	
	<i>Upd.</i> (v1.03): Game length still appears to the main factor. Sometimes, games will descend into near-permanent warfare when Riflemen become available; those games can approach the time limit. Don't want such games to desertify much of the land area most of the time.	
	<i>Upd.</i> (v1.04): All-Al games on Huge maps with about 18 civs seem to be considerably less likely to be severely affected by GW than games on smaller maps with 8 and fewer civs. I'm guessing that this is because games with a higher number of factions tend to produce more heterogeneous tech progress. When some civs don't manage to fully industrialize before the game ends (and don't get conquered by more advanced civs either), then there is a lot less GW.	
See also	Posts linked in <u>WIP</u> section.	
	K-Mod Git commit that tweaks the same variable that I have tweaked. The commit message suggests that karadoc had also concluded that the probability needs to be adjusted to the typical game length.	
	251, 910: Tech cost adjustments.	
	parameter to increase the GW "severity" rating shown on the Environment tab. The sual clue about the overall impact of GW, but also affects anger from GW.	
Rationale	Not sure if the anger needs to be higher. I mainly felt that – despite the decreased event chance in AdvCiv (which does not enter into the severity rating) – the rating tended to understate the severity as I perceived it. E.g. one event per turn hitting a

AI_unitImp	s a fingerprint (CvPlayerAI:: passables) to check whether units time impassable terrains and features.	A mere count is used (AI_unitImpassableCount).

The most significant bits of that fingerprint also contain a count of the impassable terrains and features so that ordering units by their impassable fingerprints orders them (primarily) by their impassable counts. 0 still means that there are no impassable terrains and features.

Rationale

Obviously not ideal to treat e.g. a unit that can't enter Desert and one that can't enter and Ice as compatible wrt. their movement restrictions. And it was easy enough to change and without paying a performance penalty.

See also

The isAny...Impassable functions added by 003t are helpful here.

The AI ensures for each unit group that no unit in Unit groups (CvSelectionGroup) represent AI the group a higher impassable count than the unit leading the group. This is accomplished by disallowing units to join a group if the newcomer would become the group leader and has fewer impassables than the current group leader, or if the newcomer wouldn't replace the current group units with a specific role, e.g. city attackers or leader despite having more impassables. (I did not change the algorithm for selecting group leaders.)

When a human civ comes under AI control (e.g. Al Auto Play), groups that don't satisfy the invariant stated above are split up.

When the AI type of a newcomer and the current AI units that are unable to enter some terrain or group leader are the same, then both need to have the same impassable fingerprint. For the sea assault AI type, this isn't always enforced.

unit stacks. The behavior of an AI stack is determined by the AI type (UnitAITypes) of the unit that leads the group. Group leadership is mainly determined by AI type (cf.

CvUnitAI::AI groupFirstVal, AI groupSecondVal); settlers, are preferred over units with more general or supporting roles (e.g. reserve, escort). Civs under human control also have groups: those groups represent current and past units selections. (The current selection is also stored bv the EXE →

CvDLLInterfaceIFaceBase::getSelectionList.)

feature (positive impassable count) cannot join a group with a different impassable count. For sea assault units, impassable counts have to be egual in any case (through a BBAI change).

Rationale

The BBAI behavior is OK for the BtS units (Galley, Trireme), and I haven't changed anything about that (I hope). Equal impassables are especially important for assault units, but difficult to ensure because sea assault groups are formed in multiple places (whereas AI group formation was otherwise centralized by K-Mod into cvUnitAI::AI omniGroup). BBAI doesn't ensure equal impassables for sea assault groups either; there's special code for splitting out Galleys, so this is probably OK.

For impassables added by mod-mods, requiring equal impassable counts seems too strict; can easily break the AI entirely when units aren't allowed to escort settlers. My invariant allows a support unit (low AI groupFirstValue) to join a group with a high AI groupFirstValue (UNITAI SETTLE has the highest one) even if the group leader has stricter movement rules than the newcomer. This seems like a sensible principle, and it should avoid problems with paths computed for the group leader that other units in the group may not be able to follow (not sure if this can actually happen; I guess the pathfinder checks movement rules for each unit in the group anyway). Perhaps most importantly, the invariant makes it sufficient to check the impassables of group leaders in AI omniGroup, i.e. it saves time.

The BtS behavior seems inconsistent insofar that it allows units without impassables to join groups with impassables, i.e. it seems that a symmetrical check is missing.

See also

The validation of AI groups after taking over from a human player are implemented through 127, 127c and 700 (RiseFall::setPlayerControl).

CFC discussion

Tbd.	Currently, a unit with one impassable could still join a settler with two different impassables. Really need a set inclusion check, and not just for the case when groupfirst values are the same. Don't know how to approach that.
057b	Only relevant for mod-mods: Invisible settler units don't wait for an escort. (With the BtS AI code, they wait in vain forever.)
Rationale	Someone had this problem in their AdvCiv-based mod. The BtS Al code prevents invisible and visible units from forming a group. I don't know if there's an important reason for that other than that invisible units tend to have different tasks than visible units. I'd rather that not mess with that. Letting an invisible settler go it alone isn't ideal because the city will be defenseless at first, but at least the settler gets to take advantage of its 2 movement points this way.

058	Conceal player identities (when app	ropriate)
AdvCiv		K-Mod
Functions getKnownName, getKnownPlayerColor, getKnownCivDescription and getKnownCivShortDescription added to CvPlayer. Those functions take a team as parameter and return placeholder information (e.g. "unknown player") when that team isn't allowed to know the identity of the player. Reverted the K-Mod changes. Calls from the EXE to getPlayerColor are redirected to getKnownPlayerColor.		Modified CvPlayer::getName, getPlayerColor, getCivilizationDescription and getCivilizationShortDescription so that they return placeholder information when the active (human) team isn't supposed to know the identity of the player. Perhaps that's why karadoc chose to make the placeholder behavior the default? So that the EXE would display the correct colors. He probably wasn't aware of .def files, so my solution wasn't available to him.

059	Help text for city health/ happiness fr	om surrounding tiles
See also	Based on refactored code for 901, which also changes the rules for health/happiness effects across borders.	
	004b shows health/ happiness help t	for a future city when a Settler is selected.
AdvCiv		BtS
owned by the active played health and leature which cities	ring over a tile in the radius of a city ne active player or a tile owned by the er in the radius of any revealed city, happiness effects from improvements are shown. The hover text says are affected (this can include cities by the active player). Exception:	Tile hover text doesn't show any health or happiness effects from features and improvements (only shows effects of resources). The city screen shows a tally of the health and happiness from surrounding tiles.

Health effects between -0.49 and 0.99, i.e. when there is only an ordinary Forest, Jungle or Flood Plains, are only shown when a Worker is selected in the tile that the mouse hover over.

Rationale

The +1 happiness from Forest Preserve should be shown in hover text; it's the main reason for building Forest Preserves. I want to show happiness and health from features and improvements together so that city names don't need to be listed multiple times. (Traits can grant happiness from features and, through 901, improvements can grant health; both unused.) However, I don't think I want to show the small fractional health effects of BtS features all the time; they're not so important and players are used to them. Hence the complicated conditions for when to show the new hover text.

The city screen uses slightly more generic explanations for happiness and anger from features.

The city screen uses slightly more generic explanations for happiness and anger from features.

Fractional changes are shown in	Optionally shows a hint in the action hover text if the Worker build will decrease health in any nearby city. That hint also says whether that city has greater excess health than excess happiness or vice versa.
Rationale		alth and happiness doesn't seem very helpful and e available space. Also, without that extra info, ver text optional.

060	Add-to-spaceship not shown after part completed	
AdvCiv		BtS
After completing a Spaceship (SS) part, the player is only taken to the SS screen if the SS is ready to launch.		Except in networked multiplayer, the player is taken to the SS screen after every completed SS part. The SS screen was added in BtS.
Config	BUG menu, "General" tab under "Splash Screens"	
Rationale	Finishing one of the sixteen parts isn't such a grand event.	

061	Help text that lists the units in a tile r	ewritten
AdvCiv		BtS
The available number of lines is estimated based on the context (whether the mouse is on a tile or on a unit flag or an indicator bubble), screen resolution and font size (if <u>002b</u> is enabled, size 14 is assumed, otherwise size 12).		
player's units Tokugawa (2 Archer 3 str. Archer 2/3 st If a player ha	s are listed under a heading, e.g.: Units): Combat I r. us just 1 unit, the owner is shown inhe larger font, this line sometimes	The owner is always shown in-line: Archer, Tokugawa, 3 str. Combat I Archer, Tokugawa, 2/3 str. No per-owner unit counts are shown anywhere.

The unit count in the heading is broken down into up to three categories if units of more than one category are present. The categories are "army" (military land units), "navy" (military sea units) and "other". E.g.:

Tokugawa (1 army, 1 other):

Rifleman 14 str.

Airship 4 str.

In some cases, the heading is omitted, e.g. when all units in the tile are owned by the active player and they're few enough to count at a glance.

If there isn't enough space for all the units and headings, the information shown about the tile's center unit is (slightly) shortened or shortened to Same, though it can't be shortened to a single a single line.

If there still isn't enough space, units that have both the same owner and type are aggregated into a single line, e.g.:

Archer (2), 2.5/3 str. Combat I x1 This is applied to all units except for the center unit and units with an attached Great General.

If the algorithm expects that the aggregated entries will still require more space than is available (this should happen very rarely), a line with a warning is displayed and, for some civs, only the heading with the unit counts is shown.

The unit owners are ordered as follows: First units without known owner, then those owned by the civ that owns the center unit, then ordered by (total) unit count, then by slot id.

The units of a given owner are ordered as follows: First transports and units in cargo (interleaved so that one can guess which unit is in which transport). Then units of the same type as the center units, then units of the same domain as the center unit. Then ordered by domain, then by combat strength, then by unit id (or unit type id if aggregated).

line. (The center unit is the one shown on the map as a 3D model.)

If there are more than 15 units, the first 15 are still listed on a separate line each. The rest is aggregated as described on the left

(minus the exception for Great Warlords), e.g: Archer (2), Tokugawa, 2.5/3 str. Combat I x1 These lines are often so long that they wrap around.

No such fail-safe mechanism.

If the active player has units in the tile, then those units are shown first. Then ordered by player slot id (I think).

Transports/ cargo: same. Then ordered by how recently the unit arrived in the tile (I think) and unit type id.

Config	New option "List Units per Owner" on the "Map" tab of the BUG menu; enabled by default. All the changes above only apply if the option is enabled.
Tbd.	Use the change tag (see <code>config\Tech Window.xml</code> for an example) to toggle the Unit layer twice when the status of the new option changes. Currently, the help text attached to the Unit bubbles isn't updated until the Unit layer is manually toggled.
	The "More Naval AI" mod allows human to cycle the center unit of a tile through key presses (<u>Git commit</u>). Would be nice to have some means of viewing the full information about any unit in a foreign stack. Not sure if this would be fully compatible with AdvCiv. I think there's some non-UI code by me that accesses the center unit just to get some arbitrary unit in a tile. Shouldn't matter how the center unit was chosen then – but I'm not quite sure. Also a bit laborious to merge.
Rationale	The main issue was that the BtS code wasted too much space. With the larger font

	(<u>002b</u>), parts of unit list were frequently unreadable. The wrapped-around lines were also difficult to read. The per-owner headings solve these problems and provide unit counts, which I had wanted to add in some form and place for some time.	
	Another issue with the BtS algorithm: A mix of aggregated and non-aggregated info is confusing, especially when the units shown separately are chosen mostly arbitrarily (unit type id and slot id should only be used as tiebreakers).	
See also	101 and 187 add some city-related info (revolts, air unit capacity) to the hover text of city tiles, potentially limiting the vertical space available for units.	
The owner of a Privateer is revealed if the Privateer is in a City or Privateer shares a tile with a visible non-Privateer Fort. unit or when the Privateer is in a City or Fort.		
Rationale	Revealing Privateers in port makes some sense because units that are always hostile (though BtS actually didn't check this) can only enter the port of their owner (well or of a teammate). The same reasoning should apply to a Privateer stacked with visible units whose nationality isn't hidden.	
	With the changes to help text, an anonymous Privateer stacked with other units would have to be the center unit, and this would make it stand out more than I'd like.	
See also	007 reveals the owners of Privateers when in Debug mode.	

062	Al diplo comment states the reason for canceling a vassal agreement	
AdvCiv		BtS
When the AI cancels a vassal agreement, the diplo popup says, in vague terms, why the agreement is being canceled.		Always says "It appears you are too weak to protect us"
	Got the idea from this thread (K-Mod subforum). In AdvCiv, I don't think an explanation is really necessary, as voluntary vassal agreements to humans are rare and normally canceled because of the vassal's power rating, but it's still nice to have. Also, "too weak to protect us" is misleading when the ratio between vassal power and average power is responsible for cancelation.	

063	Changes to BUG's Actual Effects mod component	
AdvCiv		K-Mod
happiness, help text wh	ctual Effects production, commerce, health, specialist and maintenance nen Alt is held down or when the options are enabled.	K-Mod already treats the Actual Effects building help text this way, but the other options aren't tied to any modifier key.
Rationale	Perhaps karadoc just didn't find these options helpful at all. They don't seem very useful to me, but there isn't really any downside to my change, and it could convince players who tend to enable all the BUG options to leave Actual Effects disabled, resulting in a less cluttered UI.	
	K-Mod doesn't include the food and defense options. I suppose these were deliberately omitted as the code seems very easy to merge. As far as I can tell, these options would only apply to Baray, Walls and Castle, and I don't think that justifies twadditional checkboxes on the BUG menu.	
Rewrote parts of the explanation text for the Actual Effects options as the original text was very		

production ra	sparse. E.g. for the production option: "When checked, displays the buildings that will affect the production rate and by how much." Displays it where? Which buildings? The options are now under the heading "Absolute Effects", which seems more descriptive. ("Net Effects" would be another alternative.)		
	the BUG menu (and wrote help text	K-Mod only shows those effects when Alt is held down; can't permanently enable them. (It seems that BULL always shows net effects of specialists; an option exists in the configuration files, but isn't shown anywhere on the BULL menu.)	
	Maybe an oversight in BULL. The op features of the Actual Effects mod.	tions are good for making players aware of all the	
Credits	VDNKh made me aware of the missing option (<u>CFC post</u>).		

064	BUG Whip Assist; changes to production overflow.	
AdvCiv		K-Mod
Merged BULL's HurryOverflow option (overflow info in the "whip" button's help text) and enabled it by default. Adapted the computation to AdvCiv's treatment of excess overflow (see below) and revised the help text. "Include Current" extra option also merged, and enabled by default. Changed it so that current overflow and feature production are included in the predicted overflow regardless of the "Include Current" option. The (other) WhipAssist option (the option names in the code are a mess; that one shows overflow info directly on the production bars of cities) remains available and disabled, and now uses the same (C++) code as the HurryOverflow option, and so do the hurry Civ4lerts. Redundant Python code (CvMainInterface.py, Civ4lerts.py) commented out.		Of the three BULL options related to hurry overflow (each with an extra option "Include Current"), two require DLL changes, and karadoc didn't merge these. One of these two, HurryOverflow, had been shown on the BUG menu but had no effect when enabled. All were disabled by default. The pure-BUG option (WhipAssist - overflow on the production bar) was working correctly. The "Include Current" option adds the city's current production rate to the overflow resulting from hurry production. This is correct insofar that the overflow after pressing hurry is going to be increased by the city's production rate, but the production rate after sacrificing population will be used, and the Whip Assist can't predict (doesn't try to) which citizens are going to be sacrificed and whether citizen automation will cause the remaining citizens to be reassigned.
See also	, , ,	ext to the production yield breakdown.
Rationale	While I think that players should use the "No Slavery" option (912d), the mod should still offer UI support for Slavery.	
The last missing Whip Assist option would show hurry info on the city billboard (or it's help text?). I suppose that the fast Deity-level players, who don't like to enter city screens all the time, use this. Could perhaps merge it along with other BULL changes to the billboards, but AdvCiv perhaps just isn't the right mod for such players.		
Credits	As far as I can tell, EmperorFool implemented the option that I've merged from BULL.	
Screen") for	Separate option on the BUG menu ("City Screen") for disabling hurry tick marks. Disabled nurry tick marks by default. The "Tick Marks" option on the "General" tab enables all tick marks, including the little yellow ones that show how much production is needed to decrease the population loss from Slavery.	

	Two different tick marks make the production bar look cluttered, and it's nearly impossible to guess what the hurry tick marks are for.
See also	078: Other changes to the BUG progress bar options.

064b	Changes to overflow production rule changes. For context, let's go throug	s. See the bullets in the blue boxes for the actual the change history first:
Vanilla Civ 4		Warlords
of the total p production of rate (hearsa different price is discarded eliminate pro- players from less than a f stacking up spaceship p	oduction is capped at the maximum production cost of the completed order and the city's base production by: this upper limit may have been or to patch 1.61); any excess overflow as a comment in the code says "to be build exploits." (I.e. to prevent a producing items that take the city all turn for several turns in a row, overflow toward e.g. a wonder, art or military units whose tech is still being researched.)	Excess overflow is turned 1:1 into gold.
Unofficial Pa	atch 0.21 for BtS 3.17 (<u>link</u>)	BtS patch 3.19
From patch notes: "Limited which production modifiers affect gold from production overflow." Lets the same modifiers apply as for Wealth.		From patch notes: "Build-specific production modifiers are no longer counted for overflow gold calculations." However, the implementation works quite differently, usually discarding excess overflow without compensation. See e.g. this post for details. This post by one of the authors of the official patch confirms that Firaxis had only meant to clean up the code from the unofficial patch.
Unofficial Pa	atch for BtS 3.19	K-Mod
From v1.0 patch notes: Kept overflow fixes from 3.17 unofficial patch. From v1.4 patch notes: "Fixed extra overflow production bug when stopping culture process after border pop."		Same as the latest unofficial patch for buildings, but, for units, excess overflow is spent on additional units of the same type if possible. If there is enough overflow, multiple units can be trained in one turn.
Issue with K-Mod rule	units, K-Mod adds complexity to r On the highest difficulty settings in that see a large enemy stack app Archer per turn through Slavery. To considerably – which might be Orvery upset about it in this video), I wars, and I don't want the invadin Usually, when excess overflow or To redeem the production spent, But this will result in even more or maximal overflow is already being per turn trains a Spy (40 production)	Il occurs for buildings (e.g. Walls) and national rules that were already complicated. In the late Classical or early Medieval era, Al civs roach can routinely produce more than one This raises the cost for conquering mature cities of for human-Al wars (though YouTuber Lain got but I suspect that it can lead to indecisive Al-Al go Al to train and bring as many units as it takes. It is cours, K-Mod produces another unit only partially. The player will have to continue training that unit. It is going to be a cheap unit and go stored. For example, if a city with 105 production on), it'll store 40 overflow and put 25 into another cond Spy to avoid missing out on the 25

production, 130 overflow will result in 40 overflow stored, two more Spies and 10 production for a fifth one. Ultimately, this leaves it up to the player to avoid excess overflow in the first place.

 When there are production orders queued up, it's counterintuitive that excess overflow is spent on an additional unit that the player didn't ask for and not on the queued orders.

See also

<u>001v</u> fixed an exploitable bug in the K-Mod overflow code. The fix was removed along with the K-Mod code.

AdvCiv: Same as the latest Unofficial Patch, i.e. fully reverted the K-Mod change, and made the following tweaks to overflow, chopping and Slavery:

 The overflow cap is set to the maximum of the city's food store capacity and (as as in K-Mod/BtS) the city's base production rate. The production cost of the completed order no longer matters.

Tbd. Rationale

Could relax the cap a bit more, e.g. 150% of the food store capacity.

The overflow cap should be chosen with two goals in mind: (a) Prevent players from stacking up substantial amounts of production and (b) set the cap so high that it's unlikely to be exceeded unintentionally. As for (b), using the city's base production rate is fair enough. As for (a), however, the cost of the completed order is not a good indicator for problematic stacking. What should matter is the cost of the production order that the stacked production is going to be used for. This is unknown, so some estimate based on the overall game progress should be used. Since overflow is somehow stored by the city, using the food store capacity makes sense to me. Conveniently, the food store capacity is already adjusted to game speed, map size and start era.

• Production from chopping is no longer converted into overflow, and instead remains stored separately until the city needs it.

Rationale

The accumulation of chopping production isn't an issue (or at least not one that overflow conversion can address) because the player can always preserve chopping production for a future production order by simply not chopping the Forests until needed. Granted: It can be more efficient in terms of Worker utilization to chop Forest ahead of time and keep the yield stored at the city; however, the BtS/K-Mod rules already allowed this by having the city build a Process (which can't use up chopping production), and my rule change has the substantial benefit of preventing chopping production from ever getting converted into gold, and preventing hurry production from stacking with chopping production to generate overflow (see below).

See also

Wonder fail gold can still convert chopping production into gold. See *Tbd.* under 123f.

- The formula for the population to be sacrificed for Slavery takes into account the current overflow and chopping production: That production is already guaranteed and doesn't need to be covered by Slavery. Consequently, Slavery can't be used at all when the entire production cost is already covered.
- The same goes for the computation of gold for rush buying, however, in this case, the current production rate of the city is fully taken into account.

Rationale

Slavery generates the most overflow when applied to an order that is already about to complete. Ideally, hurry production should only add as much production as is needed to complete the order at the end of the turn, resulting in 0 overflow. Of course production from Slavery comes in chunks of 20 or 30 hammers, but the principle still applies.

For rush buying, the entire production rate can be taken into account. If the player rearranges the citizens afterwards, there can be overflow (can't be helped) or the production order may no longer complete at the end of the turn. In the latter case, the

	player can always rush buy again to	close the gap.
	As Slavery removes at least one citizen, the city's regular production from tiles can't be counted on, but the currently stored overflow and chopping production are entirely reliable. Strictly speaking, 1 production from the city tile is also guaranteed and my original implementation had counted that 1 production. I've reverted that (see CvCity::minPlotProduction) because reducing overflow by 1 isn't worth the additional complexity. Related post of CFC: link	
AdvCiv BtS/K-Mod		BtS/K-Mod
When an order is about to complete, the production yield tooltip on the city screen says how much overflow and chopping production will carry over to the next order, and how much gold, if any, will be generated.		BULL (see 064 above) shows info about overflow production (including chopping overflow, which can't carry over separately) and gold, but only when Slavery is involved.
	converted into gold, an on-screen ys how much.	The overflow production is converted silently. (And K-Mod's additional units also appear without any notification.)
Tbd.	Would be nice to show a breakdown of hurry modifiers in the button tooltips. Also, the impact on stored chopping production isn't shown on the Slavery button, however, Slavery I'm hoping to remove eventually anyway, whereas rush buying is here to stay.	

064c	Changes to hurrying wonders	
AdvCiv		BtS
Can sacrifice at most 3 population at once (perhaps especially relevant for wonders, but applies to all types of production).		Can sacrifice up to half a city's population rounded down.
Rationale	To ensure that wonders can't be constructed abruptly, but mostly because the sudden high population loss is jarring.	
Tbd.	I don't like the high hurry penalties for great wonders as I don't see a problem with wonders getting hurried so long as they're not completed in just two turns. Also, the penalties can be bypassed through overflow (although 064b makes this more difficult). And there should be a single penalty for all great wonders, not 100% to 300% as is currently the case.	
	I've tried setting the penalty to just 50% (i.e. 20 production from Slavery instead of Same as for national wonders), but, for the time being, this would exacerbate problems with fail gold (see <i>Tbd.</i> under <u>123f</u>). I've also tried, in addition, to apply or generic production modifiers (i.e. not Stone, Marble) when hurrying a wonder, but the can, again, be bypassed through overflow: when the overflow is added to the wond the extra modifiers are applied.	
	In theory, overflow generated through Slavery could be subject to an additional penalty, e.g. reduced to 2/3, but I've found that too difficult to implement.	

064d	Invalid orders don't create overflow	
AdvCiv		BtS
		The validity of all production orders is verified at the end of turn – too late to ask for new orders

without giving yield is lost. (As far as I'ng production of turn is through of ange or a	m aware, the only way how a city's	from a human owner. Cities whose production order is invalid produce overflow production. Overflow produced in that way is not subject to any limits; can be stacked up arbitrarily. (No change:) When a player ends his/her turn without assigning a new order to a city that has finished its last order, the production yield is lost.
See also	The exploit for stacking up production is described <u>here</u> on CFC.	
Rationale	Easy enough to prompt the city owner for new orders. The popup can't be overlooked, so, if the owner refuses to give new orders, it's fair enough to assume that the city is deliberately ignored and to discard the yield. Don't have to worry about excess overflow this way.	
Tbd.	Not sure if I've implemented this correctly; I don't fully understand the code for updating plot groups. See comment in <code>CvPlotGroup::recalculatePlots</code> . Seems to work pretty reliably though — after having fixed a bunch of issues with my original implementation. (In particular the bug reported here ; the attached savegame could be useful again.)	

065	"Show Culture Turns" and "Commerc	ce Subtotals" no longer optional
AdvCiv		K-Mod
	re always shown on the culture bar	There's an option for this, which is enabled by default in BUG, K-Mod and probably most other BUG-based mods too.
Commerce subtotals (e.g. "base research") are always shown in the commerce breakdowns of cities with specialists or other direct sources of special commerce.		Optional in BULL (called "Base Commerce" in the code) and enabled by default (like almost all options), included in K-Mod but disabled by default.
Rationale	To unclutter the BUG menu, especia	lly the "Misc." categories.

066	Saved space on the Foreign Advisor screen	
See also	073 changes the layout of the "Resources" tab	
AdvCiv		BtS
the "Active" Moved the " height as the margins and margin to 25 The change BUG's "Enh	and "Info" tab. 'Active" and "Info" tab up to the same e "Tech" tab, halved the horizontal d reduced the height of the bottom 5%.	In addition to a leader portrait on the left, the name of each leader is displayed above the portrait. The leader name also appears (no change in AdvCiv) when hovering over the portrait. The "Active" and "Info" have a peculiarly thick bottom margin.
Rationale	Especially vertical space is valuable	(even on large displays).
The height of	of the main panel on the "Active,"	The panel takes up the entire height of the

"Info" and "Glance" tabs is reduced when there are few civs to list.		screen (apart from the margins), even if there is just one foreign civ to display information about.
Rationale	The large panels look inelegant.	

067	BUG era display uncoupled from NJAGC (game clock) and other changes to NJAGC		
See also	002k: Year notation (AD/BC, CE/BCE) can be switched on the "Time" tab.		
AdvCiv		BUG	
the era display, does not require NJAGC to be enabled. NJAGC (Not Just Anot upper left corner and a the clock settings – call		The tab is called "Clock". The switch for enabling NJAGC (Not Just Another Game Clock) is in the upper left corner and affects the era display and the clock settings – can't have the era without the clock. That said, the color settings apply to the	
been added	and a second dropdown menu has that allows the alternating views to for unequal amounts of time.	era shadows on the tech tree even if NJAGC is disabled.	
shown for a l	ngs revised so that the game turn is onger duration than the time of day le clock is still disabled by default).	By default, if NJAGC and the alternate display are enabled, the display switches every 5 seconds between game turn - slash - turn limit and game progress as a percentage; the time of	
	e option to show the game turn a percentage.	day is always on display.	
	I've added an option for displaying the game era instead of the active player's era. Then I realized that this would be a cheat as the game era can't be easily derived from the game state until all civs have been met, so I disabled the option again. Can be re-enabled through BugnjagCOptionsTab.py.		
Rationale Personally, I want neither an era display nor a clock, but there the two. The era display is even in a different corner of the scr			
	The progress percentage seems entirely pointless to me; the other options I can see some use in: Showing e.g. "126/750" instead of "Turn 126" can serve as a reminder that the game is on Epic speed. I could also imagine that some players want to hide the game year, e.g. to make room for the time of day.		
	The alternating display was perhaps not a great idea originally, but is kind of useful in AdvCiv because of the increased font size (002b); the BtS clock doesn't fit on the panel anymore. With the second dropdown menu I've added, one can also build a sort of nagging clock that appears every 10 minutes just to remind the player that time is passing. That's a bit more subtle than the BtS alarm function.		
Credits	TheLopez is the author of the NJAGC component.		

068	BUG options can cause tech tree to be updated	
AdvCiv		BUG
tech tree is owhole Tech	changed, a dirty-bit is set and the Advisor screen is reconstructed the at it is opened and then reflects the tings.	The "Tech Era" option that displays colored shadows on the tech tree and the options on the "Clock" tab that set the shadow colors usually only take effect after a restart because BtS (CvTechChooser.py) caches the tech tree widgets when tech tree is opened.

	The "GP research" works without restart.
Rationale	The BtS caching can't just be disabled. Opens the tech tree about one second faster (in a Debug build) and keeps track of the horizontal scroll position.

069	Changes to plot lists and the PLE (Plot List Enhancements) component		
Credits	BUG lists 12mokeys and EmperorFool as the main authors of PLE.		
See also	PLE has a function that predicts the vertical space needed for help text (getTextLines in PLE.py). This was sometimes underestimating the space, presumably because of AdvCiv's larger fonts, so my adjustments in the PLE code are tagged with 002b. That said, sometimes too much space was allocated (and I've only made that worse), so I'm not sure if this is entirely a matter of font size. Anyway, too much space isn't so bad, but too little space had meant that not all text was readable.		
Tbd.	Often, no help text is shown for plot list icons on the city screen. This error occurs regardless of the plot list drawing method (vanilla/ PLE/ BUG). The handler for WIDGET_PLOT_LIST gets called and composes the text correctly, but the text isn't displayed. When loading a savegame and entering a city screen without selecting any unit first, it seems to work correctly; so perhaps some of the code in CvMainInterface.interfaceScreen (screen.addCheckBoxGFCAt?) needs to be repeated in the updatePlotListButtons functions (near screen.changeImageButton) when the city screen is up.		
AdvCiv	BUG		
dependence options clear			
	it's good to have this sorted out.		
	ne help text shows turns-to-heal on a ne and spelled out. Shown without explanation on one line with the unit's strength and movement points.		
Rationale	Too difficult to guess what that number means; I had to look it up in the manual. And vertical space isn't really (or shouldn't be) scarce.		
	When listing unit abilities, only the BasicUnitHelp string is displayed. The full UnitHelp string is displayed (under a heading "Unit Specialties"), including a list of unique replacements and the production cost.		
Rationale	Confusing clutter		
Fixed a bug in AstarTools.py that had caused the PLE movement highlighter to crash sometimes.			
Fixed a bug in PlotListEnhancements.py that had prevented bar colors from getting updated when changed through the BUG menu.			
Fixed a possible bug in $\tt PLE.py$ that had caused health bars to be shown for civilian units. (Perhaps was intentional.)			
Fixed a buç	Fixed a bug in PLE.py: The names of unit owners had been shown in random colors.		

Fixed a Python crash in MonkeyTools.getPlotHealFactor. Credits: keldath (CFC post)

Adopted a few of the help text changes in PLE into BtS (so that they apply if PLE is disabled):

The help text for a unit icon doesn't show the unit owner if the unit is owned by the active player. The remaining movement points are shown (in addition to the maximum). XP is shown without parentheses (also in tile hover text).

Rationale

The game shows unit icons grayed out for units that belong to other players, and it's pretty rare anyway that units of different players reside in the same tile. Therefore the owner isn't important information in this context. Without the owner, the name, power, moves, XP and promotions often fit into a single line.

Remaining movement points should be shown in order to match the information on the info pane.

If the BtS drawing method is enabled, no indicator circles are shown for foreign units unless they're wounded and the wounded indicator is enabled or have an attached Great Warlord and the Great Warlord indicator is enabled or when playing multiplayer with simultaneous turns.

Not sure about the PLE method and simultaneous turns. In singleplayer mode, BtS and BUG display an indicator circle regardless of the unit owner. For foreign units, it's always a white circle – indicating that the unit isn't currently expecting orders – unless the unit is wounded or has a Great Warlord (if the respective options are enabled).

Rationale	If the circle has no information value, it shouldn't be shown.	
Tbd.	Disable the circle also when the BUG drawing method is enabled.	

070	Gold rate color options	
AdvCiv	1	BUG
the BUG me gold rate wh and exceedi	own menus on the "General" tab of nu for setting the text color of the en it's positive, negative or negative ng the reserves in the treasury. The s are as in BtS.	Checkbox "Gold Rate Warning" that shows the gold rate in yellow when it's negative but not exceeding the gold reserves in the treasury.
•	noved the menu for the "funds olor because the menu was getting	
Rationale I'm not sure what the idea behind the BUG option was. It adds code (which I had changed) for showing negative gold reserves in red, but I'm not aware of an expectation that allows negative gold reserves, and I see no need for a warning about that aside, one could argue that a negative gold rate shouldn't be shown in red becautit's not an alarming condition (though it's certainly bad in a sense).		reserves in red, but I'm not aware of an exploit and I see no need for a warning about that. That we gold rate shouldn't be shown in red because
I was going to set the color for positive gold to yello rate easier to distinguish. Now that it's implemented for my taste (or just catches the eye too much). Also gold/ commerce color, the research rate should real and that's medium green (COLOR_GREEN_TECH I thir light green (COLOR_POSITIVE_TEXT).		's implemented, the yellow is a bit too unfamiliar too much). Also, if the gold rate is shown in the rate should really be shown in the research color, EEN_TECH I think); currently, the research rate is
See also	004 adds light green and light red (c the color palette of the BUG menu (t	OLOR_POSITIVE_TEXT, COLOR_WARNING_TEXT) to hrough Config\init.xml).

071	Message on first contact	
AdvCiv		BtS
When a rival is met, the game displays a message about this on the main interface along with an indicator at the tile where the meeting occurred (unless contact is made indirectly, e.g. through a vassal agreement).		No such message. If an AI rival is met, a diplo popup is shown. No notification about meeting a fellow human.
0	Option on the "Alerts" tab of the BUG menu. Also allows the diplo popup to be disabled.	
	It's often difficult to tell where a rival was encountered. The rival unit could e.g. have moved out of sight again or could be stacked with units of a third party. The option to disable the (rather pointless) diplo popup is a nice bonus. I'm not disabling them by default, in part, because I like the introduction texts from the Actual Quotes mod.	

072	Changes to the "Current Deals" list (t	rade table)
AdvCiv		BtS
Hover text for trade items listed under "What are the current deals we have together?" shows the deal that the item belongs to (e.g. "Banana to Peter for Rice and 2 gold per turn" when hovering over "Banana") and whether/ when that deal can be canceled. Trade denial information is not shown in the hover text. This was tricky to implement because the trade table is not part of the SDK, and the DLL function that composes the help text (CvDLLWidgetData::parseTradeItem) is only given information about the trade item, not the CvDeal object.		don't necessarily align. The hover text says nothing about the deal either. Instead, for resources, the hover text says if the AI would agree to another trade for this item – usually, it won't because one resource of a type is enough.
Tbd.	shown on the same row. Adding newlaccomplish this (the GUI won't show nameless dummy trade item. Such ite CvDeal::addTrades - I've tested this care of all the side-effects is going to currently identifies gifts by checking v	s and kept the code in my (offline) archive. Taking be tedious though. In particular, the code whether one of the item lists is empty. Would have retLengthSecondTrades and CLinkList::getLength
AdvCiv		BUG
can't curren that remain	rade item listed, if the respective deal tly be canceled, the number of turns until cancellation is shown in s. (Disabled by default.)	BUG has an option ("Deal Turns Left" on the "Advisors" tab) for this, but that only applies to the "Active" tab of the Foreign Advisor screen, not the trade table.
Config	I've extended the "Deal Turns Left" or the current deals on the trade table, b	otion so that it can either apply to the "Active" tab, ooth, or neither. The default is neither.
Rationale	In both contexts, hover text shows ca	ncellation info; that should be enough. Gold-per-

turn items already show the amount of gold in parentheses, and the double
parentheses look a bit strange, e.g. "Gold per Turn (3) (6 Turns)". It's also not totally
obvious what this means, i.e. that the first number is the amount of gold and the
second the turns until cancellation.

073	Trade help on the "Resources" tab (F	oreign Advisor)
See also	004w revises the help text for resources. 036 makes trades with non-surplus resources more common, and thus increases the importance of the "Resources" tab. And shows in help text how much gold the AI will pay or demand for a resource.	
AdvCiv		BULL
changes in the Trade Denial Chanctional Chanch Chan	I hovers merged from BULL. The the DLL are tagged with "BULL - al" (almost) as in the BULL code. Changes on my part: The hovers hal, and no denial info is shown for the reason is "you must be joking." Les to talk" as the denial reason when es to talk and no other reason	They use the tag "BUG - Trade Denial". Option on the BUG menu. At least in BAT, it looks like must-be-joking resources aren't shown on the "Resources" tab at all, not sure if that's standard BULL behavior or somehow customizable. (Or perhaps only K-Mod includes the must-be-joking resources?) The trade denial hover text ignore refusal to talk. ra help text, hence no need for an option.
	074 excludes must-be-joking resource	
Enabled BULL's "Kill Deal" functionality. (I only had to remove a check for the presence of the BULL DLL for this, so it looks like this BULL feature could actually have been a BUG feature.) I've added the deal string (e.g. "Wine and 2 gold per turn to Peter for Sheep") to the help text.		turns remain until cancellation becomes possible.
Rationale	Without the deal string, it's not always	s clear which items are going to be canceled.
The column "Will Import," "Will Export," "Importing," I.e. all from "we don't ne through darl	e layout of the "Resources" tab a bit. headings are now [gold icon] (available gold per turn), "Won't Export," "We Don't Need," Exporting," [gold icon] (trade balance). the other civ's perspective except for ed." The columns are still grouped k background panels, but the group ave been removed.	The group headings are written from our perspective: "Export," "Import," "Active," and the subheadings from the other civ's perspective: "Will Trade," "Won't Trade," (again) "Will Trade," "Won't Trade," [gold icon], "Import," "Export," [gold icon].
Rationale	The two different perspectives are co frees up space for a larger "Surplus F	nfusing, and the removal of the group headings Resources" box (see below).
unwilling to column for r unwilling to Need" (reso	for resources that the other civ is import has been removed and the esources that the other civ is export has been split into "We Don't urces that we already have – denial u must be joking") and "Won't Export"	The "(we can) Export, (but they) Won't Trade" column contains the resources that both civs are able to trade. The "(we can) Import, (but they) Won't Trade" essentially also contains those resources plus some resources that the AI is unwilling to trade for other reasons.

The "Surplus Resources" box has been renamed to "Domestic Resources" and lists all resources that we're able to trade. Surplus resources are listed first and can easily be recognized by the yellow number that says how many copies we own; that number isn't shown for non-surplus resources.

The "Surplus Resources" box has been renamed to "Domestic Resources" and lists all resources that we're able to trade. Surplus resources are listed in that box. All our non-surplus resources appear multiple times in the "Won't Trade" columns though.

Rationale

The description on the right should make clear that the BUG layout is redundant. The information in the "We Don't Need" column still overlaps with the "Domestic Resources" box, but, without that column, a complete list of foreign resources would be missing.

Tbd.

When the player has surplus resources of more than 28 resource types, the first row of the "Domestic Resources" box is going to be too small, and icons are going to be shown outside the box or even off-screen. This is because I don't know how to display multiple rows of resource counts (the yellow numbers). Not an urgent problem because 28 is a lot when there are only some 35 resources in the game, and on widescreen displays, all resources might fit in a single row. On that note, the code should check whether all resources (incl. non-surplus) will fit into a single row – easy to do – and show the second row only when needed – not quite so easy.

074	Some must-be-joking items excluded	from the Trade screen
Rationale	If it's not obvious why these items can't be traded, then the explanation "Surely, you must be joking" isn't going to make it more obvious, and beyond the explanation text, untradeable items serve no purpose on the Trade screen. That said, in some cases the omission of an item could appear like an error, so I'm not removing all of them.	
AdvCiv		BtS/ K-Mod
 resource already l 	, , ,	K-Mod excludes "cold, dead hands" cities and treats unrevealed cities as secret.
account of ' recipient of it, then the	"must-be-joking", i.e. when the a resource acquires direct access to	When an AI civ cancels a resource deal with a human civ, a diplo popup for renegotiation is shown at the start of the human turn. That popup restates the terms of the canceled deal.
See also	See the last quote box of <u>this</u> post about the exception. The known issue is too much work to fix because it involves the EXE. If all AI diplomacy is moved to the start of the human turn (see <u>001e</u>), then the problem will go away.	
	If an AI civ cancels multiple deals at c single popup. 074 doesn't support mu	once, <u>133</u> shows all canceled trade items in a ultiple popups in a row.
	tab of the Foreign Advisor. (One could	f all known players are visible on the "Resources" d argue that unrevealed resources that the AI isn't at this would take some effort to implement.)

Units in cargo wake up when the ship has reached land and is out of moves

AdvCiv		BtS
moves or ot tile (city, Fo	p has spent all moves, has no further ther missions queued and is in a land rt) or adjacent to land, any land units are able to move are woken up.	Units are set to the "sleep" activity when they enter a ship. I don't think they ever wake up from that automatically.
Units that have been given any order while in cargo will not wake up. (Technically, units are set to a new activity type called "boarded" when they go aboard, and they have to be in that state in order to wake up.)		
	nove only applies when automatic unit nabled (it is by default).	
Rationale	Because of automatic unit cycling, it's easy to forget that units can disembark when a ship reaches its destination with its final movement point. The cargo units then lose an entire turn.	
	I'm limiting the wake up conditions as much as possible because units asking for orders prematurely can be annoying. Hence also the restriction that an embarked unit will only ask for orders once.	
Tbd.	Perhaps an option "Wake Up Cargo When Reaching Land" on the "General" tab under "Commands." Hopefully not needed. GlobalDefines option?	
	It might be that units are distributed rather unintelligently at times when a stack of land units is moved onto a stack of transports. <u>C2C thread</u>	

076	Player options menu revised	
AdvCiv		BtS
	he first tab from "Game" to "Controls". changes to text were only made in d German.	By "player options menu", I mean the one that gets opened by Ctrl+O. BtS doesn't seem to have a distinct name for that menu. The settings there only affect the active player.
		On modding this options screen: Unlike the Custom Game screen, the files are mostly in the SDK, so it's easy to modify. The only obstacle I encountered is the inflexible resetOptions function of CyUserProfile, which isn't in the SDK.
		Upon exiting the game, most of the options are stored in a 200-byte .pfl file in AppData\Local\My Games\Beyond the Sword\Profiles—either in Default Profile.pfl or in a custom file created by the user through the "Other" tab of the player options menu. (Unless that pfl file is set to read-only through Windows file properties. That's a way to make the options revert to a fixed configuration at program start.)
items on th	d, renamed and, in two cases, hid e player options menu, however, anging the format of the options profile	The pfl file is written in a binary format that will break when options are removed from or added to CIV4PlayerOptionInfos.xml Or

or the order of options in XML, so that these changes won't cause any compatibility issues.

Moved some of the checkboxes from the right column of the "Graphics" tab into the left column, "Graphics Level" doesn't seem to have any effect mixing them with the dropdown menus. E.g. the "No Movies" option is now placed above the 'Movie Quality" dropdown and "No Buildings" (in Globe View) under the "Globe Quality" dropdown. aliasing, "Low-Res. Textures", "No Movies", "No

Removed the "Graphics Level" dropdown. meaning that the setting will remain at whatever value is stored in the player's profile.

CIV4GraphicOptionInfos.xml, unless blank options reserved for mods (PLAYEROPTION MODDER) are used.

of its own. Looks like a change in that dropdown merely causes several other settings to change. namely the other three "quality" settings, anti-Buildings in Globe View", "No Effects", and 'Animations Frozen". They probably forgot "High Detail Terrain", which was added by patch 1.61.

Rationale

A widget that will overwrite several other settings is similar to a reset and that would have to be very clearly communicated. However, on current hardware (say, post-WinXP) most of the settings tied to "Graphics Level" hardly affect performance (or even power consumption), so it's better (and easier) to remove this master switch entirely.

Config

Can always change the "Graphics Level" by unloading AdvCiv.

Tbd.

Find out if "Render Quality" has any effect. I'm seeing no immediate effect, and, after restarting, the terrain always looks a little different, so it's difficult to be certain that there is no change. There could well be some very minor impact, or a noticeable impact only in combination with other settings, e.g. only at a low resolution. On the web. I've only found a few baseless claims. If there is no appreciable effect, then it should perhaps be force-set to "low" (to make sure that no computing time/ power is wasted) and the dropdown removed. Currently, my tooltip says "Effect Unknown".

And test some very high resolutions to see how the fonts and icons scale; then possibly add a warning about that to the "Screen Resolution" tooltip. I'll need a larger monitor for that.

The space cleared in the right column of the 'Graphics" tab allowed me to add headings to structure the remaining checkboxes, to move two headings. options from the "Controls" tab to the "Graphics" tab that might as well be graphic options ("Quick Moves" and "Numpad Help") and then to add headings to the "Controls" tab as well.

Rearranged the checkboxes on the first two tabs and made some (mostly minor) name changes, in part to take advantage of the headings; e.g. having a heading "Automation" means that "automate(d)" doesn't have to appear in all of the option names.

The checkboxes on the first two tabs are haphazardly arranged and not structured by any

Rationale

Regarding "Quick Moves", the options for unit controls on the "Controls" tab and those for animations on the "Graphics" tab are both concerned with unit animations. Putting them all on one tab might be nice, but "Quick Defense" and "Show Friendly Moves" need to be on the first tab for easy access, and there isn't enough room there for all of them. Even moving only "Quick Moves" and "Combat Zoom" to the "Controls" tab would require a major reshuffle. And these two really are just visual changes, whereas most options on the "Controls" tab allow a tradeoff between optimal play and pace, e.g. the automation options, "Wait at End of Turn", "Stack Attack" and I'd say also "Quick Defense" as this option makes it sometimes impossible to keep track of all enemy attacks.

Changed almost all tooltips to provide more precise information and, in some cases, hints and recommendations. Added tooltips to the dropdown menus and to the reset and exit buttons.

Added a "need restart" popup to the "Low-Res. Textures" option and the "Globe Quality" menu, and added info about having to restart or reload to the tooltips of any options that need it.

Removed the banner from the "Audio" tab; the cleared space remains mostly unused.

Device names in drop-down menus shortened as I never even knew that a custom music folder needed to make sure that the menu fits in the window. Moved speaker settings and custom music folder to the left column.

Removed the panel for network settings from the The only network setting is "Modem" vs. 'Other" tab. That means, the connection speed set in the profile is assumed.

Many of the tooltips more or less just repeat the name of the option, which is usually not selfexplanatory (certainly not for new players). No tooltips for the dropdowns and buttons.

Restart popup for "Fullscreen", "Single Unit Graphics", "High Detail Terrain", "Graphics Level", "Audio Speakers".

A banner of a sound card vendor (sponsor?) is shown on the "Audio" tab.

can be configured because the button had been off-screen.

'DSL/Broadband". Not sure if this has any impact on networked multiplayer games.

Rationale

No one has a non-DSL modem. Can still change this through "Bandwidth" in the INI file. With this panel removed, the Profile panel is the rightmost one, which makes sense: after configuring everything, the player may want to create/save a profile. Also, in BtS, one can get the impression that a profile is just some sort of user id for network games.

Regarding the layout of the "Audio" tab: It's better to have voice chat on the lower right than speaker settings and custom music folder because the voice chat options are a bit complicated and rarely used.

Tbd.

Should perhaps mention in the tooltip for "Show ... Moves" that those options have no effect when playing with simultaneous turns.

Changed the default values of several options (at my discretion).

Rationale

Doesn't matter much because the BtS defaults are set in the profile upon installing BtS and, when a mod is loaded, the values in the profile are used. The defaults do matter when a player manually resets the profile, or if it is automatically reset, which happens under some rare error conditions. Also, the defaults can be looked up in XML as a reference.

The reset button on the "Graphics" tab doesn't Resolution" and "Menu Background" dropdowns. The quality dropdowns are set to "high" and MSAA to 2 samples. The reset button tooltips explain what gets reset and how that will affect the current profile.

the options that was changed requires it.

Removed the reset button on the "Other" tab.

Each of the four tabs has its own reset button affect the "Fullscreen" checkbox, nor the "Screen that affects all settings on that tab except (I think) "Screen Resolution". The default values for the checkboxes on the first two tabs come from the ...OptionInfos XML files, about the others I'm not sure. For the "Graphics" dropdowns, the same settings as for medium "Graphics Level" The need-to-restart popup is only shown if one of seem to be used, i.e. 2 MSAA samples and all levels at medium. The effect on the menu background dropdown seems erratic.

> When "Graphics" or "Audio" are reset, the needto-restart popup is always shown.

Rationale

It should be obvious that the game is normally played in fullscreen. Perhaps a sensible resolution could be set based on the resolutions supported by the hardware, but that might take some work to implement. The menu background is a matter of taste.

	With only the Clock options left, a reset button on "Other" is unnecessary, and could be misunderstood as affecting all tabs.	
"Numbers on City Bar", and it only shows the city with the highest research rate, a		Also shows a research icon on the billboard of the city with the highest research rate, a gold icon for the highest gold rate and a production icon for the highest production rate.
Rationale	The meaning of the icons is obscure and, as the capital usually has the top gold and research rate, they're quite unhelpful except possibly for the production icon. Without the icons, the option makes sense on the "Graphics" tab because the turn numbers are really just a visual aid for players who find the one-turn projections always shown on production and food bars insufficient.	
See also	002f allows the icons to be enabled through the BUG menu.	
Tbd.	Would be nice to add a tab for controlling some important settings in CivilizationIV.ini. To get those settings more visibility and to allow them to be changed from within the game. (For some, it may be impossible to apply them immediately, but the options screen has warning tooltips and popups for such cases.)	
	Wish list: MouseScrolling, MinimapTrilinearFilter (some might prefer it if they try it), SetMaxFrameRate (unlimited frame rate might be a bit wasteful for a turn-based game), HidePythonExceptions, MaxAutoSaves, AutoSaveInterval, CheatCode, ScreenHeight, ScreenWidth (for custom dimensions in windowed mode; don't know if they could be immediately adopted), LoggingEnabled, RandLog, MessageLog (the log settings would have to be given clearer names).	
	Example of how to change an .ini setting from within the DLL: "We the People" Git commit by Nightinggale	
	The "INI" tab should also show the path of the <code>.ini</code> file to which the settings will be written.	

077	Changes to "Demographics" tab (Info screen)	
See also	Info graphs: <u>004s</u> , <u>091</u>	
Credits	This CFC post (by Long try) demonstrates that the BtS screen leaks information in the early game.	
Tbd.	Refactoring – there is a lot of redundant code in CvInfoScreen.py, pretty much everything times 9. Needs a "Demographic" class that "crop yield", "soldiers" etc. can be instances of.	
AdvCiv		BtS
The columns "best rival" and "worst rival" show the value, name and rank of the best or worst rival whose demographics are visible through espionage.		Those columns show the value of the best and worst rival regardless of espionage or whether that rival has even been met. Only the value is displayed though (e.g. the number of soldiers).
Alternatively, as an option, a "?" can be shown in the "best" and "worst" column when the demographics of the best or worst rival aren't visible. Or, as another option, the name of the best or worst rival can be shown even if its demographics aren't visible. A "?" is then displayed if the best or worst rival hasn't been met.		The main point of these columns was, I suspect, to provide points of reference for the player's demographics.

Config	The "options" are just boolean flags near the top of Assets\Python\Screens\ CvInfoScreen.py.	
Rationale	See under <i>Credits</i> above. I particularly don't like that the player can tell on turn 0 that some unmet rival has the Charismatic trait. Giving away any concrete rival values is problematic unless those values are revealed through the graphs anyway, i.e. when demographics are visible through espionage. Potential problem: If a player focuses all his/her espionage on one or two targets in order to reveal their research goals, then the rival columns may not contain much useful information. I've tried a less restrictive approach (still in the code as an option) that also doesn't give away values but names the best and worst team regardless of espionage; however, I worry that this could incentivize players to check the "Demographics" tab every few turns.	
multiple of 5, no longer includes vassals and active player. It's rounded to the nearest small		The average is computed over all civs except the active player. It's rounded to the nearest smaller integer and shown regardless of the number of civs alive.
Rationale	coast, and the other values probably turn to turn could reveal information t	and tiles gives away how many civs start at the aren't safe either. Moreover, the changes from hroughout the game. Coarser rounding appears ulting approximate average is still useful (at least er's values into perspective.
		e known, the one in the middle could be tedious. Hence no average when the sample
Credits	Exclusion of minor civs adopted from	"Dawn of Civilization" (<u>Git commit</u>)
Removed the final row (Export-Import). It can be re-enabled through an option (see <i>Config</i> above), foreign trade minus the sum of the commerce but this will result in a vertical scrollbar since there is only enough space for 8 demographic values now. If it's enabled, the value is the player's total commerce from foreign trade.		foreign trade minus the sum of the commerce
Rationale	Rationale Seems like the least useful statistic. It doesn't make much sense to subtract other civic commerce because Civ 4 isn't a zero-sum game (unless only two civs remain); it's mostly flavorful (trade balance is a widely known economical concept). Commerce from foreign trade is still shown on the Finance tab (Economics Advisor).	
See also	ee also CFC post by a player confused about the significance of the Export-Import stat.	
Layout changes: Except for rival average and the Only the first column has double rows, showing first (title) column, all columns have double rows with one item on top and another at the bottom. Only the first column has double rows, showing the name of the value (e.g. "crop yield") on top and the unit of measurement at the bottom (e.g.		
top and the The (player) merged into	pest rival columns show the value on rival name and rank on the bottom. yelue and rank columns have been a single column with the value on k at the bottom.	"million bushels"). All the other columns just show a single number.
space efficients using some name transl	ost of the labels to use the available ently and resized the columns. Also icons. Shortened a couple of leader lations (French, German, Spanish) to fit into the columns.	No icons; all text.

Rationale	Putting the rival value, name and rank all in one table cell would be difficult to read. Since the average column has only a (numeric) value to show and it would look strange to leave the top cell empty, all values have to be shown on top so that they're easy to compare (and all ranks at the bottom). Since the unit of measurement should be on the same row as the value, I've put the units on the same line as the names of the values. That's a bit tight, but it fits.	
Decimal ("th	housands") separators added.	
Rationale	To make the large numbers easier to read.	
losing or ref	When the Info screen is shown after winning, osing or retiring, all info on all tabs is revealed as didn't have anything to hide. And all info continues to be revealed after selecting "just one more turn" (extended game).	
Rationale	Don't want additional info to be revealed in the extended game; the player can enter Debug mode for that.	
The yield statistics about rivals are moving averages.		
Rationale/ See also	To be consistent with <u>004s</u> , which shows moving averages on the "Graphs" tab.	

078	BUG/BULL GP bar options	
See also	001c fixes the birth probability display. 064 adds a separate option for the hurry tick marks.	
Tbd.	Add the GP icons to Res\GameFont.tga (GameFont_75.tga?) and let the init function of GPUtils.py use those instead of the yield icons.	
AdvCiv		BUG
only once specifically appears of GP bar ap have been	ded to show the GP bar and GG bar there has been any progress. More y, if the option is enabled, the GG bar nce any XP has been gained, and the pears once any (non-GG) GP points a generated by a city. All the bars and otion are disabled by default.	If the GP or GG bar is enabled, the bar appears right at the start of a game although, typically, no XP is gained for the first 15 turns, and no GP points for the first 50 turns.
Rationale	Not enabled by default because the confusing when a player hasn't expli	sudden appearance of the bars could be citly enabled that behavior.
The Great General bar gets updated when combat XP changes, i.e. this sentence in the BUG help file no longer applies: "One thing to note is the display of the bar will not automatically update after a battle, but you must enter a screen and exit out for it to display properly."		
shown as part of the semi-transparent portion of the research bar and thus the research bar.		indistinguishable from the current research progress. The semi-transparent portion shows
		However, the production bar on the city screen shows overflow (only) in the semi-transparent portion.
Rationale		portion. flow has already been spent, but it isn't spent un f the research rate). And it's inconsistent with the

	production bar.	
	I'm keeping the BtS behavior if tick marks are disabled because the per-turn research rate without overflow is an important statistic that should arguably be visualized somehow, either through the semi-transparent portion or, preferably, through tick marks.	
AdvCiv		K-Mod
"Great People Rate Breakdown" merged from BULL, but without an option, i.e. the hover text is always enabled. It shows, when hovering over the GP bar on the city screen, how many GPP are generated by buildings and how many by specialists.		Unavailable (not merged from BULL)

079	AI greetings	
AdvCiv		BtS
Only about half of the AI leaders brag about their best unit (based on CONTACT_DEMAND_TRIBUTE). When a braggart AI has a new best unit, it brags about that unit at the first opportunity (unless the best unit is known anyway because AI technologies and resources are visible to the human player) and, if contacted again, with a random chance as in BtS.		If the AI doesn't warn about its worst enemy (see below), it brags about it's current best unit with a probability of 25% unless Pleased or less powerful than the player. The roll is repeated every time that the AI is contacted. AI personality doesn't matter.
Rationale	early game. At first, I implemented a particular unit based on the CONTACT it's better to make the early warmong peaceful leaders, this would be out of course, contacting the AI every few to	he AI multiple times to find out its best unit in the random chance of never bragging about a _DEMAND_TRIBUTE divisor, but, ultimately, I think ers always reveal their best unit. (For some of the f character and shouldn't be needed either.) Of urns is still tedious, but I don't think the inforimplementing an alert message or sth. like that.
See also	O05a changes the CONTACT_DEMAND_TRIBUTE divisor for several Al leaders. Most of the leaders with a sufficiently low divisor (less than 400) are listed there.	
The AI remembers when it has warned a human player against trading with a particular enemy, and is more likely to warn if it hasn't warned before and less likely otherwise.		If there is a worst enemy, there's a 25% probability that the AI will warn about it when contacted. This is accompanied by an angry facial expression in BtS, and, in K-Mod/AdvCiv, by the trade-refusal expression.
Rationale Mainly to reduce the frequency of the somewhat jarring stop-trading leader animations.		
After the first era, the AI says "we would encourage you to stop trading" in the greeting only if the human player has annual deals with the worst enemy.		Will say "watch out for our worst enemy" only if the accumulated trade value in AI memory is 0, and otherwise, i.e. basically if the human has ever traded with the enemy, "we would encourage you to stop trading"
Rationale To address a to-do comment by the original developers: "maybe make this a little looser (by time)"		

080	Warn about XP loss on upgrade	
AdvCiv		BtS
The upgrade lost (if any).		Units lose all but 10 XP when upgrading. Reportedly, the BtS manual mentions this but the in-game help text doesn't. And as no promotions are lost, it's easy not to notice.
	Limiting the number of promotions that units can acquire is good, but I'd prefer a mechanism that somehow allows old promotions (which may not make that much sense on the upgraded unit) with new ones. Not sure how exactly.	

081	Naval AI for land wars (not much done yet)	
See also	905 increases the speed and bombardment rates of some ships.	
AdvCiv	BBAI/K-Mod	
		After I fixed a likely bug in BBAI code (see <u>017</u>), the AI trains only a minimal number of warships except when planning a naval landing.
Tbd.	If naval bombardment is further buffed, an AI type UNITAI_ATTACK_CITY_SEA should be added. Should sometimes train ships for naval bombardment even when there is no war plan yet. To be added to BBAI's "city hunting stack" code.	

082	Al changes for naval assaults (few so far)	
Tbd.	Al shouldn't keep units for naval assault embarked; cf. this CFC thread.	
	To get the AI to drop invasion forces in a friendly bridgehead (and to overcome the inability to attack landlocked enemies), it might suffice to do the following: In <code>CvUnitAI::AI_goToTargetCity</code> , check if the current unit is a sea unit with cargo, and if the target city is (about to become) hostile and in a different area than the unit. If so, find the reachable (in particular: coastal) non-hostile city in the target area that is nearest to the target city. If that city is not too far away from the target and nearer to the unit, then, with a high-ish probability, go to the non-hostile city. However, if the owner of the target city is expected to be short work, go directly to the target city if possible.	
	Implement UWAICache::updateRelativeNavyPower (see comments there) and an auxiliary function for the intel ratio. Once there is a cached intel ratio, CvPlayerAI::AI_targetCityVal could also evaluate resources from the city owner's point of view so as to be able to "take the Oil." related CFC post	
	CvUnitAI::AI_assaultSeaTransport should estimate a) (easy) the strength of the own escort (just add up the strength values) and b) the strength of defending ships that will intercept the group. Cheat by using the target's (unless barb/minor) UWAI fleet power – once i implement that relativeNavyPower function, the cheat will more or less go away. Also need to account for factors that may distract the defending fleet. Perhaps based on the number of the target's coastal cities plus half the number of own coastal cities (enemy could	

	use its fleet to harass those) plus one quarter of the number of coastal cities of our war allies.	
	If <u>162</u> (crossing a border on the same turn as declaring war spends all movement points) is replaced with some form of ZoC rule, more AI changes will be needed.	
	040 deals with naval AI for founding cities and 046 with stranded units.	
AdvCiv	K-Mod/ BBAI	
When a group of AI units is supposed to start a war, the pathfinder avoids entering the enemy's border earlier than necessary. Only avoids ending a turn inside the enemy's border. Doesn't avoid moving through.		
	An oversight by the earlier modders. It would be even better to enter the enemy's territory without declaring war when it's clear that the units are going to leave and reenter, but that would be a bit more work to implement.	
large enoug small for an are needed landmass w launches an	tal" war, when a naval assault stack is AI_assaultSeaReinforce was added by BBAI. h to serve as reinforcements but too initial attack and no reinforcements abroad, then the AI looks for a sabroad, then the AI looks for a sabroad in attack there if the assault stack one powerful enough. AI_assaultSeaReinforce was added by BBAI. Naval assault stacks consider that routine if they have at least as many units loaded as are required for a land-based AI city attack stack (AI_assaultSeaTransport) is only considered when the naval assault stack has at least twice as many units loaded as are needed for a land-based attack. (That's the intended BBAI behavior anyway; because of a bug – fixed by K-Mod – it hadn't actually worked that way.)	
Rationale	2*AI_stackOfDoomExtra() is already ca. 10 in the Classical era. That's often overkill for attacks on enemy colonies.	
See also	Discussion on CFC: link	

083	Al changes for city attacks	
See also	001t and 082 deal with the path that AI units take when declaring war.	
AdvCiv		K-Mod/ BtS
Made sure that the AI doesn't blindly attack a city while trying to get to the best tile to attack it from.		There was an assertion saying "no suicide missions" that triggered sometimes.
city when deciding from which tile to attack the city.		Reportedly, the BtS AI is generally unable to plot around enemy units; in K-Mod, I can only recreate this for Barbarians vs. units blocking the entire inner ring of a city.
	Non-Barbarian AI stacks still disregard tiles with enemy defenders when deciding from which tile to attack a city. K-Mod comment: "consider fighting for the best plot"	
The choice of the tile to attack from needs to take into account how cenemy units are. Currently, once the AI has decided on an attack pat the city directly even if all defenders abandon the city.		e AI has decided on an attack path, it won't enter

Solo games

Rationale	It's possible to close all except one player slot on the Custom Game screen – and that makes some sense too when a player just wants the map to him- or herself. So that that mode of play should be supported if it isn't too much trouble.	
AdvCiv		BtS
No Conquest or Diplo victory in solo games.		If Conquest victory isn't explicitly disabled, the game ends shortly after the player founds his/her first city. Diplo victory impossible, but not explicitly unavailable.
Rationale	The other victory conditions make some sense without any opponents.	
Difficulty factor for Hall-of-Fame score gets divided by 4 when playing without competition.		
Rationale	Don't want solo wins (especially not Domination) to end up at the top of the Hall of Fame screen.	

085	Changes to the tabular scoreboard (i.e. only applies when "Tabular Layout" is enabled on the "Score" tab of the BUG menu)			
See also	120h changes the meaning of the es	120h changes the meaning of the espionage column.		
	For a scrollable scoreboard, <u>this</u> Dawn of Civilization pull request could Though I don't mind the scoreboard taking up much of the screen heig			
AdvCiv		BUG		
When an underscore is placed before a letter in the "Column Order" formatting string, the respective column appears only if the "Expand on Hover" option is enabled and the mouse hovers over the scoreboard. By default, the trade network, Open Borders, Defensive Pact, power ratio and Golden Age columns are set to appear only on mouse hover, and "Expand on Hover" is enabled by default.		The formatting string on the "Score" tab of the BUG menu allows players to select which columns should be displayed and how they should be arranged. Underscores in the string don't have any meaning and are ignored.		
Config	See the help text for the "Expand on Hover" option on the "Score" tab of the BUG menu. The letters with a preceding underscore should be placed on the left side of the scoreboard, at least to the left of the player score (letter "S") and civ display name (letter "C") to make sure that the score and name don't move away from under the cursor when the scoreboard expands.			
	Previously (v0.95 and earlier), all the info in the expansion columns was disabled entirely by default, so it's all nonessential and players who find the expanding scoreboard distracting only need to toggle off "Expand on Hover". However, players who want e.g. the power ratio to be shown permanently, will have to edit the "Column Order" string to remove the underscore and may also want to move the power ratio column farther to the right. For reference, the K-Mod default display string was !?2WSZVC6EPTUNBDRAHQ*LO, BUG's default is !WSZVC?EPTUNBDRAHMQ*LO. The AdvCiv default can be found in Assets\Config\Advanced Scoreboard.xml under "DisplayOrder". (In case that it gets overwritten when importing settings from another BUG installation.)			
	option becomes automatically disab by the DLL on checking whether the	t in the display string, then the "Expand on Hover" led. This is done to ensure that no time is wasted cursor gets moved off the scoreboard. Especially ies) settings from another BUG installation.		

See also	106d changes the default formatting string for the scoreboard.		
	Based on <u>003r</u> (code for deferred UI updates)		
Rationale To make some info about other civs quickly available without obstructing the main map all the time.		quickly available without obstructing the view on	
	Choice of the extra columns: The trade network icon isn't helpful in itself, but the hover text (merged from BULL) lists trade routes and active deals.		
In large games, unit animations (if enabled) generally stutter a bit while he the expanded scoreboard. Camera movement (e.g. arrow keys) while he isn't entirely smooth. I think that's just the result of recomputing and redra scoreboard once per game update (i.e. every 250 ms). The only (potential can see would be to write a (Python) update function that only reinitialized scoreboard widgets. Cf. comments in CvPlayer::setScoreboardExpand problem seems to get a bit worse when all columns are enabled. It gets now with more than 30 civs. Bug report		movement (e.g. arrow keys) while hovering also st the result of recomputing and redrawing the i.e. every 250 ms). The only (potential) remedy I update function that only reinitializes the n CvPlayer::setScoreboardExpanded. The	
	It seems that sometimes (rarely?) moving the cursor onto the scoreboard right after it has collapsed causes the frame rate to drop 5 FPS, suggesting that the scoreboard is getting redrawn without intermittent game updates. Or perhaps it's just somehow a special case of the problem described above.		
	Probably won't fix: When moving the cursor quickly from the expanded scoreboard to the flag button, the mouse focus switches to the main map behind the flag button. That's probably a side-effect of the CvInterface::makeSelectionListDirty call in CvGame::update.		
Another side-effect: When the mouse is moved across the scoreboard layer button and the scoreboard collapses while the mouse button is on the Globe layer button isn't registered. Probably can't be helped be can't tell whether a mouse button is being held down.		apses while the mouse button is down, the click tered. Probably can't be helped because the DLL	
During diploends.	pmacy the scoreboard can be expand	ed, but will then remain expanded until diplomacy	
Rationale	Workaround for a problem with flickering hover text; see comment at the start of CvPlayer::setScoreboardExpanded.		
AdvCiv		BtS/BUG	
when another civ is in a Golden Age or the not aware of any way to check – reliable negative-gold icon when in Anarchy. Help text for an opponent is currently in a Golden Age (Anarchy. Golden Age and Anarchy length are	
See also	152 uses the "fist" icon for AI war trades. That icon has become strongly associated with AI war planning through the BUG mod. So that icon can't be used for Anarchy. And I like the negative-gold icon better anyway.		
Rationale	For the active player, Golden Age and Anarchy are already prominently displayed in BtS; therefore show the scoreboard icon only for other players. The more often no icon needs to be shown (for any player), the better because then the entire column disappears.		
Explains wh demograph espionage p	for the power ratio column added. nat the ratio means and why rival ics are visible: by how many points the threshold for seeing ics or research (whichever applies) is	BUG has added the power ratio column. No hover text. The power ratio is only shown if a rival's demographics are visible through espionage. In BUG, the power ratio column is enabled by default, in K-Mod, disabled by default.	

		Color-coding is customizable through the BUG
		menu ("Score" tab) but the settings apply to rivals and allies alike.
See also	Color settings for power ratios (Advanced Scoreboard.xml) are tagged with advc.004.	
Rationale	The power ratio is useful (especially because it implies visible demographics), but bulky and potentially confusing, in part, because it isn't obvious which power rating is in the divisor. Hover text and expanding scoreboard address these problems.	
Tbd.	The info about the see-research threshold might make more sense in the rival-research help text. Would have to add a new help widget for that because the widget currently used doesn't have room for the rival player id in its data structure; but that's not much work. Could then also remove the active player's research progress from the help text (unexpected in this context). Still, showing the see-research info in the power ratio help text is quite economical as it doesn't take up any extra space (see-research implies see-demographics).	
	While I wouldn't want to use the attitude and worst enemy icons even in the expanded scoreboard, it would still be nice to add some simple hover text to them: Worst enemy: "You are Alexander's worst enemy" Attitude: just "Friendly" etc.	
	Some useful info that could be show currently and they're always shown.	n in hover text for the religion icons? No text at all
Clicking the active player's name or score on the (maximized) scoreboard has no effect.		player is clicked. The minimized scoreboard
	oard can still be hidden entirely ggle Scoreboard".)	shows only the active player's row.
Rationale	I don't think minimized scoreboard is minimize the scoreboard may not kn	good for anything, and players who accidentally ow how to maximize it again.

over a civ's s	score value. Always for the active for others, in Debug mode if the Ctrl	When hovering over the active player's score or name, a score breakdown is shown. Can't show score breakdowns for other civs.
the scorebood enemy or wat active player pretty much when hoveri	ing over the active player's name on ard, help text shows whose worst ar enemy the active player is, and the r's total war weariness is shown. (I.e. the same info as is shown by K-Mod ng over the active player's portrait on Advisor screen.)	
Rationale	Want to make worst-enemy info and	war weariness easier to access.
Tbd.	Combine the functions CvDLLWidget CvGameTextMgr::parseLeaderHead	Data::parseContactCivHelp and dHelp; they do largely the same thing.
AdvCiv	.1	BtS
	esearch is visible, the scoreboard ech progress as a percentage.	Show turns remaining.

Rationale	The turns remaining fluctuate too much as the AI adjusts its sliders or goes into
	Anarchy. Plus, the percentage can be shown even when no tech has been chosen
	yet, avoiding confusion as to whether research has stopped being visible. (Naturally,
	this problem could also be solved e.g. by showing some sort of empty tech icon when
	no tech is being researched.)

086	Hover text on the "Finances" tab (Economics Advisor) revised		
See also	Hover text merged from BULL is tagged with "BULL - Finance Advisor".		
AdvCiv	BtS/BULL		
		Some items in the commerce, income and expenses breakdowns have hover text with explanations or additional breakdowns.	
Finance tab	Finance tab lists commerce from domestic trade even when it's 0.		
Rationale	To avoid confusion.		
Credits	Th334		

087	Streamlined some BULL hover text	
See also	086 above also deals with that. 004: Misc. UI changes 124 prevents trade with unrevealed cities. I've added a bit of help text about that to the BULL "Trade Hover". Only shown when 0 cities of a rival are known.	
AdvCiv		BULL
The list of active deals in the hover text of the trade network icon on the scoreboard omits all dual deals, i.e. peace treaties, Open Borders agreements and Defensive Pacts (DP).		BtS show no hover text for that icon. BULL shows information about foreign trade routes and lists all active deals.
See also	106d hides the trade network icon by default.	
Rationale	Open Borders can be inferred from the trade route info. For peace treaties, there's a separate icon (enabled by default). The icon for DP is hidden by default, but DP really have nothing to do with the trade network and players should have their DP memorized anyway. This means only resource deals and gold-per-turn gifts (rare) are listed. Resource deals require a trade connection, so it makes sense to show them in this context.	
The hover text for the food display on the city screen shows a simpler breakdown when food only comes from worked tiles and is lost only through consumption.		BtS shows no hover text on the food display. BULL shows a very through breakdown with several subtotals. A BULL comment (copied into AdvCiv) above CvGameTextMgr::setFoodHelp (cpp file) shows the format of the breakdown.
Rationale Food production and loss in most cities are very simple; no need for any subheading		

088	Keyboard shortcut for unselecting all units
	002: other cosmetic changes 004: other misc. UI changes

Part of <u>154</u> (unit cycling button) is implemented based on this change.		
AdvCiv		BtS
Can unselect all units by briefly holding Alt+Shift+U.		The only way to select no unit is, to my knowledge, to give orders to all units. While a unit is selected, an animated circle is shown around it on the main map and the unit action buttons are displayed.
Rationale	For just studying the map for a while or for taking a screenshot. The fewer distractions, the better.	
Alt+U is already taken by the Unit layer; Shift+U by "unload all". Undebug menu blocks both Ctrl+U and Ctrl+Shift+U.		
	"Deselect" seems to be the more commonly used (and, in a way, more linguistically correct) term, but I associate that more with unchecking an option.	
Config	Through XML\Units\Civ4ControlInfos.xml. The key combination can't easily be changed there however because I've hardcoded the same combination in CvGlobals::suppressCycling. If automatic unit cycling is not suppressed, then it'll immediately select another group (or the same as before). That's also why the keys need to be held for a moment.	

089	Don't show odds for impossible attacks	
AdvCiv		BtS
The UI does attacks.	_	Through the Alt key, odds can be shown e.g. for attacking one's own units or units that are already
its auxililary checks whet clearly sepai	CvPlot::getBestDefender and functions a bit so that the code that her a defender is valid is more tated from the code that selects the in the highest priority.	maximally damaged.
Tbd.	In the <u>defender randomization</u> branch, the distinction between defender selection and validity is even clearer; merge that perhaps.	
When hovering for attack and no legal attack is possible and some attacker would be able to attack if its damage limit wasn't reached, then help text says that the defenders are maximally damaged and states the attacker's damage limit. No help text about damage limits; just a red cursor to indicate that the attack move isn't allowed. The UI generally doesn't explain who moves aren't allowed.		cursor to indicate that the attack move isn't allowed. The UI generally doesn't explain why
Rationale	It can sometimes take players a moment to realize that the damage limit has been reached as opposed to e.g. the selected unit having no moves left. One player has also (mis-)reported a case of maximally damaged defenders to me as a potential bug It's also nice to see the damage limit value (percentage) right away.	

090	Field of view (FoV) slider
See also	See <u>004m</u> for an explanation of the FoV value. 004m sets the default FoV value and camera start distance. <u>CFC post</u> (the quoted part) criticizing the slider.
AdvCiv	BUG

screen dime 100%. The one-to-one each percei	of the FoV slider is set based on the ensions. The text labels go from 10 to percentages below 75 correspond to (BtS) FoV values; above 75%, ntage point increases the FoV value ing that 100% corresponds to 125.	
Rationale	A longer slider makes it a bit easier to position the slider at a particular percentage. That said, there seems to be a bug in the slider component (in the EXE) that makes the slider position change by 1 when releasing the mouse button. A much longer slider might (mostly) fix that problem, but some players keep the slider permanently on display, so it mustn't take up much space.	
	FoV values below 10 aren't useful for anything, so I've removed those from the slide At a value of 100, Huge maps still don't fit entirely on the screen without zooming int Globe view, but 125 seems to be enough. The high slider positions aren't useful for playing the game, only for screenshots and AI Auto Play. For the low and medium slider positions, I want to keep the 1:1 relation between slider percentage and actual FoV value so that players who have their favorite FoV value memorized don't need tadjust.	
Tbd.	I've tried to work around the slider precision problem in CvMainInterface. handleInput. It might work if one could distinguish between the user hovering over the slider and dragging the slider; but I see no practical way to do that. Anyway, I've left some comments in the code. I think PlatyUI uses +/- buttons instead of a slider. That's probably the better solution.	

091	Changes to score graph (Info screen)	
See also	004s: Yield graphs show moving average 077: Changes to Demographics tab	
Credits	This post (last third) by crullerdonut without the need for espionage.	made me aware that scores are generally visible
AdvCiv		BtS
been visible remains visi regardless of When the his civ's demog turn number which the cives exceptions: No graph is during the 5 When load earlier, cives the turn that no prior esp	of espionage. uman player has never seen another raphics, the score graph is shown for rs greater than or equal to the turn on v was met by the human. s shown for civs that were only met most recent turns. ling a savegame from AdvCiv 0.97 or are assumed to have been met on the savegame was created on, and ionage visibility is assumed. (The lata hadn't been stored prior to	

	nented this behavior for both the BtS IG Graphs tab.	
Config	The part about partial score graphs is optional and, by default, disabled. The option is named "Partial Score Graphs" and located on the Advisors tab of the BUG menu.	
Rationale	Want to make the score history available if the player has been able to observe it. Don't want to reveal the entire score history on the first meeting though. The 5-turn restriction is supposed to avoid a very short visible interval that would be barely noticeable.	
	Partial graphs disabled by default because they're not useful enough to risk confusing players.	
See also	Screenshot of some partial score graphs attached to this CFC post	

092	The size of most HUD widgets increases with the rendering resolution	
Rationale	HD displays	
AdvCiv	1	BtS
than 1024x768, most widgets (buttons, panels, tables) of the main screen and city screen HUD increase moderately in size. Spaces between widgets also become a little larger on higher resolutions.		The panel at the bottom will always cover the distance between the info pane on the lower left and the big flag button on the lower right, i.e. the width of that bottom panel scales with the horizontal resolution. Similarly, the width of the panels at the top of the screen scale with the horizontal resolution, and the height of the side panels on the city screen scales with the vertical resolution. Apart from that, all the extra space available on high resolutions gets used for the main map at the center of the screen.
		The plot indicator bubbles are arguably also part of the HUD; their size increases with the rendering resolution, probably based on the screen height as the smaller aspect.
Config	Can be disabled on the General tab of the BUG menu. Layout changes to the list of city resources will apply even if the HUD scaling option is disabled.	
Rationale	People sit farther away from larger screens and then it becomes difficult to make out small widgets. Some parts of the HUD were also pretty crammed. It's nice to see a large excerpt of the map on the main screen, but sacrificing a little bit of that space for less eye strain is a good trade. On the city screen, showing a large portion of the main map isn't really helpful, perhaps even distracting. Better to make the side panels wider, affording more space to the building, trade route and resource lists.	
See also	Through the UI theme, <u>002b</u> increases the size of all text except for text in the game text font (e.g. city names, text on progress bars). HUD scaling further increases the size of some particular bits of text on the city screen, namely in the trade route, building and resource lists.	
	See <i>Tbd</i> . under <u>004z</u> about the size of the plot indicators (resources, units). Thos indicators are placed by the EXE.	
	097 adds building icons to the list of leave fairly little space for building n	city buildings. Without HUD scaling, this would ames.

137 decreases the aspect ratio of the map grid. The scaling of the panels in the lower left and right corner is done with the modified aspect ratio in mind, i.e. the panels are a bit higher than what would be ideal for the BtS map grids.

Request for a bigger minimap on CFC (6th quote box).

Kjotleik has (greatly) enlarged the minimap without touching the unit pane: <u>CFC post</u> (with screenshot; code attached)

Suggestions on CFC to adopt changes to the city screen from the History Rewritten (HR) mod. I did make the resource list and specialist area easier to read, but not in the same way as HR, and I haven't adopted any HR code.

Tbd.

Wider help text area. I suspect that the line wrapping behavior implemented in the EXE causes the width of the HelpTextArea widget to be limited. I doubt that there is any easy workaround. The "We the People" mod has run into the same problem (Git issue) and so has Realism Invictus (CFC post). One could still experiment a little with the various parameters. A more promising approach is to replace the HelpTextArea with a combination of other widgets. The PLE "info pane" (PLE.py) is already implemented that way. (I'm guessing that this was implemented prior to the 1.61 patch, i.e. before the release of the DLL source.) The DLL would then have to pass empty strings to the EXE when asked for hover text (CvDLLWidgetData.cpp), and, instead, make a DLL-to-Python call that places the text in the PLE-style help text area.

Implemented through a simple framework for laying out rectangular shapes and some functions that scale distances according to the resolution. This makes it easy e.g. to place the GP bar centered horizontally inside the city screen's right side panel with a small amount of space to the sides that will increase a little on higher resolutions:

```
# Helper column inside the right side panel
gSetRect("CityRightPanelContents",
  "CityRightPanel",
 RectLayout.CENTER,
  # Place below the organization area
  # (city religions, corporations)
 gRect("CityOrgArea").yBottom() + VSPACE(4),
  -HSPACE(9), # horizontal margins
  # Column extends down to the corner panel
 gRect("LowerRightCornerPanel").y()
  - gRect("LowerRightCorner").y() + 4)
gSetRect("GreatPeopleBar",
  "CityRightPanelContents"
  # Align at the bottom of the column
 0, RectLayout.BOTTOM,
  \# GP bar takes up the full width of the column
 RectLayout.MAX, self.stackBarDefaultHeight())
# ... (Can do the above long in advance of
 adding any widgets)
# Will look up rectangular layout data
self.addStackedBar("GreatPeopleBar",
 WidgetTypes.WIDGET HELP GREAT PEOPLE)
```

Hundreds (thousands?) of magic constants throughout CvMainInterface.py that specify the position and size of all widgets in absolute terms, e.g.

```
screen.addStackedBarGFC("GreatPeopleBar",

xResolution - 246, yResolution - 180,

194, iStackBarHeight,

InfoBarTypes.NUM_INFOBAR_TYPES,

WidgetTypes.WIDGET_HELP_GREAT_PEOPLE, -1, -1)
```

Also added some wrapper functions around the CyGInterfaceScreen class for a more concise interface.

Rationale

This rewrite was a big, tedious task. My framework leaves a lot to be desired but was still an essential help.

093	Additional help for Gift button hover	
AdvCiv		BtS
, , , , , , , , , , , , , , , , , , , ,		Only when the AI rejects a unit (due to Financial Trouble), a grayed out gift-unit button with an explanation is shown.
	I think the other reasons for gifts being impossible are unlikely and self-explanatory enough. (Perhaps no gifting that'll trigger combat is also obvious enough, but I had at first misread that as gifting being disallowed when enemy units are nearby.)	
	Perhaps not ideal that a human player can easily check through the gift-unit button when an AI civ is in Financial Trouble, but I suppose there are other ways to figure thout too (e.g. very low amount of gold available for trade).	
See also	Also used for showing help for restrictions on unit gifts added by 123a, 001b and 705.	

094	Production decay help merged from BULL	
Config	Can be enabled on the City tab of the BUG menu. No separate options for the hover text, i.e. the hover text will always be shown along with the warning indicators (exclamation marks). Disabled by default – however, when upgrading from earlier versions of AdvCiv (i.e. pre-v1.0), the option will be enabled because it had already been present (hidden) and had been set to enabled by default (as in BULL).	
See also	Requested <u>here</u> (2 nd quote box)	
Tbd.	The red hover text is kind of difficult to read. And it would be nice if its color could match the color of the warning indicator (yellow exclamation mark if decay isn't imminent). I've tried yellow, and coloring only some words; didn't like that either. I going to invest more effort for now.	
	Not sure if production decay could simply be disabled and this option removed. In theory, players could keep a small army in their production queue to avoid unit expenses and (in multiplayer I guess) to hide their strength.	

095	Optional wide city bars
Config	Can enable the wide city bars from BUG on the "Map" tab of the BUG menu; disabled by default. BUG had implemented the wide bars entirely through custom graphics; K-Mod had removed those graphics. The AdvCiv option loads the custom graphic dynamically. Note that this mechanism will break if the custom graphics (Art\Interface\CityBar) are renamed or if the path to the original graphics (in XML\Art\CIV4ArtDefines_Interface.xml) is changed. I've tried unsuccessfully to place the custom graphics in a folder CityBarWide, which would've been a bit more robust. Updating the paths in the customized .nif file wasn't sufficient to make it work.
See also	Related (short) CFC post (near the middle)

096	Tech tree reflects the current game state (to an extent)
-----	--

Tech help text on the tech tree takes into account the active player's context for unknown techs. Will e.g. not list the free Great Artist from Music if another civ has already discovered Music. This change does not hide any ability icons in the tech boxes. I've posted about this on CFC here and here (items 1 and 2). See also Tech-religion icons (tiny religion icon Show tech-religion icons on the tech tree. superimposed on the icon of the tech that founds (Don't do this after all. I've commented the code the religion) are shown in choose-tech popups out.) and on the main interface (when no research is chosen), but not on the tech tree. Rationale I wanted to show the icons so that players can tell more easily which techs will still grant a religion when playing with the Choose Religions option. However, the techreligion icons are difficult to make out on the tech tree (smaller icons there than on the main interface) and, currently, the whole tech tree has to be redrawn when an icon has changed since the last time that the tech tree was opened, and this results in a noticeable delay. Not quite worth it I think. One can still tell through hover text on the tech tree (see above) whether a tech will found a religion.

097	Building icons in list of city buildings	
AdvCiv		BtS
To the left of each building's name, the building's Buildings are only listed by name. icon is shown.		Buildings are only listed by name.
Config	_ I	e BUG menu. There's also an option for showing be helpful when playing in a small window (for table device?).
See also	092 (HUD scaling) makes the building resolution, increase the icon and font	g list wider and may, depending on the screen size in the building list.
Rationale	I think experienced players can identify buildings faster from the icons. Apart from the Palace (which has 4 different effects to be displayed in the city list), available space isn't really an issue, even at the original size of the building list.	
Tbd.	Sort the buildings in a sensible order. The current order, by ID, i.e. as listed in XML, isn't that bad – players are used to it, it groups buildings with similar functions together and is somewhat chronological overall –, so some thought would have to be put into how to improve it. I've left two rather naive attempts commented out in the code: sorting by production cost (too different from the original order, doesn't reliably keep wonders grouped together), and by construction year. The latter results in an order that varies from city to city, which isn't desirable I think. It would be nice to have through a toggle button.	
	I suppose free buildings (e.g. Monument from Stonehenge) should be at the top, then Palace (as a quasi-free building? along with all national wonders? along with all government centers?), other wonders at the end. Apart from these constraints, perhaps chronological based on the research cost of the most expensive tech requirement. That said, having e.g. Library and University listed right next to each other is nice too, makes the effects column look less busy. So perhaps rather sort by the (main) type of effect, with tech requirement (or, for simplicity, just building production cost) as the secondary criterion. One might just reorder the XML file manually, but that'll lead to problems with savegame compatibility.	
	Currently sorted alphabetically. Displaying fairly large icons (and no effects) screen. Might be the easiest to proce	used by change <u>086</u> for the city bar help text. aying the buildings as a wrapping horizontal list of could also be a nice option to have for the city ess for experienced players. Well, again, being rectly on the city screen would be best – but will rt.
Credits	because the table widget in BtS alrea	BAT mod. (It's really just a few lines of code ady has an option for including a DDS graphic.) plus symbol, but I find that too obscure (maybe if gh hover text?).

098	Changes to culture spread	
AdvCiv		BtS/ K-Mod
A city can spread tile culture onto another		In BtS, cities spread tile culture only within a
landmass only at a range of one tile beyond the		radius equal to their culture level, i.e. to tiles
city's culture level. Within the same landmass		within the city's culture range. K-Mod has
the range is equal to the culture level plus 3 as		extended the tile spread range by 3 tiles beyond
in K-Mod. On water, culture can spread only		the (proper) culture range in order to allow a
onto workable tiles as in K-Mod and BtS.		higher number of cities to participate in culture

		"wars" over contested tiles. In both BtS and K-Mod, a city can spread culture only to tiles that are within the workable range (2 tiles) from some tile on the same landmass as the city. This means, tiles within the culture range of a city can remain neutral because tile ownership requires at least 1 point of tile culture.	
Rationale	To prevent puzzling situations like this (A, B - cities of the same owner, L - a non-city land tile, W - a water tile): ALL WWW WWW LLLUNLIB		
	None of the land tiles on the bottom a tile is workable from the area of B an level 1 ("poor", 0-9 city culture) in ord	are workable from the area of A. The bolded land d, under the K-Mod rule, B only needs culture er to spread culture to that land tile. The result is cent owned tile (the water tile to the northwest) een itself and the borders around B.	
	Under the AdvCiv rule, the bolded lar	nd tile will be unowned.	
See also	Doing away with the "only spread onto workable water tiles" rule could make surprise attacks against large coastal cities more difficult (see <u>162</u>). That said, having ownership of water tiles that are positively non-workable could be confusing, and I think the BtS rule reflects international law pretty well.		
	099f prevents culture spread onto unowned tiles.		
	025: Reduced culture spread from va	025: Reduced culture spread from vassal to master	
	the base rate of culture spread ("free c ture spread from buildings a little less	ity culture") a little bit (from 4 in K-Mod to 5), important.	
Config	l've put the CITY_FREE_CULTURE_GROWTH_FACTOR global define (GlobalDefines_advc.xml) back in use, albeit with different semantics than in BtS because culture spread works very differently in K-Mod.		
Rationale		One measure for preventing culture rates from buildings, especially wonders, from being overwhelming in the early game – now that I've reverted most of the K-Mod changes to building culture.	
See also	200, 201: Changes to building culture rates. 099b: Tile culture decay – and expedited decay on "stolen" workable tiles – should also (and probably more so than the base culture rate tweak) help rein in culture spread from wonders.		
AdvCiv		BtS	
doubles. B after 1000	Once a wonder is obsolete, its culture rate doubles. Building culture rates do not double after 1000 years. Disabled by default; instead added a loading screen hint about the BtS rule. 1000 years after a building has been construction for a building has been construction dates anywhere. 1000 years after a building has been construction dates anywhere.		
Rationale	Disabled this again after a quick test because this change reduces the contribution that wonders can make toward a Culture victory too much – wonders that never go obsolete, that is. Would have to accompany this change with large culture increases for Medieval wonders and would have to set obsoletion techs for most wonders.		
	The original idea was to make the rule less obscure and more transparent, and to make an early commitment to a Culture victory less decisive.		

_	Can be enabled in GlobalDefines_advc.xml through DOUBLE_OBSOLETE_BUILDING_COMMERCE.	
See also	Some other disabled rule changes are collected under change id <u>500</u> .	
No culture s	pread from cities during anarchy.	Occupation sets a city to "no culture level", which also blocks culture spread. I don't think anarchy prevents culture spread.
	Seems more consistent with the idea of anarchy halting economies. E.g. Cottages also don't grow during anarchy.	

099	Culture isn't removed when a civ is destroyed

•	, the multipier for no Open Borders reduced in response to this post by	
Rationale	Removes one strong incentive for conquering a civ entirely. The goal is to make a vassal agreement the correct choice most of the time – less micro-management that way. Also intended to weaken military strategies.	
	It's also glaringly implausible that a culture would instantly disappear.	
	No AI changes: conquering cities is still very desirable, and the AI doesn't consider anger from culture anyway when deciding whether to accept a capitulation.	
Config	The anger can be tweaked through XML (GlobalDefines_advc), but can't re-enable cultural elimination. This is because BtS doesn't actually set culture to 0 in one place, but checks for elimination in numerous places and treats culture as 0 when appropriate, so making it optional is messy.

099b	Tile culture decays	
	, the culture value of each player (cive ans) in each tile is decreased by	Tile culture doesn't decay. (But it's treated as 0 when a civ is eliminated.)

1.3%.

When a tile is within the city radius of at least one civ, the tile culture of civs that don't have the tile within a city radius decays faster: if the tile is within the outer ring of any city radius, 2.3 percentage points are added to the decay rate, and 4.6 percentage points if it's within the inner ring of any city radius. Exception: civs with less culture in the tile than the city owner with the highest culture don't suffer from expedited decay.

(This change does not affect city culture.)

Rationale

Should lead to fewer unworkable tiles (see also the rationale for <u>035</u>) – especially with K-Mod's increased range of culture spread in mind – and fewer issues with stranded Al stacks (see also rationale for <u>034</u>). Higher decay rates would accomplish more, but I don't want tiles to flip too easily around conquered cities. That said, in BtS, it's too difficult to culture-flip tiles in the radius of a conquered city, especially in Renaissance or later; tiles have tens of thousands of culture points by then. It generally takes too long for city culture rate to translate into relative tile culture in BtS.

Why not simply tweak the culture spread formula so that tiles near cities receive more culture? The player only sees the culture percentages, so, visually, it doesn't make a difference. I don't want to increase culture on tiles that are near multiple cities of the same civ lest that "two cities would almost always be able to culture press a solo city" (from the K-Mod readme file). The main goal is to allow civs to work tiles in their (exclusive) city radii. That's also why I'm exempting civs with less tile culture than the city owner. It's fine if another civ has 45% tile culture so long as the 55% civ is able to work the tile. The exemption also makes it easier to implement this change without a performance penalty.

Config

201 restores most of the building culture rates that K-Mod had reduced. This change was introduced with AdvCiv 1.0. At the same time I've increased the decay rates by 0.3 percentage points (originally, I had used 1%/2%/4%; adding half a percentage point to that seemed too much in a test game) and one of several tweaks to compensate for the building culture changes. Moreover, I had had the impression that mature conquered cities were still taking a very long time to acculturate, and this CFC post also argues (toward the end) that the decay is too slow.

035 (disabled): City owns all tiles that no other city could work
It turns out that "RoM: A New Dawn" also has a culture decay mechanism
(SourceForge link to revision), but theirs is only triggered every 50 turns and then halves tile culture. For performance reasons I suppose; but I've managed to make the computing time negligibly short in my implementation after some tweaking.

Impassable tiles are exempt from expedited decay.

Rationale

Doesn't matter who owns those tiles, but perhaps such tiles can be useful for visualizing which civ is culturally dominant.

Cities in occupation spread no tile culture.

Cities in occupation produce 0 city culture, but the present city culture generates tile culture as normal.

Rationale

This should give civs that allow their cities to revolt a harder time.

No increased decay in city tiles, nor in tiles owned by Barbarians. And increased impact of stolen

	inner radius of Barbarian cities on revo		
Rationale	Don't care if Barbarians are able to work tiles. Rather give those tiles to civs with strong culture. Also increase the revolt chance then so that engulfed Barbarian cities get put out of their misery before long.		
	make revolts and anger from foreign The exception for city tiles can lead t	ch tiles are workable. The increased decay would culture easier to handle, which isn't what I want. o higher culture percentages of the city owner in city tile. This is a bit odd, but not a real problem I

(based on c	eany defenders would be necessary ity population and era), the AI will not extra defenders and essentially wait o flip.	
Rationale	Since revolts no longer occur only in border cities, the AI had to be adjusted.	
	advc.ctr: The AI for city trades might cede cities under foreign culture pressure. (Not yet sure how that will work.)	

099d	Can't spread religions under occuptation.	
AdvCiv		BtS
Missionaries and Executives can't spread religions/ corporations in cities that are under occupation.		Can spread regardless of occupation, but there isn't much of a point because happiness and culture from religion have no effect under occupation, and revolt chance is 0.
Rationale	Now that the occupation duration is linked to the revolt probability, spreading a religion right after conquering a city could reduce the (expected) occupation time. Don't want players to micromanage missionaries to spread religions right after conquest.	
	Also seems realistic that religious communities (or corporate branches) can't be established during disorder. (But don't want to apply this rule to disorder from anarchy because anarchy doesn't normally restrict the actions of units.)	
Tbd.	Would be better to show the Spread Religion button grayed out with explanatory text. Currently, the button isn't shown when a city is in unrest.	

099e	Al for promotions that reduce revolt chance	
AdvCiv		Warlords
promotions and when moving units.		A promotion with revolt protection is chosen based on whether the cultural owner of the current tile differs from the actual owner.

		When moving units, revolt protection is ignored. Revolt protection from promotions was added in Warlords but remained unused. K-Mod gave the Leadership promotion 50% revolt protection.
Rationale	Too much work to do this properly (see <i>Tbd.</i> below). What Warlords does is worse than nothing.	
Tbd.	The promotion should be selected based on the revolt chance in a nearby city, the number of units already stationed there and the revolt protection percentage. When there is a city with a high revolt chance, a unit with revolt protection should be given a defensive Unit AI type and stationed in that city.	

099f	Culture on unowned tiles	
AdvCiv		K-Mod
still spread radius, but o ownership r a different p shown whe	culture beyond their own ownership only to tiles that are within the adius of another city of the same or of player.) Culture percentages are n hovering over any actively visible	K-Mod increases the radius of culture spread around cities beyond the radius of cultural ownership, meaning that it's common for funowned tiles to have tile culture of one or multiple players. As in BtS, culture percentages are only displayed on owned tiles (help text, Culture layer). In BtS, the only way for unowned tiles to have positive culture values is through city razing.
Rationale	Invisible culture is not a good thing; can in particular be an unpleasant surprise when founding a city near a foreign border. Showing culture values on unowned tiles is distracting when most of the visible unowned tiles have culture values. (But it's OK when culture on unowned tiles occurs rarely, i.e. only after razing.)	
	I also don't think that culture spread to unowned tiles serves an important gameple purpose. Yes, founding right next to a foreign border should be a struggle, but it's difficult enough if the foreign culture starts spreading only once the city has been founded; in fact, that's probably better for gameplay when it comes to cities found the midgame and late game. The main purpose of the increased culture radius is non-border cities with high culture output support border cities in their struggle for contested tiles; the point isn't to spread culture to tiles that aren't really near any of	
	I think it's nice if border cities can also spread culture fairly deep into foreign territory and thereby pave the way for assimilating that territory after a war of conquest; therefore, I'm not limiting culture spread to tiles within the ownership radius of a <i>friendly</i> city.	
	prioritize info about culture over info	ense for a layer called "culture display" to about ownership, there has to be some way to d, currently, the culture layer is the only way (cf.

AdvCiv	'	BtS
another civ message inf	(hired/bribed for war), the DoW forms the human players about this : "declared war on at the	Humans don't learn about AI bribes.
Rationale	The information isn't terribly relevant strategically, but makes it easier to make sense of the AI, and makes it clear that the AI actually does sponsor wars. Moreover, if AI civs learn about sponsored wars ("You brought in a war ally against us!"), the human civs should be allowed to know this too.	
(Only relevant if UWAI is disabled:) Al civs are reluctant to be hired for war against a powerful civ. Either they decline fearing "their military might", or the price for war is high, up to two times higher than in K-Mod, depending on how disparate the power ratio is.		Weak AI civs are sometimes bribed into joining wars against powerful civs. An AI civ doesn't consider its individual military power but only the total power of the war coalitions.
Rationale	War against a considerably stronger civ is a big risk, even as part of a coalition, and, in any case, the weakest link is unlikely to conquer any cities. Moreover, sponsoring wars was too cheap overall.	
Config	WAR_TRADEVAL_POWER_WEIGHT in Gl	obalDefines_advc.
against third parties can be discussed: no or "will never trade with our worst enemy," be		Normally blocked by "we don't like you enough" or "will never trade with our worst enemy," but it may occasionally be possible to hire an AI civ for war as part of a peace treaty.
Rationale	Shouldn't show the option if the AI practically always refuses, and Cautious attitude despite war is an oddity that shouldn't matter. Could instead remove the attitude checks while at war. Seems more realistic that such options can't be discussed. Would also take a bit of implementation work because the the war trade should be	

	evaluated assuming that the peace treaty is already signed.

AdvCiv		K-Mod
probabilities, approaches 1		Foreign culture strength goes to infinity as the city owner's tile culture approaches 0%. As a consequence, sometimes no stack is large enough to keep a city from revolting, or at least
Foreign culture strength is taken to the power of 1.35 and times a (player) difficulty-based factor between 0.1 (Settler) and 0.4 (Deity). The progression gets flatter toward Deity, e.g.		not large enough to reduce the revolt probability to 0. On the other hand, a medium-size stack is often enough to reduce the revolt probability nearly to 0 but not all the way.
reaches 0.25	at Noble and 0.35 at Emperor.	The difficulty level does not affect revolts.
	The K-Mod behavior is intended, i.e. it's not that karadoc hadn't considered flipping after conquest; see discussion here . I can see how keeping a city can be harder than conquering it in the first place — but not that much harder. Say, ten good units should generally suffice to hold on to a city. If this makes revolts easy to prevent late in the game — fine; it's mostly early expansion that needs to be paced.	
	The exponentiation is supposed to balance out changes to the culture garrison strength formula (see below). The player handicap wasn't added until AdvCiv 1.0; before that the Emperor factor had applied regardless of the difficulty level. Perhaps should have thought of that earlier. On lower difficulty settings, smaller stacks can conquer cities, so smaller stacks should be able to hold onto them. That being said, I think it has been mostly Emperor players and above who have complained about revolts being too big a factor. I guess they're the ones used to conquering numerous cities in quick succession. I think it's a fairly moderate effect, at least above Noble.	
	The handicap change also stacks the game a bit further in favor of the AI, which will e.g. need only 83% as many garrisons as a human player on Emperor difficulty. Seeing that I haven't written much code for helping the AI avoid revolts better, I guess that's for the better. Could easily be changed so that culture strength gets based on the game handicap (shared by all players).	
_	The exponent and normalization factor can be adjusted through GlobalDefines_advc.xml (FOREIGN_CULTURE_STRENGTH_EXPONENT, FOREIGN_CULTURE_STRENGTH_FACTOR). The factor can also be used to adjust how difficult it is to suppress revolts overall.	
AdvCiv		BtS

CGS values are set in XML (iCultureGarrison) The culture garrison strength (CGS) of a unit equals its current combat strength with the to e.g. 3 for Warrior, 4 for Archer, 6 for Maceman, following modifiers: 9 for Rifleman, 12 foor Tank. The total garrison City defense modifiers (Archery units, Garrison strength of a city is the sum of these values. promotions) Generic strength modifiers (Combat promotions) E.g. Catapult has iCultureGarrison 4. same as -50% for non-lethal units (Siege units except Axeman; Machine Gun 9, same as Rifleman. Machine Gun) The iCultureGarrison values in XML are ignored except that iCultureGarrison=0 in XML still means 0 CGS. All non-land units have 0 CGS (as in BtS). Hover text on the main map and city screen Hovering on the nationality bar shows the revolt probability; other than that, no help text. (nationality bar) says how much more garrison strength is needed to bring the revolt chance down to 0, or, if it's already 0, how many units could be safely relocated. See also 023 reduces the CGS of damaged units. 500b (disabled by default) introduces a defensive strength (DS) value that determines whether citizens fear for their safety. It seems that using the exact same formula for CGS and DS wouldn't work well. In particular, while some effect of Walls and Castle on CGS is plausible, they shouldn't be a major factor (cf. this CFC post of mine). It's mainly about the help text. Players will often want to station exactly as many units Rationale as necessary to bring the revolt probability down to 0. By making CGS nearly equal to combat strength, players don't need to be aware of the values set in XML. The BtS XML values also increase too slowly over the course of the game. This makes outdated units too useful for revolt suppression. Combat strength increases too steeply throughout the game compared with foreign culture strength. I'm balancing that out through a change to the foreign culture strength formula (see above). That formula is now very complicated (see also below; referred to as "revolt strength" there), but it was already fairly complicated in BtS, and the crucial thing is that CGS has a simple, predictable effect so that players know how many units they need in each city. As for the Siege modifier, siege units just seem badly suited for quelling revolts. It's asymmetrical warfare. Credits Elkad and VDNKh have asked for help text to be added (CFC link). Tbd. Currently, the main map doesn't show how much CGS is needed while a city is in occupation; perhaps that should be changed. Should perhaps explicitly show the effect of revolt protection (Leadership promotion) in the hover text of the nationality bar. Perhaps wait with this until I add revolt protection to Jail. Armored units having the highest CGS values is perhaps a bit counterintuitive (and

269

before conquering the city, which requires some foresight.)

Rationale	Seems useful, but clashes with the occupation indicator, and I can't think of a different – self-explanatory – icon for positive revolt chance. A yellow fist would make sense, but the icon is very tiny, so a different color will probably make it difficult to recognize as a familiar icon.
Revolt prob	pability is initially based on the current. Always based on the highest-ever population of

Revolt probability is initially based on the current. Always based on the highest-ever population of population of the city. If the city has ever had a higher population than currently, then, over the course of 37 turns (slightly longer or shorter on speed settings other than Normal), a gradually higher population is assumed, up to a maximum of the highest population ever. Then the assumed population decreases again toward the actual population.

the city.

Culture in the eight adjacent tiles factors into foreign culture strength; the effect increases over and can increase culture strength significantly. time (same mechanism as above for population). Culture points in those tiles don't count directly. After 50 turns (on Normal speed), culture strength is further increased when adjacent tiles are owned by the foreign civ.

Each citizen angry about sacrificed population ("we cannot forget your cruel oppression"), is counted as 2.5 population (instead of just 1) and the resulting foreign culture strength is increased citizens angry about foreign culture for the price by a modifier based on the square root of the oppression anger and speed-adjusted; e.g. 50% for one angry citizen on Normal speed. The Al doesn't use Slavery in cities that already have a positive revolt chance.

Ownership of the adjacent tiles always counts.

Sacrificing population doesn't lead to a lower revolt chance because only the highest-ever population matters for that. It can get rid of 2 of 1 being angry about oppression.

Rationale I think the BtS rules are supposed to make cities flip faster once the adjacent tiles have flipped. Loss of tiles will often lead to population loss, which would normally reduce culture strength. Also wouldn't want to outright punish players for growing population in conquered cities and certainly don't want them to starve the population on purpose. (My guess as to the original intention behind ignoring the current population is that the designer saw it primarily from the perspective of a player trying to flip a border city – don't want culture strength to decrease as as food production tiles around the city flip.) However, eventually, when a city stays at a small population count, it's revolt chance should decrease accordingly, and using the highest-ever population directly after conquest contributes to the problem of a scarily high initial revolt probability. Hence the sawtooth curve. I agree that cities enveloped by foreign culture should flip quickly, but I don't want conquered cities to be untenable, and I don't want players to feel compelled to continue their wars in order to push back foreign borders. My rules are supposed to give the conqueror time to build up some culture.

Slavery would be an easy way to get around anger from foreign culture, and to keep the population small, making the city easier to pacify. Also, Slavery could be used to raise units for revolt suppression in the very city that needs to be suppressed.

Prior to AdvCiv 0.97, hurry anger (regardless of the number of angry citizens) had caused the population to be treated as 5 greater and there was no speed adjustment. (Note that anger duration is e.g. three times longer on Marathon than on Normal speed.) That turned out to be too punishing (and too implausible). Slavery should should be an option for urgent production orders, in particular Courthouses.

That's all overly – and really unacceptably – complicated (already in BtS). It's OK for now; players don't really need to know the details. But eventually this should be greatly simplified.

See also

If 035 is enabled, it's *cultural* ownership (highest tile culture that matters for the revolt chance after 50 turns.

912d nerfs Slavery a little and allows it to be disabled.

CFC post (response to Elkad) about the effect of hurry anger.

Tbd.

Maybe the penalty for using Slavery is now a bit too small. Losing one or even multiple citizens lowers the revolt chance substantially in small cities; the increased anger can't always (over-)compensate for that.

Should population growth increase the city owner's city tile culture? A supressed population would typically not grow as fast as its supressors ... However, this could encourage sacrificing or starving the city population.

Hover text for the nationality bar shows when sacrificed population increases foreign culture strength.

Rationale

Players who normally use Slavery all the time are unlikely to notice that revolt chance is lower without hurry anger; need some UI support for this. Ideally, players should be aware before sacrificing population, but I don't think they'd necessarily read hover text for the hurry button. They'll likely inspect the nationality bar though (sooner or later) when cities have much higher revolt probabilities than in BtS.

I'm not showing *how much* hurry and conscript anger add to foreign culture strength. Culture strength isn't really part of the UI's vocabulary, so it would have to be expressed as additionally required garrison strength. In any case, it's awkward to implement and that time would be better spent re-designing the culture strength formula or replacing Slavery.

Barbarian cities flip on the second revolt. After a city is conquered or founded by Barbarians, it has has 0 revolt probability for 8 turns (adjusted Barbarian units can suppress revolts just like non-Barbarian units.

Flip on the first revolt. No protection after conquest except that no revolt can occur under occupation (and cities can generally only revolt to game speed through the Golden Age modifier). When within the culture range of the city's cultural owner). Barbarian units have 0 culture garrison strength (but this doesn't affect the occupation timer).

Rationale

Given the increased revolt probabilities in K-Mod and AdvCiv and the removal of the range restriction for revolts (099c), a single Barbarian revolt happens (way) too quickly. A holy city conquered by Barbarians in the early game would flip back in something like 10 turns. Two revolts are still too guick, and, even for cities that can't flip, it looks strange if they go into revolt so easily.

I've tried some other remedies (letting Barbarians eliminate some of the former owner's tile culture upon conquest; increased chance for decreasing the occupation timer in Barbarian cities), but a grace period seemed like the most effective approach in tests since Barbarian conquests tend to happen in the early game when a Barbarian city can quickly generate some tile culture if they're not interrupted by revolts.

023 changes to the occupation timer.

religions if

- a) the civ to whom the revolt culture belongs is alive, not a capitulated vassal of the city owner, has a state religion and that religion in present in the city; or
- b) if the city owner has a state religion, and that religion is not present in the city but some other religion is.

In case b), the increase is only 2/3 of case a).

No change: The revolt chance is decreased (which may cancel out the above) if the city owner has a state religion, and that religion is present in the city.

In case a), the revolt chance is also decreased (but not by as much) if the city owner has no state religion.

All city owner is slightly inclined to switch to the religion of the foreign population.

Hover text on the nationality bar shows when, on balance, religion modifiers increase foreign culture strength.

The revolt chance is increased on account of city Only a) increases the revolt chance, and also applies to capitulated vassals. Dead culture can't cause revolts.

> When there is a non-state religion in the city, then an oppressive state religion (which is not present in the city) is no worse than no state religion.

The UI shows only a revolt chance, no information about how it gets computed.

Rationale

almost removed this complicated stuff entirely, but it's kind of nice that spreading one's state religion can help flip a city. The BtS rule doesn't work for dead culture, so I felt that some replacement was needed to balance out the decreased revolt chance from owner's state religion. The BtS rule also doesn't work well for capitulated vassals of the city owner: The owner can just tell the vassal to switch to a different religion; not an interesting decision, and players that aren't aware of the religion/revolt rules get confused or screwed.

	e religion-based modifiers (see at most +/-33% foreign culture	Religion can double or halve foreign culture strength.
Rationale	Spreading one's state religion had made a huge difference previously, going from doubled to halved foreign culture strength, i.e. a factor of 4.	
Config	STATE_RELIGION_MODIFIER parameters in GlobalDefines_advc.	

102	Show fewer foreign moves		
Tbd.	Perhaps enforce "Quick Moves" for non-hostile foreign units.		
AdvCiv	BtS		
an invisible start plot ar	ove starts in a visible plot and ends in plot, the camera is centered on the nd the player gets to see/ glimpse the g out of sight.	Only moves ending in visible plots are shown. In the case of a multi-tile move ending in an invisible tile, not even the visible portion of the move is shown.	
	Units that begin and end the turn in es, i.e. move only through a visible tile		
Rationale	Would make sense to show units passing through, but difficult to implement; can't catch the unit as it moves. What's easy to do is show the empty traversed tile, but that's confusing, and it doesn't make sense that the player learns about the tile but not the unit that moved. Better not to show those moves at all.		
Tbd.	Often the unit moving out of sight is already gone when the camera jumps there. Not sure if this can be helped.		
See also	Implemented based on <u>003k</u> , which CvSelectionGroup.	allows data members to be added to	
won't patro	All avoids patrolling within its own borders and won't patrol beyond a 10-tile radius around its cities. Units for pillaging don't normally patrol. All constantly patrols within its own borders are those of other civs, especially with fast pillage like Knights.		
	nits tend to move in a consistent eads to wider patterns.	Patrol movement is memoryless; narrow patters.	
Rationale	The patrols make "show enemy/friendly moves" unusable, and there isn't much of a point. After all, borders grant visibility. I guess patrols add some uncertainty to small-scale surprise attacks (can't be sure how many units exactly are going to be near a city at a given time) and could help against nukes. Well, anti-nuke AI behavior needs to be improved at a later point anyway.		
	Patrols in foreign borders make some AI visibility cheats less obvious, but that's not a good enough reason. Patrols in unowned land can keep Barbarians away from the AI's rivals; unowned land should only be patrolled if it's not too far away from the AI's cities.		
Tbd.	I didn't disable inner-border patrols entirely because, in order to patrol unowned la AI units may have to traverse owned land. Moving in one direction for a longer tim also helps with that. That said, patrols in unowned land don't seem crucial either. Against Barbarians, the guard-city-site AI routine is probably more effective.		
	The 10-tile distance check should perhaps also consider cities of (non-human) teammates and vassals. Might not be worth the extra computing time though.		

Executives are no longer moves" optionships, moves are always amoves of ot	on-hostile Workers, Missionaries and within their owners' cultural borders er shown when the "show friendly on is enabled. As for non-hostile es of human ships and cargo ships shown (except AI ships on patrol), her ships only when moving into sight or inside the borders of the layer.	All unit moves are shown.
Rationale	These land moves are practically never interesting. For ships, it's a bit trickier because a passing Caravel could matter (target for Privateer, or could be carrying Spy), but mustn't show patrolling Destroyers. Cargo units that can carry city attackneed to be shown in any case.	
	By not showing moves of cargo ships on patrol, I'm giving away some info about the intentions of the AI. That said, a lone cargo ship is practically always a patrol, and patrolling AI Galleys are just too annoying to watch.	
Config	SHOW_FRIENDLY_WORKER_MOVES and SHOW_FRIENDLY_SEA_MOVES in GlobalDefines_advc	
Tbd.	Could be an issue for enemy moves as well when there is city visibility from espionage. So, should perhaps apply the change to enemy moves too.	
Related: Fixe	ed a bug that caused AI non-combat units	to oscillate between safe cities when at war. See

change 001.

(Also fixed in K-Mod 1.45, now using the K-Mod fix.)

"show friendly moves" can be toggled using Shift + M. If the option is toggled this way, the change won't be visible in the Options menu, and won't be saved upon leaving the game.

(Disabled through a switch in GlobalDefines advc.xml. Turned out I had never used this.)

No moves are shown when in Globe view. If the Unit layer is active in Globe view, then the layer colors and indicator positions are updated as foreign units move (without a delay and regardless of the show-moves options).

The camera jumps around, but the moving units aren't visible in Globe view. If the Unit layer is enabled, the positions of the unit indicators are updated as foreign units move, but the layer colors aren't updated.

Requires <u>004m</u> to be able to tell if the Unit layer is active.

103	Spy unit can investigate cities		
AdvCiv		BtS	Vanilla/Warlords
works as in mission with espionage p guaranteed comparison, costs 100 at success; as doesn't use still, to an exinformation account.	BtS and an active a a base cost of 40 points and success. (For a Counterespionage and also guarantees in BtS.) The Al this new mission, i.e. atent, cheats with the that is taken into	accumulating espionage points (passive "Investigate" mission). That said, the "Sabotage Building" and "Sabotage Production" missions (and the cost of these missions) give away some information. The AI code for some of the active missions (e.g. "Foment I linest") use	moved. City religion can also grant visibility. No visibility from espionage points.

screen, the Spy unit has its movement points spent but isn't teleported anywhere. The owner of the Spy can enter the city		,	
screen for fr	ree any number of e remainder of the	All successful active missions cause the Spy unit to be teleported to its owner's capital.	As far as I remember, Spy units aren't teleported anywhere after a mission.
When investigating a city, the research bar, income and treasury are hidden. Slider settings are still visible.		When investigating a city, the owner's commerce slider positions, current research, gold in treasury and per-turn income are shown on the city screen.	Same info revealed as in BtS I suppose.
Config	Investigate mission added through <code>GameInfo\CIV4EspionageMissionInfo.xml</code> . Can remove it there or adjust its cost and success chance. To allow free investigation, one can set <code>bInvestigate</code> to 1 for the Spy unit and Great Spy unit in <code>Units\Civ4UnitInfos.xml</code> . I had done this until v0.95 along with a change in the DLL (which is still in place) that prevents spies from investigating if they've spent any movement points. After some testing, I felt that this made investigation too easy and added the active mission.		
Rationale	To make Spies more useful for players that don't invest heavily in espionage. Also, constructing wonders is more fun when one can find out who else is in the race. Players don't spend thousands of espionage points just to find out if someone is currently building a wonder.		
	In Vanilla/WL, investigation was too easy though, hence the cost. I've disabled the teleport so that players can investigate a city to find out its weaknesses and then execute one of the take-that missions on the next turn.		
	No gratuitous info about foreign research because this would supersede the passive (and more or less reasonably priced) "See Research" mission.		
Tbd.	Perhaps the cost needs to scale with the game progress somehow, e.g. the era of the city owner.		
	Confusing: When inspecting a city that has just grown, the new citizen has no job at all (not listed as a Citizen specialist either).		
See also	120d: Mission cost for Sabotage Production no longer shown on the Espionage screen. It had previously been possible to guess based on that cost whether a city was close to completing a wonder.

104 UWAI: See chapter <u>Utility-Based War AI</u>

Most of the changes are in newly created classes. I've added a few auxiliary functions in pre-existing classes too. Technical documentation only inline. There are also some changes in unlikely places, which I've marked with the following sub-ids.

One thing I guess I should explictly document somewhere in this manual: When an AI civ refuses to capitulate with the reason "Not right now", then that civ will capitulate on the next turn of the would-be master unless it can manage to improve the power ratio until then. This way, only the game state at the end of the capitulating civ's turn is decisive. If the capitulating civ thinks that the would-be master wants to end the war badly, then it may respond "Not right now" for several turns. Related CFC post

See also	210a: UWAI changes that make the war trades alert less noisy.
Config	By checking "Aggressive AI (Legacy)" on the Custom Game screen, UWAI can be disabled. Can also disable it through XML, even in a running game (after saving and exiting), by setting either <code>uwai_in_background</code> or <code>disable_uwai</code> in <code>Assets\xml</code> GlobalDefines_devel.xml.
	UWAI settings in AI_Variables_GlobalDefines.xml.
Tbd.	Would be nice if the per-turn UWAI log file (configured in GlobalDefines_devel.xml) could be closed at the end of a turn, so that it can be deleted without having to exit the game first, but the logs are handled by CvDLLUtilityIFaceBase, which doesn't seem to allow files to be closed.
104b	Code for measuring path lengths for troop deployment from friendly cities to the cities of a (potential) war target. (A hack that measured distances between cities by generating paths for garrisoned units was removed in v0.94. Until v0.99, the FAStar pathfinder in the EXE had been used along with a tweak for aborting the search upon reaching a distance limit.)
See also	Now uses the TeamPathFinder described under <u>advc.pf</u> .
	Some vague ideas by Nightinggale for faster pathfinding: <u>CFC post</u>
Tbd.	Until AdvCiv 0.99, scalability was a real issue with more than 18 players. That issue is now resolved insofar that AdvCiv (with UWAI) runs as fast (or at least nearly) as K-Mod even with 48 players. Nevertheless, the computation of deployment paths remains the biggest time sink on super-Huge maps. The pathfinding code can't be optimized much further. I've given Dijkstra's algorithm a try (Git branch) – which is potentially faster than A* when paths are needed for multiple destinations, but that turned out to be not much faster than Firaxis' FAStar class in the EXE and considerably slower than K-Mod's A* implementation in the DLL (which TeamPathFinder is based on). So, to save further time, fewer paths should be generated.
	The most promising approach is to consider only cities of the best potential war targets. There's a bullet toward the end of the <u>WIP</u> section about that.
	Two more ideas:
	Don't update distances for every one of our cities on every turn. Distances change gradually through tiles being revealed, routes constructed, border expansion and other factors – it should be OK to skip a city with, say, an 80% probability (adjusted to game speed). Major changes in diplomacy should result in an immediate full update: Open Borders, Vassal, Permanent Alliance, declaration of war. Only if we're directly involved in one of those. Also: upon the discovery of certain technologies. A tech is discovered every 4 turns or so, so doing it after <i>every</i> tech is undesirable.
	Try parallelizing the distance computations. On that note, AI war evaluations (based on the cached distances) could also be suitable for parallelization.
	(This one no longer sounds promising now that pathfinding has become much faster.) Take advantage of the triangle inequality: If we have computed a path distance from A to B and from B to C, we could use that as an approximation of the distance from A to C if B is a non-hostile city, i.e. not owned by the prospective war target or a current war enemy. One might first let a new class CityGraph compute a sparse graph with edges chosen based on area id, air distance and city size. Edges between our own cities will have to be allowed too. Graph updates: Local updates for changes that occur throughout a turn and a full update when updating the UWAI cache: Go through all relevant pairs of friendly and potentially hostile cities as before and make the graph compute a shortest distance using a standard graph algorithm (Kruskal/ Prim or something to compute all shortest paths). Turn that shortest graph distance into something slightly optimistic to account for direct paths being shorter than triangular ones.
104c	Al avoids military victory strategies in order to spare friends

AdvCiv/ UV	VAI	BBAI/ K-Mod
When weighing its victory strategies, the Al considers whether a military victory (esp. conquest) will require an attack on a friend. If so, the Al will pursue different strategies instead.		The AI doesn't take friendships into account when choosing victory strategies.
may ultimat	comes close to a military victory, it ely attack friends, depending on the cumstances.	Once stage 4 out of 4 of a military strategy is reached, the AI ignores attitude when it comes to war targets.
Rationale	See the UWAI chapter. Victory strate case, the strategy weights need to be	gies aren't within the scope of UWAI, but, in this e aligned with the DoW policy.
Config	Only effective if UWAI is enabled.	
See also	115: Al commitment to victory strateg	ies
104d		nt function is not part of the UWAI component, but part of UWAI (if it is enabled), and it feeds back omes.
AdvCiv		K-Mod
Added a function AI_assetVal to CvPlayerAI that evaluates cities as economical assets, replacing code in AI_targetCityVal and AI_cityTradeVal.		AI_cityTradeVal (AI evaluation of cities for end-war trades) is almost just a stub in BtS, but has begun to overlap with AI_targetCityVal (AI evaluations of enemy cities to attack) in K-Mod. For example, K-Mod has added an evaluation of wonders to AI_cityTradeVal — which was already present in AI_targetCityVal in BtS.
See also	advc.ctr revises AI_cityTradeVal.	
	ges to AI_targetCityVal that make ly on cities of rivals en route to a peac	an AI fighting or considering multiple wars focus eful victory.
Rationale		military victory are able to pivot from war against ote target that is getting close to a peaceful
Tbd.	Still no working very well I think. Part of the problem is that the militarily powerful civs often have very acrimonious diplomatic relations with their neighbors and pretty positive relations with remote rivals.	
The per-continent AI target cities get updated when the enemy status of a rival changes. This will also discard any target city of a vassal set by its human master ("we'll do our best"). K-Mod updates the best target city on each continent only every few turns, presumably order to make AI offensives more focused.		continent only every few turns, presumably in
Rationale	Looks like an oversight. It doesn't ma no longer an enemy.	ake sense to cling to a target city whose owner is
	•	Tile defense factors into the targeting decisions of individual stacks, but is not a factor in AI_targetCityVal and thus not a factor for the per-continent target cities of an AI civ.
Rationale		are only intended as intermediate targets, it still eity with a Castle when the power ratio is nearly

104f	More narrow conditions for Dagger strategy	
See also	131 also makes some changes to XML AI settings, e.g. the asset value of Infantry. The BASE mod also halves the military power of ships (but I didn't get the idea from there). 131c changes some power values of buildings.	
Config	Civ4UnitInfos.xml	
	shouldn't be enough to bring Jaguar more strength). Montezuma is suicida	owder is very valuable, whereas Woodsman I to the same power as Swordsman (which has 1 al enough without overestimating his unique unit.
	High power of Maceman makes UWAI overestimate Maceman when predicting military build-up; appears as a better offensive unit than Grenadier. The bonus against melee isn't that useful for this type of unit at that point of the game (whereas 7 power for Crossbowman seems OK). UWAI (if enabled) increases the power values of all offensive units that can receive city raider promotions; this gives Maceman another boost.	
Rationale	UWAI handles naval and land power separately, so the power of ships relative to land units doesn't matter. But the K-Mod AI uses a single power rating, and, considering that ships are only useful in certain situations, ships contribute too much power. Also, even if UWAI is enabled, some strategic AI choices are based on a single power rating, and the Statistics screen shows only one rating as well.	
	Reduced military power (not combat str.) of Maceman from 9 to 8; Samurai at 9 (no change), Berserker at 9 (was 10), Jaguar at 5 (was 6). Increased power of Infantry to 22 (was 20).	
104e	Halved military power values of ships	through the DLL.
Rationale	The BtS formula was flawed (mainly when it came to naval attacks I think), but I don't think the map size should matter. Even on the biggest maps, the AI shouldn't generally target cities that are one or two dozen moves into enemy territory. (AI attack stacks will opportunistically attack cities along the way, but it's still not a good idea to try and cut deeply into enemy territory.)	
	ne impact of distance. Now probably ame as in BtS.	BBAI had reduced the impact of distance so that (comment in the code) it "scales sensibly with map size".
AdvCiv	1	BBAI

	The choice of tech for reparations is target value for the reparations.	less randomized and more based on matching the
104i	Refusal to talk (RTT) when at war. A new AI memory type, MEMORY_DECLARED_WAR_RECENT is used for distinguishing a DoW at the request of a third party or through a defensive pact (DP) or a vote from a normal DoW.	
Config	The MemoryDecayRand value of the new memory type determines the RTT duration in wars on behalf of a third party. This value can be set through Civ4LeaderHeadInfos.xml, and a default of 11 is hardcoded in the DLL (CvLeaderHeadInfo::getMemoryDecayRand). That default value corresponds to an expected RTT duration of 11 turns. (Though, as in BtS, war success and AI personality can shorten the duration.)	
Tbd.	When the AI is already willing to talk according to the BtS rules, adding DECLARED_WAR_RECENT memory has no effect. Thus, a civ could e.g. make peace with the target of a force-war resolution right after the vote. Not sure what to do about this. For a start, the turn on which a vote takes place or a war ally is brought in should be remembered.	
just those t		recent memory is added for all involved parties, not n peace is made between two civs, the civs es.
Rationale	Otherwise, the target of the original attack would be free to negotiate peace, while the allies that declared war because of the DP would be forced to continue the war.	
See also	kekm.3 allows DP despite war	
Tbd.	War votes should arguably lead to a (10-turn?) period of forced war. The current code based on AI memory can't enforce war between two human civs (or just for 1 turn).	
	civs make peace, all their declared-w lk to everyone (unless war utility is to	ar-recent memory is set to 0, i.e. both become o high).
Rationale	Refusal to talk is a matter of fairness toward a third party (sponsor, DP ally, voting members of the AP). When a war party bows out (possibly said third party itself), it's big enough change in circumstances to disregard any commitments for continuing th war.	

104j	decide where to invade first. Active ev	fects war plans of its vassals. The unit stacks ven if UWAI is disabled, meaning that BBAI's t function (" <i>Block AI from declaring war on a</i> to the master") no longer works.	
Rationale	With K-Mod's AI changes, I doubt that isOkayVassalTarget is really needed, whether UWAI is enabled or not.		
	because diplo penalties need to be ta	ate wars triggered by Defensive Pacts (DP) aken into account, so the strategic side of the AI claration of war and the tactical side needs to	
See also	003b: It could be important for perform precomputed.	mance that CvTeam::getMasterTeam is	
104k	Moved rounding of trade values into a	an auxiliary function (no functional change)	
1041	is willing to talk or willing to trade cert	r interface fully responsive when checking if a civain items. No functional change outside UWAI, aching on and off into CvDLLWidgetData.cpp.	
104m	Handling of tribute demands redirected	ed to UWAI; fewer random AI requests.	
	Regardless of whether UWAI is enabled: AI doesn't ask for help, an embargo or (no change) tribute if it's about to declare war on the player (war preparations complete). On Noble difficulty and higher, the AI only makes tribute demands with a significant trade value; e.g. won't just ask for a food resource or some small sum of gold.		
	The AI can demand gold per turn (not possible in BtS). The demanded sum is based on the human player's commerce rate and expenses (not on the current gold income which is often negative or near 0).		
Rationale	This should also address problems with players pillaging their own roads in order to cancel a deal that results from a tribute demand for a resource. That trick doesn't always work (the resource could be next to a river or in a city tile) and requires two roads to be pillaged, which is somewhat costly in the early game. So AI resource demands can make sense; don't want to disable them entirely.		
See also	advc.ctr: The AI can also demand cition	es.	
AdvCiv (rega	ardless of whether UWAI is enabled)	BtS	
as tribute a	demand multiple resources at once and resources that the human player be of aren't off-limits.	The AI demands only a single surplus resource.	
	demand the human player's map in a technology.	Only one tech <i>or</i> the map.	
Rationale	A map or a single surplus resource isn't nearly valuable enough for +1 relations and a peace treaty.		
	When the Al asks for help or tribute, it includes a beace treaty in the proposed deal. The peace treaty gets signed as a separate de in response to a "diplo event" that triggers when a human agrees to give help or tribute.		
Rationale	So that annual tribute and help deals can be identified (through the peace treaty) and canceled automatically. Also more transparent this way: The peace treaty appears on the trade screen.		
Config	The display string for a peace treaty offered by the AI at peacetime is set by TXT_KEY_TRADE_SIGN_PEACE_TREATY in Civ4GameText_advc.xml. Currently says "Sign Peace Treaty (10 Turns)" whereas, in other contexts, it says just "Peace Treaty		

	(10 Turns)". Players have gotten confused (CFC posts <u>1</u> <u>2</u>) by the AI "offering peace" despite not being at war. Hopefully the word "sign" puts more emphasis on the offer being a (lasting) treaty. Don't want to invent a new term – it is very much a Peace Treaty like the one signed upon ending a war.	
See also	City trades ($\underline{advc.ctr}$) and war trades ($\underline{146}$) also imply a peace treaty and show it on the trade table.	
Tbd.	Should perhaps also add a peace treaty to the trade table as soon as a human player lets the AI side put something on the trade table if nothing has been added to the human side yet. When something else is added to the human side, the peace treaty should be taken away. So that a peace treaty is on the table if a human player asks for tribute or a gift. Or maybe this is too distracting	
	Al civs cancel experied peace treaties at the start of a game turn – players never have nually. Al civs cancel experied peace treaties at the start of their turn, which usually means that the peace treaty remains in place during the preceding human turn unless the human player cancels it manually.	
Rationale	More convenient in general, and will auto-cancel expired annual tribute and help.	
	von't ask a human civ for help unless It's enough for the human civ's asset score to be asset score is at least ¾ of the AI civ's half as much as the AI civ's asset score.	
Rationale	Feels unfair to be asked for a handout by an AI civ that is clearly doing better.	
104n	Diplo votes	
1040	Handling of sponsored wars and conditions for vassal agreements when UWAI enabled.	
104р	Target size for invasion stacks based on difficulty and less random (even when UWAI is disabled). Always choose a target city while war is imminent. (BtS sets no target with one chance in three.) Smaller target size on landmasses without capitals where the enemy has at most 3 cities.	
Rationale	Except on high difficulty settings, the AI often took too long to get invasions started after finishing preparations. The change for small landmasses is really unrelated to UWAI; warfare tends to play out on a smaller scale there.	
104q	Changed some K-Mod uses of WarPlanStateCounter to AtWarCounter	
104r	Handling of empire split	
104s	Propagate UWAI decisions about limited, total and naval war to other parts of the AI:	
	 Treat faraway land targets as only reachable by sea. Treat preparations for "total" war the same as ongoing or imminent "total" war in AI_maxUnitCostPerMil. Change Area AI from Offensive or Massing to a naval assault type when UWAI thinks that the attack should be made via sea. Increase train-invader chance when preparing a total war. (K-Mod: Chance only increased once the war has started.) Tweak code that makes AI cities less interested in buildings and missionaries while preparing for war. War preparations now carry greater weight than an imminent or ongoing war. (But, overall, an ongoing war that goes badly still affects AI cities even more than preparations.) Rationale: Once stacks are coalescing or moving, cities don't need to focus as much on military production; but it tends to take the AI too long to get to that point. 	

104t	Handling of team changes: Permanent Alliances and elimination of a team member

104w	Make all the Al's cash and gold-per-turn (up to a limit based on total commerce) available for peace deals, and trust the UWAI code not to spend more than peace is worth.	
See also	039 announces the conditions of peace deals to third parties. 036 and 550f make more gold available for trades other than peace deals.	
104x	Loading of Al-related parameters from AI_Variables_GlobalDefines.xml	

104y	No-war probability without Open Borders	
AdvCiv		BtS
Civ4LeaderHeadInfos.xml would be 100% for a civ that the Al doesn't have Open Borders with,		If the no-war probability is 100%, then the AI tends to behave non-aggressively. Depending on AI personality, Pleased or Friendly attitude is needed for 100%.
	Don't want humans to take advantage of a friendly AI neighbor by closing the borders and thus, possibly, preventing the neighbor from attacking anyone.	

104z	Handling of random events that lead to war/ peace: "Spy Discovered", "Wedding Feud", "Great Mediator", "Heroic Gesture".	
AdvCiv		BtS/K-Mod
Spy Discove	red – No change	There is some BtS code for deciding if the Al wants war, and K-Mod improves that code a bit.
Wedding Feud – Fixed a bug: When a response to a random event will anger a rival civ that the AI dislikes, the AI picks that response only if the rival is not too powerful.		The event data doesn't say that one of the responses can lead to a DoW; the AI only knows that the response is going to worsen relations.
		If a rival is powerful, the AI is all the more inclined to anger that rival. As a result the AI will, on rare occasions, get into a war with a far too powerful rival.
Great Mediator, Heroic Gesture – Reduced the probability for peace from 50% to 33%.		The DLL gets no info at all about this event, so the AI has to decide based on the "AIValues" of the two possible responses. Both have the same value, so the AI ends up picking a response at 50-50 odds.
No Change		The other side can still decide to continue the war but, if that's also an AI civ, it never does (no change in AdvCiv).
No Change		Through, what karadoc calls "an ugly hack" in the respective canTrigger functions, K-Mod prevents

	the event from triggering when either side refuses to talk.	
Rationale	I don't want to invest time here because there are serious issues with almost all random events; the sane approach is really to disable them. The war/ peace events are especially consequential though, so I'm applying some more band-aids.	
	I'd like to add that the war/peace events more or less hinge on irrational AI behavior. Giving the opponent an option to make peace is pointless – the two civs could just negotiate via the trade table. And Wedding Feud lets one civ pay 60 gold for a relations penalty, and the other civ is simply asked whether it wants to declare war (diplo penalties still apply).	
	The proper way to handle the last three events would involve adding tags to the EventInfo schema so that the DLL can tell what the events actually do. (The DLL could probably also identify them based on EventTriggerData, but that's messy.) And CvRandomEventInterface.py would have to call some new Python-exposed DLL function instead of just always starting a war (in the case of Wedding Feud) or always making peace.	
	If I wanted to overhaul the events, <u>MongooseMod</u> (see "Event Overhaul" in LunarMongoose's feature list) would have to be the starting point. <u>This</u> Rise of Mankind revision could also be of interest. I don't think it fixes the war/peace events though (or only through his DLL, which is closed-source).	
	I'd tend to throw out the diplomatic events (which require the AI to role-play; better work more on the <u>Dynamic Diplomacy</u> changes instead). Similarly, tile yield changes could be better handled by separate mechanisms for depletion/ degradation, prospecting and propagation. Pandemics and uprising would also deserve separate treatment. In the end, mostly events that ask a player to pay gold should remain (though these will only make sense if binary research can be discouraged somehow) and events representing natural disasters.	
See also	106g is responsible for recording war/peace events in replays.	
	This open Git issue of the "We the People" mod mentions the problem of missing XML tags for certain random events.	
	137 tweaks the map-size scaling of quests.	
"No Rando	Mathematical All options on the Custom Game screen are disabled by default.	
Rationale	I feel that at this point (v0.94), the mod makes improvements in so many areas that players might expect that Random Events have also been overhauled. So I want to signal somehow that this isn't the case. Renaming the option to "Random Events" (disabled by default) would be more consistent, but players who update from v0.93 would have to toggle the option then.	
	As of v0.98, they're again enabled by default. I haven't improved anything about Random Events, but I've noticed that games started via "Play Now" always use the default options. My intention had only been to show the option as disabled the first time that a player enters the Custom Game screen.	
See also	101 renames "City Flipping after Conquest" to "No City Flipping after Conquest". That was done earlier in the mod's development when updating was less of a concern.	

105	Al relies less on getAnyWarPlanCount	
AdvCiv	BtS	

Replaced most calls of getAnyWarPlanCount and some of getAtWarCount with a new function AI_isFocusWar that ignores wars that are probably not worth focusing on.		
(Other parts of the AI code already take care of		The AI assigns lower utilities (found values) to settlement spots when at war, to the point that AI civs practically don't expand while at war.
	move to join a group of units so group isn't in immediate danger of ed.	
Rationale	Just being at war doesn't imply that the AI needs to build up units or switch to wartime civics. It could be that the war enemy can't even reach the AI civ, or has just one city left, is hopelessly backwards etc. In particular, don't want human players to declare meaningless wars in order to hamper the economical development of an AI civ.	
See also	OO1j replaces ALWAYS_PEACE checks in Al code with AI_isWarPossible calls. OO3b has replaced the remaining calls to getAnyWarPlanCount and getAtWarCount with CvTeamAI::AI_countWarPlans, AI_getNumWarPlans and AI_isAnyWarPlan.	
Tbd.	Should've written an int function instead that puts the commitment to war efforts on a scale. That could e.g. also be used for the "serious war" check in CvCityAI::AI_updateSpecialYieldMultiplier.	
The AI makes no tribute demands when busy with a war. (Only relevant when UWAI disabled; with UWAI, such demands are possible.)		The AI checks if its own military power is greater than the target's defensive power before demanding tribute. The target's defensive power accounts for ongoing wars with third parties, but only in a crude, unreliable manner.

106	Announcements and replays	
See also	Announcements and replays Some additions to the replay log are covered by change 150 004f disables celebrations See 104z about random events. Most messages about random events are irrelevant, but I don't want to fix this because I think players should just disable them. 127 records start and end of AI Auto Play in replays. 127b stores jump-to info about most announcements (e.g. click a DoW announcemen in the Event log to jump to the captial of the civ that declared war). 120f announces and records spy missions that cause a revolution. 210: Civ4lerts 071 shows a message when first meeting a rival. 010 shows a message when a noncombat unit is killed through an attack. The "Dawn of Civilization" mod has added BUG settings for customization of announcements about Great People, religion spread and random events. CFC post (For AdvCiv, I think I have a sensible middleground and no need for customization.)	

Tbd.	think Civ 3 had those. I've already wbut it turns out that CvPlayer::acqu	nessages about captured and razed wonders. I ritten the code and translations (not on GitHub), priceCity isn't the proper place for my code solved until later. This really complicates things.	
	•	parians should be announced even if the player ne active player. (Maybe, ideally, not if the active mass.)	
AdvCiv		BtS	
	stated if the city isn't revealed, e.g.	All GP births are reported; "in a faraway land" if the city is unrevealed.	
Show only th		Entire message in yellow. Makes it harder to pick out the yellow BUG gold-trade alerts.	
Rationale	Gotta kill some messages. This one undiscovered continent?), and does	is implausible (how do you learn about GPs on an n't have great strategic value.	
Finished wonders are always reported (no change); the city is stated if revealed.		Message says "faraway" when the city isn't revealed. If the owner is known, it is listed on the Statistics Screen. The message never states the city, but highlights it on the map.	
No change to the way religions and corps are reported.		When a religion or corp. is founded, if the holy/ HQ city is unrevealed but the city owner known, report only "faraway".	
The name of the city where a GP is born is no longer recorded in replays. Record it as "The Great Scientist Antony van Leeuwenhoek has been born in the Russian Empire." (important infoat the start and the end)		"Antony van Leeuwenhoek (Great Scientist) has been born in St. Petersburg (Catherine)!"	
Rationale "In the Incan Empire" is extra information. Reporting "faraway" (as in Bt misleading in this case. Not reporting them at all would also be bad. Sh report all GP births of a civ or none. The crucial info is how many GPs a produces, and not so much which GPs specifically.		g them at all would also be bad. Should either The crucial info is how many GPs a rival civ	
	Wonders: just to be consistent.		
The	GP in replay: In order to shorten the message a little. The city is irrelevant.		
Tbd.	in the Russian Empire".	replays, i.e. just "A Great Scientist has been born	
Relocation of a civ's capital is announced to other players (but not recorded in replays). Regardless of whether the old capital was conquered or razed or whether a new Palace was constructed.		Conquered and razed cities are announced; without special mention of the capital. Constructed Palace isn't announced.	
Rationale	Most of the time, it's easy enough to tell from the city name when a capital gets conquered, but shouldn't have to scroll around the map to find out the name and location of the new capital.		
See also	See also 127: In spectator mode, the announcement is shown regardless of map knowledge.		
AdvCiv		BUG/ Civ4lerts	

No more BUG alerts about civs no longer willing to trade a resource.		The alert about resource trades triggers whenever the set of resources offered by a rival changes from one turn to the next.	
See also	210e makes the alert trigger also wh	nen the AI becomes willing to import a resource.	
Rationale	It's a helpful alert, but fires too often. Typically, the willing-to-trade part is more important. The player then either trades for the resource or decides not to. In the latter case, it's not immediately helpful to know that it's no longer available.		
Tbd.	The same reasoning can be applied to the tech trade alert, though techs seem to become unavailable less frequently. Unavailable techs and resources hint at inter-Al trades and/ or changes in Al attitude. The proper solution is to implement a new alert for Al attitude changes and one for inter-Al trades. (Update: The latter has been implemented by now, 210d, but turned out to be too noisy.)		
	Will probably still need the "no longe started building a wonder.	er willing" alert because the AI could also have	
Civics changes except to Free Religion excluded from the replay log.			
Replays red (disabled by	ord when a leader enters a new era. Except for Liberalism, technological progress is only recorded indirectly through civics changes		
Replays red	cord the first discovery of each tech.	and constructed wonders.	
Era transitions and first discoveries are shown in green. Cities founded in green, religion and civics changes and random events in white. player text color. Religion changes in light blue.			
report melto	nukes, meltdowns recorded. And downs to all players that know the city when a city reaches Legendary	Only announcements; not mentioned in replays. Meltdowns are only reported to the city owner.	
Rationale	Civics changes are not very important and occur very frequently; make replays difficulto follow. (Religion changes tend to be rarer and more consequential.)		
	Replays should give some indication of technological progress. Era transitions were my first idea, then I thought first-to-discover would be even better. There's some redundancy when techs cause religions to be founded, but I guess that can't be avoided.		
	Colors: Green should be the color of research. For cities founded, I've tried magenta (the color used by the disabled city-founded Civ4lert) and <code>color_culture_rate</code> , but they're too hard to read against the brown background of the Replay screen. I've also tried white (now that civics changes and random events are no longer reported), but found player colors easier to follow. (Although replay messages are otherwise not color-coded based on the affected civ; so it's inconsistent.)		
See also	ctr uses COLOR_CITY_BLUE for city to	ade alerts.	
Config	SHOW_FIRST_TO_DISCOVER_IN_REPL USE_PLAYER_TEXT_COLOR_IN_REPL	LAY, SHOW_ENTERED_ERA_IN_REPLAY and AYS in GlobalDefines_advc.

AdvCiv		K-Mod
		Feature growth is only announced on actively distributed by visible tiles. (It seems that BtS had announced feature growth even on unrevealed tiles – but you'd think that this would be a widely known bug. Maybe the announcement gets killed somehow when the tile is unrevealed.)
Rationale	Terrain features aren't subject to the	fog of war.
106b	Message limit	
Config		bled by default because it's potentially confusing e enabled on the "General" tab of the BUG menu.
This change	only applies when playing with the "	Minimize Pop-Ups" (MPU) option.
Rationale	It's awkward when the Event Log opens along with a popup because then the Event Log can't be closed until the popup is dealt with. This happens all the time when playing without MPU. Also, I suppose players who don't use MPU are fast players that don't pay a lot of attention to each individual message.	
Config	Override: message_limit_without	_MPU in GlobalDefines_advc.xml
AdvCiv		BtS
If more than 3 messages are waiting at the beginning of a turn, don't display them on the main interface; open the Event Log instead. Exception: Messages about most major events are always displayed on the main interface. The following major events are <i>not</i> shown on the main interface when the Event Log is opened: • Golden Age begun • city founded • city liberated, ceded • foreign city flipped • city captured/ razed • wonder built Also not shown, and now only a minor events: when a religion or corp spreads in a city, birth of a GP, civics changes, tech discovered. The signing of a Permanent Alliance is now a major event.		No limit on the number of messages. The Event Log is only ever shown when the player opens it. Major events are kept in the Event Log indefinitely, whereas minor events are cleared after 20 turns and info messages after 2 turns. The following events are major: War started/ ended, alliance formed, defensive pact signed, capitulation/ vassal agreement signed/ broken, tech discovered, first to discover Liberalism, circumnavigation, wonder/ team project built, city founded, civics or state religion changed, revolution started/ ended, Legendary culture reached, religion or corp founded, city religion/ corp spread or removed, city liberated/ flipped, game won, GW sustainability reached (K-Mod), vote source established (UN, AP), city captured/ razed, Golden Age begun/ ended, civ conquered, GP born/ GG killed, empire split, spaceship launched/ failed, nuke.
Also open t messages a popup is jus the human In Hotseat,	he Event Log when there are 1 or 2 along with a diplo popup (unless that st an AI civ making first contact with civ). always open the Event Log when	The Event Log button becomes inaccessible when a diplo popup opens (hotkey also blocked). On-screen messages are cleared in between turns, including those that haven't been displayed.
there is a new message.		yet. This means that a player who follows another human in the turn order misses most

messages.

Rationale

The main interface really isn't suitable for displaying frequent messages. It's obtrusive: the display delays add up: messages can disappear too fast. My limit guarantees that after waiting for 3 messages, no further messages can arrive.

When a diplo popup opens, any messages on the main interface become difficult to read, so it's important to provide access to the Event Log. The player should be able to learn what happened during the AI turns before making any decisions.

Maior events on the main interface: These can easily get buried and missed in the Event Log because they occur already during opponent's turns. Especially when playing without sound. The ones that I've excluded are either not that important or there is some additional mechanism that alerts the player (e.g. tech splash screen when a tech is discovered). Religions are spread all the time; that's not a major event at all.

Tbd.

Could repair message delivery in Hotseat; opening the Event Log is only a workaround solution. Would have to store messages within the DLL when they are triggered, and call CvInterface::addMessage only at the start of the recipient's turn. Can also rewrite that function in the DLL if necessary; probably just wraps data into a CvTalkingHeadMessage **object and calls** showMessage.

Messages about major events don't appear on the main interface until all diplo popups are through. Same problem in BtS. CvPlayer::postProcessMessages already gets called before diplo popups are displayed and already tells the EXE to show major event messages. Still, when CvGame::update returns, the messages get held up by the diplo popups. This issue will hopefully be easier to resolve once AI-to-human diplomacy is moved to the start of the human turn (see *Tbd*, under 001e).

See also

The "We the People" developers are considering improvements to the message delivery system: GitHub issue. Doesn't sound like they'll add something that AdvCiv could adopt. Sorting messages by importance can mix up causes and effects.

I got the following idea (and uploaded a mockup <u>here</u>): When there are more than three new messages at the start of a turn, don't to select any unit and don't display any popup; instead show all new messages in the unit command area and put all minimized popups in the info pane, along with a button to start unit cycling, instruction abels if needed, and any further buttons that could be helpful at the start of a turn (e.g. buttons for cycling through unhappy and unhealthy cities). Remove all those widgets when a unit is selected (but show them again when no unit is selected). Could also have little buttons next to each message for dismissing only that message, and tiny versions of the button graphic that comes with some of the messages (to communicate that the message can be clicked). Not sure if all this is doable in the SDK. Main problem: Diplo popups. I don't think it will be possible to give the focus to the command area or any panel therein when the Diplo screen is up, meaning that the player will be unable to scroll through the new messages before dealing with the Diplo screen, and there's only enough space for four messages at once. That's an advantage of the current solution: The Event Log can take the focus.

All messages are cleared from the main interface Once displayed, messages only disappear when at end of turn.

they've been on display for the proper amount of time (depends on message type).

Any messages still queued for display are flushed before that (i.e. cleared without having been on display).

When a human player's turn ends, all messages still waiting to be shown to that player are displayed at once (delay skipped).

replay files. When no mod is loaded, that cal returns an empty string. All mods share a single that BtS ignores and through a hack (as CVDLLUtilityIFaceBase::loadReplays is not in the DLL), AdvCiv is able to load replay files without a mod name and to distinguish AdvCiv replays from unmodded replays. Teplay files. When no mod is loaded, that cal returns an empty string. All mods share a single returns an empty string. All mods share a single replays folder. The Hall of Fame screen load all replays from that folder, compares the mode in each replay file with the currence result of gDLL->getModName() and displays those that match. Double-clicking a replay file appears to bypathe name check, so there is a way to view		name stored in each replay file with the current result of gDLL->getModName() and displays only those that match. Double-clicking a replay file appears to bypass
Config	mod adds map sizes, victory condition	mod. But this doesn't work on Steam installations (not sure about Windows 10), and it doesn't work via the Hall-of-Fame screen. ines_advc.xml. Automatically disabled if a modons, handicap or game speed settings. May also nod adds colors that BtS can't display; see

Rationale	generally desirable to show replays debatable. I think I'd prefer it, provid distinguish, but I'd rather not inflict the by default, players would probably of they have a replay that they'd like to savegame from just before victory is the option, but that's a long shot.) Pl	Civ replays with other players. Whether it's from different mods on the same HoF screen is ed that replays from different mods are easy to his on others. However, if the option was disabled nly find out about it when it's too late, i.e. when share and that doesn't have the right format. (If a kept, one can recreate the replay after enabling ayer who don't like AdvCiv replays showing up in ng replay files manually; the file names start with
See also	003k is a prerequisite as, otherwise,	no data can be added to the CvReplayInfo class.
		lors in city-founded replay messages. This doesn't because player colors are used in any case for
	106h (see above) ensures that Advo mod name in the first replay messag	Civ replays are identifiable as such by showing the ge.
	106m stores the minimap resolution	in replay files.
AdvCiv is able to load unmodded replay files and those from other mods.		
Config	Disabled by default; can be enabled replays can be loaded; see the com	through GlobalDefines_advc.xml. Not all ments there.
Rationale	Certainly nice to have the ability to show replays from any mod without having to install it, but this doesn't have to be enabled all the time (see the previous "Rationales" box).	
Tbd.	If loading of non-AdvCiv replays is enabled, the HoF screen should show mod names somewhere and offer a filter-by-mod menu. The HoF screen is in the SDK, so this is doable – but a bit of work.	
	ome sanity checks to the function ne serialized replay data.	BtS relies entirely on a try-catch block to filter out files that don't have the proper format.
	ne is started, loaded or exited, any loaded by the Hall of Fame screen is	After entering the Hall of Fame screen (from the opening menu or at the end of a game), all replay data is kept in memory until the program is exited.
Rationale	Memory is generally a non-issue for AdvCiv, but there could be a lot of replays (especially if those from other mods are loaded too), and each could contain thousands of messages and minimap color changes.	
Replay file n	names start with "[AdvCiv]".	The replay name is composed of the player name, year of the final turn and, apparently, a two-digit random number to avoid name collisions with earlier replays. BtS associates the .CivBeyondSwordReplay file ending with Civ4BeyondSword.exe, but this does not cause the proper mod to be loaded.
Config	TXT_KEY_REPLAY_PREFIX_ADVC in Civ4GameText_advc.xml	
See also	190a shows the mod name on the Settings tab (Victory screen).	

Tbd.	Known issues with the Hall of Fame screen:	
	buttons): Microsoft C++ exception msvcr71.dll on the call stack. I get occur before any of the handleInpu	ctly next to a replay button (e.g. in between two on:no_rtti_object in KernelBase.dll; this crash also with unmodified BtS. It seems to the functions in the SDK are called, so, if it can be exceeded that sets up the table with the replay.
	necessary can't be started. CvHallo the replay button is clicked. Rationale	_	irn because a player who renames a city might es the new name on the main interface; don't porary changes.

106 I	Messages upon saving the game	
Config	AUTO_SAVING_MESSAGE_TIME in Assets\XML\GlobalDefines_advc.xml	
AdvCiv	BtS	
No message when autosaving Autosaving message at end of human turn		Autosaving message at end of human turn
Rationale	Players who rely on autosave tend to set narrow intervals via <code>civilizationIV.ini</code> , which makes the frequent messages disruptive. Autosave is known to be reliable; no need to report success. It would be nice to show a message when the interval is, say, greater than 2, but the DLL doesn't have access to that setting (and I don't want to write code for loacting and parsing the INI file).	

	Should add an option on the BUG menu when I merge the other autosave options from BULL.	
•	"Saving" messages about quicksaves and regular saves are displayed for 4 seconds. For 10 seconds, like most of the on-screen messages.	
	Too long for such a short message that the player knows is about to appear. The message arguably also has the purpose of warning the player against terminating the process while the savegame is being written, but that can't take more than a couple of seconds.	

106m	Replay screen takes up the full (disp	olay) screen
AdvCiv		BtS
	sions of the replay screen are set ne display resolution.	Hardcoded to 1024x768 like most Advisor screens.
Rationale	HUD in the background and some c	can be helpful to see parts of the main map and an't easily be scaled up. Otherwise, as is in the reason not to adjust them to the available space
Credits	SDK because neither the expansion Kjotleik. I didn't ask him for his code for one screen resolution.	up the replay screen (easy to forget that it's in the s nor BUG modify it) until I read <u>this</u> post by because I'm assuming that it, again, only works
	The idea to increase the minimap re	solution came from CFC user VDNKh (<u>link</u>).
When the HOF_STORE_REPLAYS_AS_BTS option (see 106i) is not enabled, then replay files store the MINIMAP_RENDER_SIZE value that was used to generate the terrain texture. This allows players to change the texture resolution without breaking compatibility.		(apparently) stored as bitmap with 8-bit color depth, an aspect ratio of 2:1 and a width determined by MINIMAP_RENDER_SIZE, 512 pixels by default. (I suppose the margins are set to black when the map doesn't have a 2:1 aspect ratio.) The game can only read replay files whose texture dimensions match the current MINIMAP_RENDER_SIZE.
Config	The XML settings mentioned above	are in GlobalDefines_advc.xml.
Rationale	I haven't changed the default MINIMAP_RENDER_SIZE because I want to stay compatible with BtS. But at least players who don't care about that can use a higher resolution and maintain replay compatibility within AdvCiv. (Another concern with a higher resolution is that the same resolution is used for the minimap on the main interface, where the BtS resolution is sufficient and a higher resolution might carry a slight performance penalty. Switching back and forth between resolutions as the replay screen is entered and exited doesn't seem to be possible.)	
Credits	VDNKh made me aware that maximizing the replay screen has made the terrain texture a bit blurry. (CFC post; under "requests")	
See also	106i deals with other changes to the replay file format.	
		m before the end of the game

If REPLAY TEXTURE ERA is set to an era number, then the minimap texture for the replay is stored when a player first reaches that era. The texture is included in savegames and written into the replay file when the game ends. This does not break compatibility with the BtS replay format. The texture has a size of 128 KB (unless MINIMAP RENDER SIZE is increased; see 106m); the EXE might compress that a bit when appending the texture (bitmap) data to a savegame.

Replay files include a terrain texture generated at the end of the game. That texture may show roads, railroads and the effects of deforestation and global warming.

By default, no texture data is stored in savegames and the texture generated at the end of the game is written into the replay file (as in BtS).

'	
Config	REPLAY_TEXTURE_ERA in GlobalDefines_advc.xml
Rationale	I'd prefer to use a pre-industrial texture, i.e. REPLAY_TEXTURE_ERA=4, because railroads are very noticeable (and blurry) on the maximized replay screen and didn't exist for most of the time period covered by the replay. However, I think using the final map is also a logical choice and getting rid of the railroads and global warming effects isn't worth a substantial increase in savegame sizes.
See also	This post outlines some obstacles against showing terrain changes in replays.

106n Replays can show terrain texture from before the end of the game If REPLAY TEXTURE ERA is set to an era number, Replay files include a terrain texture generated at then the minimap texture for the replay is stored when a player first reaches that era. The texture is included in savegames and written into the replay file when the game ends. This does not break compatibility with the BtS replay format. The texture has a size of 128 KB (unless MINIMAP RENDER SIZE is increased; see 106m); the EXE might compress that a bit when appending the texture (bitmap) data to a

108	tarting site normalization and re-assignment	
See also	For many maps, <u>027</u> handles the selection of starting sites will then also decide how to reassign the sites and which sites need to be improved through extra resources or features during normalization. <u>kekm.35</u> deals with starting site assignment as well. <u>129</u> makes starts with multiple Gold or Gem resources or numerous Flood Plains much less likely.	
Config	Several parameters in GlobalDefines_advc.xml; can (largely) restore BtS normalization too. Selecting "Balanced" on the Custom Game screen will also have that effect.	
AdvCiv	BtS	

Desert, Ice), peaks aroun cleared. In m	ost but not all bad terrain (Tundra, bad features (Jungle) and mountain d starting sites. Ice is always nultiplayer games, all peaks are and almost all bad terrain and	Ensure that all land tiles around starting sites are decent tiles.
Rationale	Removing all bad tiles makes the starting region look unnatural. A few bad tiles give a start more character and provide more variety without hurting the player much. (Until the midgame, some tiles typically remain unworked anyway.)	
		ner for these terrain upgrades. It fits better for the extra bund-city value. Anyway, it's all referred to as "normalization"
resources ar	s never replaced under a precious and a bad feature on a precious only removed in the inner ring around ocation.	Desert Gold always gets upgraded to Plains Gold, and Jungle is cleared from Grassland Gems.
See also	The "precious" resource class is intro	oduced by change <u>129</u> .
Rationale	•	capital tend to be too powerful. If they happen to tter and that drawback shouldn't be taken away.
placed arour Also don't pla	on the number of extra Forests nd a starting site deemed too weak. ace (too many) extra Oases when eady a lot of Flood Plains or Oases.	Places Forests almost everywhere unless the Forests increase the found-city value sufficiently, i.e. if the site is no longer too weak.
Rationale	Usually, no number of extra forests will close the gap in found-city values, so BtS essentially creates a dense forest around every weak starting site. Too obvious. Could argue that Forests should increase the found-city value more when normalizing, but I don't think AI civs actually get that much out of Forests near their capital.	
See also		tion and starting site reassignment in the future; bund-city value of Forests during normalization is
types that all probabilistica adjacent to t	g additional resources, resource ready exist in the city radius are ally avoided, especially in tiles he existing resource, and especially sthat don't normally form groups.	Resource types already exiting around a city aren't taken into account.
Rationale		ural. Also, clusters of food resources or Stone/ ly allowed to occur for good reason. Weird casionally; good for variety's sake.
randomized. but only prob		The placement of food resources (normalizeAddFood) is, shockingly, not randomized and K-Mod hasn't fixed that either. Meaning that, if possible, food always gets added east of the starting site. Specifically, Corn gets added. Thus, the inner ring has absolute precedence for food; for "extra" resources (normalizeAddExtra), tiles in the city radius are tried in a uniformly randomized order, meaning that the outer ring has a chance of 60% (12/20).
Rationale	Prefer the inner ring so that players I	have more leeway to move the starting settler.

See also	129 randomizes the order in which re	esource types are considered.	
Normalizatio total of 3 (no	n can add at most 2 hills; up to a	Normalization ensures at least 3 hills within the city radius.	
Rationale	For more variety; having just 2 hills is with 0 hills initially are probably very	sn't a major handicap. That said, starting sites rare.	
placed during the same lar extra resourd	ces (except seafood) and hills g normalization have to be placed on admass as the starting site. Other ces also aren't placed on other — if it can be avoided.	BtS doesn't check this; may place extras on an island in the city radius. PerfectMongoose does have such a check.	
Rationale	At least food resources can be crucia	al for making a starting site playable.	
made by sta the aim is to 75% as good	nd features during normalization isn't rting position iteration (<u>027</u>), then make the worst starting site at least d as the best in terms of found-city n multiplayer games (no change).	80% of the best.	
Starting loca bad in this co	Rationale Should magnify the impact of difficulty (StartingLocPercent) a little. Starting locations near bad terrain are more strongly discouraged than in BtS and Ocean counts as bad in this context (K-Mod: half bad). Food resources are more strongly encouraged than in K-Mod (not sure about BtS).		
Rationale	plausible and normalization is espec through normalization at all. Extra fo conspicuous; that change is more at	rom extreme latitudes. They're not historically ially noticeable there. Ocean can't be fixed od placed during normalization is not so tout not leaving sites with a lot of food without a leaving too much food on the map overall.	
	3	No tiles are revealed other than those that the starting units can see.	
Rationale	blindly and hope for the best (or rege cross tiles are revealed upfront, and	e starting Settler. Don't want players to settle en) when a starting site looks poor. When all city- hidden resources are unlikely (see below), there he starting site for what it is or go find a better one.

are disregard starting sites no more like than anywhe	er games, initially hidden resources ded when choosing and normalizing and initially hidden resources are thus by to appear around starting sites are else. (Less likely, in a way, rse, Copper and Iron can't be occur	As far as I can tell, yields from all hidden resources are fully factored into the found-city value when choosing starting sites. Only their strategic value is discounted. A poor starting site can hint at a hidden resource in the surrounding city cross.	

	T		
Rationale	A poor starting site hinting at hidden resources breaks immersion.		
		even take into account in which era a resource is die valued about as highly as Copper. This ner.	
	because addExtras is unaware of h	retically produce very strong starting sites idden resources. That's something to keep an eye city radius of the capital isn't much of a predictor	
site on turn any). Most o city on turn just 1 tile), a	The AI moves its starting Settler if it sees a better the AI always founds its first city on turn 0 after moving its exploration units (if any). Most of the time, the AI still founds its first city on turn 0 (possibly after moving the Settler just 1 tile), and it practically always has a city at the end of turn 1.		
I've made a few adjustments in the found-value function to help the AI evaluate potential sites for its capital. In particular, a low-ish value is assumed for unexplored tiles.		There is special code in AI_foundValue for selecting starting locations, but that's not really Al code. E.g. it evaluates also tiles beyond the city radius. Unexplored tiles are normally treated as having 0	
This change does not apply to scenarios; Al always settles in place as in BtS.		value.	
Rationale	The starting site isn't assured to be locally optimal, and moving the Settler is sometimes, rarely, very advantageous. (More often, moving the Settler is only slightly better than settling in place.) Put differently: The Al's ability to move the Settler means that the starting site selection and normalization code doesn't have to try hard to find or create a local optimum.		
Credits	Merged from the Better BUG AI mod, mostly by copying the code by Fuyu and Afforess. I've made a few adaptations and added some special clauses to the found-city value function because neither the tile evaluation for starting tiles nor the normal evaluation was quite right for this AI decision.		
AdvCiv		Better BUG AI	
The AI is reluctant to move its starting settler farther than 1 tile on crowded maps.		It can happen that can AI civ moves its settler very close to another civ's capital. Since borders haven't expanded yet, the AI won't necessarily be aware of the nearby rival capital.	
Rationale	Capitals at a close distance can be a major (random) handicap for both civs involved.		
Credits	Elkad reported a game that (s)he quit after Al Willem had founded his capital at a very close distance. <u>link</u>		
AdvCiv		BtS	

Exploration units that civs receive at game start are placed on a different tile than the starting Settlers, Workers and defensive units. If more than one exploration unit is received (AI on Immortal and Deity), each one is placed separately.

Since the starting Warrior that humans receive counts as an exploration unit, nothing changes for human civs under typical game settings. If a human civ receives free defensive units or Workers (low difficulty settings or later-era start), then there is a slight change: Those units are placed on separate tiles in BtS; now they're placed together with the Settler(s).

Exploration units can be placed at most 3 moves placed across a large bay, i.e. a long (walking) away from the starting site.

All units that an AI civ receives at game start are placed in the same tile. For humans, only the Settlers are placed in the same tile; every non-Settler unit is placed alone on a separate tile. The UnitAI type (City Defense, Explore, Worker) of the non-Settlers doesn't matter.

Can't be placed on a different landmass than the starting site, but can, in rare circumstances, be placed across a large bay, i.e. a long (walking) distance away from the future capital.

away IIOIII li	ie starting site.	distance away from the future capital.
Rationale	to nudge beginning players away fror first city. The separate placement also easier to move the starting Settler; I I goal) and, now that the AI knows how visibility also for the AI.	g tiles for human units were implemented in order m immediately fortifying the starting Warrior in the o reveals a few more tiles and thus makes it ike that (though it may not have been the original or to move its starting Settler, I want the additional are the rules for human and AI civs more alike.
Config	BtS has a Python callback "startHumansOnSameTile" that can make human units start in a single tile. That should still work, but won't affect AI units.	
See also	The path distance check is based on	pathfinding code written for <u>104b</u> .
result in mor unlikely. Coa	re than 3 seafood; more than 2	More than 3 coastal food ruled out, and more than 3 ocean food ruled out, but both taken together practically unlimited (up to 6).
Rationale	Cities with more than 2 seafood grow unrealistically fast; doesn't play well either. This happens too often.	
Tbd.	When I get around to XML balance changes, I intend to reduce the food yield of Pig Pasture and Fishing Boats by one. Should make starts with overabundant food less common.	
See also	001: Whale doesn't count as a food source at all.	
Try to avoid placing food as extra resources when a site already has enough food and just needs to be buffed.		
Rationale	As above; don't want sites with very much food that often. Note that a high proportion of resources allowed for normalization are food resources.	
Gold can't be placed during the normalization step.		
Config	bNormalize flag in Civ4BonusInfos.xml.	
Rationale	There's a pretty good chance that a Gold resource will turn a relatively weak site into one that is too powerful.	
Tbd.	Don't want to block Gems entirely, but would probably better not to place them at rivers during normalization. (I wouldn't want to prohibit river Gems in general.)	

AdvCiv		K-Mod	
	e chance of lakes as extra freshwater favor of rivers).	30%-50% chance of a lake instead of a river, depending on whether the starting tile is coastal.	
		(And civs will also start at a lake when there happens to be one already before the "normalization" step and when no river can be placed. In BtS, starts next to a lake had occurred only in these circumstances.)	
Rationale	Lakes do have the advantage of granting freshwater to up to 8 tiles while a coastal river (single segment) only affects 2 or 3 tiles. Therefore lakes make it easier for players to move their starting settler and support more Farms.		
	I'm still dialing the lake chance down near rivers.	because most of the early civilizations emerged	
to the startin also done th placement o No freshwat already a fre	ig site are (strictly) preferred. BtS had lat, but K-Mod had randomized the if lakes. er source gets added if there is eshwater tile adjacent to the starting eshwater source two tiles away from	K-Mod randomized the placement without regard for distance from the starting site. karadoc was aware of that: "[S]ince the lake placement can be anywhere in the fat cross, it is less likely to be adjacent to the city and so that's why you might see fewer fresh-water starts." source	
Config		IVELY is set in GlobalDefines_advc.xml, then vater source adjacent to every starting site.	
Rationale	The K-Mod change may have been partly motivated by convenience, but I think karadoc also wanted to increase the variety of starting locations. I'm in favor of that too, especially now that the AI knows how to move its starting settler. Though even if a player chooses not to move the settler onto a freshwater tile, adjacent freshwater can still be useful for irrigation.		
	I didn't like that only lakes (not rivers) were being placed two tiles away and I think it happened too often with lakes (about a 12 in 20 chance when placing a lake). Also, two freshwater sources close to a starting site can look a bit strange. (Can still happer naturally, i.e. prior to normalization.)		
Tbd.	Place a 2-tile lake in some situations?		
108b	Starting site swaps based on difficult	Starting site swaps based on difficulty	
See also	027: If starting position iteration is used, then the volatility value of a starting site can also affect whether the site gets swapped and to whom.		
AdvCiv		BtS	

difficulty leve	Slightly increased StartingLocPercent for most The starting locations selected by the map script difficulty levels, meaning that human civs receive are reassigned by the DLL based on the difficulty slightly worse starting locations than in BtS. setting. StartingLocPercent is a percentile rank for the human civ.		
E.g. on Noble, humans receive the median location if the total number of civs is odd; one better than the median if the total number of civs is even.		On Noble, humans always get locations that are slightly better than the median (40% rank), i.e. they get an advantage over the AI civs. (In as much as the game can't accurately determine whether one starting location is better than another.)	
	l like giving humans rather bad starts	when there is an important reason to do so. And s on the higher difficulty settings; it's a more (see also chapter <u>SPaH</u> about this).	
See also	250d slightly reduces some AI advar	ntages from the difficulty setting.	
	Through Civ4HandicapInfos.xml; are handled by the DLL a bit (see be	though I've also changed the way these values elow).	
	5), then the human players receive	Human players only ever receive the second worst starting site.	
		lidn't trust their starting site heuristic and worried rts. This shouldn't be an issue with K-Mod	
	Doesn't really matter since Starting	gLocPercent isn't 100 on any difficulty level.	
Except in scenarios that assign specific starting locations to specific civ leaders, the starting sites assigned to human players are selected based on the difficulty setting. In team games, a round-robin algorithm is use to assign to each team starting sites of a similar total value; afterwards, sites may be swapped around to bring members of the same team			
In team games, an initial assignment of starting sites is made either by SPI (see <u>027</u>) or through		closer together geographically. In non-team singleplayer (no change), human starting sites are assigned based on difficulty	
of tweaks). T starting sites teams so tha	rithm (see on the right; with a couple then, if all teams have the same size are swapped (pairwise) between at the difficulty setting takes effect ing team starting sites to become	(StartingLocPercent). In non-team multiplayer, humans receive the best starting sites.	
Rationale	I see no reason not to use Starting (Other than the implementation effor	gLocPercent in multiplayer and team games. t to make it work for team games.)	
See also	135c: other multiplayer changes		
	CFC post about issues with the BtS	algorithm for assigning starting sites to teams.	
assignStari	If a map script calls useDefaultImpl in assignStartingPlots, the DLL reassigns those sites through swaps based on team membership and difficulty (see above). The DLL will select new starting sites (based team membership and difficulty) and ignore the sites selected by the map script.		
Rationale	This seemed like the easiest way to	let PM use the standard reassignment algorithm.	
See also	<u>Chapter</u> about PM		

If a map scri	ot overrides findStartingPlot but Overriding either findStartingPlot or		
not assignS	not assignStartingPlots, then the DLL swaps assignStartingPlots means that the DLL has		
•	around unless a custom map option no part in the assignment of starting sites.		
	value "Historical". (If assign		
	ots is overridden, then the DLL		
doesn't swap	anything; see previous blue box.)		
In principle, a map script that overrides findStartingPlot may choose specific starting sites for specific players, but none of the official and bundled map scripts do that – so, generally, it's fine to make swaps in the DLL. In my opinion, a script that assigns player-specific sites should override assignStartingPlots. However, the EarthEvolution3 map script – which is essentially a real-Earth scenario wrapped into a map script – only overrides findStartingPlot, and has an option for "Historical" starting sites (enabled by default) that breaks if the DLL swaps locations around. Hence the hardcoded exception.			
See also	CFC post reporting EarthEvolution3 being incompatible with AdvCiv 0.99 (fixed in v1.0).		

108c	Changes to the Balanced Resources custom map option	
See also	108 also gives this option some impact on the "normalization" of starting tiles. If it weren't for that, I'd have a mind to rename the option to "Balanced (metals, oil, horse)" to make clearer what its effect is.	
AdvCiv		Warlords (not updated by the BtS expansion)
tiles chosen random from respective s	calancer places resources on land independently and uniformly at a 11x11 square centered at the tarting tile. The starting tile itself and at tiles are exempt, i.e. resources ced there.	Maps with the Balanced Resources option suppress the placement of strategic resources (except Stone) by the map generator and instead place those resources through the "BonusBalancer" class. That class tries all plots in an 11x11 square in a fixed order; the placement is random only insofar that the map is random and therefore won't allow particular resources in particular tiles. Oil frequently gets placed on water.
Rationale	The Warlords behavior predictably places the strategic resources to the west of each starting tile. And giving some players access to land Oil and others only sea Oil isn't well balanced.	
	The placement logic is still achingly simplistic, not taking into account the crowdedness of the map (one instance per resource per player can be quite few with respect to corporations) or whether one player's resources actually end up closer to the starting tile of another player. I don't want to put time into this, however, because I don't think this option is a good idea at all; strategic resources have less impact on the fairness of starting locations than food resources and room for expansion.	
Marble is not affected by the Balanced Resources option.		The BonusBalancer entirely prevents Marble from being placed on the map.
Rationale		explanation offered in old CFC posts either. My nmer felt that Marble was too powerful to leave uper to have access to it either.

109	Al improvements for isolated starts	
AdvCiv		K-Mod
era focus mo	naven't met any rival by the second ore on Science, and less on the set in Civ4LeaderHeadInfos.xml et a rival.	Optics is prioritized when isolated but not Science in general.
victory. Adopt the "Economy Focus" strategy when alone, or when no threatening civ is known.		Al civs that haven't met anyone adopt Economy Focus; I don't think that strategy is reliably adopted when there are Friendly or faraway neighbors. Economy Focus (a BBAI-introduced strategy) reduces the production of military units.
Rationale	All naval technologies have a Science flavor, and faster research will reach Optics faster.	
	130n bases religion hate on the number of known adherents. 130p decouples enemy trade penalties from the has-met counter. Both should make it easier to find partners abroad.	

110	Changes to AI military build-up	
See also	104s increases military build-up when preparing for a "total" war. 017: Al trains fewer military units in general	
AdvCiv		K-Mod
research in target isn't r	ne target commerce surplus for the early eras of the game. (If the met, the AI is reluctant to build more ling Settlers.)	The same target for all eras.
Gold reserves are taken into account (if the AI has a lot of gold). Only a matter of the commerce rate and expenses.		•
that says ho trouble. So	nction AI_financialTroubleMargin ow close the AI is to being in financial far used only in one place: To make hoose gold buildings more often.	AI_isFinancialTrouble is a boolean function.
Rationale	Don't want the AI to expand too rapidly in the early game and fall behind in research.	
Credits	The code for the gold reserves is from the Caveman2Cosmos mod (by Koshling). Some vertical revision The change to the city AI is from "Rise of Mankind: A New Dawn" (by Afforess) via the SVN revision by alberts2.	
Al production weight lowered to 220%. Was 270% of the commerce weight (except when in financial trouble).		
Al food weight lowered, in part, to match the reduced Al use of Slavery (change <u>121b</u>).		
Rationale	Still high, but the AI is better at growing cities than at choosing sensible tech or city production. Would make sense to increase the production weight when Slavery is used less, but 270% was way too high, and resulted in post-Chemistry Workshop spam (without supporting civics). Huge outdated AI armies don't exactly make the game enjoyable either.	

		nake sense to grow cities further. I'm still giving AI should only avoid growth, not actually shrink no know what they're doing).	
for the number of military units that the AI may disband as many units as it takes to disband when in financial trouble. (Doesn't apply when already in strike.) The AI won't disband any military units as it takes to desired upper bound on military sper the AI won't disband any military units as it takes to desired upper bound on military sper the AI won't disband any military units as it takes to desired upper bound on military sper the AI won't disband any military units as it takes to desired upper bound on military sper the AI won't disband as many units as it takes to desired upper bound on military sper the AI won't disband as many units as it takes to desired upper bound on military sper the AI won't disband as many units as it takes to desired upper bound on military sper the AI won't disband any military units as it takes to desired upper bound on military units as it takes to desired upper bound on military sper the AI won't disband any military units as it takes to desired upper bound on military units as it take		When in financial trouble, the AI will immediately disband as many units as it takes to reach its desired upper bound on military spending. The AI won't disband any military units when losing a war (except when forced by the rules in a strike).	
	Rationale Allowing the AI to disband an arbitrary number of units is clearly dangerous. Income may well increase (gradually) in response to financial trouble. Not disbanding at all in a bad war will eventually lead to strike (and then the AI doesn't get to pick the units).		
So long as t	So long as the AI has any undeclared war plan, it tries to cap its military spending.		
	Declaring war will often reduce the funds of the AI through canceled trades or angry citizens, and unit supply can add to expenses (though the AI gets a 50% discount on supply costs). Declaring and then having to disband units is really bad.		
See also	vedg <u>posted</u> a savegame where this happens to the K-Mod AI.		
When deciding which units to disband, the AI takes unit locations on the map into account (in a rudimentary way – plot danger, city threat, mission target plot). Based on production cost, XP, unit AI type and mission AI type. And every city has to retain at least one defender.			
Rationale	Try not to disband units that might be	about to die in combat.	

111	Changes to pillaging	
See also	004: Pillage gold can't randomly be 0. 004c: Minor tweak to group pillage missions. 004g: Announce pillaged tiles immediately. 004k: Disable Sea Patrol mission 005c: Can't pillage City Ruins. 033: Always-Hostile units can't pillage vassal's, master's tiles. 064d: Block exploit involving pillaging of own resources.	
AdvCiv		K-Mod
When pillaging in friendly territory, routes are pillaged before improvements.		K-Mod allows pillaging one's own route (BtS doesn't; but I think it allows improvements to be pillaged), but improvements always get pillaged before routes.
Rationale	Pillaging one's own improvements can, in theory, be useful as part of a scorched-earth tactic. I've never once used that though and never read about anyone using it. It seems that roads do get pillaged occasionally. The K-Mod changelog mentions Forest Preserves. Knocking out a road can also disconnect Coal without destroying the Mine (that said: Coal at a river can only be disconnected by destroying the Mine), or can slow down rival units. Or maybe the best argument is that it's logical to destroy the cheaper structure first.	
Credits	Inspired by this post by CFC user P&enny.	
See also	This CFC post suggests that players may not even realize that they can pillage their own roads when improvements take precedence.	

AdvCiv		BtS
	unit of a different team.	No special restrictions for pillaging unowned tiles. Can, in particular, pillage routes in order to slow down another civ's units.
	Not an important change. Yanking out roads from under other civs' stacks is pretty bizarre, and occasionally exploitable.	

112	Al changes for voluntary vassal agre	eements (VVA ; "peace vassalage")	
Tbd.	The VVA code was already messy in K-Mod, and it's worse now. Should be rewritten based on a utility value that replaces the dozens of exclusive clauses.		
See also	037: Rule changes to prevent masters from sabotaging voluntary vassals.		
AdvCiv		K-Mod	
Al lowers its VVA attitude threshold (Friendly or Pleased for most leaders) only when feeling powerless (as in BtS) <i>and</i> acutely threatened, particularly when in a losing war against a third party. Al lowers its attitude threshold when it is among those civs with the least military power.		Al lowers its attitude threshold when it is among those civs with the least military power.	
	A civ that has at least one Defensive Pact and is not at war with anyone refuses to sign a VVA. Once a VVA is signed, Defensive Pacts of the vassal get canceled.		
No leader is willing to sign a VVA when Cautious and not threatened. Leaders that have their threshold set to Cautious in XML are instead a bit more willing to lower their threshold when threatened.		E.g. Frederick signs a VVA at Cautious.	
Rationale	VVA happen too quickly in K-Mod, probably also owing to increased military budgets. The idea that civs without prospects for winning the game should become vassals asap comes from Warlords though. Perhaps they're supposed to catch up under the protection of their master, and then break free again, but it doesn't usually work this way. The AI should certainly prefer independent survival over becoming a vassal and helping another civ win.		
See also	133 cancels tribute deals once vassalage ends. 143 adds recently-canceled memory for vassal agreement.		
AdvCiv		BtS	
the contrary, Domination, agreement if		Al leaders refuse to sign VVAs when the would-be master gets close to a Domination victory: "You've grown too powerful for us." I think they may also cancel the agreement when the master approaches Domination.	
Rationale	Just prolongs the inevitable. (It does game capitulates, but, even then, it's	s look strange when the last non-vassal player in a s better not to drag the game out.)	

agreements prospective its power rat	too far away" rules out vassal only until the Industrial era. If the master is in the Industrial era or later, ing is decreased when not sharing a th the vassal, but a vassal agreement	
		Only considers refusal when acceptance means war.
Rationale	Peace vassals are fickle and may lea unless they bring a considerable eco	ad to wars with third parties. Not worth the hassle pnomic value.
When deciding whether a vassal breaks free, the territory of the vassal is treated as at least 10 tiles large. Thus, a vassal that has fewer than 15 tiles left when becoming a vassal can only break free by gaining land, not by losing land.		gets to break free after losing 6 tiles (from war or culture pressure). Voluntary vassals don't care if
Rationale	Through change <u>143</u> (cancelation of little territory left can end up changin	voluntary vassal agreements), vassals with very g hands a lot.
strategy refu break free if game."	e at stage 3 or 4 of any victory se to sign vassal agreements, and they can: "We'd rather win the of AP or UN also refuses/ breaks free.	Civs that are close to domination victory refuse to become vassals (such civs will normally also be way too powerful to accept, so this is pretty pointless). In K-Mod, civs refuse to accept vassals that are at stage 3 or 4 of Culture or Space victory ("Surely, you must be joking"); may also cancel the agreement. Diplo victory not covered.
Rationale		ile hiding behind a master who can't cancel the master. Important to let the vassal refuse (not the human.
See also	115 prevents civs with too little production capacity from pursuing a Space victory, which is important for this change: Technologically advanced civs might otherwise refuse to ever capitulate once they have the Apollo Project. 143b prevents vassals from having nukes. 014 prevents capitulated vassals from pursuing victory strategies.	
A colonial vassal can break free like a normal voluntary vassal, but the vassal's personality has less impact and stricter piower and attitude thresholds apply.		Only attitude can cause an independent colony to break away. And since the +10 "granted us independence" bonus doesn't decay, this happens practically never.
Rationale	A War of Independence should at lea	ast be a possibility.
See also	130r causes "granted us independer	nce" memory to decay.
prospective probability. T scoreboard r if the master scoreboard,		

Rationale		
	probability also for vassal agreeme it may, civs are too quick to sign va dip, which doesn't only happen in d	Plopers had meant to use the permanent alliance into and misplaced a closing curly brace. Be that as ssal agreements when their power ratio takes a defensive wars, but also when an AI focuses on its focus or Get Better Units) or after an unsuccessful
	that makes civs more reluctant to b	al agreements. Could also implement it in a way become vassals of human civs, but that's a bit more bugh for humans to obtain AI vassals because e enough armies to impress the AI.

numerous enemy units in its territory on an		Enemy positions matter for peace treaties, but surrender is only a matter of power and war success.
	to surrender If 30% or more of the ion are on a landmass with few	
dead hands"	if denied . your offensive has run its course" as	That response isn't used anymore at all. BtS used it for cities that the Al didn't want to trade.
Rationale	Let the enemy demonstrate that they capitulating.	y can reach our important cities before
See also	CFC post about the refusing-to-surre	ender response.
Don't surrend the master's	der while there are units en route to territory.	This is checked before signing peace treaties but not when considering surrender.
and the attitu the enemy's it actually is.	my is the worst enemy of an AI civude toward that enemy is Furious, power is treated as 10% lower than I.e. the enemy needs slightly more er to achieve capitulation.	The worst enemy's power is treated as 25% lower regardless of attitude.
Rationale	Should perhaps disable this power adjustment entirely. It makes some sense flavorwise, but makes capitulation easier to achieve when the winning side already has a much larger army when the war starts; otherwise, it'll take time to get the uppe hand, and "This war spoils our relationship" will typically lead to a Furious attitude. From a human pov, it's annoying if the AI won't capitulate when a war has already become tiresome.	
Tbd.	Attitude could play a bigger role whe	n there is more than one powerful war enemy.
When considering capitulation, the power modifier based on war success is applied to the vassal's power, meaning that war success matters not just for the vassal-master power ratio but also when comparing the vassal's power with the average power of other civs. The master's power is modified based war success, and therefore only matters when comparing the vassal's power with that of the master.		
A civ refuses to capitulate unless its power rating The threshold is 80%. is at most 76% of the global average power rating.		The threshold is 80%.
	of war success on capitulation is t overall. Can reduce the vassal's most 45%.	Can increase the master's power by up to 100%.
Rationale	Perhaps the average power shouldn when the master's war success is hi	't matter at all for capitulation. Now matters less gh.

113	Al worker production and worker assignment to landmasses and cities

See also	251 reduces the AI work rate bonuses from the difficulty setting.	
AdvCiv	1	BtS
	eeded workers is reached.	Workers prioritized only when there are far too few of them; otherwise, any decent building takes precedence.
And several tweaks to the probability of training a worker and the target number of workers (total and per city).		precedence.
Rationale	experienced human player, but the A isn't enough. Also note that the Al go	er per city (BtS: fewer), which is about right for an Al isn't good at scheduling its workers, so 1/city enerally isn't good at choosing city production. except in the very early game and unless there are
	Should be about 1.5/city now. (Also BuildUnitProb —, coastal cities, co	a matter of traits, leader personality – especially lonies so it varies a lot.)
Config	Can be tweaked through <code>WORKER_RESERVE_PERCENT</code> in <code>GlobalDefines_advc.xml</code> , but that only affects the upper limit for the total number of workers that an Al civ may produce and not (or only indirectly) the number of workers assigned per city and how worker production is prioritized.	
Tbd.	Should take into account currently re	esearched tech (e.g. Calendar, Railroad).
	building a road toward any guarded	should flock to a settler (if any) or even start city sites (CvUnitAI::AI_guardCitySite); will w city has been founded (except for colonies: ogether with settlers).
See also	117: Al chopping; 121: Forts; 040: Ir	mprovements on landmasses without cities
	Fuyu has tried to get the AI to build more Workers as well, but I think, by now, m code supersedes his; haven't looked at the details though. The <u>code</u> in question CvCityAI.cpp, marked with "Build more Workers" (also "Worker Counting"?).	
having near	The number of Workers that the AI aims at aving near a city takes into account Forests and the missing improvements will require extra worklands on workable tiles.	
Made the Al	more reluctant to chop Forests near	a city that is producing a Worker.
Rationale	If the AI has time to chop, then it car	n't be that short on Workers.
	I considers assigning one of the	Not sure if BtS can reassign workers at all so long as there is anything left to improve near the current city. The code for reassignment is apparently erroneous (K-Mod comment: "Is it just me, or did they get this backwards?") The K-Mod code still got it somewhat backwards I think (see my own comment in CvUnitAI::AI_workerMove) and doesn't allow reassignment when a city has 2 workers and needs only 1.
Rationale	BtS comment (by Blake probably) al "Workers have/needed is not intendenceded is at least 1 that means a we	worker management quite a bit less inefficient. A bove CvCityAI::AI_getWorkersHave Says: ed to be a strict target but rather an indication. if orker will be doing something useful" s a conservative estimate; more workers than that

before a settler or worker, the AI anticipates border expansion and improvements.		The decision is, in part, based on the yields of the tile that an additional citizen would work. Unowned tiles are disregarded and only existing tile improvements count.
		BtS has an extra clause that prevents cities below size 3 from producing any workers or settlers until the owner has at least 3 cities. K-Mod and AdvCiv have mostly removed this restriction.
Rationale	Especially relevant for the capital at	game start.
	A bugfix in the tile evaluation code (CvCityAI::AI_getPlotMagicValue) has been tagged with "advc.001".	
		The number of other cities on the same landmass isn't taken into account when the Al decides whether to produce a Worker.
Added code to avoid shipping out more Workers than a landmass can spare.		All idle Workers can get shipped out and are then urgently replaced because BBAI has added some high-priority clauses for landmasses with 0 available Workers.
Fixed a likely bug in the code for ferrying Workers in between cities: Only the Workers needed by each potential target city had been counted, not the workers already available there.		The number of needed Workers decreases as improvements are built, so the error is self-correcting. However, in the late game, the AI may quickly ferry all idle Workers to some small landmass and delete most of them once they become idle again because the landmass will then have far more Workers than needed.
	These changes were prompted by a test on an Archipelago map with Tropical climate starting in the Modern era. The AI ended up deleting dozens of Workers. Deleting some Workers is reasonable under these settings – Workers are relatively cheap this late in the game and a colony (with free initial population due to the start era) on a large Jungle-covered island needs a large group of Workers a.s.a.p. However, the Killing Mod code kept producing, ferrying and deleting Workers even once all land was settled and improved.	

113b	Changes to the computation of workers available to a city	
AdvCiv		BtS
		BtS comment: "How slow is this? It could be almost NUM_CITY_PLOT [i.e. 20] times faster by iterating groups"
Rationale	A profiler run suggests that this change might reduce late-game turn times by 1 to 1.5%.	
AdvCiv		K-Mod

Idle Workers that have retreated to a city tile are counted as available to that city; Workers in cargo destined for another landmass are not counted as available.		Workers that have retreated to a city (which is what idle Workers normally do) are not counted. Workers in cargo are counted regardless of the transport's destination. The BtS code had worked differently, but probably also incorrectly.
Rationale	A bugfix really.	
AdvCiv		BtS
The number of Workers available to a city is updated over the course of a turn.		There's an update once per turn (still true in AdvCiv); updates throughout a turn happen in CvUnitAI::AI_improveLocalPlot and AI_nextCityToImprove, which covers only a fraction of the possible Worker moves.
Rationale Mainly to avoid transporting or deleting too many Workers in one turn.		

114	Changes to AI attack courage	
114a	Breaking sea blockades	
AdvCiv		BBAI
		AI keeps building e.g. Triremes but never dares to attack even a single Privateer. (Not sure if it would attack with Caravels.)
Rationale	Known issue in BBAI, not fixed by K-Mod. I've also posted about this on <u>CFC</u> , but the code I posted there is now outdated; doesn't fully solve the problem.	
Tbd.	Would probably be smarter to stop building primitive ships, and wait for better tech. Also dubious that there is dedicated code for breaking blockades – why should the normal AI behavior for stack combat be inadequate for this?	
114b	Attacks on valuable units at poor odds	
AdvCiv		K-Mod/ Lead From Behind
Changed the attack courage computation so that the cost of the involved units is given less weight when the odds are one-sided.		
Rationale	Warrior against Tank doesn't matter much, but K-Mod Barbarians are also too happy to attack advanced units in fortified positions.	
See also	koshling has addressed this by making the attack odds increase multiplicative; see this revision of "RoM: A New Dawn".	
114c	Al less patient and less risk averse about attacking cities	
Config	Partly through AI_Variables_GlobalDefines.xml	
See also	004c lets the AI bombard in a sensible order (and to bombard and attack within the same turn).	

Al city-attack stacks will attack even when the attack looks risky and costly if the stack can't bombard the city further and can't find a good alternative target to attack.		In such a situation, the AI will rather try to pillage surrounding tiles.
Rationale	Attrition warfare should be a last resort; tends to work out more badly for the aggressor than a costly (or perhaps even a failed or ephemeral) city attack. Both sides may just keep adding units, staying deadlocked for dozens of turns.	
114d	Decreased random portion of attack	courage
courage is between 0 and 12 for Al civs and between 0 and 31 for Barbarians. Increased the base attack odds change of Barbarians by 2. Barbarians) and 6 (Ragnar and Napoleor portion chosen at random once per turn by the base attack odds.		Al units have a bias toward attacking based on leader personality. The bias is composed of a deterministic base value between 0 (e.g. Ashoka, Barbarians) and 6 (Ragnar and Napoleon) and a portion chosen at random once per turn between 0 and 32 for the Barbarians and between 0 and 16 for all civ leaders.
Rationale	If the AI attacks completely rationally, defensive tactics won't really work anymore; but I think making the AI a bit more rational won't hurt.	
	Not the Barbarians though, which had attacked a lot more mindlessly in BtS than in Mod (don't recall if that's due to a K-Mod or a BBAI change).	
Config	Partly through the DLL, partly through Civ4LeaderHeadInfos.xml.	
114e	City attackers in a friendly city may opportunistically attack enemy units approaching the city ("leave attack").	
Credits	More Naval AI (Tholal)	

115	Al less willing to commit to victory strategies	
See also	112: Al civs less willing to become vassals. 018: Al uses Crush strategy less. 019 makes the Al a bit less inclined to use military strategies in Aggressive Al mode. UWAI bases some Al decisions on the victory stage of other civs; e.g. wars started in order to thwart the victory of a rival.	
AdvCiv		K-Mod
4) of the Doi meeting 55% requirement percentage	mination victory strategy when 6 of the (land and population) s. More generally, the target	The thresholds are 50% for stage 3 and 80% for stage 4, and don't depend on the number of civs. However, the requirements themselves do depend on the number of civs (e.g. 64% with 7 civs, 51% with 16). Victory strategies with stages 1 to 4 were introduced by BBAI. At stage 4, victory is imminent.

Rationale	_	ries too often (or early) for my taste. The BBAI rationally is fine, but let's not turn it into a
		ation and 32% of the land, i.e. about a "double 28.5%. This shouldn't quite be enough to trigger
	55% means that 35% of the land is needed for stage 3. That's right between 3 in 7 (42.8%) and 2 in 7.

_	nd 4 require a significant portion of the parts to be completed.	
Rationale	they want to have a chance, they'll n	ust three cities, from pursuing a space victory. If leed to expand instead. Also to discourage civs alf of their cities at war; such civs should at most
	a very large total production rate in the re a bit more advanced technologicall	e endgame, Space victory is considered even if y.
Rationale	Mostly to allow civs that are pursuing they run into a stalemate with another	g a military victory to switch to Space victory if er very powerful civ.

Domination 2 third of the s	2 requires the AI to be in the upper coreboard.	Upper half suffices.
Rationale	Military victories can't really be won the middle of the scoreboard should	from way behind. (Which isn't to say that civs in n't start wars.)
115b	Stages for Diplo victory revised	
AdvCiv		BBAI/K-Mod
Based mostly on the current (voting) population of the own team, vassals and friends. Personality and randomness still factor in; game options don't (unless Diplo victory disabled).		Based on leader personality, randomness and, a little bit, on Aggressive AI and Always Peace game options.
Stages 3 and victory stage	d 4 can be run regardless of other s.	Stages 3 and 4 are impossible if already in stage 3 or 4 of another victory condition.
AI prioritizes	food a bit at stage 4 (grow votes).	K-Mod takes into account the favorite civics of rivals when evaluating civics at stage 3.
Rationale	, ,	adn't been revised by karadoc and it didn't do aceful game options isn't good: Diplo victories are
		e for the AI. I've made the changes mostly for estimating voting populations for <u>UWAI</u> .
Diplo victory stage 2 factors into the decision to build AP and UN. The AI avoids building AP/UN if another civ seems closer to Diplo victory.		Only stage 1 is considered for AP/UN. No avoidance. (NB: Building evaluation also affects AI tech paths, i.e. the AI is able to aim at Mass Media – if it can properly evaluate the UN.)
Tbd.	Doesn't look reliable; at best, it'll no l blunder.	onger build the UN when it's <i>obviously</i> a terrible
See also	178 is supposed to improve CityAl decisions about the AP. 031 makes the Al more willing to found cities when near Domination.	
AdvCiv		BtS
inclined to pursue the "Missionary" strategy, and its vassals switch out of Theocracy.		"Missionary" is a BtS strategy that is adopted based on Al flavor and the number of civs with Open Borders and whether they've already converted. Victory doesn't play a role.
		The AI makes no effort to deal with Theocracy.
Rationale	Should at least allow the AI to win an AP victory when all human players are already members of the AP. Will otherwise have to use Holy Wars to bring down the humans.	
	AP victory conditions need to be overhauled. It's silly that a single converted city makes all the difference in victory votes. (War votes are already addressed by kekm.25.)	

The AI proposes the victory resolution when it gets the chance and a team member is at Diplo victory stage 4.		Al chooses uniformly at random from all the resolutions that it supports.
Voting AI abstains if it likes two candidates equally.		Votes for the candidate with the lowest internal id; normally humans have lower ids than AI civs.
Also abstain condition.	ns when at stage 4 of a victory	May vote for someone else's diplo victory even e.g. after launching a spaceship.
Tbd.	The AI still proposes random resolut to watch.	ions in all other cases, and this is often agonizing
	Under "let's discuss something else", should allow asking the AI whether it would vote for the active player. Could call the option sth. like "If there was an election next tuesday" Then just call CvPlayerAI::AI_diploVote (should make that const too Snarky attitude-flavored responses would be nice.	
115c	Victory strategies in zero-sum game	S
one other te	ursue Diplo victory when there's just am left; Al does pursue Conquest if	Diplo2 possible with just one rival, but UN and AP require at least two other teams.
there is just one other team to begin with.		Conquest1 requires at least one civ to be a vassal or eliminated; doesn't work if there are only two teams at game start.
Rationale	Both only really relevant for games a	against a single Al opponent.
115d	Show human victory stage in debug	mode
Debug mode has no bearing on victory stages.		The victory stage of human civs is computed as if they were AI civs when in debug mode.
(No change.)		Also, human civs can never be at stage 1 or 2 of a victory strategy, only 0, 3 or 4.
Rationale	Since R&F, <u>UWAI</u> and other parts of the AdvCiv AI code use victory stage in order to determine whether a (rival) civ is getting close to a victory condition, it's important to see the human victory stage the same way that the AI sees it.	
	Stage 1 and 2 are probably too unreliable and might lead to peculiar decisions from A governors of human cities. I'm guessing that's why BBAI restricts human victory stages. Fair enough; the AI only needs to know when a human is close to victory; 0, 1 and 2 don't (need to) make a difference.	
Tbd.	The AI_calculateVictoryStage functions aren't ideal for determining how close a civ is to victory. The main purpose of these functions is to determine whether and how much the AI should focus on a particular victory condition; therefore, e.g. AI flavor values factor in. Would be better to write separate code for measuring the progress toward victory.	
115e	Minor misc. changes to AI decisions about victory strategies	

Al redistributes personality-based we	Al redistributes personality-based weights assigned to disabled victory conditions	
AdvCiv	BBAI	
redistributed among any valid victory conditions that already have a positive weight.	For each AI leader, a weight value is defined in XML for every victory condition except Time. The weights give the leader personal preferences for some of the victory conditions. When a victory condition is disabled, the preferences for the

116	Changes to raze decisions	
See also	250b moves the No City Razing option to the bottom of the Custom Game screen. ctr makes the AI raze cities in awful sites. 300 deals with razing by Barbarians. cdtw.1: razing by vassals.	
Tbd.	Try to use CvPlayerAI::AI_assetV	al.
AdvCiv	,	K-Mod 1.44
between 0	re value plus a random number and 5 is above 0, the city is razed. 0 little; it's hardly random at all.	Raze value is used as the probability of razing a city, i.e. even if the value is just 1, the city might be razed (with probability 1%).
	value. Settled Great People count as	RazeCityProb adds up to 75 to raze value. Settled GP count as 2 against.
•	istance and finances lowered; impact adjusted to map size.	Cities past a distance threshold are usually razed.
Unlikely to raze when controlling fewer than 5 cities, i.e. in the early game.		Cities conquered in a very early rush are usually razed because of the distance.
When no other city on the continent is owned by the conquering AI civ or when the city is very far away from that civ's territory, the AI tries to predict if other cities in the vicinity are going to be conquered. If so, the city is less likely to be razed.		l · · · · · · · · · · · · · · · · · · ·
Rationale	K-Mod razes too much and too randomly, and this is among the most common complaints about K-Mod. Leader personality has far too much impact: Genghis Khahas 75 RazeCityProb while some leaders have 0. A city would have to have e.g. 15 settled GP to make up for that difference (assuming each GP counts as 5; in K-Modactually only 2), or 5 active wonders (each counts as 15).	
AdvCiv		BtS
Al factors cultural ownership into raze decisions. Reluctant to raze cities with own majority culture or with majority culture of a partner civ (i.e. attitude Pleased or higher).		Tile culture is ignored. The AI incurs diplo penalties by razing cities with cultural majority of a third party.
Rationale	The Diplo penalty is usually not worth costly. (The AI knows how to do that	n it. Can give the city away if it becomes too too.)
AdvCiv	,	BBAI
		1

When an AI civ conquers a city that, if reconquered, may soon lead to a Culture victory of the previous owner, the conquering civ razes the city if reconquest seems plausible (based on power ratios and nearby units).		The dangerous city is razed in any case.
Rationale	The BBAI comment actually said to racheck was there.	aze unless we "overpower" them, but no power
AdvCiv		K-Mod
		Some parts of the raze value computation already directly or indirectly take into account whether the city is Barbarian.
Rationale	Some advantages of conquerting cities from Barbarians probably aren't fuily covered by the K-Mod code. E.g. they tend to have smaller tile culture values and other Barbarian cities hardly exert any culture pressure. Also, it practically never makes sense to raze a city just to make sure that the Barbarians can't ever get it back.	
	More importantly, the AI doesn't currently evaluate whether Barbarian cities are worth conquering (or if it does, it's not working well). When a city is razed, this AI flaw becomes obvious to the human player. Better try to cover that up than to break immersion.	
See also	<i>Tbd.</i> -note toward the end of change <u>300</u> about improving the AI for targeting Barbarian cities.	

117	Al chops more Forests	
AdvCiv		K-Mod
on available Workers and competing Worker		Only chops while building something urgent, or a building in a small city. Then assigns a priority P that is proportional to the chopping yield.
More specifically, assigns a priority of 0.5 * P in situations where the K-Mod AI is unwilling to chop, and 1.5 * P otherwise.		
chopping opportunities are taken into account.		Chopping seems to happen only opportunistically, i.e. when a Worker is assigned to a city in order to build improvements, it may (afterwards) be instructed to chop if there happen to be Forests.
Rationale K-Mod tries to discourage extensive chopping, but I don't think this can work reducing or delaying chopping yields further (beyond what patch 1.61 did). A stands, the K-Mod AI is missing out on early chopping yields. See also this on CFC.		s further (beyond what patch 1.61 did). As it
	In particular, there are few reasons not to cut down Forests along rivers and on hills. With Replaceable Parts, a hill Lumbermill yields only one more commerce than a Mine, and, in part due to change 902, a river Lumbermill can't compete with Watermill. As a result of my changes, AI Lumbermills on hills/ at rivers don't seem to occur anymore at all. The other Forests remain largely intact.	

Tbd.	1	sound but on hills not so much. Perhaps I'll allow	
	Mines to coexist with Forest (though some areas were deforested for producing charcoal for smelting ores).		
	The AI should arguably chop even more. I intend to nerf chopping instead, probably by restricting the yield to apply only to buildings and ships.		
	Should arguably only chop if that'll speed up the current city production, i.e. if it isn't already about to finish. I've only implemented that for the decision to chop while producing a Worker (covered by <u>113</u>) so far.		
See also	113 also includes chopping opportunities in the estimated Worker tasks. 064b prevents chopping production from being converted into overflow gold.		
AI chops Fo Restrictions:		The AI never chops Forests on tiles that no city can work on.	
 Only wher 	n there is nothing else to do.		
	automated and chopping is I in options.		
 Not if there warming. 	e is already anger from global		
 Not near p 	planned city sites.		
 Not on imp 	proved tiles (e.g. Fort).		
 The AI bui chopping. 	lds a route to the tile before		
	ure cities, distance and the correct chop aren't considered.		
Rationale	My conditions are simplistic and rather conservative. At least the AI now fells unworked Forests within its own borders at some point.		
Tbd.	Considering to set 0 yield from chopping outside the BFC; then this change will be obsolete.		
See also 119 prohibits chopping on unowned tiles, i.e. the Al doesn tiles.		tiles, i.e. the AI doesn't have to worry about those	
	012 gives Forest and Jungle a defensive bonus that only the tile owner benefits from. Therefore this change in K-Mod 1.45, which makes the AI more inclined to chop Forests in the inner city ring, has no effect unless change 012 is disabled. (I've still merged that K-Mod change.)		

118	Al changes regarding peacekeeping and city votes	
AdvCiv		K-Mod
Al proposes and votes for peace if it likes both sides and neither side is clearly winning or losing.		Al only seeks peace if it likes the losing side or dislikes the winning side.
"Like" means that the attitude is strictly greater than DeclareWarThemRefuse-AttitudeThreshold.		"Like" means attitude greater than or equal to DeclareWarThemRefuseAttitudeThreshold.

Rationale	A minor thing that vexed me in one game. The AI should stop inconclusive wars between its partners.	
	The second part is probably a bug in I enough to not declare war on them", a	K-Mod. A comment says, "if [we] like them and this isn't what the code does.
See also	UWAI (<u>104n</u>) partly handles peace vote decisions, but 118 still applies.	
		chance in 3 to defy when a city owned by the Al iv or its teammates is to be reassigned. That's Ill.
Credits	krikav managed to eliminate an AI civ through an Apostolic Palace vote: CFC <u>link</u>	
Tbd.	Check how important the city is relative to the AI civ's total economy and how much defiance will hurt etc. BBAI comment: "Wonders, holy city, aggressive AI?" Ideally use existing city evaluation functions.	

119	Can't chop Forest, Jungle outside borders	
	ds that remove features can only be owned by the Worker's team.	Features can be removed from unowned plots and even from plots owned by a war enemy.
Rationale	Forests being chopped for marginal gains by idle Workers isn't realistic. In part, the problem lies with Workers working for free, but large-scale deforestation without nearby human settlement is strange in itself. Moreover, the AI doesn't chop outside of its borders, and it's easier to change the rules than to change the AI.	
	Part of an overall effort to reduce and delay deforestation (without inhibiting the AI).	
See also	117: Al chopping on owned tiles that aren't workable.	

120	Usability and AI improvements for espionage	
See also	132 makes the AI use the force-religion mission less (also changes the mission cost).	
Rationale	Espionage in BtS is beyond redemption. Focus on the few parts that somewhat work, and try to make the rest easier to ignore.	
AdvCiv		K-Mod
Default espi	onage weight set to 0.	1 in K-Mod (since v1.30), was 0 in BtS.
Rationale	Important in the (frequent) situation where a player sets some espionage weights before meeting all rivals. When meeting another rival, a default weight of 0 means that no points are assigned to that rival until the player readjusts the weights in the espionage screen. 1 could mean that a few points are assigned or a lot, depending on the weights set previously.	
NOUNKENEL TO ITAIN SOIRS WHEN HOUTING A WAL		War plans increase the odds for training a Spy as if running the Espionage Economy strategy.
Rationale	It's better to focus commerce on research or entertainment when at war, and production on military units. Espionage is for cold-war situations. That said, when war is declared, relations take a dive and the enemy may quickly	
	order some malicious Spy missions. It's good to prepare for that, and some extra Spies for lowering city defenses could also be helpful (although the Al rarely manages	

	to use that mission).		
Messages a	Messages about rival counterespionage missions are shown in white, not in red.		
Rationale	Often, the affected player isn't even using espionage, so a counterespionage mission shouldn't use the color of alarm.		
other vassa	Capitulated vassal disregard their master and their vassals of the master when checking for ech-steal targets. Not sure if there's something to prevent capitulated vassals from trying to steal their master's tech (or anyone's).		
Rationale	the commerce generated by that vas	nage economy to steal tech from the master, then sal is essentially lost to the master. This would be ally discouraging players from accepting vassals.	
Tbd.	Capitulated vassals should only ever already have.	attempt to steal techs that the master doesn't	
	tweaks that reduce the weight that the PlayerAI::AI_calculateEspionage	ne AI assigns to espionage commerce (now in a Weight).	
Rationale	My impression is that, on average, the AI weight should be as defined in CIV4CommerceInfo.xml: 1 gold being worth 0.25 espionage. There are situations when espionage is worthless or almost, so the average weight excluding such situations should be a bit higher, somewhere between 0.3 and 0.4. The K-Mod code seemed to end up at the upper margin of that range.		
See also	Actually, the average weights assigndue to a bug described under <u>001</u> .	ed by K-Mod were quite a bit higher, but that was	
120b	Al Spies less malicious		
Tbd.	Higher AI diplo penalty for malicious missions, and no diplo penalty for failed missions. E.g. 2/3 chance of a diplo penalty (and spy identity revealed) for successful malicious missions, 1/3(4?) for successful non-malicious missions. Espionage screen should then indicate which missions are considered to be malicious.		
See also	130v makes Spies less likely to attac	k capitulated vassals.	
AdvCiv		BBAI	
Cautious or no-war thre malicious at malicious at	Alicious" espionage only when Annoyed, depending on the leader's shold. (If no war at Pleased, then t Annoyed; if no war at Friendly, then t Cautious.) Al has no impact on Al malice.	Attitude threshold not leader-specific. With Aggressive AI, malicious unless Friendly, otherwise malicious unless at least Pleased.	
	(AI may also be malicious when planning war or against a civ that is close to victory; no change.)		
Rationale	The "take that" missions are rarely beneficial for the AI (although the K-Mod AI uses them quite well). I like them for flavor, but, flavor-wise, malicious espionage only makes sense against enemies. Aggressive AI still has an indirect effect because war plans enable malice, and Aggressive AI leads to more AI war plans.		
	No fomented unrest, poisoned water or sabotaged building while a city is in disorder. Cities in disorder are only exempt from sabotaged building K-Mod comment: "disorder messes up the evaluation of product and of building value"		
Rationale	Cities in disorder won't lose food.		
No revolt in	cited when city defenders are	The K-Mod code only make sure that the	

		defenders aren't too powerful. Will even use the revolt mission against undefended cities. (Whereas BBAI had a clause – disabled in K-Mod – that blocked the revolt mission when the attackers were more than twice as powerful as the defenders.)	
Rationale	2:1 as in BBAI would be too strict. Ju inciting a revolt doesn't mean that a r	st because a city can be conquered without evolt isn't worthwhile.	
reduces AI espionage weights against civs from		K-Mod added this strategy; comment in AI_Defines.h: "run high espionage slider to steal techs at a discount."	
		When hoping to steal a tech from a particular civ, the weights of other civs are halved.	
	chance malicious missions further bionage Economy.	Espionage Economy already decreases the chance of malicious missions.	
Rationale	Espionage Economy tends leads to a much higher espionage output than normal. Even 10% of that can amount to a lot of wasted commerce if it's spent on frivolous missions.		
120c	Hide the espionage slider when it's a	t 0	
AdvCiv	ı	BtS	
Espionage slider not shown on the main interface when it's at 0. Added the slider to the Espionage screen.		Once Writing is discovered, the Espionage slider is shown on the main interface, city screen and Finance tab of the Economics Advisor.	
Rationale	More room on the main interface. Ma	ny players hardly ever touch the espionage slider.	
Config	Optional through the "General" tab of the BUG menu. Since AdvCiv 0.98, the slider is again always shown by default.		
See also	120g requires Alphabet for adjusting the slider. History Rewritten also places the espionage slider on the Espionage screen (though I don't suppose it's removed from the main interface).		
Tbd.	Occasionally (rarely?), the Espionage screen gets garbled when the slider is moved from 0 to 10. See comment in CvPlayer::setCommercePercent.		
there is spa	Position the Domestic Advisor window so that there is space for two sliders above it and space for unit icons below it. Positioned so that there is room for three sliders unit icons are half-obscured.		
Rationale	Even if the espionage slider is shown on the main interface, I don't think it's important to show it when the Domestic Advisor is open.		

120d	Info on Espionage screen revised	
AdvCiv		BtS
The heading above the point thresholds for passive espionage is "Threshold".		Says "Cost"; same as the heading for the espionage mission cost.
Thresholds that the player has reached and mission costs that he/she could pay are shown in green.		All in white.
Rationale If it isn't paid, it isn't a cost.		

Credits	The green numbers I've seen in anot	her mod, probably BULL or BUFFY.
train Spies	costs are listed if the player can't (i.e. prior to Alphabet). Exception: shown if the player controls a Great	Mission costs are listed as soon as the player learns the location of a rival city.
Rationale	Rather distracting to see the costs ea	arly in the game.
See also	Ties in with change <u>004w</u> (uncluttering	ng the UI).
	A Great Spy prior to Alphabet is a rat longer provides Great Spy points (ch	her academic possibility since the Great Wall no ange <u>310</u>).
Production/Improvement/Building missions are shown as a single item "Sabotage" with mission Sabotage Production gives away the number		Sabotage Production gives away the number of hammers spent on the target city's unfinished production. The cost for Sabotage Building is
Rationale	The Sabotage Building cost is mostly sabotage the cheapest building.	unhelpful – unlikely that the player wants to
		s useful information (close to completing a that the player shouldn't get for free.
	The cost for Sabotage Project doesn listed on the Victory screen.	't give anything away I think; Spaceship Parts are
See also	 103 allows Spy units to investigate cities; that's the fair way to find Wonders under construction. 045 hides buildings in rival cities (meaning that the Sabotage Building cost does give away secret information) 	
See also		when able to investigate the city. And should ing and the current production and its progress as
player is ur the target c tech (on wh	Steal Technology" is shown without a cost if the player is unable to trade techs with the owner of the target city. If they can trade, the cheapest ech (on which the mission cost is based) is shown in parentheses in addition to the cost.	
would curre	Steal Treasury" shows the amount of gold that would currently be stolen (and on which the shown mission cost is based). Can compute the amount of gold from the shown mission cost.	
Rationale	Don't want to give away the cheapest tech in situations when tech is otherwise secret (pre-Alphabet, No Tech Trading option). If a cost is shown, the cheapest tech can be deduced; more convenient and transparent to just name the tech. Same with gold.	
See also	004i tells a player from whom gold w	as stolen how much was stolen.

120e	Al response to poisoned water and unrest	
AdvCiv	Bt	S

unrest don't meaning tha after a spy a	of poisoned water and fomented affect the AI population target, at the AI tends to prioritize food more attack (in order to keep the current despite food lost due to anger and bad	The effects of spy attacks are treated just like other causes of bad health and anger when setting a population target, meaning that the Al lets its population shrink after a spy attack (may even de-prioritize food).
See also	160 slows down starvation	
Tbd.	The AI should be more upset about poisoned water and fomented unrest than about other spy missions. Could implement that, but spies get identified too rarely (25%; ESPIONAGE_SPY_REVEAL_IDENTITY_PERCENT) for it to matter. Perhaps give these missions a 50% chance of revealing spy identity even when the spy isn't caught? See also <i>Tbd.</i> under 120b.	

120f	Spy missions announced to third parties	
AdvCiv		BtS
Spy missions that cause a revolution are announced to third parties that know the mission target. The owner of the spy unit is not named in the notification. Missions that change the religion of a civ are recorded in replays along with the spy owner.		Third parties are notified of revolutions (and they're recorded in replays), but only the target of a spy mission learns about the mission, and no missions are recorded in replays. I'm not sure if the BtS AI uses the revolution missions much; the K-Mod AI does use them from from time to time.
		of a spy mission and to assume that something civ switches to a suboptimal civic or religion, turns.
	spy. A normal revolution causes anard when the next human turn starts. So t	o infer whether a revolution was triggered by a chy, but that anarchy has normally already ended this change reveals information that players don't an AI that looks incompetent even less.
Config	Switch in GlobalDefines_advc.xml (0	loesn't affect the replay message though)

120 g	The espionage slider requires Alphabet	
AdvCiv		BtS
In games started with AdvCiv 0.95 or later, the espionage slider can't be adjusted until Alphabet.		The espionage slider can be adjusted as soon as another civ is encountered. (This condition is implemented, unusually, in CVMainInterface.py.)
Rationale	Don't want to clutter the main interface with this slider long before it is needed.	
	120c hides the slider from the main interface when it's 0, but that's optional. And, if 120c is enabled, having an icon for the adjust-slider ability on the tech tree allows me to place a hint in the hover text about the new location of the slider.	
Config	Can be reverted through CIV4TechInfos.xml and CIV4CommerceInfo.xml.	

120h	Keep espionage-against ratios secret

AdvCiv		K-Mod
Espionage-against ratios aren't shown anywhere (as in K-Mod) and the espionage icon on the scoreboard (disabled by default) is shown when the active player has set a positive weight on the Espionage screen against a rival.		BtS shows as a ratio on the scoreboard and on the Foreign Advisor screen how many espionage points the active player has accumulated against each rival (that info is still available on the Espionage screen) and how many espionage points the rival has accumulated against the active player. Since K-Mod 1.26, this espionageagainst ratio is no longer shown. The espionage icon on the scoreboard is disabled by default in K-Mod, but, if enabled, it shows whether the espionage-against ratio is greater than 1.
		On the Espionage screen (no change in AdvCiv), an espionage icon is shown next to rivals against whom the active player has set a positive espionage weight.
Rationale	The K-Mod change seems to irk some players greatly, but I don't see why. One reddit user writes that "it makes espionage much more difficult, annoying and non-worthwhile." That sounds like tech stealing strategies depend on the espionageagainst ratio somehow, but the cost of espionage missions isn't based on that at all, it based on the total espionage ratio (points that active player and target respectively have ever accumulated against anyone) and that ratio is still shown on the Espionage screen. (Plus, in K-Mod, it's cheaper to conduct missions against civs with a large population.) Also, how hard can it be to guess, approximately, the AI espionage weights?	
	(suggests that the ratio of points accugive away information about unmet riscoreboard probably can't really give straightforward to keep the espionage condition for showing the icon was diespionage ratio shown prominently of	e-against ratio entirely secret. Also, the BtS fficult to guess (as there's also the total n the Espionage screen) and nearly impossible to are hidden. The new meaning of the scoreboard
Tbd.	and/or let a right-click on the icon set	ery useful now. Perhaps add some hover text the weight to 0. Note that the passive missions eady covered by other scoreboard columns
AdvCiv/ Van	iilla Civ 4/ Warlords	BtS
_	• •	Messages are shown immediately when the missions are executed.
Rationale		ner from the timing of the messages. The original nit::destroy) had gotten this right; BtS mucked

120i	Steal tech cost based on partial research progress	
AdvCiv	BtS	

number of rewould need	stealing a technology is based on the Same, but partial progress is ignored. search points that the recipient n order to discover the technology, ogress counts.	
Credits	<u>VIP mod</u>	
	More intuitive to me. As for balance, this could make quite a difference for players who never increase the espionage slider. The espionage points generated from buildings alone are usually too few for stealing a technology or, often, carrying out any useful mission. If partial progress counts, then even small amounts of espionage can be converted into research. This will require some attention to detail on the player's part, and that could actually annoy players who dislike the espionage system; but I'd like to give it a try.	

120j	Al improvements for Spread Culture mission	
AdvCiv		BtS/K-Mod
culture that will be spread and also tries to predict amount o how the city tile culture percentage will change. Culture m doesn't ta meaning in an oce.		The BtS code seems to attempt compute some amount of culture, but it actually just uses 5% of the city tile culture, which is not how the Spread Culture mission works at all. The code also doesn't take the total tile culture into account, meaning that the culture added could be a drop in an ocean that won't change the tile culture percentages at all.
	A fix for apparent K-Mod bug that had only considered cities previously owned as targets is tagged with change id <u>001</u> .	
	CFC post by me summarizing how the Spread Culture mission works.	

121	Misc AI changes to Worker builds and citizen assignment	
	131: Other minor misc. AI changes 901 tweaks the evaluation of happiness from improvements.	
AdvCiv	BtS/ K-Mod	

For deciding whether to build a Fort or a cheaper The Worker AI frequently builds Forts on improvement to connect unworkable resources. resources that aren't (vet) workable. Forts are the AI uses a heuristic that considers the following circumstances:

always preferred on these tiles.

- How busy Workers currently are overall;
- whether the tile has natural defenses:
- whether a city is planned on or next to the tile;
- and whether a Fort would function as a canal.

Al always prefers any improvement with a positive yield over Forts on workable tiles, and replaces the Fort when a tile with a Fort becomes workable (once a Worker finds time to Also likes to build Farms and Cottages on do it; not necessarily high priority).

(Fixed a possible bug that may have prevented improvements that connect a resource – like Forts – from being replaced – even by an improvement that also connects the resource). Probably not a bug after all. I think my change only gives higher priority to replacing Forts.

Once Fort tiles become workable, the AI is hesitant to replace Forts with yield improvements.

revealed but yet unusable resources, and doesn't replace them with improvements that connect the resource later on.

Rationale

I've posted some screenshots about the K-Mod problems here.

Forts cost a lot of Worker turns and often have to be replaced later on, so the Al should be hesitant to build them. Possibly a bug in BtS: The AI picks the most expensive improvement; was perhaps intended to be the cheapest (hard to say).

My heuristic using natural tile defense leads to a reasonable number of Forts in reasonable locations. Not really smart, but looks good on the surface.

Forts can theoretically be better than yield improvements even on workable tiles. A Silk Fort preserves the underlying forest, which is worth 1 production vs. the 3 commerce from a Plantation. 3 commerce is generally preferable to 1 production, and don't think the AI can figure out when 1 production is better. Better stick to the obvious improvements.

Tbd.

I don't think I've actually seen an AI canal yet (not through CvPlayerAI:: AI getPlotCanalValue either).

Increased the value assigned to GPP when choosing jobs for citizens by 38%, but made the value decrease faster with each additional GP.

K-Mod comment: "[...] because of the flawed way that food is currently evaluated, I need to dilute the value of GPP so that specialists don't get value more highly than food tiles. (I hope to correct this later.)"

Rationale

I've noticed that the AI doesn't create enough GPs in the first half of the game and rather too many in the second half. I didn't look into the food evaluation issue mentioned by karadoc, but AI cities still seem to grow normally in tests.

AdvCiv

BtS

When AI yield priorities are adjusted in response to high expenses, then the adjustment is done gradually over the course of several turns.

The city AI may lower the priority of production vields when (overall) expenses are high. The priorities are fully recomputed each turn without any inertia.

	Comment in the Dune Wars mod: "ALN - this causes a few issues in DuneWars and in general. if it causes a wholesale move towards commerce, the ratio changes next turn shifting back to production, leading to a possible endless seesaw [e]ffect"	
	I haven't observed such a seesaw ef (I didn't adopt any code from Dune V	fect, but it sounds plausible. Vars; I think their solution is specific to that mod.)
Made the city population.	/ AI prioritize food more in situations	when happiness and health allow for a lot of extra
AdvCiv		BtS/K-Mod(?)
screen to a c	er adds a specialist on the city ity that has citizen automation AI assumes that all specialists of forced.	Manual changes to the citizen assignment don't disable automation, they only force the Al governor to keep that particular assignment. When a player forces any such assignment on the Al, the Al may reassign any non-forced citizens in response. When the Al has already assigned one (non-forced) specialist and the player adds another specialist of the same type, the Al may in response reassign the non-forced specialist. This can mean that the human assignment has no visible effect. (The non-visible effect is then that the one specialist can't be reassigned by the Al in the future.)
	When a city already has one Scientis likely wants there to be two Scientist	st and the player adds another, the player most s.
(AI_routeTeri the AI prioriti and up to 3 v	ig "territory" railroads ritory(/*bImprovementOnly=*/true)), zes worked tiles over unworked tiles vorkers can team up depending on e (i.e. mostly on slower game speed	Railroads on worked tiles should arguably be handled primarily by workers assigned to cities, but those workers can't always immediately build all railroads that increase production yields, so workers that improve their owners territory in general end up building such railroads as well. Those workers prioritize tiles solely based on the distance to their current tile. Tiles that another work is already building a route at or adjacent to are disregarded.

is nonurgent, I'm reducing the value counted for overflow production because the subsequent orders are probably also not going to be urgent. Decreased the urgency factor for units so that the Al will mostly only burry them when there is a		K-Mod replaces the lengthy case-by-case BtS code (e.g. "Rush Courthouse if maintenance is at least 10") with a general calculation of lost and gained yields. The benefits of getting a building a couple of turns earlier are evaluated through the same function that is used for choosing production orders (AI buildingValue). For units,
are usually he Buildings the health are oneeds happiare ignored getting a building the building and building a	acept Settlers and Workers, which nurried. The primarily grant happiness and only hurried if the city immediately iness or health. And specialist slots when evaluating the benefit of ilding earlier (because the population are it difficult to fill those slots).	it's a matter war plans and Area AI, but cities that can use Slavery efficiently (Granary and low population) will normally hurry units even when there is no war plan, and all buildings too. Wonders are usually hurried despite the penalty because their building values are extraordinarily.
Even when a building has a very high utility and is thus desirable to get earlier, the AI will not hurry the building if that's inefficient in terms of lost food versus gained production – i.e. when the building is a wonder with a hurry penalty. When evaluating the cost of not working a tile due to population loss from Slavery, the value is increased if the tile is unimproved and expected to be improved soon.		Will hurry too readily in the early game when Workers aren't quick enough to improve tiles. This is a bit of a feedback loop because unimproved worked tiles are a main driver of training additional Workers. Also, in general, if Slavery is used a lot, cities stay small, and thus Slavery remains efficient (small cities need less food to regrow population).
	The AI doesn't hurry as much as a highly competent player now, but that makes sens to me because the AI generally produces units and buildings ahead of time (or for no particular purpose) and thus doesn't benefit much from getting them a couple of turns earlier.	
		n buying now. (Well, basically, hardly ever as in Universal Suffrage, and I can't blame it.)
See also 064b changes the interaction between hurry production, chopping and overfold (rules-wise). 110 shifts yield priorities, in part, to match the use of Slavery. 912d reduces the hurry production from Slavery. The AI should be able to hat (small) changes to that variable; it's part of the calculations.		match the use of Slavery. rom Slavery. The AI should be able to handle
	_	K-Mod Slavery: "AI doesn't use slavery as in bigger cities and stronger AI overall." (source)

advc.ctr	Changes to city trades (change id was originally "advc.122")
----------	--

Tbd.	through object composition and an a classes could be derived from as we changed (that would be under chang TradeAI should have functions will	ove the AI code for city trades out of CvPlayerAI bstract "TradeAI" class that other trade evaluation II in the future, e.g. if the rules for tech trades are e id 550) so that a rational AI can be put in place. Give, willReceive, giveVal, receiveVal, der ctr (AI), and should be serializable.	
Any non-ar exchange f	nnual trade items can be offered in for a city.	Cities can be traded only as part of a peace deal; otherwise they have to be gifts.	
Rationale	playing with the "no tech trading" opt like to move tech trading from Alphak system.) Could also make culture-ba	arding when tech trading isn't possible, i.e. when ion, but also when a civ has fallen behind. (I'd also bet to Scientific Method and add a tech diffusion sed strategies more rewarding and interactive: sn't feasible, but a combination of culture pressure

Only revea	led cities can be traded for.	Can receive previously unknown cities as part of a peace deal. Al civs accept unknown cities from human civs as gifts.
	trade proposal" option hidden when o eligible trade items.	Proposal can lead to an empty Trade Screen.
Rationale		ausible that the AI is (supposedly) able to decide be knowledge of. Moreover, unrevealed cities are, Trade screen can leak that info.
	the early game after I excluded unrev "Let's discuss something else" is also	sing, and became a more common occurrence in vealed cities. "What do you think of" - "Yes?" o confusing (when there is no third civ to talk erent mod (Git commit), but I actually find the BtS
AdvCiv		K-Mod
		T. Control of the Con

Apart from colonial vassals, only former owners K-Mod added a "base culture [value] to dilute the of a city are eligible for receiving it through true culture values." (Git commit) As a result, civs liberation. with 0 culture level can be eligible for liberation. I'm not sure if that side-effect of the K-Mod change was intended. I think allowing Rationale liberation to arbitrary civs in some obscure circumstances only complicates matters. Thd. The computation of the liberation player is still highly obscure. In summary: Can always liberate to a colonial vassal that has its capital on the same landmass. Otherwise, the liberation player is is the one with the highest score – unless the current owner has the highest score. The score is city culture with a dilution factor from K-Mod, biased for the original owner when liberating upon conquest, strongly biased against rivals of the current owner, taken times a factor between 1 and 2 based on the team' culture in the city tile (K-Mod) and divided by capital distance (air distance, doubled if colony). Maybe do something based primarily on tile culture (city culture of other civs isn't even visible on the UI). That already accounts for distances – though nearby cities may have recently changed hands, so a distance factor or sanity check would still be needed.

AdvCiv

Keep the option of liberating a city right after conquest. canTradeItem is now called to make sure that the (implicit) city trade is legal.

Cities ceded this way count as liberated for the "you liberated our cities", "traded fair and forthright" and "traded with our worst enemies" relations modifiers. The raze popup says "liberate" in parentheses to clarify this. The popup says "let the ... empire assume control" if the new owner hasn't owned the city before. (This can only happen with colonial vassals; see the previous box.)

When the liberation player upon conquest differs from the peacetime liberation player, the popup choice of keeping the city is followed by a note saying that liberation to the original owner won't be possible at a later time.

BtS

After conquering a city that can be liberated, the raze popup includes an option to liberate the city if the player that conquered the city is able to enter the territory of the liberation player. The liberation player is computed with a bias for the city's original owner (i.e. the founder). However, the city counts for "you liberated our cities" only if the liberation player would be the same without the bias for the original owner. It never counts for fair trade and enemy trade.

The raze popup says "return control to the ... empire" even if that player has never owned the city.

The recipient can't refuse. (no change)

The option to cede a city after conquest was already present in Vanilla Civ 4; when BtS added the notion of a liberation player, the code was updated to cede to the liberation player instead of the highest-culture player.

Rationale

I haven't added a trade denial check because, otherwise, for equal treatment of human and AI, human players would have to receive a popup allowing them to reject a city; way too much work, and it's fair enough to say that the new owner is somehow taken by surprise.

The bias for the original owner is an obscure rule – until I read the code, I had assumed that liberation through the raze popup worked just like through the trade screen. That said, it's flavorful to restore a city to its original owner after/ as part of its "liberation." (Perhaps there should be some simpler advantage to it.)

The relations boost from liberation has to apply in any case; otherwise, the raze popup is a trap. The trade modifiers aren't all-upside, but treating them differently from liberation would add to the confusion and getting around the enemy trade penalty this way also wouldn't be particularly plausible.

Tbd.	Perhaps remove the bias for the original owner (bConquest in CvCity:: getLiberationPlayer).	
	a city even if there is an enemy sea unitational unit visible from the city.	There must not be any unit hostile to the prospective city owner visible from the city. Otherwise, the city can still be traded, but it doesn't count as a liberation (no diplo bonus).
Rationale	The visible-enemy restriction is reasonable – if the new owner has to fight for the city, it's not really liberated –, but units that can't attack the city shouldn't block liberation.	
	Disabled this in AdvCiv 0.97 because trade denial handles hostile units now. That sai the trade denial check ignores all ships. I've left the old code as a comment in CvCity::getLiberationPlayer in case that I want to merge it into the denial check (Removed that comment too on 22 Mar 2020.)

ctr (cont.)	ctr (cont.) Consequences of city trades	
AdvCiv		BtS
owner is de tiles), excep that don't be contested ti only if the tr	r is traded, the tile culture of the old creased in the full city radius (21 of for tiles contested by other cities elong to the new owner. Those rivalles are affected by the trade if and raded city has a higher priority based and (tie-breaker) age.	The old owner's tile culture is set to 0 in the city tile and in the inner circle. The outer circle remains unchanged.
The tile culture of the new owner is increased by the same amount that the old owner's culture is decreased. The amount of converted culture is equal to 50% of the old owner's culture or 100% of the new owner's culture, whichever is smaller. I.e. the new owner's culture can at most triple, and the old owner's culture can at most halve. 33% of the old owner's city culture is converted into culture of the new owner. This doesn't increase the city's total culture (sum over all civs), so it should be safe in multiplayer.		The new owner doesn't gain any tile culture. If the city is liberated, then the new owner's city culture (not: city tile culture) is increased by 50% of the old owner's city culture. The old owner doesn't lose any city culture. K-Mod disables the culture increase when the new owner had already owned the city at some earlier time; this was done to block an exploit in multiplayer mode. City trades that don't count as liberation don't affect city culture.
Rationale	The instant removal of all culture in BtS is jarring. That said, the mutual agreement should have some (appeasing) effect on the population, so I'm halving the removed culture. Excluding the outer ring can lead to strange borderlines with foreign enclav	
The culture is converted to make the city suffer less from culture pressure, to for the consensual change in ownership (as opposed to violent conquest), to strengthening the influence of third parties, and because culture shouldn't ju		hip (as opposed to violent conquest), to avoid
	The converted city culture can't be based on the new owner's city culture because new owner doesn't normally have any city culture. Therefore, I'm not using the tile culture conversion formula for city culture.	
Config	CITY_TRADE_CULTURE_THRESH in GlobalDefines_advc.xml	
See also	kekm.23 removes the distinction between liberation and regular city trade when it comes to city culture. Also removes the free defenders that cities used to receive when traded to a vassal.	

Slavery, Dra both the old	is ceded, reset the anger timers for afting and defied resolutions unless and new owner are human or the is human and the old owner an Al	The timers are reset only if the new owner is an AI civ (and always after conquest; no change).

appropriate time.

Related <u>CFC post</u>. The technical difficulties mentioned are resolved now. I had simply forgotten to set the peace treaty item to <code>bOffering=true</code>. Overall, this was more tedious than difficult to implement once I realized that the offer lists (despite being <code>const parameters</code>) can be modified in <code>CvPlayer::updateTradeList</code> at the

New tab "Cities" on the Foreign Advisor screen. Shows a table with all cities that the active player can trade much like the "Tech" tab does for technologies. An occupation (fist) icon indicates when a city can be liberated. When an AI civ is unwilling to cede or receive a city, hover text shows the denial reason. When not all cities fit into a table cell, points of ellipsis are shown and hovering on those points shows the omitted cities.

To implement the city table, BUG's IconGrid module has been extended, allowing multiple text elements (with hover text and on-click action) to be added to a single table cell.

elements (with hover text and on-click action) to be added to a single table cell.	
Config	The "Cities" tab can be disabled through the "Advisors" tab of the BUG menu.	
Rationale	A bigger role for city trades requires better UI support. The only place that dealt with city trades was the "Liberation" column of the Domestic Advisor (more about that below); not the right place for information about trades, and the Domestic Advisor was already too cluttered.	
Tbd.	Perhaps it's habit-breaking that the "Tech" tab is no longer right next to the "Exit" button. That could easily be amended by switching the "Tech" and "Cities" tab.	
	The BUG option to disable the "Cities" tab could later be removed to unclutter the BUG menu. But so long as city trades are novel, it makes sense to have an option.	
Advisor an	the name of one of the active player's cities opens the city screen behind the Foreign d highlights the city on the minimap. Clicking on the same city name again or right-any city name closes the city screen.	
Rationale	Want to help player locate the cities. Unfortunately, the camera can't move (ensured by the EXE I think) while an Advisor screen is open. The Foreign Advisor obscures all the interesting parts of the city screen, so the city screen in the background isn't helpful. However, as a side-effect, the city gets highlighted on the minimap (visibility circle and larger city blot) and the player can close the Foreign Advisor to inspect the city and can then close the city screen with right-click (see <u>004t</u>) to see the city on the main map.	
Tbd.	Clicking a foreign city's name does nothing; should at least highlight that city on the minimap, but I'm not sure how to do that (without opening the city screen, which can't be allowed for foreign cities).	
	Perhaps clicking a city owned by the active player should close the Foreign Advisor screen and then center the camera on the city (like the BUG Wonders tab). And right-click for the current behavior (opening the city screen in the background).	
	An alternative approach would be to show just a near-fullscreen minimap on the "Cities" tab with cities that can be traded highlighted through colored blots; all other info in hover text – but could blots on that map have hover text? Also sounds like too much work. Though a nice large minimap could also be useful for well, screenshots?	
Domestic A	ost column of the (non-customizable) Advisor shows the revolt probability of a positive revolt probability. The (fist) icon is used as the heading for n. The rightmost column instead shows a fist icon for all cities that can be liberated to an existing civ. (Prior to AdvCiv 0.97, the icon was also shown next to cities that could be split off as an independent colony.)	
Rationale	Liberation to existing civs is now handled by the "Cities" tab. Liberation to a new civ is presented better by the "Liberate" button on the Domestic Advisor screen. It wouldn't hurt to show that information redundantly, but it's not really within the purview of the Domestic Advisor, the icons are pretty obscure and revolt probabilities are more useful (they also require a bit more space, but everything still fits even at screen width 1024 pixels).	

See also	The <u>Immortal Culture</u> changes make revolts more relevant than in BtS.		
Tbd.	The Domestic Advisor could use hover text to explain its headings and maybe also for some additional information.		
Alert for city	trades added.	When a conquered city can be liberated, the raze popup shows an option for that; similar enough to a notification – in that one special case.	
		(Since the BtS AI only trades cities when at war, notifications aren't really needed.)	
Config	Can be disabled on the "Alerts" tab o	f the BUG menu.	
See also	Implemented based on the AdvCiv4le	erts class (<u>210</u>).	
unused COLOR_CITY_BLUE. reliably, e.g. green for research and tech I don't think cities are part of that color s in replays, founded cities used to be sho green. BUG used magenta (normally us		Some parts of the game are color-coded pretty reliably, e.g. green for research and technologies. I don't think cities are part of that color scheme; in replays, founded cities used to be shown in green. BUG used magenta (normally used for culture) for city-founded alerts.	
	106: For city-founded messages in replays, I use the player-specific text colors. 210c: City-founded announcements are shown in plain white.		
	Colored alerts stand out more at first (which is not what I want), but, after a bit of getting used to, are easier to identify at a glance to (usually) ignore them. That's my experience with the BUG tech trade alerts anyway. COLOR_CITY_BLUE is surprisingly easy to read against the blue background of the Event Log but doesn't stand out much. For game text, blue tones weren't used much at all (I guess because of the blue backgrounds and water tiles). Other ideas would be COLOR_CITY_BROWN, COLOR_CULTURE_RATE or a similar new COLOR_CITY_VIOLET with r=50%, g=30%, b=100% – that's not too similar to the player colors of Sumer and Rome.		
		ng to cede a city. When at war with that player, ling to give the city in exchange for peace.	
	Ale Since the rules for city trades are fairly narrow, I'm not restricting the alert to AI players. There's no way to get a city from the AI while at war if the AI won't make peace in exchange for the city because only one side can give items in a peace deal.		
	No " will no longer cede" alert. Doesn't sound too helpful and might flicker while at war. (If it's needed after all: Don't report cities whose owner has changed, nor cities that have become the capital. Perhaps don't report anything after making peace.)		
Show an ale	Show an alert when another player becomes willing to accept a city in trade.		
	Rationale Mainly so that players know when a city becomes tradeable through the gradual spread of a foreign culture.		
Show an ale owner.	Show an alert when it becomes possible to liberate a city to a player other than the city's previous owner.		
	Liberation to the previous owner – typically after a war – is almost always possible and rarely desirable.		
AdvCiv	1	K-Mod	
	Show all cities that can be traded on the trade creen (and on the "Cities" tab).		

Rationale	It was a good change for K-Mod (and for AdvCiv until v0.97) because the AI said that about nearly every city when at peace, and those untradeable cities were cluttering the trade screen. It may also have been part of the K-Mod changes to make unrevealed cities secret. These things are now addressed by the game rule restrictions on city trades: Can't trade for unrevealed cities and can't trade for cities without a significant amount of the new owner's tile culture.
When a hu up.	man tile flips to a different owner, sleeping and fortified units of the old owner are woken
Rationale	So that human players can't forget about units fortified in or near a traded city. Should also be useful when border tiles flip through culture pressure; units forgotten on such tiles can even increase away-supply costs.
See also	163 wakes up teleported units
Tbd.	What if a human player has units fortified on a teammate's or vassal's tile and that tile flips to a third party?

	riips to a third party?

Config	The tile culture percentage that enables the stricter attitude threshold is set through	
Cornig	NATIVE_CITY_CULTURE_THRESH in Civ4GlobalDefines_advc.xml.	
	The personality-based thresholds are set in <code>Civ4LeaderHeadInfos.xml</code> . The respective XML tags are optional; see comments in <code>Civ4CivilizationsSchema.xml</code> about the default values.	
Rationale	Rewarding good relations, especially Friendly relations (which are difficult to attain), is one of the main goals of making city trades more flexible.	
About liberation see under Al trade value below.		
	The personality-based thresholds were chosen as follows: There are 10 reasonable combinations – AA, AC, AP, AF, CC, CP, CF, PP, PF and PP, where "A" means that towner's attitude needs to be (strictly) better than Annoyed, "C" better than Cautious, "P" better than Pleased and "F" better than Friendly (which is impossible; AI respons "That would go against everything we stand for"). For variety's sake, I've tried to distribute the leaders somewhat evenly among these combinations – though some too extreme to be justified for more than a couple of leaders. My assignment is main based on what notion of ethnicity a leader might have possessed. (Caveat: I'm no historian.) Consequently, it's more based on the era that they lived in than on personality. I didn't want to just make the "difficult" leaders more difficult and the "ea	

ones even easier to get along with: BtS (or rather especially Vanilla Civ 4) is too onedimensional in that regard.

AA: Brennus, Pacal, Shaka, Montezuma – Chieftains that care more about clan than country, and rulers of city states.

CP: Alexander, Augustus, Cyrus, Darius, Huayna Capac, Hannibal, Julius, Justinian Emperors of classical antiquity. Enlarging the inherited realm is a point of pride. Cities with little tile culture may yet be acculturated. However, in the end, it's up to the whims of the emperor.

AC: Mansa Musa, Pericles – Pericles ruled over a city state, but there was also a sense of Hellenic identity. Mansa Musa is more of a classical emperor, meaning he doesn't easily part with land, but he also can't resist a good deal.

AP: Ashoka, Hatshepsut, Hammurabi, Gilgamesh, Ramesses, Suryayarman, Ragnar Mostly pre-classical emperors; less interested in colonizing acquired land. Conquered cities especially are to be exploited (e.g. sold), not integrated.

CC: Charlemagne, Isabella, Joao, Mehmed, Saladin, Suleiman, Wang Kon, Zara Y. Medieval sovereigns. Care more about feudal ties than country. They do worry that the recipient of a city might plot against them; or worse: they could be heathens.

CF: Frederick, Louis, Willem, Elizabeth, Mao, Tokugawa

The first four are rulers over early (proto-)nations. They only abandon their citizens under duress. Conquered lands are negotiable, but they're also interested in expansion. Mao: As a modern ruler also not happy to cede land, but he did cede some land to the USSR when relations weren't entirely friendly. Tokugawa: Tough one. Giving up Japanese citizens should be taboo. To minimize contact with foreign cultures, it would seem best to trade conquered cities away. Though he doesn't really like to trade either, nor does he like foreign cities at his borders ...

AF: Bismarck, De Gaulle, Napoleon, Victoria, Boudica, Sitting Bull The first four are leaders of colonial nations, but arguably not too keen on cementing colonial rule and willing to engage in politics. And, let's say, two proud chieftains to whom the land of their forefathers is sacred.

PF: Churchill, Stalin, Peter, Catherine, Gandhi, Lincoln, Roosevelt, Washington The first four have an aversion against giving up what they've once taken, except perhaps to a "fraternal country." The other four are modern democratic rulers that are reluctant to put a liberated people under the thumb of some less enlightened ruler.

PP: Kublai Khan, Qin Shi Huang – Want to give this combination to someone. Not sure about Oin. Kublai was practically a Chinese emperor but didn't have Chinese roots, so he shouldn't be absolutely attached to any ethnicity. On the other hand, he was an extremely powerful emperor, so he doesn't quite see why he should give anyone anything.

FF: Genghis Khan – Maybe due to his fierceness; or arrogance since his campaigns were so successful.

As for the 20% nationality threshold, I've tried 10%, same as the threshold for being able to receive a city in trade (CITY TRADE CULTURE THRESH), but that didn't work well in situations when two war allies divvy up the spoils of a successful war. If both owner and potential recipient start at 0 nationality, then the latter would have to increase its nationality faster than the owner in order to receive the city before the stricter attitude threshold applies, which often isn't doable and also isn't consistent with the idea that having half as much nationality as the owner should suffice for a trade.

20% also has some supporting precedent in history. For example, the parts of Ukraine that Russian nationalists have been seeking to "reclaim" all have a population of at least 18% ethnic Russians (map on Wikipedia).

The AI refuses to trade away cities with a trade value greater than 4/7 of the trade value of the Al asked to trade a city where its city culture is more

The AI reponds "surely you ask too much" when capital except when at war. If the other side is a than 50%. This only applies to teammates. Rivals

rival, the denial reason is "you'll have to take it from our cold dead hands," otherwise "surely you hands" except when negotiating peace. ask too much."

The AI refuses to accept cities with a negative trade value ("we don't want to trade this"). Even if want to trade this"). Cities with 0 tile culture are the trade value is positive, the AI rejects small cities in very poor surroundings.

Neither of these conditions apply to liberation.

are told to take any city "from our cold dead

When in financial trouble, AI civs refuse to accept cities where they have 0 tile culture ("we don't also rejected when they're too far away from every currently owned city.

None of the AI denial checks apply to liberation.

Rationale

Want to exclude major cities in order to limit the possible gains from tech-for-land deals. One could just assign very high trade values to large cities, but excluding those cities through a denial condition should be more convenient for players: don't need to bother making offers then.

could think of various heuristics for identifying important cities (e.g. the score computed in CvCity::getLiberationPlayer could be a starting point), but using trade value is the easiest to implement. That's also the approach taken by <u>UWAI</u> for war trades – trade denial based on trade value. Cities in disorder are are problem, but the trade vaue computation needs to deal with that in any case. Performance could be a problem, but I don't think it will be. A more likely issue is a flickering city trade alert when the value of a city is near the threshold. Let's hope that this will be rare (would be a bit tedious to smooth that over).

The special condition for cities on poor land (CvPlayerAI::AI isAwfulSite) was added prior to AdvCiv 0.97 in order to discourage players from founding cities in the worst possible spots and then gifting them to the AI to improve relations. I was going to remove it in favor of a trade value check, but now I think it's safer to apply both checks.

I've considered merely relaxing the trade value threshold when at war (instead of waiving it), but at least the UWAI code usually doesn't value peace highly enough (even when losing badly) to give up any major cities in peace deals. Saying "take it from our cold dead hands" could look bad when it's obvious to the human player that the respective city is about to fall.

The 0-culture conditions are obsolete because the game rules now prohibit such trades. Recognizing cities that are more trouble than they're worth is, again, something that the trade value computation can handle better than some ad-hoc heuristic.

Thd.

A downside of denial based on trade value is that no specific reason can be stated. But maybe the AI could still somehow respond with "your land is too far away" (DENIAL TOO FAR) in some situations.

The AI refuses to accept cities in trade when there are hostile land units nearby and nearby potential defenders don't clearly outnumber the potential attackers: "We are afraid of their military might." Doesn't apply when negotiating peace.

Nearby enemies (any units, not just land units) prevent liberation, but there is no such trade denial check.

Rationale

To eliminate loopholes that can make the Al look bad, Ideally, hostile transports should be counted as well and the condition should be checked in peace negotiations to make sure that the winning side isn't gaining a city that it will immediately lose to some other war party. That could be implemented, but isn't worth the effort I think.

cities, mear no trade is	players don't feel encouraged to keep an eye on the City Trades tab for AI war plans. y default, 0 trade value is assigned to liberated ties, meaning also that the AI will respond that to trade is possible when asked what it will give exchange for liberation. At peacetime, the game rules and UI prevent cities from being traded (except between two human players).		

When negotiating terms for peace, liberation has Liberation never affects a city's trade value. no impact on a city's trade value. Rationale Mainly because I don't want to render the liberation choices in the conquest and colony (Alt+F1) popups useless. If the Al pays for liberation, even if it doesn't pay much, it'll always be preferable to liberate cities through trade. Therefore, I'm interpreting liberation as the recipient having a rightful claim to the city and insisting on getting it for free (granting peace isn't really a payment). Admittedly not very realistic. In gameplay terms, the reward for liberating a city is the relations boost (see a few boxes below). It would be easy enough (by reverting a one-line change in CyplayerAI:: AI counterPropose marked with advc.ctr) to let the AI make a proposal that leaves the left side of the trade table empty when asked what they'd give for the liberation of a city, but stating that no trade is possible (as in BtS) seems less confusing to me. (Although a trade might actually be possible, namely, when the AI has a city that it can liberate in return.) CvCity::getLiberationPlayer may have to be simplified because, when deciding Tbd. whether to trade a city away, players may want to take into account whether the city will soon become eligible for liberation – meaning that the the recipient won't pay for it anymore. That's currently impossible to gauge. When considering to liberate a city in response to Human can request liberation, but the AI will a human help or tribute request, the AI decides decide based on the regular trade value of the based on a reduced trade value that only takes city. into account how valuable the city is to the AI civ. Rationale If humans are expected to liberate cities for free, there should be a real possibility of the AI doing the same thing. The AI will also liberate cities without human importuning; see below. When considering a trade in which each side Regardless of liberation, the AI can never trade liberates at least one city, a reduced trade value cities for other cities. is counted for all liberations. That trade value accounts only for the value that the city has to its current owner; although, if the current owner is human, then that value is capped at 50% of the value that the city has for the AI recipient. Rationale To facilitate reciprocal liberation, which is a win-win. The UI doesn't allow humans to propose city When a human player asks the AI to liberate a city and offers trade items in exchange or asks trades and the AI will sav that no such trade is the AI for a price, the AI computes the city's full possible. trade value, i.e. as if the liberation conditions didn't apply. Rationale Liberation shouldnt ever be a handicap for the liberation player. Unlike AI players, human players aren't going to "feel too entitled to pay" for a city, so they should be allowed to pay regardless of liberation. For non-liberation trades, the AI evaluation is K-Mod comment: "The way this function is broken down into two similar components: One currently used is that it actually represents how value expressing how much the current owner much the current owner values not giving the city want to keep the city and one value expressing to this player. For example, if this player currently how much the recipient wants to acquire the city. controls most of the city's culture, the value When evaluating a trade proposal, both values should be lower rather than higher, so that the are added up and, if the AI civ is the recipient, current owner is more likely to give up the city. capped at two times the value of acquiring the Ideally the value of receiving the city and the cost

city.		of giving the city away would be separate things; but that's currently not how trades are made."
Rationale	the other – so the trade value is esse which is mostly zero-sum – the trade	h, which mostly benefits one side without hurting ntially equal to the tech cost –, and for gold, value is two times the amount of gold –, but illero-sum, but can also involve cities that would be han to the current owner.
	The cap based on the recipient's valuable high price for a city that is more valuable.	ne is supposed to ensure that the AI doesn't pay a able to its current owner.

Conquered AI cities

liberation a	conditions as described above for free pply except that no trade denial performed.	
See also	Among the <u>rule changes</u> to city trades, the (unchanged) BtS special rules for liberation after conquest are described. Those rules also apply when the AI considers liberation upon conquest.	
Rationale	Easy enough to do; as a rule, human and AI should play by the same rules.	
The AI may offer a city for trade if it is much more valuable to the recipient or if the city isn't much more valuable to its current owner and the recipient has far more assets (population, land, tech, buildings) than the current owner. The AI then tries to find a city of the recipient that satisfies the same conditions – to propose a one-for-one city trade with additional trade items for the side that gets the less valuable city. Usually, there is no such city, and then the AI looks for arbitrary trade items (i.e. tech, gold) that the recipient can offer in return. AI city trade offers to human players include a discount.		
Rationale	See the rationales given at the <u>start</u> of the city trade documentation.	
	Al-to-human trades aren't crucial, but make the Al appear a bit more alive.	
See also	The discount is the usual incentive for humans to actually consider the AI offer. Through <u>026</u> , the AI may also offer more gold than it normally would.	
When two AI civs are negotiating a joint war, the civ that is already at war may offer a city (in principle several, but I doubt that will happen) in exchange for the declaration of war. Unlike in other city trades, the offered city doesn't have to be more valuable to the recipient than to the current owner, at least not when the war is going badly.		
Rationale	Not sure how frequently this will come about, but it could be pretty awesome when an AI civ that seemed already doomed brings in a powerful neighbor as a war ally by ceding a city.	
Tbd.	Such trades would work as a matter of course due to my changes to CvPlayerAI::AI_counterPropose — but that function isn't actually used for war trades; perhaps it should be (see comments in CvPlayerAI::AI_proposeWarTrade).

	Can move land units across arbitrary distances over water within a single turn by using a chain dispersed cargo units.		
123d	Reduce war success when trading	away a city while at war	
When a city is traded away, and the old owner is at war with any earlier owners of the traded city, the war success of the old owner against these earlier owners is reduced by 25. A player can conquer a city (+25 war success against the enemy), gift it to a war ally (no change to war success), wait for the enemy to conquer the city again (+25 war success against the player's ally), and repeat. The war enemy we then assume that the war against the player is going very badly. [A player can conquer a city (+25 war success against the enemy), gift it to a war ally (no change to war success), wait for the enemy to conquer the city again (+25 war success against the player's ally), and repeat. The war enemy we then assume that the war against the player is going very badly. [A player can conquer a city (+25 war success)			
Rationale	Not so easy to exploit, but occasion	ally leads to quick capitulation.	
	Reducing the war success against <i>all</i> earlier owners can be overkill, but this is difficulto avoid.		
Tbd.	The war success counted for a conquered (or traded) city should be based on the importance of the city. Currently, every city counts as WAR_SUCCESS_CITY_CAPTURING—which should remain the base value, to be multiplied by some modifier—except the capital, which already has a modifier of 1.5 (was 2 in BBAI; I've reduced it). The function that records war success is CVUnit::setXY.

See also	033 prevents Privateers from plundering vassal cities.	
123f	Fail gold only for great wonders and at most once per wonder	
Tbd.	Perhaps convert only 50% of the invested production into gold and the rest into city culture. That should be a separate change id though because it's a balance change rather than just closing a loophole. For now, fail gold remains a valid tactic, and this gives wonders with very weak abilities (e.g. Chichen Itza) at least <i>some</i> use.	
AdvCiv		BtS
wonder is immediately removed from the production queues of all other cities, generating		After a message about a rival finishing a wonder, another turn passes before the game removes the wonder from production queues and generates fail gold.
Exception: Members of the team that has completed the wonder never receive fail gold.		No such exception.
When a player has invested production into a wonder but removed that wonder from the production queue, no fail gold is generated.		Fail gold is generating regardless of whether the wonder is queued. This allows <u>crafty players</u> to cash in multiple times per wonder.
World projects are treated just like wonders. Units and national wonders never produce fail gold.		Units, national wonders, great wonders, world and team projects are all treated alike, meaning that fail gold can also be obtained from e.g. Missionaries (see this CFC thread).
Rationale	The Wealth process should be used for converting production into gold, and that's already a pretty efficient conversion. Award fail gold only when it has to be done, namely when a civ is beaten to a wonder by a rival. If there was no such compensation, wonders would become too unattractive and frustrating. (Civ 6 reportedly has that problem.)	
AdvCiv		K-Mod
Units never produce overflow gold.		K-Mod uses excess production on additional units of the same type. Overflow can still occur I think, but only on units with a national limit.
		As for buildings (no change): BtS 3.19 with the unofficial patch converts production into gold, but cancels out building-specific modifiers like Stone for Walls.
Rationale	A side-effect of disabling fail gold for units, and I don't think that overflow gold should be a worthwhile tactic.	
Config	MAXED_UNIT_GOLD_PERCENT in Glob	palDefines_advc.xml.
Tbd.	Once I remove the whip ability (hurry through population), it should be all but impossible to use the overflow rules for converting production into gold.	
123g	Need to choose research a.s.a.p. at	the start of a game
Once the player has founded a city, a choose-research popup appears. If the player ends the turn without addressing the popup or sets research back to "no technology" after dealing with the popup, the AI chooses a tech for the player and the popup appears again on the next turn. A choose-research popup appears one turn after founding the first city. If the player manages to avoid choosing a tech to research, then, during the first five turns, research is stored as overflown research; that research is spent once the player does select a tech and research modifiers are applied based on the selected tech. After five		

	ng the first city, the choose-research ars before the choose-production	turns, the AI chooses for the player. Not choosing a tech for five turns can yield a little bit of extra research due to known-tech modifiers; see the description here on CFC. The choose-production popup appears first.
Rationale	My guess is that the Civ 4 developers wanted to delay the choose-tech popup by one turn to make the first turn easier for beginners, and set the limit to five turns because the player might move the Settler around a bit before founding a city. For this mod, this wouldn't make sense, and is a needless (and exploitable) complication.	
	Choosing tech before production should actually be a bit easier for experienced players than vice versa.

124	Restrictions on trade	
AdvCiv		BtS
in order to e the first city	establish a trade route, the owner of needs to explore the second city and vers/coast leading there.	Plots owned by another civ don't need to be revealed. I.e. by revealing a path of road, river and coastal tiles up to any foreign tile connected to the foreign capital, trade routes are established with all foreign cities connected (along owned tiles) to the foreign capital, including unrevealed cities.
foreign city t	that is connected to the capital; the doesn't have to be revealed. I.e.	Resource trades require a connection to the foreign capital.
	utes with cities in occupation, and no with cities whose owners are in	
Rationale	side the other half, trade can be cond	If one side knows half of the way and the other ducted in the middle. Soren Johnson explained between Han China and Rome as example.
	rewards repeated exploration of rival	the other city has to be revealed because this territory, and the game tends to be more fun vities. Also makes Scouts more useful. Trade modeled as resource trade.
	The BtS rules are also inconsistent v secret; the trade routes listed on the	vith K-Mod's treatment of unrevealed cities as BtS city screen give the cities away.
	blockaded and plundered cities as w	for added plausibility. I've considered excluding ell, but such cities could still trade across land, i.e. d, in which case trade routes are already severed.
	BtS rule (trade with third parties only	ade unless there is an OB agreement? I think the blocked when at war) plays better and is arguably Hormuz remained open despite the 1995 sanc-
Tbd.	Would like to change the way that cit	ies are matched. The current algorithm creates

long-distance trade routes between large cities, but these cities aren't usually the borderland trade hubs that would realistically profit from trade passing through. Boils down to the guestion if trade routes should be represented from end to end or hop by For resource trades, only one side needs to be Trade connections are always symmetrical, so able to reach the other. this isn't an issue. Want a civ that establishes a trade connection to be able to trade resources right away Rationale (as in BtS), instead of having to wait for the other civ to e.g. also research Sailing. Trade along rivers doesn't require any tech: back Trade along *owned* rivers works from the to how it worked prior to BtS. beginning, along unowned rivers only with Sailing. Sailing help text just says "enables trade Trade along unowned coasts still requires on Rivers"/ "...Coasts". Sailing. Help text says "Enables trade on Coasts" outside own borders". Not sure why this change was made in BtS. The distinction between owned and Rationale unowned rivers is pedantic, and confuses players (people ask about this now and then on CFC). Rivers now work just like roads when it comes to trade. Tbd. Want rivers to speed up movement as in Alpha Centauri. Fishing could enable this. An AI civ is willing to sign Open Borders with OB based only on a personality-based attitude another civ only once it has revealed a land tile threshold. owned by that civ. or if AI attitude is one level above the normal OB threshold, i.e. at Pleased in most cases. Otherwise: "We would have nothing to gain." Exception (added in AdvCiv 0.99): If all revealed tiles are located on continents where the AI civ doesn't have any cities, then the tile will only cause the AI to open its borders if a trade connection exists between the AI capital and the tile (through Sailing or Astronomy). Relevant mostly for mod-mods: If the AI has a unit adjacent to a tile that the unit can't currently enter and will be able to enter through OB, then the AI is willing to sign OB based on the normal attitude threshold. (Even if the tile is not a land tile and doesn't have a trade connection. I don't think this can easily happen with the BtS/AdvCiv roster of units.) Will sign OB at attitude one level below the Al signs OB regardless of attitude when sharing normal OB threshold when sharing a war but. a war. again, only if there is a revealed owned tile. The AI initiates OB with another AI (or proposes 20 turns after becoming willing, at least 20 turns OB to a human) 10 turns (on average) after delay in between proposals (30 on average). becoming willing to agree to an OB proposal. The delay in between OB proposals is at least 40 turns (45 on average). Rationale Don't want the AI to sign OB when it clearly won't benefit from the trade – at least not

Once the AI is willing to sign OB with another AI, it shouldn't wait for another (up to)

at Cautious attitude.

	20 turns.	
Credits	Got the idea for signing OB more quito 5 turns.	ckly from Civ 4 Reimagined <u>1.3</u> . They even set it
See also	130i reduces the diplo bonus from OB that don't actually benefit the AI. This makes OB less with remote AI civs less of a matter of course and thus makes it more important to stop the AI from proposing OB over and over (through an increased contact delay). 130r: adjusts contact delays to the game speed setting.	
Tbd.	The condition for being able to immediately enter foreign borders with a unit is at best a kludge. Let's assume that some mod-mod has a Medieval Cog unit that can reach foreign lands across Ocean but (unlike Caravel) can't enter foreign borders without OB, and assume that Astronomy is still required for cross-ocean trade. Don't want the AI to be unwilling to sign OB when a Cog reaches another continent. The current AI code will only make the AI willing to sign OB when the Cog is right at the borders; as soon as it turns around, the offer will be off. I don't think it makes much sense to allow cross-ocean movement without allowing cross-ocean trade, so maybe I should just remove the kludge. It's also potentially expensive in terms of computing time.	
	es it a high priority to build at least explorer once it knows Sailing.	The AI prioritizes exploration only until meeting all civs.
AI consider	's Galley to be suitable for exploration.	Unit AI types for Galley are only Transport and Attack. Before Caravels, only Work Boat and Trireme have the Explore AI type. (Though CvPlayerAI::AI_unitValue may have considered Galley as an exploration unit regardless of the types listed in XML.)
Rationale	_	ne Al needs to explore coasts more reliably. 'k Boats get picked off by Barbarians at some
See also	905a increases the speed of Galleys	this makes them more suitable as explorers.
plots are af that is not h	pass through hostile plots if these fected by a naval blockade by a party nostile to the trading civ. In particular, civ itself could blockade the plots.	Trade can never pass through hostile plots and blockades can only prohibit trade.
The AI does	s not use blockades to enable trade.	
	th a friendly unit can be worked despite being sabled again. It's a bit more sensible but too bother.	Blockade prevents tiles from being worked despite the presence of units protecting the tile. Those units will have to engage the blockading unit to make the tile workable.
Rationale		vers important maritime trade connections es or with some third party. This should not ority.
	Would be too much work to get the A	I to use blockades this way.
	How do you operate, say, a winery in argue that wine remains available fro enemy has had an opportunity to pilla Would be nice to have the option of buildinging, but I worry that resources we causing (human) trades to be canceled Anyway, CvPlot::isTradeNetwork	plocking a resource for several turns without yould get disrupted too frequently for just one turn, ed and citizens to be reassigned. would be the place to implement such a change.
A structure	(route, fort or city) can only be part of	If the tile is owned by another civ, then not even

a civ's trade to the civ.	network, if that structure is revealed	the tile needs to be revealed in order to carry trade. Otherwise, it's sufficient if the tile is revealed, even if the tile is fogged and no structure existed the last time that it was visible. (Structures on unowned tiles are unusual though, so this isn't really a problem in BtS.)
Rationale	Consistent with the (AdvCiv) rule that only be conducted with revealed cities	t trade only works along revealed tiles and can es.
See also		lets the trade layer show trade connections on layer to give away structures hidden in the Fog of
	001i fixes other issues with routes in	the fog of war.
can be conr a route. This within the w	ole by a city on a different landmass nected to adjacent water tiles through a means, a resource on an island orkable radius of a (mainland) city uire a fort in order to be connected.	Whether a tile is workable doesn't matter for trade connections. A connection between land and water requires a river, city or fort. This means, an offshore resource that is worked by a mainland city can (unless there is a river on the island) either be worked for its maximal yield (no fort) or be connected to the trade network (fort) – but not both.
Rationale	awkward choice between connecting yields. It doesn't remove the confusion	g. this thread on CFC. My change removes the the resource and exploiting its improvement on in situations when a tile is owned by the player would connect to coast – see the notes below tiv 0.95 to 0.96 about that.
	wouldn't need to make this a special tiles to be connected to water through required for a long-distance coastal taingle route sufficed for connecting a	t added until v0.96. At first (v0.95), I thought I rule for islands. However, allowing all workable h a route meant that no coastal city/ fort was rade connection in the early game and that a my coastal resource. In v0.96, there was the cities on the resource's landmass. That seems ow.
See also	040: The AI transports Workers to wo	orkable tiles on other landmasses.
	Other mods have addressed this prodon't remember how exactly.	blem as well, Realism Invictus at least, though I
	passing through a fort doesn't ute on the fort.	Trade can pass through land tiles only through a route, river or city (has a route built in).
Rationale	Looks like an oversight that happene by the BtS expansion.	d when forts were given their additional abilities
Credits	Bug report (toward the end of the pos	st) with screenshot
the same m (Civics scre	n allows trade routes with vassals of aster (and with the master). Help text en, new-civic popup, Civilopedia) ercantilism blocks only trade routes	Only with the master. (And the master can have trade routes with its vassals – no change.) Help text says that trade routes with all foreign civs are blocked. I don't think the exception for vassal/ master (presumably introduced by Warlords) is mentioned anywhere.
Rationale	This minor rule change makes the im	proved help text easier to phrase.
	i.	

125	Culture from trade routes disabled	
AdvCiv		K-Mod
Trade routes o	s generate only raw commerce. nly generate culture if the city tile already- ure (more than 0 points) of the trade partner. sable it entirely instead.)	Trade routes generate foreign tile culture in addition to raw commerce.
	The only real upside of trade culture is flavor, and I don't think this justifies the added complexity. The confusing part is that trade culture could also be added to city culture (but it isn't). Tile culture from faraway trade partners may be a disadvantage in local border disputes; difficult to say.	
Unimportant culture in plot help text is another problem. Very sm shown, but this means plot culture sums up to just, say, 97% so confusing. (99% is OK – everyone's used to that.)		ums up to just, say, 97% sometimes, which is
	Another issue: The Nationality bar or four different civs, and this can't be c	n the city screen can show only culture of up to changed within the SDK.

126	Changes to the later-era start option	
See also	138 changes the religion assignment when starting in a later era 307 makes Machine Gun ineligible as a free starting unit (because it can't stop Barbarians from pillaging). 314 allows tribal villages when starting in the Medieval era.	
AdvCiv		BtS
(except Fut grants free	free tech for each era after Ancient ture) to each difficulty setting that technology to the AI. These free only granted when starting in the era.	When starting in a later era, every civ receives at least all Ancient techs. Neither human nor Al receive free techs beyond those.
	ne human player receives additional on Chieftain and Settler.	
the new fre Mathematic	to Chieftain and Monarch to Immortal, se techs are cs, Machinery, Printing Press, er and Plastics.	
receive Ironworking	to those, Al Deity and human Settler g (only Al), Alphabet (only human), Gunpowder, Steel and Refrigeration.	
AI, more ur later era: a beyond And	y settings that grant free units to the nits are granted when starting in a nother defensive unit for each era cient, another Worker for every 2 eras er Scout or Explorer for every 3 eras.	Every civ receives additional free units in later eras. Al civs also receive free units granted by the difficulty setting. All free units are chosen based on the start era, e.g. Riflemen as defensive units when starting in the Industrial era.
Rationale	Games starting in later eras tend to be much easier to win than normal games, surely in no small part, because the AI doesn't get a proper head start. No tech advantage, and the extra free units are relatively few compared with the total number of free units, which may even allow a human player to conquer a high-level AI right away.	
Config	The free tech is configured in Civ4HandicapInfo.xml.	
See also	301 prevents Barbarians from using Copper and Horse until these resources are connected by some city. This used to be a problem with Classical starts – Barbarians would have Axemen and Horse Archers right away, whereas the (AI) civs needed some 50 turns to establish access to Copper or Horse.	
Tbd.	The free techs aren't carefully chose techs; can reconsider the freebies at	n. At some point, I want to change the era of some ter that.
	difficult to win; I've never even finishe	alance issues that make them too easy or too ed a test game starting in a later era. Would be Medieval starts playable; these aren't <i>that</i> different ferent enough to be refreshing.

later. For example, starting in the Modern era		thresholds.
	screen shows how much culture is victory.	There was an unused tag iCulture in Civ4EraInfos.xml that may have been intended as a multiplier for culture level thresholds. Another unused iCulture tag, in Civ4GameSpeedInfos.xml, remains unused (but that one is arguably superseded by Civ4CultureLevelInfos.xml). The victory screen only says that "Legendary" culture is needed.
Config	Civ4EraInfos.xml; I'm using the iCulture tag.	
Rationale	To make Culture victory viable regardless of the start era. To this end, it would be enough to change the "Legendary" threshold, but might as well change the others too for a smooth progression. Don't change the first threshold ("Fledgling") unnecessarily though; players know that one by heart.	
	Space victory arguably comes too early when starting in the Modern or Future era. This can't really be fixed; players arguably should disable Space victory. Looking at i this way, lowering the threshold for Culture victory may mean that players will also want to disable Culture victory; inconvenient. That said, I don't want to base the cultulevel adjustment on the assumption that Space victory will be disabled.	
Tbd.	I've no idea if halving the Legendary threshold is enough to make a Modern-start Culture victory viable. I haven't tested (Al Auto Play) any of the values so far.	
See also	251 adjusts the culture level thresholds to the game difficulty level.	

127	Changes to Al Auto Play	
Tbd.	It would be nice if Al Auto Play could be interrupted more reliably. No clue how to go about that,	
	"Lock Modified Assets" seems to keep Al Auto Play disabled even after returning to the opening menu and starting a new game.	
See also	<u>devolution</u> has added benchmarking functionality to Al Auto Play. The stop-autoplay button added to the failed-assertion popup (<u>006l</u>) is also based on his work.	
	Some of the Debug mode tweaks (007) are also potentially helpful for all-Al games.

The AI attitude	(Not sure if this still applies to the latest version of AdvCiv. Generally, I think there is no difference anymore between a single long AI Auto Play run and multiple short ones.)		
	044 creates autosaves also at the start of the active player's turn.		
was created at	The AI attitude cache is updated when AI Auto Play starts and ends and when an autosave that was created during AI Auto Play is loaded.		
	Some of the "first impression" relations modifiers don't apply to humans (i.e. they do and should apply during AI Auto Play).		
Disable the Ct	That combination causes 1 turn of Al Auto Play, billed as "auto moves"/ "moving your units".		
th m in ta di th	One turn of AI Auto Play is not the same as letting the AI move the human units – see the notes above about handicaps and the AI Auto Play lasting through the AI turns. It might still be kind of handy to have a shortcut for 1 turn of AI Auto Play, but it shouldn't involve the M key. Ctrl+Shift+1 collides with unit grouping shortcuts, Ctrl+Shift+F1 is taken by the GameFont display Anyway, considering that 1 turn is the default duration for Ctrl+Shift+X (a K-Mod change? I think it was 10 turns originally), I don't think a separate shortcut is needed, and it seems safer to always require another click for confirmation before starting AI Auto Play for any duration.		
fu	Also want to avoid confusion with the similar key combination for the savemap function. Accidentally running 1 turn of Al Auto Play instead of saving the map would be bad.		
AdvCiv	BtS/ K-Mod		

Renamed CvDLLInterfaceIFaceBase:: the wrapper for that interface to "addMessage". (Some of the changes described above and

Apparently there is a function CvInterface:: addMessage to "addMessageExternal". Renamed addMessage in the EXE, which is responsible for displaying on-screen messages (immediately through the bForce parameter, otherwise, the below are implemented in that wrapper function.) message gets stored at a CyPlayer object). That function is exposed to the DLL through a class CvDLLInterfaceIFaceBase, and gets called in numerous places. The call locations don't check if the recipient of the message is human, which is wasteful and results in a minor memory leak. K-Mod fixes that through a wrapper function CvDLLInterfaceIFaceBase::addHumanMessage that discards non-human messages, and changes all call locations from addMessage to addHumanMessage.

Rationale

Karadoc may not have realized that the it's possible to rename CvInterface:: addMessage despite it being a virtual function. Be that as it may, having a public function called "addMessage" that programmers aren't supposed to use isn't good.

Discarding the messages to AI players does not avoid the overhead of composing the message string; but that's not a concern because the number of on-screen messages needs to be kept small in any case for usability reasons.

Spectator mode

AdvCiv

AI Auto Play mod

When both in Al Auto Play and Debug mode, the Messages are displayed as if the player was in human player receives messages about the following major events regardless of whether the the player's civ. civs and cities mentioned in the messages are known to the player's civ: war/peace, Defensive Pact or Permanent Alliance signed, vassal agreement started/ended, city conquered/razed, capital relocated (though not a major event; cf. 106), city culture-flipped, city or colony liberated. wonder completed, Golden Age started/ended, religion founded, state religion changed, resolution of the Apostolic Palace or UN passed, Legendary culture reached, nuke launched/intercepted, meltdown.

control, i.e. based on the information available to

can be located on the map once Auto Play ends location info were also removed. by clicking on them in the Event Log.

I think the original Auto Play mod delivered messages as if the human player was in control, including indicator bubbles on the map that weren't cleared until Auto Play ended. No The messages are shown in the usual colors and indicator bubbles in K-Mod (good), but colors and

Rationale

Civics changes (except Free Religion) and random events aren't reported because they occur too frequently.

It would be nice if messages did not refer to the player's civ as "you" (e.g. "You declared war on Alexander!"), but it's too much work to change this.

Sadly, one can't use the Event Log to jump to locations that aren't revealed to the active player. The EXE checks is Revealed with bDebug=false before moving the camera, without calling any DLL code beforehand. (CvDLLWidgetData:: doGotoTurnEvent isn't called either.)

See also	allow players to keep cheats ("chipo accident.	r plans when in Spectator mode. e debug/ cheat key combinations. This should tle") permanently enabled without using them by Itdowns for players other than the city owner.	
Tbd.	Also show messages about diplo resolutions that don't pass? Known issue: CvRandomEventInterface.py calls CvInterface::addMessage directly, which means that the code in CvDLLInterfaceIFaceBase::addMessage for suppressing info messages during Auto Play has no effect on messages generated by random events. Would have to expose the DLL's addMessage function to Python to fix this, but that's a bit laborious because of all the non-primitive call parameters.		
ENABLE_AU GlobalDef	Can use Al Auto Play in multiplayer by setting ENABLE_AUTOPLAY_MULTIPLAYER to 1 in GlobalDefines_devel.xml. All players become automated and de-automated at once. Multiplayer is supposed to be supported in the final version (2.0, which is, as far as I can tell, the version included in K-Mod): "AlAutoPlay is now multiplayer compatible []: it will apply to all players, not just the one who activates it." (source)		
		This final addition probably wasn't tested much; due to what looks like a bug, only one player gets automated at a time, and only one can be returned to human control.	
in multiplayer when a singleplayer game was only available in cheat mode." However, che		"Autoplay and change player functionality is now only available in cheat mode." However, cheat mode ("chipotle") isn't recognized in multiplayer	
See also	135c allows Debug mode and World	Builder in multiplayer.	
Tbd.	Known issues: When AI Auto Play ends in a game with simultaneous turns, the game sometimes goes OOS. Perhaps not difficult to fix. (But not that much of a problem because AI Auto Play with simultaneous turns isn't really useful for OOS debugging anyway – because the RNG sequence isn't reproducible.) Interrupting AI Auto Play through Ctrl+Shift+X stops AI Auto Play only on one machine.		
	Modified Assets" option because Al Noble. Start and end of Auto Play are recorded in replays.			
See also	Relevant mostly for R&F		
	re not updated during Auto Play and essages are displayed right after Auto	Al civs don't have attached Civ4lerts, but when a human civ comes under Al control during Auto Play, its Civ4lerts keep getting updated. When Auto Play ends, alerts are displayed based on the differences between the current game state and that on the last turn under Al control.	

Rationale	The updates during Auto Play are a waste of CPU time. And the game state after Auto Play ends can be completely different from the game state before Auto Play started; alerts shouldn't try to communicate that difference.		
See also	106c prevents alerts from being shown right after loading a savegame.		
Tbd.	I've added an is-AutoPlay check to every onEvent function in the two Civ4lert scripts. The cleaner (and faster) approach would be to unsubscribe the Civ4lert objects from being notified of game events when Auto Play starts and to re-register them when Auto Play ends. (It's an Observer design pattern.) My Python skills aren't quite up to this task.		
	(The alerts added by $\underline{210}$ are disabled during Auto Play in a clean manner through the AdvCiv4lerts class.)		
Play, the (no the next hig Auto Play co procedure fa	When the active player is defeated during AI Auto When the <code>checkPlayer</code> method recognizes that Play, the (non-human, non-Barbarian) player with the active player has been defeated, it creates a settler unit for that player at coordinates (0,0) in order to prevent the game from ending. A popup for selecting a different player is launched and gets displayed at the start of the (defeated) active player's turn. Not sure if that had been working correctly in K-Mod. If it fails, the active may end of with a Lion unit; I guess that happens through BtS code.		
Rationale	I think AI Auto Play is mostly used for testing and for watching all-AI games. In those cases, it doesn't really matter which player is the active (human) player, but interrupting AI Auto Play can be annoying when it runs unobserved. It's also difficult to ensure that the original procedure works smoothly.		
See also	A bugfix in CvPlayer::acquireCity (listed under <u>001</u>) causes players to be defeated as soon as they lose their last city — rather than delaying defeat until the start of the next game turn. This makes it more difficult to get checkPlayer to work correctly and without failed assertions.		
or Always W	When AI Auto Play is used in One-City Challenge The special rules only apply to players so long as or Always War games, those rules continue to apply to the automated human player.		
Rationale	Should help with testing those options through Al Auto Play.		
127b	Store location info (iFlashX, iFlashY) for most announcements		

When the player clicks on an announcement in the Event Log, the camera will normally focus on in a particular tile don't get associated with any a tile that has something to do with the respective tile on the map. Clicking on such an event:

Anarchy, Golden Age begun/ ended, project completed, civic/ religion change, circumnavigation: Jump to the capital of the affected civ.

DoW, war trade alert: Jump to the capital of the civ that started the war (unless it's the active player) or has become willing to start a war.

Peace made, PA, DP, vassal agreement signed/ broken: Jump to the capital of the civ that has initiated the treaty/ cancelation. (One might as well jump to the other capital; this is pretty arbitrary.)

Colony liberated: Jump to the location of the new capital.

Diplo vote: Jump to the location of the vote source (AP or UN); when a resolution passes, also show an indicator bubble on the map.

Announcements about events that don't happen announcement in the Event Log has no effect.

Apart from the click-to-jump behavior, announcements with an associated tile will highlight that tile with a flashing dot on the minimap (no change in AdvCiv).

Rationale	No harm in allowing these camera jumps via the Event Log. (The flashing dot doesn't amount to a distraction.) Mostly helpful for following Auto Play games, in order to jump back and forth on the map as wars are declared, ended etc.
	Indicator bubble for passed resolutions: "This is the city you need to conquer in order to stop such resolutions in the future."

127c	Changes to the ChangePlayer component	
Credits	The ChangePlayer mod is originally by jdog5000. I'm not aware of a standalone version. Looks like karadoc merged it into K-Mod; not sure from where exactly – perhaps from the Revolution mod.	
AdvCiv	1	K-Mod
the "chipotle" cheat code has been entered. player's civ or leader) and Ctrl+Shift+L (take		The shortcuts Ctrl+Shift+P (change the active player's civ or leader) and Ctrl+Shift+L (take control of another player) are always enabled.
Rationale	No cheat code should mean no debug/ cheat/ god mode tools.	
Tbd.	Would be better to let a BUG config file (see e.g. BUG Core.xml) or Civ4ControlInfos.xml handle the shortcuts.	
Disable the "update graphics" shortcut (Ctrl+Shift+U).		Not sure what graphics are updated exactly. I don't see any difference. Also, the key combination doesn't work when cheats are enabled because the unit debug menu blocks all combinations that involve Ctrl+U.

Rationale	Since ChangePlayer now requires the cheat code for everything, a different shortcut would have to be used. Ctrl+Shift+G is available. However, it seems that the automatic graphics updates after changing a civ or leader are sufficient. When there is no visible effect (except for a harmless failed assertion from change 210), the shortcut will only cause confusion.	
flag for every graphics. (Prior to v0.97, parameter to co	y plot in order to update the flag I had instead added a bGraphicsOnly vPlayer::setCurrentEra that caused the	After a civ change, flag graphics are updated by temporarily changing the active player's era. During the era change, Al Auto Play is enabled in order to suppress the new-era popup.

No option to change a player's team.		The Ctrl+Shift+P popup allows teams to be reassigned. However, the reassignment is ignored by the code that processes the popup and therefore has no effect.
Rationale	I'm not interested in that feature, so	m not going to fix it.
•	Al attitude cache for both civs after man control.	No update of the AI attitude cache.
Rationale	Some of the first-impression modifiers don't apply to human players, so the cache needs to be updated.	
See also	127 updates the AI attitude cache at the start and end of AI Auto Play.	
Merged parts of the CvGame::nextActivePlayer function (Alt+Z) into BBAI's CvGame::changeHumanPlayer function (Ctrl+Shift+L) because their functionality overlapped. This also seems to have fixed an issue with the diplo screen refusing to put certain trade items on the table when trading with a previously human-controlled AI civ. Apparently, the diplo screen (in the EXE) checks the net IDs of the trade parties, and the BBAI code hadn't updated those.		
And, in single-player, the DLL no longer relies on the EXE for providing the correct net IDs when loading a savegame from within a running game. It seems that the net IDs stored by the DLL aren't reliable when different player IDs are active in the running game and in the savegame. This could explain why, by my recollection, player cycling through Alt+Z had also been causing the diplo screen issue sometimes (not just Ctrl+Shift+L).		
Tbd.		for the issue with loaded savegames would to be Al Auto Play. (I don't know if the problem had only uring Al Auto Play.)
	There appears to be a rare – perhaps unrelated – issue that makes it impossible to add either gold or gold per turn to the trade table. I've only encountered this once in a R&F game, but this Realism Invictus bug report seems to describe the same problem. While the net ID issue had, technically (at times also visually), allowed trade items to be added but then immediately took them off the table again, the second issue prevents gold from being added in the first place; in the DLL, nothing seems to happen at all once the amount of gold has been entered, in particular no call to CvPlayer::canTradeItem Of updateTradeList.	
See also	CFC post about the player switching mods.	and gold trading issues also occurring in RFC

When checking if human units are in danger, the pathfinder is used for greater accuracy. This mostly (only?) applies to Workers getting is a threat, the air distance is compared with the movement points. If the unit is standing on a roor railroad, its movement points are treated as greater. Terrain and whether the route connect to the target isn't checked, so false positives caleasily occur.		
During the first two eras, the AI also uses the pathfinder but only when the potential threat is a human unit. Will not notice possible attacks by units with terrain movement bonuses (e.g. Woodsman promotion).		
human unit.		promotion).

Rationale	See the link above. I'd like to use the pathfinder always, but, at longer distances, this could give away information about fogged or unrevealed tiles along the way, and the plot danger functions are called very frequently by Al code. In profiler runs, using the pathfinder for the Al (when the air distance is 3 or less) added something like 5% to the total runtime, which is clearly not worth it. The pinpoint change to address early attacks by human Woodsman units on Al Workers isn't going to affect performance.		
Tbd.	Perhaps increase the 3-tile limit to 4.		
information	The tactical AI for air missions uses perfect nformation only sometimes (randomly) when checking for enemy air interceptors. Always ignores the fog of war when checking for enemy interceptors.		
Rationale	At least for the paradrop mission, playing fully by the rules would seem too easy for human players to take advantage of. The AI could also look bad with Airships against a sparse human Fighter force. Cheating always, on the other hand, can be noticed. (Though I think few players if any have ever noticed. So I wouldn't really mind simply reverting this change if it turns out to hurt the AI significantly.)

of eligible tile placed abun- maps with lo resources ov	Place fewer copies of resources that have a lot of eligible tiles, and thus would normally be olaced abundantly. E.g. a bit less seafood on maps with lots of coastline, and sparser resources overall on Huge maps (but still farmore in total than on Large maps). The number of copies of a given resource is proportional to the number of tiles where the proportional to the number of a given resource is proportional to the number of a given resource is proportional to the number of tiles where the proportional to the number of a given resource is proportional to the number of tiles where the proportional to the number	
Rationale	Make unusual maps a little less unusual and more playable.	
Config	SUBLINEAR_BONUS_QUANTITIES in GlobalDefines_advc	
When placing (strategic) resources based on the map's player count, the number of resources to be placed is increased a little bit on maps with ewer than 8 players and decreased a bit on maps with more than 8 players. E.g. on a map with 16 players, the number of resources placed is the same that BtS places for 14 players.		
Rationale	On overcrowded maps, strategic resources can become conspicuously commonplace. Should be OK to place fewer copies when there are more players from whom to capture or snatch away resources.	
Tbd.	There isn't a strong reason for applying this change to large maps that aren't overcrowded. So perhaps it shouldn't apply to such maps.	

When placing a cluster of resources, the probability of placing an additional resource decreases exponentially with each resource already placed. The potential target plots are processed in a randomized order.

The targets are processed in clockwise order. and each one gets the same probability (25 or 50%, depending on the resource) until the upper limit is reached.

Rationale

Make large clusters less likely, especially on maps that have large areas of uniform terrain because such areas are especially likely to receive large resource clusters (e.g. Ivory in a large area of Plains).

The map generator avoids placing more than two resources of a kind adjacent to each other, on a 3x3 square.

It seems that a cluster can theoretically fill an entire 3x3 square. The number of copies to be in particular when placing a cluster of resources placed on the map in total puts a cap on this, but not on large maps.

Added a separate resource class for Gold, Silver Nothing to ensure that multiple clusters are and Gems. Clusters of these resources are now placed apart. kept far enough apart to prevent a single city from working all resources in both clusters. (Actually, Silver can't be placed in clusters anymore at all; see a few boxes below.)

Clusters of Gold, Gems and Ivory get spread out All clusters get spread across a 3x3 square. over 21 tiles (a "city cross"); individual Gold and Gems resources can't occur adjacent to each other within that range. Decreased the placement probability so that the number of resources in a cluster is, on average, smaller than in BtS (despite the increased diameter).

Still not rare to get more than 1 Gold or Gems within a city's radius, but 3 or more are guite rare powerful (starting) city sites. 5 such resources now, even on large maps.

The map generator can produce large clusters of precious metals/stones that make for very aren't that uncommon on large maps.

Rationale

Starting plots with more than one Gems or Gold tend to be overpowered. Could also be fixed when assigning starting plots or during normalization; however, the cluster placement algorithm also scaled badly with map size, so it needed work anyway.

Ivory: Large clusters aren't really useful and look a bit strange; let's give the jumbos some more room. (So long as War Elephants don't become too widely available this way ... If that's a problem, then it could help to restrict Ivory placement during the normalization of starting sites.)

See also

108 never removes bad terrain or features from precious resources when normalizing starting locations. Also weakens starting locations overall, and increases the value counted for commerce a bit when evaluating starting locations.

Fur, Gold, Silver and Gems can appear on multiple landmasses.

Fur, Gold, Silver, Gems, Banana, Corn, Cow, Deer, Pig, Rice, Sheep, Wheat, Dye, Incense, Ivory, Silk, Spices, Sugar and Wine (19 out of 35 resources) get placed only on one continent.

Rationale

The single-continent restriction doesn't match the distribution of those resources on Earth at all. As for encouraging trade, Fur isn't really a concern because it often appears in groups. The precious minerals at least sometimes appear in groups and their terrain restriction also tend to cluster them a bit.

Tbd.	For Spice, Wine, Incense and Dye, the single-continent restriction is also dubious, and they also appear mostly in clusters. (The restriction is defensible though by arguing that e.g. Spice represents only black pepper and other spices of southern Asia; that Wine refers only to Old World vines; Incense only to frankincense; and Dye only to indigo.) Perhaps just remove the restriction for Wine, Incense and Dye; that would still leave more than 1/3 of the resources overall unique to one continent.	
Config	bArea in Civ4BonusInfos.xml	
Spices can a	appear at most at a latitude of 45°.	60°
Rationale	I guess Firaxis were thinking of mustard, caraway and maybe horseradish. These really are the only spicy spices that grow in a temperate climate. And mustard is not even native there. 45° (maybe rather 40) is justifiable for cumin. But cumin wasn't anywhere near as important as a trade commodity as the spices imported from and via India. For realism, a limit of 25° or 20° would be best I think. However, I don't want to deprive the higher latitudes of resources too much. I did want to make a least a moderate change for the sake of the True Starts game option.	
See also	advc.tsl avoids placing temperate an	d subtropical civs near Spice resources.
Tbd.	See below under FIsh – such a chan	ge could allow Spice to be restricted a bit more.
Relaxed the	latitude restriction for Crab.	Crab can only occur at latitude above 40°.
Decreased t	he overall frequency of Fish a little.	Fish tends to be the most common resouce.
Rationale	Too few Crabs; was quite a bit more rare than Clam. A latitude restriction for Crab is realistic at all; they're caught all over the world. That said, keeping the range of Crab and Clam at least somewhat apart is arguably good for gameplay.	
	Decreased Fish frequency to compensate for the Crab change. As an Ocean resource (potentially), it also has too much impact on city placement.	
Tbd.	Would like to restrict the latitude range of Fish. That would be realistic insofar that, historically, mainly fish from the North Atlantic was used as a (long.distance) trade commodity. On the other hand, fish was a major food source for the Norte Chico civilization near the equator Perhaps, ideally, Fish would be <i>more common</i> in higher latitudes.	
		No lower bound for Horse and Cow. Pig had required at least 10°, Sheep 30°.
Rationale	farm animals in equatorial Brazil, Ma some regions there with plenty of wa	ly affects Africa, but there also aren't a lot of large laysia and Indonesia (though there probably are ter buffalo or pigs). 9 or 10° makes a difference ractal). 9° only excludes livestock from 4 map
	Sheep are commonly kept in souther strict.	n Iran and northern India, so 30° is a bit too
Tbd.	Equatorial "jungle" (rainforest) is still	far more productive than it should be.
	Horses can be placed at a latitude of 9° (see above) to 68°.	
Rationale		ne world's "nothernmost Equine veterinarian". I Iso aren't kept farther north than that.
	The restriction won't matter much as there isn't much Tundra beyond 68° latitude.	

Reduced the little bit.	e unique range of Horse and Oil a	There have to be at least 6 tiles in between two Horse resources and 7 in between two Oil resources.
Rationale	Understandable for gameplay reasons, but quite unrealistic. Now a little less so. The steppe belts of the Earth are vast grazing grounds for horses.	
Tbd.	I have some plans for making (native actually form clusters.	e) access to Oil less crucial. Eventually, Oil should
Map scripts try to place at least 0.78 Silver resources per player, and only 0.78 Gold resources.		1 Gold per player and 0.67 Silver.
Plains, river on forested (pear on Ice, Desert and unforested possible, whereas Silver can appear Grassland and on Tundra regardless It not along rivers.	Gold only on Desert and unforested Plains, and Silver on Ice and unforested Tundra. Both can appear next to rivers.
Silver can't b	e placed in a cluster.	
	tech value so that Bronze Working is hen starting next to a Silver Forest.	
Rationale	Gold was arguably more rare throughout most of history. More importantly, Gold is very powerful, and fewer occurrences should improve the game balance a bit. That said, Grassland Silver Hill is nearly as powerful as Desert or Ice Gold Hill. Therefore haven't made Silver more abundant than Gold; don't want to make it too much more important than in BtS.	
	Allow Silver to appear on forested Grassland to make it more easily accessible. Also, restricting Silver to extreme latitudes is, as far as I can tell, completely unrealistic; should really appear on just the same tiles as Gold. The intention was probably to make Gold and Silver more distinct. I'm trying to keep them distinct but make the distinction more historically informed. The most famous gold rushes happened in the Australian desert, Alaska and maybe "on the banks of Sacramento," as a shanty says.	
	Silver can't be or isn't commonly panned from rivers. The densely forested Central European mountain ranges have seen silver rushes in the Early Modern era (Berggeschrey). Grassland Forest also fits with Colorado and British Columbia. Indeed, silver mining might be more reliant on charcoal for refinement than gold mining.	
	Ancient Egyptian gold deposits and	silver in Attica and Baetica also fit.
	Silver clusters disabled because, on can easily occur near starting sites.	Grassland Hills, they can be pretty powerful and
	Gems can only appear on Jungle Gr	assland; thus distinct from Silver.
Credits	Inspired by Civ 4 Reimagined <u>1.2</u> , which also makes Silver more common than Gold.	
See also	The <u>BASE mod</u> also allows (my tranareas" – though I didn't get the idea	slation) "Gold in cold areas and Silver in warm from there.
		o when Mines make random discoveries. As ature requirements are not enforced.

types of reso which type to Similarly, du through the i	ime placement priority is set for two burces in XML, decide randomly o place on the map first. ring starting site normalization, go resource types in a random order g for a suitable food or extra	BtS relies on the order of the XML file (mostly alphabetic) in these cases. That results in a bias for certain resources near starting locations and causes Sugar (one of the last resources in the file) never to be placed on extremely crowded maps.
See also	Prompted by this CFC thread about certain resources never appearing on very crowded maps.	
Rationale	Having a great variety of starting locations (or rather – among balanced and historically plausible starting locations) is pretty important, so arbitrary biases should really be avoided.	
	With my changes, some resource ty maps, but it won't always be the san	pe may still be omitted on extremely crowded ne type.
See also	advc.enum: The FOR_EACH_ENUM_RAND macro makes it pretty painless to randomize the order in which alternatives are considered. During normalization, 108 also avoids placing resource types that already exist around the city.	
in which BtS considers tiles are broken randomly. especially hills and peaks, but e.g. among a		and peak tiles, those with the lowest map index
Rationale	Should increase the variety among o	generated maps a little.
When deciding where to place a river segment, all four tiles (or rather: their terrain types) at whose corner the segment will arrive are given equal weight.		Rivers tend to flow away from peaks and hills and toward flat land and water. The terrain of the tile at whose southeastern corner a segment will arrive is given much higher weight than the surrounding tiles. This gives one riverbank more weight than the other and sometimes gives the terrain orthogonally adjacent to the river segment more weight and, at other times, the terrain diagonally ahead of the segment.
Rationale	river should be treated equally, and t	the Firaxis developer; obviously both sides of a the terrain next to and ahead of the river should take a difference whether the segment goes
Increased th	e attraction of rivers to water tiles a b	oit.
Rationale	Should result in somewhat shorter ri frequently for my taste.	vers overall. BtS generates very long rivers too
Added a limit for the number of resources of one type to be placed on a landmass: Can only place up to 2 + ((number of tiles on the landmass) / 25).		restriction, as many resources are placed as there are valid locations. Resources that can't be placed on the target landmass aren't placed at all.
Excess resources are placed elsewhere; that can include small islands.		The target landmass is chosen randomly with a bias for large landmasses. K-Mod has added a clause that rules out small islands entirely.

Rationale	Mainly so that single-landmass reso Spice Islands hadn't been possible v	urces can also appear on small islands. E.g. the vith the BtS/K-Mod rule.
only suppose into account	ing a landmass for a resource that is ed to appear on one landmass, take how many tiles on each landmass or receiving the resource.	Only based on total landmass size and the number of single-landmass resource types have already been assigned to each landmass.
Rationale	Especially Banana was sometimes p Jungle. Can still happen though.	placed quite densely on landmasses with very little
and Fish resources placed. on player count (fully predictable), in number of tiles eligible for receiving (somewhat unpredictable). Further		The number of resources placed is based in part on player count (fully predictable), in part on the number of tiles eligible for receiving the resource (somewhat unpredictable). Further variance is explicitly added through the RandApp (random appearance) XML elements.
Rationale		n especially high number can look bad. I think is isn't very interesting either. Similarly, neither icularly well.
the DLL: The but see net the top edge value (normal latitude value this. Conseq	alculation of per-tile latitude values in a maximal latitude value (normally 90 xt blue box) is assumed to refer to of the map and the minimal latitude ally -90) to the bottom edge. The es of tiles are interpolated based on uently, e.g. the latitude value of the will normally be slightly less than 90.	
Rationale	1 -	whole row of tiles exists at 90° or -90° latitude. The remaining the re
respectively. don't set thei scripts that g	ult latitude limits to 87 and -87 These apply to all map scripts that ir own latitude limits, i.e. to all(?) generate some sort of alternative ticular Fractal.	90 and -90
Rationale	Combined with the above, this sets e.g. the topmost row of tiles to 85 degrees on Standard-size maps. So this chops off a little bit more of the extremely distorted latitudes.	
	See also 137 changes the aspect ratio of all maps that don't set custom dimensions. Since the aspect ratio is still greater than 1:1, one could assume that latitudes get vertically compressed based on their distance from the equator, akin to the Miller cylindrical map projection (but I wouldn't use such a complex formula), i.e. one could assign smaller latitude bands to the polar regions than to the tropics and temperate zones. But perhaps one should then also place a bit more land in the polar regions (most map scripts have a explicit or implicit bias against that), so maybe it's best not to wade into that,	
Increased the grain adjustment for the placement I think how this works is that the Fractal algorithm of hills, peaks and vegetation on Huge maps. normally creates larger clumps of elevation, terrain(?) and features on larger maps. The grain adjustment counters that to some extent.		
Config	Civ4WorldInfos.xml	

Rationale	With the RtS adjustment. Huge more can still have his lumps of hills that are casily fill	
канопаге	With the BtS adjustment, Huge maps can still have big lumps of hills that can easily fill the entire radius of a city. I don't think that plays well. It's nice if Huge maps look a little bit coarser than smaller maps, but that's too pronounced in BtS. I think the surface of the real Earth is a lot more fine-grained still than Huge maps in AdvCiv, so realism isn't a problem.	
129b	No flood plains on river bends	
orthogonall are only dia	Also on river bends and tiles diagonally adjacent to a river. Desert tiles that gonally adjacent to a river still get 1 from the river but no Flood Plains	
	Oases can't be adjacent to rivers. Oases can't be adjacent to rivers.	
	e affects all standard map scripts and tMongoose.	
Rationale	Cities with too many Flood Plains don't play well, and, in reality, not every flat desert soil becomes fertile when irrigated. This could be addressed by reducing the appearance probability of the Flood Plains feature from 100% to, say, 67%. I like the river-side rule better because, graphically, Flood Plains on river bends can be difficult to see and bending rivers are the ones that produce the highest number of Flood Plains within a city radius in BtS. I've thought about an exception to allow Flood Plains diagonally adjacent to river mouths as the flood plain is usually widest at the mouth:	
	Also, the absence of a Flood Plains diagonal to the river mouth leaves room for a city and thus encourages civs to settle at the river mouth. Added an XML tag to allow Oases on river corners so that Desert river corners aren't always useless, and because oases near desert rivers seem pretty common in reality (e.g. Faiyum, Merv/ Murghab, Tarim). Left the tag unused after realizing that a 3-commerce Oasis can be quite powerful at a starting location, especially with the	
Config	Financial trait.	
Config	Civ4FeatureInfos.xml, PerfectMongoose.py	
Shorten the Flood Plains texture so that it doesn't get so close to the tile concurrently, Deserts on river corners look (almost?) the same as in BtS, so it forget that corner tiles no longer receive Flood Plains.		
	The 1 commerce on river corners is pretty pointless. Could give the Desert terrain +1 food next to river through XML (RiverYieldChanges). That would only apply when no feature is present, and a hill would eliminate the 1 food, so it wouldn't stack with anything. However, there aren't always adjacent Flood Plains, and, without those, the graphics look completely dry. Such dry stretches do exist in reality as well, e.g. along the Nile cataphracts separating ancient Egypt and Nubia. At least for scenarios, barren desert river needs to be possible. Perhaps I should revert the change to the map generator, i.e. again place Flood Plains on river corners, but grant only +1 food there. This would require a new XML tag though, say, "RiverSideYieldChanges".	
Config	river mouth. I think, currently, this can happen but is very rare. Civ4TerrainInfos.xml	

AdvCiv/ BtS		Unofficial Patch
Flood Plains to be removed forever (just as any other terrain feature). If the city is razed, an empty Desert tile remains.		Founding a city still removes all features, but, when a city is razed, a Flood Plains is placed in the city tile if a Flood Plains can be placed there. Comment by jdog in CvCity.cpp: "replace floodplains after city is removed"
Config	Can enable the code from the Unofficial Patch through GlobalDefines_advc.xml.	
Rationale	Don't want to encourage players to raze cities that were founded on Flood Plains just so that the Flood Plains can be worked. Tedious micromanagement. In scenarios, the Unofficial Patch may "re"place Flood Plains where none have ever existed. And players may get the impression that Flood Plains aren't removed in the first place and get confused about why founding on a Flood Plains doesn't yield extra food in the city tile.	
	The disappearance of a Flood Plains also isn't necessarily more implausible than the disappearance of other terrain features: The citizens may well have engineered the river or degraded the soil so that it's no longer arable.	

129c	Climate/ terrain adjustments (for all standard map scripts)	
See also	021a allows Jungle to appear on Plains	
Config	All changes below can be disabled by setting <code>bEarthlike</code> to <code>False</code> at the start of <code>CvMapGeneratorUtil.py</code> . They're automatically disabled when playing with a map script that overrides any essential method of the standard terrain generator. From among the official and bundled scripts, the following are not affected by the AdvCiv changes: Rainforest, Highlands, Earth2, Donut, Boreal, Arboria, Fantasy, Great_Plains, Hub, Oasis, Ring, Wheel, Ice_Age, RandomScriptMap, Team_Battleground. (I've considered tying the changes to a new climate type, but it wouldn't have been flexible enough for what I wanted to do. Also, my changes are more subtle than those of the existing climate types.)	
AdvCiv		BtS
equator (un fGrassLata default valu Slightly incr	itude interval greater than the e). eased the frequency of Plains overall	The Python TerrainGenerator ("the only primary method for generating terrain types" according to a comment in CvMapGeneratorUtil.py) reserves the +/-10 latitude region around the equator for Grassland. Map scripts can set a different latitude interval (not sure if any do).
Plains tend BtS.	to clump together a bit more than in ve an (explicit) tendency to appear	Since Deserts don't appear near the equator and tiles near the equator are 100% Grassland, Deserts appear more commonly next to Plains than one would assume based purely on the overall terrain frequencies.

Rationale	Plains seem like a slightly more realistic representation of soils with jungle or rainforest cover than Grassland. Such soils are usually not well suited for food production. As for game balance, I don't think it's a fundamental change: Grassland is generally a bit better than Plains, but 100% Grassland can easily result in too little production. The change also makes maps more varied.
	Additional Plains near the equator imply fewer Plains elsewhere. Since there was already a lack of anything resembling the Earth's steppe belts, I've increased the Plains frequency.
See also	Experience with the PM script (<u>021b</u>) suggests that steppe and desert belts of realistic proportions disadvantage nearby starting locations too much – unless more sophisticated code is written for the selection of starting locations.
Tbd.	I have smarter code for starting locations now (<u>027</u>). So perhaps the standard terrain generator could take a few more leaves out of PM's book now?
Increased the frequency of hills a tiny bit.	
Rationale	Don't want to change the balance too much, but more non-arable land would feel more realistic.

129d	No unreachable resources	
AdvCiv		BtS
on an impas unworkable,	nat could only be worked from a city sable tile (Peak) are counted as meaning that they have 0 yield and s can be placed there.	All water tiles that aren't within a city radius around any land tile are considered as unworkable, have 0 yield and can't receive resources (well map scripts can ignore this). Doesn't check whether a city could actually be founded on the land tile.
Rationale	Just makes players regretful to see unworkable resources. Could've removed them after map generation, but it turns out that it's actually easier to prevent them from being placed.	
	On a related note: Unworkable tiles having 0 yields means that players can tell from the yields of an Ocean tile whether there is land nearby. If an Ocean tile is workable, there has to be an adjacent Coast tile. I'm not sure if such a Coast is always visible via graphical bleed anyway, or if the yield display actually leaks information. Wouldn't be easy to fix.	
Tbd.	Not covered: Water tiles workable by a city - but fully enclosed by sea Ice and thus no reachable for Work Boats. Such tiles shouldn't receive resources, but that's not so easy to prevent.	
See also	Brief exchange about unworkable se	eafood on CFC (toward the end of the post): <u>link</u>

130	Changes to AI diplo modifiers (<u>Dynamic Diplomacy</u>)	
See also	112: vassal agreements (especially voluntary ones, whereas 130v and 130d focus on capitulated vassals) 141: No diplo effect from gifted GP 553: "Shared discoveries" relations modifier	
AdvCiv	BtS	
130a	Sustained peace	

"Voare of no	ace" only start to count when an Al	Years of peace are counted from the beginning of
civ is met. The decrease fro		the game. The relations bonus is one for every 60 turns (and at most 2).
Rationale	have just met shouldn't have streng too difficult for civs that start isolated decreasing threshold should also he	ence shouldn't "strengthen relations," and civs that thened relations. That said, don't want to make it d to find partners on other continents. The elp keeping "years of peace" relevant after war in y end in 100 turns, it's almost irrelevant whether rns from now.
See also	130k adjusts this counter to the gan	ne speed setting.
130b	Personality-based modifiers	
values and v		Relations modifier from peace weight between -6 and +4, warmonger respect between 0 and 2.
in (fractional) relations from peace weight between -2.7 and 1.8, and from warmonger respect between 0 and 1.5 and putting their rounded sum between -3 and 3. To this sum, a modifier from the difficulty setting (see 148) and a base modifier are added (e.g. Gandhi +2,		(The peace weight of an AI leader is apparently a measure of that leader's love of peace. It's partly randomized at game start. Leaders with similar peace weight like each other, and leaders with dissimilar peace weight dislike each other.
	L; no change).	Warmonger respect says whether a leader is considered to be a warmonger, and warmongers like each other.)
Rationale	I think these modifiers are intended to prevent warlike leaders from fighting inconclusive wars among each other while the peaceable leaders get ahead economically. Fair enough, but it's overdosed, sometimes leading to practically inseparable bonds between peaceful civs. The excessive modifiers make diplomacy overall too predictable from the beginning.	
Config	Only through the DLL; the personali	ity values in XML are unchanged.
Tbd.	When there is a large majority of either warlike or peaceable AI leaders in a game, small minority doesn't stand much of a chance. Can easily happen when AI leaders are chosen at random. It's less of a problem with the change above, but I'm still considering to adjust the hidden modifiers based on which leaders are in the game. Could adjust the modifiers versus all AI leaders that are too popular or too unpopula overall. Don't want every game to have perfectly balanced diplo though	
	Another problem: Don't want the modifier to give away info about the leaders that the player hasn't yet met. If only met civs are taken into account, the first impression modifier may change upon meeting a civ. But "a first impression is a lasting one" suggests that the modifier doesn't ever change. One could lock them in at the time of the first meeting, based only on the civs met thus far.	
	Or should I bias the random leader	selection instead?
	Perhaps gradually lower the first im the game: brief CFC discussion	pression modifiers throughout the second half of
See also	Explanation of Civ 6's "first impressi source code isn't released): CFC po	ion of you" modifier (only conjectures as the ost

130c	Rank-based modifiers

AdvCiv		BtS
	es civs that are ranked higher on the I but not those ranked far higher.	Civs on the bottom dislike those on top; the greater the rank difference, the greater the hate. The second doesn't dislike the first, but the last does.
No rank-bas	ed modifiers in the first game era.	Modifiers change a lot in the Ancient era because ranks change a lot.
are ranked o	mes that civs not yet encountered on the very bottom (or top) of the ; i.e. these civs don't affect relations.	The AI magically knows the ranks of unknown civs. Humans can sometimes use inter-AI diplo values to deduce the ranks of unknown civs.
ranked 7th a gradually clir game. AI Pe until overtake all his rivals Peter's modi +1, changes 5, to -1 wher player reach as the playe (This examp	ssume that the human player is at the start of the Classical era, and mbs to rank 1 over the course of the ter starts on rank 4 and stays there en by the player. Let's say he meets during the Ancient era. If it is a count the player then starts at to 0 when the player reaches rank in Peter is overtaken, -2 when the les rank 3, -1 again at rank 2, and 0 in takes rank 1; see the table below. It is does not take into account the factor that was added in AdvCivelow.)	+1 until the player reaches rank 3, then 0, and -1 when the player takes rank 1. I suspect that the initial +1 is due to a bug and should be +2 until the player reaches rank 6.
Rationale	Presumably, a (slight) tendency of the AI to gang up on the leader of the field was intended. Not unreasonable, but it doesn't work: Civs that are far behind can't do much to impede the leading civs. They just hurt themselves by sulking.	
	It's not necessarily wise for civs in the lower half to stick together either. Cooperation is just one way to improve, war another.	
	ank differences, game score ratios ne relations modifier.	Only based on rank, specific scores don't matter.
Rationale	To stabilize the relations modifier. Ra	anks can easily change from one turn to the next.
See also	Rank hate can oscillate in the early game. <u>148</u> alleviates this problem by lowering the relations threshold for worst enmity (i.e. making the AI more hesitant to single out a worst enemy).	
Civs in the lower half of the leaderboard no longer have +1 relations with each other. However, certain leaders still grant a relations bonus to civs ranked beneath them (no change), and rankbased penalties are reduced among civs in the lower half. They're only slightly reduced though so long as relatively few civs are known.		
Rationale	It's not necessarily wise for civs in the lower half to stick together either. Cooperation is just one way to improve, war another. That being said, there mustn't be high penalties for civs that are themselves struggling to keep up.	
Tbd.	Perhaps peaceful leaders should grant the bonus after all (as proposed by CFC user Inthegrave here). Though not in the Ancient era.	
	res civs that are ahead of him and at are behind him, just like all the s.	Willem is the only leader that dislikes civs that are behind him, and likes those that are ahead.
Rationale	Probably a mix-up by the BtS develo	ppers.

civ is already Conversely,	 at stage 3 or 4 of a victory strategy. Al civs at stage 3 or 4 of a victory assign a diplo penalty to civs at 	Al victory strategies were introduced by BBAI; the diplo modifier is only based on rank.
Rationale	In the endgame, score and rank become unreliable measures of how well a civ is doing.	

Rank player vs. Peter	7-4	6-4	5-4	4-5	3-5	2-5	1-5
Modifier AdvCiv	+1	+1	0	-1	-2	-1	0
Modifier BtS intended(?)	+2	+1	+1	+1	0	-1	-1
Modifier BtS bugged(?)	+1	+1	+1	+1	0	0	-1

Example 130c

130d	A master can't be its own vassal's worst enemy, and capitulated vassals can't be anyone's worst enemy. Can't ask civs in a vassal-master relationship to stop trading with each other. If a vassal has either a forced (by the master) or unforced attitude of Cautious or better toward a rival, then that rival can't be the vassal's worst enemy.		
Rationale	Most of the consequences of worst-enmity don't apply to the master anyway, in particular, the vassal will always trade with the master. That means, a vassal with its master as worst enemy effectively has no worst enemy at all. Perhaps OK, but certainly don't want a vassal to promote trade embargoes against its master.		
	<u>UWAI</u> ignores relations with capitulated vassals; to be consistent with this, capitulated vassals should not be worst enemies. Capitulated civs are already marginalized; their enemies should be content with this.		
See also	The Dawn of Civilization mod also rules out worst enmity when the rank difference between two teams is big. Git commit 130p prefers war enemies as worst enemies; 148 changes the relations threshold for becoming worst enemies.		
130e	Worst enemy updated upon relation	s change	
AdvCiv		BtS	
	he relations value of an AI civ at civ's worst enemy is immediately	Worst enemy is only updated at the end of an AI team's turn, i.e. never during a human turn. Attitude is updated immediately though, so, e.g. after making peace with a human civ, if the AI attitude changes from Annoyed to Pleased, the AI will still consider the human its worst enemy for the rest of the human turn.	
Rationale	Attitude and worst enmity should be	consistent during human turns.	

130f	Trade embargo changes	
See also	130m: Al requests an embargo when at war and too Annoyed to ask for military aid. 001: Bugfix in the computation of the price charged for an embargo. 001e fixes a bug that causes the Al to make a stop-trading demand against a civ that has just stopped being its worst enemy. 1040 uses the Al embargo trade value as a lower bound for the Al war trade value.	
Tbd.	Would be nice to let the Foreign Advisor show the time-to-cancel for deals between other civs. Would have to happen in CvGameTextMgr::getDealString.	
AdvCiv	BtS

of a peace t account of a enemy and	reaty, the AI doesn't refuse on attitude. Attitude (toward the war toward the target of the embargo) still the trade value that the AI assigns to	Normally refuses: "We don't like you enough" or "we couldn't betray our close friends".	
Rationale	enemies of the winning side, and the	n a war to stop trading e.g. with remaining war losing side should be open to this. Similarly, the asked to change its religion as part of a peace	
See also	Similar issue with war trades as part of a peace treaty; see <u>100</u> . Similar rationale for <u>132</u> (change civics as part of a peace treaty).		
Tbd.		rious and at war with the target or when the target ing war. <u>039</u> might have to be adjusted.	
greater trade Exception: t civ that asks	d to stop trading, the AI assigns e value to OB while at war. rade value not increased when the s for the embargo is at war with at the contacted civ is at war with.	OB doubles the trade value of the embargo, regardless of war.	
Rationale		r. Canceled OB can prevent the AI from reaching lem when the civ who's asking is a war ally.	
Tbd.	A proper evaluation of an OB agreement while at war would be too much work to implement. But the AI should generally be very reluctant (possibly refuse) to sever OB while at war and also while preparing war. The latter part is problematic because it could expose AI war preparations.		
reduced by	25% if Pleased toward the (human)	No impact of attitude toward the civ that pays; only the attitude toward the embargo target matters.	
Rationale	stricter), and both attitude values sho	ted overall (now that the preconditions are ould matter. At Annoyed attitude, the AI refuses o point in a cost increase when attitude is low.	

Refuse-to-talk duration after embargo is 18 turns 30 turns on average. The trade value charged by the AI is				
proportional to this expected duration (apart from other factors).				
"You agreed to stop trading with our worst enemy" is remembered for 50 turns on average.				
Rationale 30 is too long considering that diplomacy is now more day AI offer an embargo at a more reasonable cost now that				
See also 130r makes the embargo target forget that the player st on average. (The BtS AI never forgets this.)	130r makes the embargo target forget that the player stopped trading after 60 turns on average. (The BtS AI never forgets this.)			
	Should perhaps use the same AI memory decay rate for "You agreed to stop trading" as for "You stopped trading." Not sure if 50 or 60 would be the better expected duration though.			
The relations penalty for negotiating a trade embargo is normally renturns (no change), but an embargo proposed against a war enemy is enemy (i.e. after 30 turns on average).				
When a war ends, recent-embargo memory of all war parties is redu embargoed war parties become willing to trade 9 turns after the war				
Rationale To make embargoes more useful and to help reconciliat players don't want third parties to trade with their war er the AI too much. Which is to say, being upset with a thir embargo does make sense.	nemies – this shouldn't upset			
also doesn't ask for an embargo if the relations that player is him-/value toward the human is the same as toward the AI is Furious to the worst enemy or only one higher.	s Furious toward a player, then herself the worst enemy. When ward multiple teams, and the orst enemy, then the attitude doesn't prevent embargo			
Rationale Not trading with other enemies of the AI is expected too And shouldn't keep digging when relations are already a	at rock bottom.			
The relations-value clause should prevent worst-enemy	oscillation.			
proposes an embargo is strictly greater than the that the AI is at lead threshold (i.e. Friendly in most cases), the attitude threshold for the embargo target is reduced by 1. However, except for Tokugawa, an AI leader still won't agree to stop trading with a civ that he or she is Pleased with. that the AI is at lead player and Annoye the embargo (else: only Cautious attitude).	a attitude thresholds require list Pleased with the human ed or worse with the target of: "we couldn't betray our close leaders require Friendly or ude toward the human and areing at Cautious attitude toward kugawa is willing to stoping Pleased with the target.			
Rationale The BtS thresholds for attitude toward the target are a bisn't going to be much trading anyway. This change also more rewarding.				
Regardless of attitude, the AI refuses to stop trading if this means canceling Open Borders with a dangerous civ: "We're afraid of their military might."	taken into account.			

Rationale	Should make it harder to abuse the	Al as a most shiold	
Power ratio in charges for a	is factored into the cost that the Al an embargo.	Only the game turn, number of cities, attitude values and current deals matter.	
Rationale	Even if a civ is not an immediate threat, an embargo makes a war at a later time more likely. Don't want humans to set a peaceful AI that is getting ahead in tech on a collision course with a militarily more powerful civ through an embargo; or at least not so easily.		
The number	of civs in the game factors into the e	mbargo trade value.	
Rationale	An embargo is more consequential when there are few civs to trade with.

civs ignore their vassals, and vassal civs ignore their master and the master's other vassals. gets a diplo penalty for declaring war on the master and – if the master likes its vassals -		When a master civ is attacked, the aggressor gets a diplo penalty for declaring war on the master and – if the master likes its vassals – a penalty for attacking the vassals. Similarly, the	
	s of the target (no change).	vassals resent the attack on their master, and each vassal may resent the attack on the other vassals (of the same master).	
	No war-on-friend penalty from anyone for attacking a capitulated vassal. Can get a penalty both for the master and its capitulated vassal.		
Rationale	The "You declared war on us!" pena normal relations with a vassal after h	lty suffices. Should make it a bit easier to have nelping it break free.	
	War on capitulated vassal: Relations never matter; see change <u>130v</u> .	s toward a capitulated vassal should basically	
		vabout the attacked civ and the attacked civ has war plan "attacked" or "attacked recent").	

Rationale	If the AI is unhappy about a civ under attack, it shouldn't be unhappy about a third civ attacking the aggressor (even if the AI still likes the aggressor).		
Tbd.	Not nice that this depends on information that the player can't see (Al war plan type). The following should help a little (but still):		
	upset about nukes dropped on their if the vassal's true attitude is Pleased	The forced attitude counts (as in most situations).	
Rationale	As above, to decrease war-related of	liplo penalties from enemy vassals.	
lists all AI civ	ation popup for a declaration of war vs that are going to disapprove (if red Defensive Pacts are also listed.	If war is declared through the diplo screen ("Your head would look good") or Alt+Click on the scoreboard, the "Does this mean war" popup appears. When attempting to enter closed borders, the "Entering will trigger war" popup appears along with "You can peacefully enter if you sign an Open Borders Treaty" if OB trading is possible.	
Rationale	The list could be especially helpful in team games because the penalty is based on team-toward-team attitude and I'm not sure that these attitude values are shown anywhere on the UI.		
Tbd.	Perhaps something similar could be holy one. Nukes also.	done with the raze-city popup when the city is a	

130i	Diplo modifier from Open Borders (C	DB)	
AdvCiv		BtS	
the OB coun each time wi This probabi from trade ro	at an AI civ has OB with another civ, iter of the AI is incremented twice, ith the same probability (cf. 130k). Ility is based on the AI civ's profit outes with the other civ and the seness value (cf. 107) between the	The counter just counts the number of turns that the two civ have had OB.	
Rationale	It had been too easy to please the AI, and, consequently, there wasn't enough warfare overall. See for example this game report of mine played with v0.87, prior to change 130i. In particular, civs that never had much to do with each other were often unwilling to go to war when they came in closer contact through Galleons or conquest.		
See also	149 has the same aim.		
_	out OB decays at a rate of 1.45% rs are no longer open.	OB memory never decreases. When borders are closed, the relations bonus is suspended until they are open again.	
Altho		The relations bonus is +1 for every 25 turns. Although the bonus is capped at 2, the OB memory keeps increasing after 50 turns with OB.	
Rationale Mostly for consistency: all diplo memory and counters decay (130r, 130k). Regarding the upper limit: otherwise OB that have lasted for, say, 250 turns would never decay the point of reducing the relations bonus.			

130j	Friendly AI more resentful about bad actions, Annoyed AI happier about good actions Changed scale of AI memory				
Tbd.	The scale factor of 2 is currently hardcoded in several places and a higher factor (3) is used for declarations of war (DoW). Should either directly store the effect on relations in the memory counters (e.g. decrease the DoW counter by 300 when war is declared on the AI) or set a single scale factor in GlobalDefines. The latter approach would have the advantage that any changes that a player makes to the AttitudePercent values in XML would affect ongoing games and that there would be no danger of overflow. A scale factor of 10 should suffice, and then it would take e.g. 3000 nukes to cause a short int variable to overflow.				
correspondi Furious, 3 if action pleas Annoyed or This results	The AI stores separate memory about each civ and for each type of action, e.g. DoW or an accepted tribute request. When a diplo action occurs, the respective memory is increased by 1. The current AI attitude has no impact on this. (Although the AI e.g. doesn't make tribute demands at Pleased.)

Counters relevant for diplo increase and decrease probabilistically by either 0, 1 or 2 per turn.

When the condition for increasing a counter is not met, the counter is decreased by 1.7%.

For every civ, the AI keeps track of the number of turns spent in various relationships with that civ: war/peace, shared/opposed religion, shared civics, resource trade, defensive pact, OB, shared war. E.g. the defensive pact counter is increased by 1 on every turn that the two civs have a defensive pact, and decreased by 1 otherwise.

Rationale

While memory decay (130j) is too unpredictable in BtS, the counters are too predictable. E.g. the "years of peace" bonus kicks in after exactly 60 turns. Exponential decay should make diplo bonuses from counters less sticky.

The probability of increasing or decreasing a counter is adjusted to the game speed setting. While an AI civ is in the Ancient era, the probability is divided by the Growth modifier (e.g.

probability is divided by the Growth modifier (e.g. 150% on Epic speed); after the Classical era, the divisor is the Golden Age modifier (e.g. 125% on Epic speed); and, *in* the Classical era, it's the mean of Growth and Golden Age modifier (e.g. 137% on Epic).

No game speed adjustment.

Rationale

On slower speed, more trades and wars tend to happen throughout the game than on faster speed, but the difference is not that great, so the Golden Age modifier seems like a good compromise. The early game is special because early wars are rare, so the peace and Open Borders counters usually increase monotonically until the Iron Age or so, and at that point, the relations bonuses often make AI leaders unwilling to attack each other on Epic and Marathon speed. Hence the extra slow increase during the first game era.

130m	Shared-war diplo bonus based on w	ar success
AdvCiv	Charca war diplo borido basca on w	BtS
+1 relations for currently sharing a war (no change), more than that only if the one side has had losses in the war (i.e. is at least in some need of assistance) and the other side has also had losses or has inflicted losses on the shared		The AI counts the turns spent together at war (shared-war counter), and for every 8 turns, increases relations by 1 up to a limit that depends on the AI leader. This counter never decreases, meaning that the relations bonus remains for the entire game. It is only suspended while the former war allies are at war with each other. The shared-war counter also matters for Permanent Alliances. The AI only agrees to those after at least 40 turns of shared war.
Success (and losses) in the shared war are remembered by the AI beyond the end of the war but decay by 1.5% per turn (even while the war still lasts). The relations bonus for a remembered shared war is reduced if the AI needs help in a current war but the former ally hasn't joined the war. The shared-war counter decays by 0.1 per turn		
(on average) Rationale	On average) when no war is being shared. Rationale The everlasting relations bonus was reported as a potential bug for the Unofficial Patch 3.13 but didn't get patched, and I agree that the BtS behavior is probably deliberate. That said, a permanent relations bonus is clearly too big a reward for just staying at war. My change should ensure that you need to fight alongside the AI in (somewhat) good faith in order to get a relations bonus. I don't think players need to know the specifics of the war success formula; I hope it works pretty intuitively.	
No shared war bonus if either war ally is a capitulated vassal.		Shared wars can bring a master and its capitulated vassals closer together.
No defensive pact bonus for capitulated vassals.		All vassal agreements are treated as defensive pacts when it comes to relations bonuses.
Rationale Capitulated vassals are dragged into war by their masters. They should generally b unhappy about that. At best, the shared war experience can make up for this unhappiness.		

Al less likely to ask for military aid if the war is still recent: same frequency overall. If Annoved toward the player, the AI asks for an embargo instead of joint war. Past wars by the human don't matter.

Al civs on whom a human civ has declared war in the past don't ask that human civ for military aid. but the current attitude isn't an obstacle.

the player recently made peace with.

Also less inclined to ask for war against a civ that Can't ask if there's peace treaty, i.e. for 10 turns; beyond that, recent peace doesn't matter.

Rationale

A joint war is asked too much from a civ that the AI considers to be an adversary. (Or they could ask, but they shouldn't be mad when denied.) Embargo requests should generally be more common when the AI is at war.

If the player has recently been at war with the target, then, apparently, the player is unwilling or unable to defeat the target. Also don't want the AI to drag players into the same war repeatedly.

is extra effective at increasing the shared-war memory. Of course, these units need to be hostile to the tile owner. Losing a unit in such a fight counts as much as defeating a hostile unit.

Fighting against units inside another civ's borders War success has no impact on the shared-war diplo, no matter where it occurs.

Barbarians count as hostile in this context, i.e. it's possible to get a "mutual military struggle" bonus without even sharing a war, just by fighting Barbarians inside the other civ's borders. Fighting Barbarians elsewhere doesn't help though, and the bonus won't exceed +1 unless there is or was previously a shared war.

Units with hidden identity (i.e. Privateers) also count (but not if the Privateer belongs to the plot owner).

Rationale

If someone engages enemy units in the Al's territory, that someone is really being helpful, and not just competing for loot; the AI should appreciate that. Regarding Barbarians, I sometimes find that my, say, scouting Chariot could help an AI civ against Barbarian invaders, but BtS gives me no incentive to do so. The change should make these situations more interesting.

The relations breakdown says "Our mutual military struggle has brought us closer together" when not currently sharing a war.

Always present tense.

Rationale

'Our struggle brings us closer" sounds a bit strange when not currently struggling together. Might also help get across that the relations bonus is bigger while at war.

If UWAI is enabled, the AI does not ask the player to join a war when it thinks that this would be disastrous for the player. This is checked by letting the proxy AI (see 130u) compute the player's war utility. The AI may ask for an embargo instead.

The human position is not considered by the AI.

Rationale

Would prefer to let the player decide whether a joint war is a bad idea, but the player shouldn't be punished with a diplo penalty (help refused) for not being stupid.

130n	Adjust ideological relations modifiers (religion, civics) to popularity		
See also	o 148 statically (i.e. not dependent on the game state) reduces the limits of those modifiers across the board.		
	130x makes these modifiers take a bit longer to attain.		
AdvCiv	,	BtS	
with the Ho majority of tone worse a leaders, and turns (well,	nt-religion penalty starts at -1 (or -2 ly City) for all AI leaders. For the the leaders, the penalty then becomes after 15 turns and, for some of the other one worse after another 15 16 turns, see 130x). The total limits same for all leaders.	The penalties start at 0 to -2 depending on Al personality (another -1 with the Holy City) and then grow one worse after 5 turns. In contrast, the same-religion and favorite-civic modifiers start at +1 for all leaders (+2 with the Holy City) and then increase by one every 10 turns.	
Rationale	So that all ideological modifiers follow the same basic principle of starting at a small constant value and then growing up to a leader-specific limit. Before streamlining the AI behavior like this (this happened in AdvCiv 1.01), I had implemented separate but similar mechanism for adjusting positive and negative ideological modifiers.		
	Moreover, letting the different-religion penalty increase gradually gives civs that have founded their own religion in (semi-)isolation more time to make some tech trades with the rest of the world before the penalties make everyone annoyed. Letting the penalty grow more slowly than the positive modifiers also reflects that the penalty has (for most leaders) a tighter limit than the positive modifiers. I.e. the time that it takes to max out the penalty becomes more similar this way to the time that it takes to max out the positive modifiers.		
	A penalty of 0 for 5 turns doesn't make much sense to me. I guess it guarantees that civs can change their own religion before the penalty applies, but I don't think that's something players will commonly do, and having a penalty of 1 apply for a few turns is hardly a problem.		
modifiers and known citiest question. I. of long as their (or civic), retthe cities. F	or the time-based ideological re decreased based on the portion of s whose owner follows the ideology in e. all revealed cities are counted so ir owner runs the proper state religion egardless of the religions present in for the civ toward whom the modifier is even unrevealed cities are counted.		

The high diplo bonuses from early civics, especially Hereditary Rule, are too easy to get, and BtS diplomacy gets boring when everyone's in the same religion. Also to reduce the overall (irrational) impact of ideologies on AI relations, considering that change 148 reduces the threshold for Friendly relations (effectively) by 2 and that change 130n reduces the limits for positive ideological modifiers only by 0.5. The change seems also realistic: if everyone shares a trait, it gets taken for granted, and lack of external enemies leads to infighting. And it's unwise to eschew everyone when they all have "heathen" religions. It's not so clear how the popularity of an ideology should be measured. Counting cities rather than population makes it less important which tiles, exactly, are revealed. I don't want players to worry about hiding or revealing their own cities or those of third parties. Hence also the exception for the civ toward whom AI attitude is being computed. This small vision cheat seems unlikely to leak exact city counts to observant human players, and a rough estimate can be guessed from the player score anyway. An important upside of disregarding unrevealed cities of third parties is that, this way, the adjustment is mostly based on those civs that actually interact with each other. E.g. when everyone on one continent is in the same religion, the samereligion modifiers should be reduced a lot (i.e. about halved) at least until the other continents (or their shores) have been explored a bit. The different-religion penalty is also reduced when the offending religion has few adherents (again, measured by revealed cities). To make civs whose religion has failed to spread less unpopular. Also makes sense to Rationale me that a religion with few followers would be more easily tolerated; it's not threatening. Note that the adjustments to the different-religion penalty usually just reduce the penalty by one if at all because the time-based portion is only between 0 and -2. 130o Changes to made-demand memory See also 130v prevents vassals from acceding to tribute demands from rivals. 144: refusal of gift request.

When a human player declares war on an AI civ Accepting tribute results in a 10-turn peace (primary DoW: not through DP), and that AI civ treaty. After that, there is no particular penalty for remembers having paid tribute to the player, the declaring war despite tribute. AI civ and all non-vassal AI civs that it has met set their recent-demand memory about the player to 8, which (due to change 130j) means that they won't consider any requests for help or demands for tribute by the player for (on average, on Normal speed) 80 turns.

The declare-war confirmation popup warns the human player about recent-demand memory

If the AI denies a demand for tribute, the human player does not receive a diplo penalty. Only granted tribute results in "You made an arrogant demand", and this memory decays after 30 turns on average. I.e. the only negative consequence of a denied demand is that the recent-demand memory increases.

Accepting tribute still results in a peace treaty.

When an AI civ declares war (primary DoW) or signs a vassal agreement, it sets all its arrogantdemand memory to 0.

"You made an arrogant demand" regardless of

whether tribute was granted; never goes away.

Rationale

The BtS mechanism incentivizes players to demand tribute from civs about 10 turns before attacking them anyway. Not at all how tribute should intuitively work, not how it works when the AI asks tribute from a human player, and not an interesting decision.

Could go about improving this in many ways. My approach is supposed to be low-key and low-effort. I've removed the penalty for failed demands because players need to be able to tell if a civ has actually paid; if it hasn't, it's OK to attack. Moreover, a penalty for a failed demand encourages reloading.

Not sure if the penalty (no requests for 80 turns) is painful, but at least it should stop players from routinely receiving tribute before going to war.

Not ideal that the safety period is tied to memory decay – and thus randomized.

Wouldn't make sense to apply this change to AI civs that declare war after receiving tribute from humans: Al civs never request or demand anything from each other, so increasing AI-to-AI recent-demand memory would have no effect.

An earlier implementation kept the "arrogant demand" penalty for unsuccessful tribute demands, and added a new type of diplo memory ("exacted tribute") to distinguish the two outcomes.

Config

The 80 turns are customizable in GlobalDefines advc.xml.

Arrogant demand should be remembered for a non-rand 30 turns is too long; try 25. Would be nice to show info/ a reminder about this change or after the player makes a demand; however, the text of demand is also used for vassal tribute (which doesn't can memory) and "We demand that you give us this in tribute one line because it's always shown while the player array message I guess (outside the diplo screen) Would like rejected gift requests to add only 1 to recent stakes that way. 130p	Fair-trade bonus and enemy trade penalty reworked – and some vaguely related changes to cancellation memory about OB, DP.		
Rationale	Hopefully, in the end, the bonuses work as one would intuitively expect. The details have gotten pretty complicated (and especially complicated to describe).		
AdvCiv	E	BtS	
normalized current assome accuming turn (Norma computed for diminishi is needed in forthright" to	gold value of the traded items and thefet totals of both parties is recorded. ulated score decays by 1.45% each ral speed). The relations modifier rom the remembered score is subject in greturns, meaning that more trading in order to get from e.g. +3 "fair and rade to +4 than from 0 to +1. The increased a bit if the two civs have	Raw gold values are recorded without adjustment for game speed or game progress, and don't decay. When computing relations, the total recorded gold value is divided by the has-met counter, i.e. the number of turns that the two civs nave known each other.	
See also	131 makes some minor adjustments to asset totals.		
Rationale	The BtS formula works OK for Normal speed in the first third of the game but becomes too sensitive later in the game (because trade values increase faster than the has-met counter), and on slower game speed settings. It also produces weird results for civs met in the middle of the game; a small gift can be enough for a +4 bonus or -4 penalty, and modifiers can decrease rapidly as the has-met counter increases.		
	I'm taking a more explicit approach by recording normalized trade scores and applying exponential decay each turn (instead of implicit decay through increasing trade values and has-met counters). Asset totals seem well suited for computing trade scores because they tend to increase at a similar pace.		
	Despite the decay, trade scores still tend to be higher between civs that have known each other for a long time than between civs that have recently met. It does, therefore, make sense to take into account the has-met counter, but the effect is now much smaller than in BtS.		
Tbd.	Make this more sensitive when tech to	rading isn't allowed.

between the has receive	e recorded values of items that the AI sed in trade minus 4/5 of the recorded	100% of what the other side received is subtracted. I.e. a human who makes only deals with the AI that the AI finds perfectly fair never receives a "fair and forthright" relations bonus.	
Rationale	It's clear enough that "fair and forthring	ht" is supposed to be a bit of a euphemism, but	

bit easier for AI civs to reach mutually Friendly relations (despite change 148, AI-AI friendships are a bit scarce). The coefficient was 5/6 instead of 4/5 until AdvCiv 1.04. Open Borders (OB) with a worst enemy OB and DP factor into the trade memory for both contribute significantly to the relations penalty. fair trade and enemy trade, but the deal value is The impact is based on the number of turns that so small that the impact is negligible. the two civs have had OB. None if the borders aren't currently open. OB (and Defensive Pact; DP) have no impact on Resource trades don't matter for trade memory. the fair-trade bonus, and don't contribute to trade All ongoing deals can cause the Al to demand a memory. Resource trades add to trade memory. trade embargo. though the impact is normally small. The trade value for the first ten turns is processed when the deal is signed, then, once the deal can be canceled, trade value is added turn by turn. The AI refuses to sign a DP if a DP was recently The AI refuses to sign recently canceled OB, but, canceled (explicitly canceled or through a war for DP, there is no such restriction. declared by one of the signatories). Rationale OB can be very helpful for the enemy civ, may even be crucial at wartime, so I don't think the potential -1 from refusing a trade embargo is a sufficient penalty. prefer to keep OB and DP out of the trade memory, so that cancelation of those deals immediately reduces the enemy trade penalty. This can't be abused by suspending OB and DP just for one turn because of the Al's refusal to sign OB and DP if recently canceled. DP needed this kind of restriction anyway; too easy to flick DP on and off in BtS. 130t factors attitude and worst enemy into anger about rival DP. See also kekm.3 keeps DP intact after a foreign DoW. 550a gives civs that have fallen behind better deals by adjusting trade values. This adjustment factors half into the trade score relevant for relations. May have to dial this up once there is tech diffusion from OB. Tbd. Peace treaties should perhaps also add to the enemy trade penalty. Can currently ask for a gift or tribute to avoid getting asked to join a war. If the AI itself cancels OB or DP, then it forgets Doesn't matter who canceled: canceled OB are the cancellation twice as fast (5 turns on forgotten after 10 turns on average. average). Rationale It's frustrating when the AI attitude dips below the OB threshold (which is difficult to notice in time) and, on top of having to get the attitude back up despite having lost the OB diplo modifier, the human player has to wait for 10 turns (and often longer than that). It does make sense that the AI is a little wary about signing the agreement again - won't be able to cancel it for 10 turns then, and the other side has just proved to be unreliable (at keeping the AI happy). It also makes sense that the AI is, on top of that, upset when *the other side* cancels an agreement, possibly (the AI can't check this ...) at an especially inopportune moment. Important that humans can't just briefly close their borders when it suits them (e.g. when an AI settler or army wants to move through); that makes the AI look dumb. Tbd. 10 turns generally seems pretty long, also between two AI civs: both memory counters need to reach 0 and one side's contact roll has to succeed before a new deal can be

trades that are actually fair should still have some impact. This should also make it a

Rationale	At least before the late game, there should generally be a route to reconciliation (though it doesn't always have to be worth following).	
See also	553: Changes to the "shared discoveries" modifier	

All decay probabilities and contact delays are adjusted to game speed using the same (moderate) modifier as for Golden Ages: 100% slower decay on Marathon, 25% slower on Epic, are the unaffected by the game speed setting. 20% faster on Ouick.

No speed-adjustment for contact probabilities (as in BtS).

The various AI memory values are decremented each turn, each with its own probability from Civ4LeaderHeadInfos.xml. The probabilities After contacting a human player, the contact delay prevents the AI from contacting the same human player with the same type of request. Not speed-adjusted.

Rationale

Help reguests – a pretty common type of AI reguest – should not really be made more frequently on slower speed settings; they should match the research speed. Other requests, e.g. for joining a war or enacting an embargo, should match the pace of diplomacy, which is not nearly as much affected by game speed. The Golden Age modifier seems like a reasonable compromise. I don't want to adjust the contact probabilities because that would make the AI slow to respond to game state changes e.g. someone starting to trade with an enemy.

Decay speed: If the contact frequency is reduced, then individual requests should arguably be remembered longer so that the typical number of active diplo modifiers is unaffected by game speed; at least, there shouldn't be fewer active modifiers on slower game speed. And a granted help request shouldn't be forgotten as fast on slower game speed settings because the gifted technology took longer to research.

Another (minor?) reason for slowing down the decay rates: I don't think the AI really contacts human players three times more often on marathon than on Normal speed in BtS. Apart from a successful dice roll and expired delay, certain other conditions need to be true for each specific request. For example, an AI civ can only make so many help requests in a row until it becomes too advanced to receive further help.

On the other hand, an argument against slower decay on slower speed: Some diplo memory, e.g. "you declared war on us", isn't affected by contact delays. Still, I think declarations of war don't happen as often (in terms of game turns) on slower speed as on Normal speed, so (moderately) slower decay shouldn't lead to problems with penalties stacking up too much.

See also

130k factors game speed into state counter (e.g. "years of peace") increments. 130p: Remembered trades ("fair and forthright", enemy trade) don't use the MemoryDecay system. The remembered trade values match the game speed because e.g. techs have higher cost and thus higher trade value on slower game speed settings.

CFC post of mine about game speed adjustment of diplo parameters; and another post (after the 1st quote box). <u>Discussion</u> specifically about Open Borders contact delay.

Transformed the independence bonus into a memory-based bonus to let it decay. It's treated as 10 memory decaying at a rate of -1 every 30 turns on average (Normal speed).

A liberated colony is forever +10 grateful to its old homeland.

To be consistent with the "everything decays" paradigm. Rationale

War success decays by 3% each turn; that's a War success doesn't decay; only reset to 0 when reduction to 75% after 10 turns. It's still set to 0 at a war ends.

the end of a war.

Rationale In long wars, initial successes tend to have too much weight.

Tbd.	Initial successes should perhaps be ignored entirely, or decay very quickly because they're often owed to surprise and thus not a good estimate for the future course of the war.	
		a war isn't smart because war could break out access while at peace might be assumed by some y it would be to change this.
See also	UWAI remembers the overall outcon	ne of a war before war success is reset.
Reduced the	war success value counted for cond	uered cities from 25 (BBAI) to 22. Was 10 in BtS.
Rationale	25 is more than 6 times the 4 points of war success counted for a successful attack. A string of successful attacks (failed attacks counting 3 points for the defender) is quite a feat, can easily be more indicative of how a war is going than the conquest of a city (any city).	
Tbd.	Well, it's hard to say, should probably let the DLL adjust war success values based on the circumstances

civ Y for hav X is based on no penalty if DeclareWar	s penalty from an AI civ X toward a ring a defensive pact with a rival Z of on the attitude of X toward Z. There is the attitude is one higher than the Them threshold, or when X also has or when X is too weak to attack Z of the DP.	No penalty if X has a DP with Y; attitude doesn't matter.
e.g. Darius, Pleased for for Catherine Pleased in th	eWarThem threshold is at Annoyed for at Cautious for e.g. Hannibal and at e.g. Julius Caesar. (And at Friendly e, but this is no different from his case because I'm using the us 1, and Friendly is the highest tude.)	

Rationale	BtS doesn't properly factor DP into enemy trade diplo, and I think it's better to have all the negative DP diplo in one place anyway. A DP of Y with both X and Z shouldn't satisfy X and Z unless they like each other. In this constellation, Y threatens war on X if X should attack Z, which should offend X. Y also promises to protect X; but this is covered by the DP relations bonus (no change to that).		
	As for the threshold, I've considered using the DefensivePactRefuse threshold from Civ4LeaderheadInfos.xml, which is Cautious for some leaders, but a leader that is quick to sign a DP shouldn't necessarily be forgiving about a rival DP. (The opposite could be true: these leaders think that DPs are important, and are therefore worried about rival DPs.)		
	Warmongers tend to have high DeclareWarThem thresholds (easy to convince to declare war). These leaders should be bothered most by DPs.		
Al refuses to	sign a DP without OB: "Surely, you must be joking."

bases the "vassals to your empire" penalty on attitude in the case of peace vassals, and 130w penalizes expansionism through vassals and conquests, 130v and 130h reduce war-based diplo penalties for vassals, recognizing that vassals don't have a choice in starting wars. 099c prevents master cities from flipping to a vassal, and 025 reduces the culture spread of capitulated vassals. <u>143b</u> prevents capitulated vassals from building nukes. 014 makes capitulated vassals ineligible for team votes, stops them from pursuing victory and from building great wonders, kekm.25 prevents capitulated vassals from defying resolutions. 112b changes conditions for capitulation. 130f lets capitulated vassals agree to embargoes for free. 036 (gold available for trade based on attitude) disregards the attitude of capitulated vassals. 033 stops capitulated vassals from training Privateers.

CFC discussion about the relationship between capitulated vassals and their masters:

Thd.

I'm considering to turn capitulated vassals into voluntary vassals after some time; perhaps after 30-40 turns. Would only need to implement a popup asking the master to sign the new agreement or else free the vassal. A capitulated vassal that reaches the territory and population threshold should then also turn into a voluntary vassal.

Some way for a master to free (itself from) a voluntary vassal would also be nice.

Capitulated vassals should perhaps only be allowed to trade tech with their masters. Or just prevent them from brokering to other civs. That said, the AI currently keeps its vassals (capitulated ones too) at arm's length tech-wise; that might have to be changed if vassals can't trade or broker.

AdvCiv

If a capitulated vassal

- razes a (holy) city;
- trades with someone or someone's enemy;
- has OB with someone's enemy: or
- nukes someone (but not just someone's friend)

half of the resulting relations modifier is applied to the vassal, and half to the master.

Relations penalties about shared borders are also shared between vassal and master.

In team games, the penalties apply to the leader of the master team.

BtS

Actions of a vassal don't reflect on the master. but civs are generally upset about "rivals" being vassals to the master's "empire", and vassals are possible war targets. Prior to K-Mod, the Al attitude toward the master was generally lowered based on the attitude toward the vassal.

Rationale

My thinking is that there shouldn't be grudges against capitulated vassals because they're basically dead already. This opens up a loophole: A human master could let vassals do the dirty work (razing), or use them as buffers against shared-border anger. BtS attitude averaging would fix this issue, but would also punish the master for e.g. the vassal's religion and any bad deeds prior to the vassal agreement.

The change about nukes is obsolete because 143b now prevents capitulated vassals from having nukes.

Vassals are always Friendly toward their master, Voluntary vassals are Friendly toward their and capitulated vassals share the master's master except when deciding whether to break attitude toward rivals, but their attitude can be at free. The attitude of and toward capitulated best Cautious. Al civs project their attitude toward vassals is computed normally but rarely matters. a civ onto the capitulated vassals of that civ.

Sometimes a (capitulated) vassal has a much

This does not apply when a vassal is deciding

whether to break free.

Masters are Pleased toward their capitulated vassals, and capitulated vassals are Pleased toward fellow vassals with the same master.

Vassals never grant gifts to rivals and never ask rivals for gifts. When deciding whether to grant a gift to its master (no matter if capitulated), the vassal checks its actual attitude (what the attitude would be if it weren't for the vassal treaty).

Capitulated vassals are slightly reluctant to found additional expenses (esp. for number of cities cities, especially on other continents.

and civics) are small. The additional maintena

Al Spies are reluctant to attack a rival's capitulated vassals.

more positive attitude toward another civ than its master, and will trade away technologies that the master wouldn't trade.

When a vassal grants a gift to a rival or receives one, a peace treaty is signed between the master and the rival. Thus a civ with multiple vassals can sometimes be kept at peace indefinitely.

Capitulated vassals with few cities left tend to found cities in marginal spots because the additional expenses (esp. for number of cities and civics) are small. The additional maintenance for the master isn't taken into account.

AI doesn't attack it's own vassals (still the case in AdvCiv).

Rationale

Given my other changes, the attitude of and toward capitulated vassals really doesn't matter anymore, and showing them, as is often the case, Annoyed toward their master is misleading. I'm still showing the actual relations value (e.g. "Friendly (-2)") and modifiers because they do matter again if a vassal breaks free.

If vassals are supposed to be zombies, they shouldn't be relevant for tech trading, and they generally shouldn't undermine the master's foreign policy. Until v0.85, I had capitulated vassals share the master's attitude toward other civs, but this made it too easy for a human player to dictate civics and siphon gold from vassals with AI masters; now they're at best Cautious toward rivals.

Civs that can't declare wars can't sign peace treaties at all. Their wars end without a peace treaty. This applies to both types of vassals and when a game option prevents war. Exception: A passed force-peace diplo vote will still result in peace treaties for vassals.

Apart from tribute and gift requests, vassals sign a peace treaty when their master ends a war (I think). Perhaps also in other situations that I can't think of.

Rationale

It's enough for the master to have a peace treaty. If a vassal agreements ends within 10 turns of that – fair enough, the vassal shouldn't be bound by the master's treaties anymore (this argument doesn't apply to diplo votes). This change also makes sure that a master can't somehow be forced into a peace treaty via its vassal.

Added a trade denial reason "We don't truly like you that much" for cases in which the true attitude is decisive for trade denial, doesn't pass the denial threshold whereas the forced attitude would pass it.

See also Only used for ctr so far; and I'm not sure it'll ever matter there.

Capitulated vassals are not shown on the "Glance" tab of the Foreign Advisor.

The Glance tab shows relations between all living (non-minor) civs.

Rationale

The Glance tab gets quite crowded in large games, and capitulated vassals don't have interesting relations because they follow their masters in matters of diplomacy.

Human espionage weight against vassal set to 0 automatic changes to human espionage after accepting capitulation.

Rationale

Easy to forget, and cases in which a player would want to continue espionage against his/her capitulated vassal should be extremely rare. I'm not making the same change for voluntary vassals because these agreements are often fleeting.

AdvCiv		K-Mod
Capitulated vassals support all resolutions proposed by their master.		Team members of the Secretary-General (SG) support all resolutions. Civs Friendly toward the SG support some proposals, but not all (non-proliferation, force-civics).
Rationale	Since all votes are cast simultaneously, vassals can't always vote along with their master – they don't know how the master is going to vote.	
See also	<u>kekm.25</u> allows vassals to support the master in repealing resolutions (which requires them to vote "No" on the master's proposal).	

130w	Penalty for expansionism: "We oppo	se your ruthless expansionism"
AdvCiv	1	BtS
with foreign difference be culture), the personality of warmonger	ed on the number of owned cities majority culture (depending on the etween highest culture and owner's total number of cities, and the of the AI leader (peace weight minus respect). The penalty is reduced if nilitary can't compete with that of the t civ.	If a civ has at least one vassal, the "vassals to your empire" penalty is based on the military power of the master and all its vassals. Other than that, there are rank-based penalties (130c).
previously of about a quar	uch) more sensitive about cities it wned. Other than that, so long as juster of a civ's cities are foreign, none civs will mind.	
Up to -5 for the number of capitulated vassals, typically about -1 per vassal, but it depends on the number of cities owned by the vassal, the initial number of civs, and (as above) Al personality and power ratio. This penalty is added to the one for voluntary vassals (130t), and they're displayed together as "We are worried about our rivals being vassals to your empire".		

Rationale	Not fair to give a penalty based on military power only to civs that control a vassal. A civ that just conquers all cities isn't less threatening. Since I don't want to remove the vassal penalty, I'm adding a counterpart that penalizes conquered cities. In any case, penalizing military power isn't good because that hardly affects human civs.
	The personality-based term means that e.g. Genghis Khan won't easily get upset about expansionism, which is consistent with his own behavior and his first-impressions bonus with other warmongers. Moreover, I don't want all leaders to increase the penalty synchronously because, then, conquering a single city could have a big negative impact on relations overall; the personality factor makes sure that the overall effect changes smoothly.
	Power ratio is factored in because it doesn't help if small civs stop trading with the expansionists – this mostly hurts the small civs.
	As razing doesn't remove tile culture, this penalty can't be circumvented by razing (and razing carries its own diplo penalties too).
	I've considered ignoring cities culturally owned by an enemy (war enemy or worst enemy) of the AI civ that opposes expansionism, but concluded that this shouldn't make a (big) difference; territorial expansion needs to be opposed even if it has happened at the expense of an enemy.
See also	Without <u>099</u> (culture of dead civs stays in the game), this change wouldn't really work because cities conquered from eliminated civs wouldn't count.
	CFC post explaining why I've increased the expansionism penalty (though not its upper limit) a bit in AdvCiv 1.01.
Tbd.	Should perhaps be reduced if the AI civ that opposes expansionism has conquered much more territory. Can seem a bit hypocritical the way it is now.

130x	Ideological relations modifiers (religion, civic) take longer to attain the higher they go	
See also	130n dynamically adjusts these modifiers to the popularity of the ideology in question, and slows down different-religion penalties.	
	148 lowers the limits for the positive	ideological modifiers for many AI leaders.
AdvCiv	AdvCiv BtS	
modifiers in	The time-based same-religion and favorite-civic modifiers increase by one after 10 turns, by one more after 11 turns, then by one more after 12 turns etc.	
Rationale	Since the modifiers have tighter limits now, I feel that they should also grow a bit more slowlys, so that they don't become too quick to max out. Making them grow more slowly initially could frustrate players, so lets try a non-linear progression.	

130y	Lower diplo penalties for wars involving vassals, DP or seeing little action	
AdvCiv	BtS	

When making peace, the declared-war relations The declared-war penalty is solely based on the benalty is reduced (but not beyond -2) if the other number of declarations of war; only the side has had very little war success, namely less (unimportant) hidden "this war is going badly" than 0.3 times the equivalent of capturing a city times the era number (0 for Ancient; i.e. full penalty for early attacks on Workers). The penalty is also reduced if either side is a

capitulated vassal. And a capitulated vassal reduces its declared-war penalties when it regains its independence.

If a vassal is freed because its master has capitulated to a third civ. the third civ automatically makes peace with the vassal, but without signing a peace treaty.

If the third civ doesn't have much war success against the freed vassal, and the free vassal had been a capitulated vassal, the third civs gains +2 "You've granted us independence" from the freed war on the former vassal. vassal.

penalty is based on war success.

When declaring war on a master civ, war against the vassal civs is implied, and the aggressor gets the full (never decaving) -3 "You declared war on us" from each vassal, even if the war takes place entirely in the master's territory, and ends up freeing a capitulated vassal. Likewise, when a master declares war, its vassals suffer a -3 relations penalty.

When a civ capitulates, the vassals of that civ are freed. They remain at war with the master of their former master, and the former master declares

Rationale	Shouldn't hold civs fully accountable for declarations of war if these declarations were enforced by the vassal system, especially not for capitulated vassals. The change should make it easier to free vassals and have a cooperative relationship with them henceforth.	
	I'm factoring in war success because vassals should not be happy about being liberated when that involves killing most of their units or taking away their cities.	
	The reduced penalty for non-vassals practically only applies to wars where neither side sent any units or an invader changed its mind in the face of tough defenses. Not plausible for such wars to have long running repercussions.	
See also	130h disables war-on-friend penalties for attacking master/vassal alliances; sha reduces "war spoils our relations" penalty if there is little war success.	
Tbd.	Should perhaps also add "granted us independence" memory when the master is eliminated.	
A DoW caused by honoring a DP leads to only a Full relations penalty (-3). -2 relations penalty from the civ that triggered the DP. (No change to "war on friend" penalties.)		
Rationale	Diplo penalties for fulfilling a DP seem justifiable, or at least not wrong enough to change radically. I'm just reducing the penalty a bit.	
Tbd.	Should probably not assign war-on-friend penalties when war is triggered by a defensive pact, and perhaps not for wars declared by capitulated vassals either.	

130z	Al gives help also to other Al civs	
AdvCiv	В	etS

An Al leader may decide to gift a tech to any non-vassal civ that has fallen behind and that the Al leader is at least Pleased with. Friendly relations, a low difficulty setting and a high Diplo victory stage increase the probability of such a gift. Only human civs can benefit from this. Pleased attitude is required, Friendly and difficulty don't matter. (Although a low difficulty makes the Al easier to please.)			
The choice of research cos	of the tech is biased toward low st.	The tech chosen uniformly at random.	
(No change vassals.)	(No change to the AI routine for gifting tech to vassals.)		
See also	112 deals with tech gifts between vassal and master. The gifted tech is also chosen randomly based on cost in that context. The part that takes into account the difficulty level is based on 250a.		
Rationale	Especially with SPaH, it's not so unlikely for experienced players to trigger this Al behavior, and I don't think those players would want the AI to help them compete. So one could either disable the help routine for medium and high difficulty settings, or extend it so that AI civs can benefit too. I've done the latter because it can actually make sense for an AI civ to help a weaker partner; humans do that too sometimes.		
Tbd.	Should perhaps ask for gold in exchange if the recipient happens to have some.		

131	Misc. changes to AI evaluation of un	its, buildings, techs, civics, religions

gold in the ti	starts a revolution if it has enough reasury to prevent the strike counter ng 2 during anarchy.	During anarchy, civs have 0 income and expenses except that gold deals still need to be paid. This means that anarchy leads to a strike when a civ has no gold in its treasury. If anarchy lasts only one turn, the strike has no immediate effect, but multiple turns of anarchy lead to disbanded units. Moreover, the strike turn counter is never reset, so once there has been a strike, even a single turn of anarchy can lead to disbanding.

Dationala	Use the unbt about augmending gold of	deale during anaraby, but then what about the air	
	I've thought about suspending gold deals during anarchy, but then what about the cive that is supposed to receive gold? For a human player, it could be confusing if an AI cive pays no gold during anarchy. If gold is received without having been payed, then this could exploited in multiplayer (team) games.		
	Perhaps the strike counter should be reset or counted backwards (probabilistically?) when there is no strike; but then a single turn of strike now and then would have no negative consequences at all.		
	132b: Vassals with a human master 133: Gold-per-turn deals are cancele		
AdvCiv		Vanilla Civ 4	
		Just counts a fraction of the AI civics value for each unlocked civic. A tiny fraction, considering that building and civics values aren't on the same scale. K-Mod 1.46 note: "compare to current civics!"	
	Was greatly underrated and the AI was building the Pyramids very late (late Classical era usually). Actually had to make the AI underrate the Pyramids again by a factor of more than two after some tests. In BtS, they're something that human civs without much land and mediocre terrain can reliably fall back on so long as they have decent food sources; not good for balance to let the AI build them aggressively.		
	This CFC post noting that good wonders are not being prioritized by the AI might refer to the Pyramids. I suppose the BtS AI builds them a bit sooner than K-Mod through non-intelligent factors (flavor, building focus, culture).		
	tech value counted for buildings whom of the capital hasn't grown beyond	en an AI civ hasn't founded a second city yet and size 3.	
Don't count t	ech value for potential domestic trad	e routes when having only 1 city.	
The AI assumes that it is not geographically isolated when more than 25% of its continent remains unexplored. Consequently, naval exploration is not prioritized in the very early game on account of being isolated.			
So long as the AI isn't sure whether it is isolated (no one met and 30 turns not yet passed), the values counted for military units are reduced.			
Reduced the	Reduced the utility counted for working water when the average city population is small.		
	Mostly to prevent the AI from overestimating Fishing and Sailing in the very early game. Apart from Lighthouse, an early discovery of Sailing can lead the AI to waste time on a Galley or to construct Moai Statues in the capital.		
Swordsman and Legionary have Attack City as their default AI type. Non-default AI types are Attack and Reserve. For all Swordsman units, the default is Attack, non-default Attack City and Reserve. The earlie non-siege unit with default AI type Attack City is Maceman, the next one Grenadier.			
		The default AI type seems to matter mostly when the AI evaluates units that it can't train yet. Will then, for each AI type of the new unit, compare the new unit with the best current unit that has the matching default AI type.	
Rationale	ale The main advantage of Swordsmen over Axemen and other early units is that Swordsmen are better at attacking (AI) cities held by Archers.		
See also	907a renames Praetorian to Legionary.		

Battleship ha	as the (non-default) AI type Escort.	Destroyer is the only late-game unit with Escort AI type. I don't think the Escort type is required for accompanying cargo ships, but if more escort ships are needed, the AI will only train ships with the Escort AI type to fill the ranks.
Rationale	expensive. They can handle enemy	nan Destroyers and aren't that much more Battleships, and a mix of Destroyers and game ships (Missile Cruiser, Stealth Destroyer)
See also	905a removes the Escort AI type fro	m Caravel.
Ai civ that so cities assum	s of the tech utility calculation of an cale with the civ's current number of the up to one extra city when the civer ready or is training one and has a site.	The BtS and K-Mod code, for the most part, accounts only for current cities.
Rationale	No particular reason not to look ahe predict. Should be relevant mainly in	ad with tech evaluations. One city is easy to the early game.
	ion of an extra trade route granted by lless of whether settlers are coming ι	a technology takes into account all planned city up).
Rationale	The AI is sometimes very slow to dis	scover Currency.
Tbd.	Currency still seems to be underrate	ed (and Code of laws overrated).
Bureaucracy modifiers. A	evaluation takes into account y when evaluating special commerce nd some value is added to account creases of the city's base commerce.	Special commerce modifiers are evaluated by taking the modifier times the current base rate of the respective special commerce type. K-Mod increases the result to account for possible future weight increases (slider position), and accounts for future growth when evaluating base yield modifiers – but not for special commerce modifiers.
Rationale	The AI had tended to omit the Educa	ation tech entirely.
AdvCiv		BtS
an asset val	nnologies and Horseback Riding have ue of 6, Classical techs 12, Medieval ance 24, Industrial 30, Modern and	
The Infantry	unit has an asset value of 4.	3 for Infantry but e.g. 4 for SAM Infantry.
		The total asset value of a civ is computed as 2 per citizen, 1 per land tile, up to 48 per technology, 1 to 5(?) per non-wonder building, 16(?) per great wonder, 8(?) per national wonder For units, the asset value usually corresponds to the square root of its power, rounded down; though e.g. not for Infantry.
See also	130p uses asset totals for computing trade-based relations modifiers.	The total is used only for deciding whether an Al civ asks for a free technology or offers one.

Rationale	cost only 60 research and count as assets) cost at least 88 food and 8 A intentional: when the human player	d toward technologies. E.g. early technologies 8 assets, whereas 4 population (also worth 8 Archers cost 280 production. This is probably gets ahead technologically, the AI is supposed to s and citizens. It was just a bit too extreme, at least
	Horseback Riding being treated as	an Ancient tech might be deliberate (*shrug*).
Tbd.	The asset values for buildings look crazy; e.g. 1 for Drydock but 2 for Barracks and 3 for Lighthouse. Hard to say how the original developers came up with these.	
planned city	uating the Great Lighthouse, check y sites to estimate how many coastal might be in the medium term.	BtS only considers the currently owned coastal cities, K-Mod adds a projection based only on the map size.
Rationale	Just a little tweak.	
131b	Al weights in Civ4TechInfos.xml,	Civ4CivicInfos.xml
AdvCiv		BtS
	I weight for Feudalism, Sailing. And reased the cost of Iron Working.	All weights are 0 in BtS and K-Mod. Al weights are added to the utility values computed in Al tech evaluation. The intention was probably to give non-DLL modders a way to bring the Al to research techs with novel abilities.
Rationale	In test games before releasing v0.93, half of the AI civs were researching Iron Working right after Bronze Working, and Feudalism was practically always researched before Machinery. This is out of step with the historical development and, more importantly, makes these techs unattractive to research for human players as they're easy to get in trade.	
	In testing with v1.0, Iron Working isn't as popular anymore; not sure why. So I've set the AI weight for Iron Working back to 0. Usually some civs go for Iron Working very early – I suppose civs that lack both Copper and Horse –, while others delay it until the late Classical era (if they can't trade for it). I guess that's OK.	
	I've already done some work on Sai	iling (see 131 above), but the AI is still to fond of it.
Tbd.	This is a temporary measure. Not sure how to fix this more permanently though. Longbowman and Serfdom really are very useful for the AI.	
	The AI weight should arguably be multiplied by the number of cities in the DLL in orde to match the scale of the tech utility values. Currently, a non-zero AI weight for a late tech would have less impact on a map that gives civs a lot of room to expand. Shouldn't be much of a problem for early/ midgame techs because civs can't expand that quickly.	
Slight nega	tive weight for Bureaucracy	
Rationale	The AI evaluation is pretty precise, to civ in Bureaucracy almost all the times.	the civic is just too powerful. Don't want every Al ne.
131c	Dower values of buildings	
	Power values of buildings	f 104e also for some other changes to never
See also	UWAI uses its own power ratings (cf. <u>104e</u> , also for some other changes to power values), but the power graph (Info screen) still shows the BtS power ratings and they're still used for many AI decisions.	
AdvCiv	1	BtS
I		

weariness a	gs with defense, XP and war abilities contribute (a little) to the ver value (power graph) of a civ.	Some buildings with production abilities also have power values, e.g. Forge.
Rationale	Counting some military power for buildings seems fair enough in general, may help a little to deter the AI (and humans) from attacking difficult targets. Production abilities are reflected by the production curve though and both UWAI and K-Mod's AI_startWarVaI function take the production curve into account. (Arguably, they should also take into account XP abilities, but, so far, they don't.)	
Config	iPower tag in Civ4UnitInfos.xml. Note that the DLL does <i>not</i> scale those values according to the game progress; therefore, a late-game building like the Pentagon, contemporary with e.g. power-22 Infantry units, needs to have a high power value to have any noticeable impact. It would be better to let the DLL compute a power value from the various militarily relevant building abilities and adjust that value to the game progress, but this isn't worth the implementation effort (in particular, updating the caches at CvPlayer and CvArea would take some effort).	
See also	This CFC post by made me aware that the Great Wall's power value is too high – especially since 310 usually disables the Great General ability.	

132	Changes to civics and religion trades	
AdvCiv		BtS
Can (a) bring vassals and war enemies (peace negotiation), or (b) any civ through a Spy, to switch to any economy and religion civic except the initial ones, and to any major religion (same threshold as for "not enough of our people follow that faith"). Exception: A master with a state religion can't ask its a vassal to accept a different state religion. A civ with a state religion can still (as in BtS) try to force another civ into that religion if the other civ has at least one city with that religion.		Can only ask anyone to switch to own civics (except the initial ones) and own religion (unless "not enough people").
The petitioned side charges twice as much trade value in case (a) if the petitioner is not running the target civic or religion. In case (b), twice as many espionage points are needed.		
Al civs refuse trades that ask them to make multiple civics changes in the same column. In multiplayer (not tested), I imagine such trades are possible and will result in the player adopting the civic that was added to the trade offer first.		As the trade table is not part of the SDK, mods can, to my knowledge, block only individual trade items, not combinations of trade items.
Rationale	it makes sense to demand a switch vassal to switch out of Mercantilism and religions can spread. (UN votes	ensible – but only when negotiating as peers. E.g. to Pacifism as part of a peace treaty, or to ask a or Theocracy so that the master's corporations are yet another matter. I think there are few, if vics that would work well and make sense.)
	Also more interesting (and entertain	ing) options this way.
		ised civic makes sense in case (a) because the s, and (somewhat) in case (b) because the Spy

	owner lacks familiarity with the targe	t civic/ religion.	
	seems far-fetched to switch someon civ in the game has been in Vassala	that many options on the diplo screen. Also e to, say, Vassalage in the Modern era, when no ge for 500 years. Assume civs to be somewhat onomics. These are also the columns with the Property and Theocracy.	
Config	New tag bCanAlwaysForce in Civ4C	CivicInfos.xml.	
	n to be present in the city where the	The target religion has to be present in any one city.	
Rationale	More plausible this way; don't think i	matters much for game balance or AI behavior.	
	e impact of the number of cities with igion on the mission cost.	K-Mod already adjusts the mission cost but rarely increases it by more than 100%.	
Increased the force-civic by	e base cost of force-religion and v 25%.		
the target rel threshold as	The AI doesn't use the force-religion mission if the target religion has few adherents (same threshold as the "too few of our people follow that back to its former religion after 5 turns. faith" response).		
	Being forced to convert from a widespread religion into one with just a single city can be very painful. I've considered allowing only major religions as the target religion, but a cost increase and a change to AI behavior should suffice.		
Config	Partly in Civ4EspionageMissionInfos.xml		
	The number of religious cities should be factored into the mission cost <i>modifier</i> , not the base cost, because the UI shows a breakdown of the modifier, i.e. the impact of the city count could then be displayed by CvGameTextMgr::setEspionageCostHelp. Same for the cost increase when the Spy owner doesn't run the target civic or religion.		
predicts the I	to change civics or religion, the Al osses from anarchy based on the ced (production) and GNP (gold + 4s) curves.	Based only on city counts, both of the AI civ and the human who's asking for the change. Can underestimate the cost by a factor of 10 in the late game.	
	multiplier for the difference between nd the new AI civic value.	The cost of running a bad civic is also underestimated by a factor of 10.	
	The human cities shouldn't play a ro during the second half of the game,	le, and the AI city count could well stay the same but the cost of anarchy doesn't.	
	The AI should charge extra or refuse when asked to switch out of a hurry-production civic by a player who may well be about to declare war. Or perhaps the change-civics attitude threshold already covers that wariness Different tack: Tack a peace treaty onto change-civics and change-religion trades.		
132b			
	e reluctant to switch civics if their	Vassal/master status doesn't affect civic choices.	
master is hur	IIdii.	The diplo bonus from sharing a religion with the master factors into the religion choice of the vassal.	
	Humans tend to ask vassals to adopt certain civics; switching back and forth doesn't help either side.		

Switching to a state religion requires at least one city with that religion; doesn't suffice if another team member has a city.
No special need for team members to align their state religions. Major religions are also determined based on per-civ city counts, and not per-team.

133	Al cancels more deals	
AdvCiv		BBAI
		Tribute deals remain in place until (if ever) the Al reaches so much military power that it wouldn't have agreed to the deals in the first place.
Rationale	The problem of lingering tribute may have been introduced by BBAI, which replaced BtS/Warlords custom code for deal cancelation with calls to AI_considerOffer. K-Mod has mostly repaired this (deals from non-vassal tribute demands and gifts do get canceled), but missed a spot.	
trade, all trade-denial conditions are checked. conditions like those based on attitude.		Trade value is checked every turn, but not denial conditions like those based on attitude. There's a special clause that cancels deals with the worst enemy of an AI civ.
Rationale	I think this was the intended behavior from the beginning, but a bit awkward to implement. (Comment by karadoc in <code>CvPlayerAI.cpp</code> : "getTradeDenial is not equipped to consider deal cancelation properly.") The denial check also cancels deals that no longer make sense for the other sid when a player imports Rice and later settles on a Rice resource.	
AdvCiv		K-Mod
The tolerance for continuing resource deals when the trade values have become uneven starts at 50% and decreases to 20% over time.		
human playe cancellation ratio of the tr of the trade per-turn com	olerance is exceeded, deals with ers aren't necessarily canceled. A probability is computed based on the rade values, the absolute difference values in relation to the AI civ's total nmerce, the game speed setting and of civs that the human player is in .	
Rationale	The changes to AI resource evaluation (change 036) lead to more fluctuation in trade values; hence the increased tolerance and randomness

		ess of resources – arguably making the GPT limits limits. Still: I don't want the relaxed limits to be	
(Not an AI change:) When a civ doesn't have enough gold to pay for an active gold-per-turn deal, not even after (force-)increasing the gold slider to 100%, the gold-per-turn deal gets canceled by the game rules. A civ that can no longer pay for gold-per-turn deals (typically after losing cities at war) will go into strike. The recipient keeps receiving the gold even if it isn't paid. The AI will cancel gold-per-turn deals, but only once they're no longer too recent to cancel.			

Rationale	It's not uncommon for small civs in the late game to pay a large portion of their budget for imported resources. When a big (human) civ quickly takes cities from such a small civ, the effect of the subsequent strike can be noticeable and confusing. It's also illogical that the gold keeps getting received without getting paid. I don't see a credible way how this new rule could be abused (i.e. to cancel war reparations).
See also	This situation might be exceedingly rare if it weren't for the changes to AI resource trades (036).

	trades (<u>036</u>).	_

135	Changes to multiplayer
See also	004v removes square brackets around the names of human civs on the scoreboard. 108b applies StartingLocPercent from handicap in multiplayer. 054 removes some options from the Staging Room screen.
No Civ4lerts about humans willing to become a vassal.	
AI won't ask one human to stop trading with another human.	

AdvCiv	BtS	
135a	Resource bubbles	
	ctivates resource bubbles in Hotseat, active until a player deactivates	Resource bubbles are deactivated at the end of each human turn. Other map layers (e.g. yield display) are not reset.
Rationale	The BtS behavior is annoying if all players want to play with resource bubbles. Otherwise, the players could still agree not to activate them, or one player flicks them on and the next one flicks them off.	
Tbd.	The proper solution might be to remember each player's active layers at end of turn, and restore them at the beginning of the next turn of that player. Same for player options and BUG options, which are currently shared by all players. Could store layers and options in savegames, but storing them in non-serialized data members of CVPlayer would already be an improvement.	
See also	004m increases the default zoom distance (also reset each turn in Hotseat).	
135b	MoreCiv4lerts in Hotseat	
AdvCiv	BUG	
the MoreCiv	Added per-player memory to the BUG alerts in he MoreCiv4lerts fire every turn in Hotseat; unusable. ones, like tech trades, are in that package.)	
Rationale	The first package of alerts seems to have been implemented with multiplayer in mind but not the "More" ones.	
	This might also be fixed in the BUG main branch (see this commit).	
Tbd.	Don't know if the alerts also work for networked multiplayer.	
See also	106c also fixes issues with Civ4lerts. 106b always opens the Event Log when there is a new message in Hotseat.	
135c	Debug tools in multiplayer	
AdvCiv	BtS	

Can use WorldBuilder (WB) and Debug mode in WB is always available in singleplayer; Debug multiplayer if enable debug tools multiplayer is mode (Ctrl+Z) requires cheats to be enabled set in GlobalDefines devel.xml. (I quess all players should set it if multiple PCs are involved.) multiplayer, both WB and Debug mode are In networked multiplayer (i.e. anything except Hotseat), "chipotle" needs to be set as the game the SDK and several checks inside the SDK, name under "Host Game" in addition to the XML presumably to make certain that cheating is switch. The text on the large flag button will then impossible. say "cheats enabled" in order to make sure that no player can secretly cheat. The cheat code in civilizationIV.ini doesn't affect multiplayer. Entering the WB makes network games go out of sync (OOS) immediately; will have to save and reload afterwards.

through CivilizationIV.ini (code "chipotle"). In blocked through a cheats-enabled check outside

If the game name is "chipotle", only players with even slot id numbers create autosaves.

If a player changes the game name to "chipotle" through the in-game menu ("Game Details"), an announcement informs all players that debug tools have been enabled.

When testing multiplayer on a single machine, both players try to write to the same autosave file, leading to annoying error popups.

Rationale	Debug tools are indispensable for multiplayer testing. Not sure if the OOS issue with the WB can be fixed; could just be a side-effect of my hack to make the WB accessible.
	Still missing: Python console (impossible?)
	Autosaves: Don't know how to check if both instances run on the same machine, so I'm assuming that the game name "chipotle" is only used for such test games.
See also	127 allows enabling AI Auto Play in multiplayer. 001n fixes OOS errors. 007 describes how OOS errors can be debugged on a single PC; and there's a short guide about the various log files.
setPlotHel	the cheat level checks in the CvGameTextMgr class more easily, I've split the Lp member function into several subroutines and made some changes to const hat could make it a bit difficult to merge this change into another mod.

	In multiplayer games, the Settings tab (Victory screen) shows the game end turn only if it's different from the default (500 on Normal speed).
Rationale	Tidiness.

136	Changes to map trades	
136a	Circumnavigation checked at end of turn	
AdvCiv	K-Mod	

AI) player's to navigated the trade, two player on conditions or rewarded on completed. It always wins are always of was also the extra movements of the conditions of the con	urn if that player has circum- e globe. Thus, if, through a map eayers meet the circumnavigation in the same turn, only that player is whose turn the map trade is in a human-Al map trade, the human because trades involving humans completed on a human turn. This case in BtS (but not in K-Mod). The ment still applies to to a whole team.	Circumnavigation is checked during each team's turn, not during the player turns. In BtS, the team turns happened all in a row, i.e. without intervening player turns, at the start of a game turn. In K-Mod, team turns and player turns are interleaved, i.e. circumnavigation gets checked for team X right before the players on team X take their turns. That means, when two players satisfy the circumnavigation condition through a map trade, the player on whose turn the trade is completed misses out (always the human when it's a human-Al trade). That player even misses out if it has completed circumnavigation through
circumnaviga	ation the AI refuses to trade its man	unit movement earlier on the same turn (before making the map trade).
If it can't trair	Caravels but the other side can,	Whether an AI is willing to trade it's map depends entirely on the leader's attitude threshold.
	turn instead puts the AI at a bit of a c completed on an AI turn. That said, t relatively rarely, and never with an ir change doesn't really hurt the AI.	sketched on the upper right. Checking at end of disadvantage because human-AI trades can't be the AI suggests map trades to human civs attention of completing circumnavigation, so the
	The trade refusal should make it har Al that is already close.	der for a human to steal circumnavigation from an
136b	Al doesn't pester human with unattra	active map trades
AdvCiv		BtS
The AI proposes no trades to a human civ where the human side receives only the AI map when the human value of that map is 5 gold or less.		The AI occasionally asks human civs to exchange maps even if the AI map has no value to the human.
Changed the rounding of AI trade values to multiples of 5. Makes the implementation of the above change a bit easier.		Trade values are rounded to a multiple of 10.
	es to accept trades with a value of (the equivalent of 5 gold).	
Rationale	These map trades are pointless dist	ractions.
Config	The rounding change is implemente	d in GlobalDefines_advc.xml.
AdvCiv		K-Mod
No low-value	map trades between AI civs either.	I think K-Mod added calls to AI_counterPropose to AI deal negotiation. That function will usually insert the map of one side into the deal.
	Going through all tiles on the map is CvPlot::updateRouteSymbol for a	slightly costly (though not nearly as costly as human player's map).

137	Default/ recommended player counts; map dimensions; help text for difficulty levels	
AdvCiv	BtS	

On the Custom Game screen, the dropdown menu for the sea level includes recommended changes to the number of players. ("+x% players to match the recommended number of players. recommended")

When the world size is changed, some player slots are automatically opened or closed in order No such thing happens when the sea level is changed.

Rationale

Having the proper number of civs is imo pretty important, and sea level has a big impact on this. The recommendations, if followed, should lead to about the same number of cities per civ as with Normal sea level.

Recommendations weren't my first choice; I had wanted slots to be opened and closed automatically when the sea level changes. This can't be done because the Custom Screen isn't part of the SDK, When slots are opened/closed in response to a world size change, it's possible (through a hack) to also factor in sea level, but then the sea level needs to be configured before the world size, which isn't what players normally do.

Changed the default player number for Standard-size maps to 8 (+1), Large maps to 11 and Huge - 11. (+2) and for Huge maps to 16 (+5).

Default player counts are Normal - 7, Large - 9

Config

Civ4WorldInfos.xml

Also reduced the starting distance percent parameter through GlobalDefines advc.xml to match the increased player density. Can't expect starting sites to be as far apart anymore.

See also

The number of resources per player increases more slowly with the default player count than the number of tiles. This is because 129 places fewer resources per tile when there are many eligible tiles.

140 adjusts various map size modifiers to match the new player count recommendations.

031 fixes an issue in the formula for the target distance between starting sites.

Increased the normal land area (Normal sea level) by 1 percentage point, decreased map dimensions, aiming at an aspect ratio of ca. 7:5 on smaller map sizes) and at a number of map tiles per civ (assuming the AdvCiv default civ counts, see above) that increases slightly with each world size.

These changes don't affect all map scripts equally. Pangaea, (Custom) Continents, Inland Sea, Ice Age and (sometimes) Shuffle set their own land-sea ratio. The changes to grid dimensions don't affect scripts that override the getGridSize function.

The normal land area is 22%, the aspect ratio seems to be aimed at 8:5. (It varies guite a bit between world sizes because the width and (slightly higher on larger map sizes, slightly lower height need to be multiples of 4.) The numbers of tiles per civ on (maps that don't override getGridSize) are:

> Duel: 480 Tiny: 555 Small: 512 Standard: 624 Large: 740

See also

This change has become tightly coupled with 165, which tweaks the dimensions of some individual map scripts.

Huge: 931

129 makes some tweaks to the calculation of per-tile latitude values. That subject is related to map aspect ratios. Change 129 also slightly decreases the density of resources on larger maps.

Rationale It's strange that Firaxis used a land-sea ratio of only 22%, much smaller than the 28 to 29% on Earth. My best bet is that this low ratio worked better with the Fractal algorithm, which was, apparently, ported from Civ 3. Perhaps they also were more willing to adjust the land-sea ratio than the map dimensions or the default player count when aiming at the proper amount of land per player. Anyway, those are my reasons for not increasing the land-sea ratio further. Smaller maps would move the tropics and polar circles too close together. That's also why I use slightly smaller aspect ratios for the smaller map sizes. I don't think there's a compelling reason for the ca. 8:5 (golden) aspect ratio. Considering that latitude values are computed linearly, i.e. without the increasing north-south stretching that most modern map projections apply, a 1:1 aspect ratio (like the Mercator projection) would make the most sense to me, combined with the bias against placing land near the poles that most map scripts exhibit. The only reason for using a higher aspect ratio, to me, is that people are used to world maps being oblong - and that the space reserved for the minimap on the HUD is closer to 2:1 than to 1:1. As for the default player counts, BtS gives each player far more space on the larger maps than on the smaller maps. That should not be the default because it leads to very different – in my opinion boring – gameplay on large maps. There should be a bit more land per player as the map size increases because resources are placed less densely on larger maps, i.e. cities tend to be farther apart. I'd also like there to be a (verv) slightly higher number of cities per player on larger maps – because I think that corresponds better to player expectations, and because larger maps tend to have bulkier continents and thus more potential for conflict; not necessary to put the civs all that close together to get some early-game AI warfare. With the 8 players on the Standard size, as a baseline, should usually lead to an Alinitiated war before 1 AD. It's important that the default settings lead to some military action because AI war planning is the biggest single contribution of AdvCiv. Since UWAI decides mostly rationally whether to start war preparations, the space for

peaceful expansion is a big factor in the timing of warfare.

The choice for a low player count on Huge maps may have been made for performance reasons; much less of a problem with current hardware and the more optimized code.

Some tweaks to improve support for aspect ratios less than 1.5: ...

The minimap doesn't show black bars to the sides; instead, the whole panel gets adjusted to the map's aspect ratio.

See also 092 enlarges the minimap panel, especially its height.

When zooming out all the way in Globe view, the Earth no longer morphs as much into a spherical form.

Config	XML\Misc\CIV4DetailManager.xml
	At low aspect ratio, the final stage of morphing abruptly compresses the map vertically. That looks a bit awkward.
The Fractal agorithm uses internal dimensions that approximate the map's dimensions more	

closely. (The internal dimensions have to be powers of 2; so the internal aspect ratio is going to be either 2:1 or 1:1.)

Should lead to fewer rounding errors. Not sure if the internal dimensions are relevant Rationale for anything else.

	em to result in any graphical artifacts. of	ultiples of 4, which corresponds to a "cell" size 4x4 tiles per cell. I think those cells are levant for the graphics engine.	
Config	The cell size is still set in $Civ4TerrainSettings.xml$, but the map sizes set in $Civ4WorldInfos.xml$ no longer (fully) conform to it, and the DLL ignores the cell size and instead simply multiplies the dimensions loaded from Civ4WorldInfos by 2 – or by 4 when a map script defines its own dimensions (for compatibility with map scripts not included in AdvCiv).		
Rationale	It's important to get the map size right, so that, with the default player count, at least for the most frequently used map scripts, incentives for warfare between civs arise at just the right time, namely, when the Barbarian threat tends to subside and still clearly before the Medieval era – the game mustn't just skip over (classically) ancient warfare. On the other hand, players mustn't get boxed in too frequently. Especially for human players, early war should normally be an option, not an imperative. Ideally, I'd like each civ to be able to found 5-point-something cities near its starting site; enough to stay competitive into the midgame but not the endgame.		
	The multiples-of-4 restriction really it made more difficult to get this right.		
See also	910 changes the years-per-turn formula – in order to align tech progress better with the real time line.		
Tbd.	Should perhaps decrease the years per turn in the early game a bit (and increase tech costs accordingly) to make pre-Medieval warfare a less delicate goal to achieve.		
AdvCiv	K-	-Mod	
Rewrote the English and German help text for each difficulty and speed setting and [unused] for settings doesn't seem to be shown anywhere each map size and sea level setting. Help text for difficulty and game speed setting shown on the final screen ("Snapshot") of the "Play Now" dialog chain.		ettings doesn't seem to be shown anywhere. elp text for difficulty and game speed settings is nown on the final screen ("Snapshot") of the	
	M _i or	ome of the info is misleading, e.g. it says that onarch difficulty makes the AI "much smarter" that Marathon has an entire game's worth of rns in every era.	
Rationale	nale I imagine that most players of this mod (wisely) never use "Play Now", but players do use it might actually believe the info provided in the help text.		
	My texts about the difficulty settings are a bit clunky but at least somewhat informative and not highly misleading (I hope).		
		ayer count; 2 (Duel) to 11 (Huge) in BtS. ne building class prereq. modifier is used e.g. r the Library requirement of Oxford University.	
See also	154 rounds to the nearest integer wher this is also done for quest requirements	n applying the building class prereq. modifier; s.	
	CFC post (last quote box)		

Rationale	Now that the default player counts are increased (by a lot on Huge maps), the BtS scaling gets totally out of whack. It was already too sensitive to map size in BtS, and it's a bad idea in general because putting more players on a map gives each player fewer cities and thus makes it harder to fulfill quest requirements. The building class prereq. modifier seems like a natural fit for this purpose.
Config	All quests with a map-size adjustment (except Blessed Sea) now call a function worldSizeTarget in CvRandomEventInterface.py. The formula can be adjusted there.

138	Religion assignment when starting in later eras	
AdvCiv		BtS
When starting in an era other than Ancient, the automatically founded religions are assigned based on handicap, Spiritual trait and favorite religion. More specifically, on difficulty settings above Noble, the game prefers to assign religions to AI civs, and on lower difficulty to human civs; always prefers Spiritual leaders and AI leaders whose favorite religion is among those to be founded.		After assigning the same number of religions to everyone, the remainder is assigned to a random subset of civs. In particular, favorite religions don't play a role (except possibly with the choose-religions option).
The top priority is still to give each civ the same number of religions. The above change only applies when that is impossible.		
	Religions are hardly shared in games starting in in the Medieval era or later because almost everyone founds a religion. Assigning the religions to civs that like to spread them (Spiritual, favorite religion) should lead to more block-building like in normal games (Ancient start).	
	Also want to make it more predictable for human players whether they'll get a religion if there aren't enough to go around: On Emperor difficulty or higher, probably not. Otherwise, choosing a Spiritual leader should guarantee a religion.	

139	AI evacuation of cities	
AdvCiv		BtS
next turn, the combat units receive defendedicated defense can evacuate if the dangerous.	•	The AI only evacuates noncombatants; may even reinforce hopeless cities.

Rationale	Evacuating units without defensive bonuses and badly injured units seems like improvement. Units with high defensive bonuses can be expected to cause lost the attacker even when badly outnumbered; might, in particular, draw out the attacker's siege units.	
and settle for peace when the evac		an't scare away all defenders from several cities, ated defenders gather for a last stand. Sounds namics of the game, would make conquests too
	Fixes the "meatgrinder" loophole, which was still on the BBAI to-do list when the was discontinued.	
Config	AI_EVACUATION_THRESH in GlobalDefines_advc.xml

		ecks if the attack has provided relief to any nearby r that city. (This will matter very rarely.)
Reduced AI	trade value for evacuating cities.	The tactical situation does not factor into the AI trade value of a city.
Rationale	The AI should be more willing to give a city away when it thinks that it can't hold onto it, and the recipient (which may or may not be the civ about to conquer the city) should be less willing to pay for such a city.	
See also	ctr deals with other changes to city trade value.	
If no city looks safe, idle ships are kept at sea. are used for guarding resources and patrol, but the rest is moved into some city even if none a		
		Upgrade cities are chosen only based on proximity, safety doesn't matter.
See also		K-Mod and a BBAI change causes idle ships to be ss of danger. <u>001s</u> deals with that issue and

Rationale	The careless positioning of ships can hurt the AI greatly against savvy players.		
Tbd.	Should perhaps use a greater maximal range when checking for potential attackers, is currently 3 tiles. Embarked attackers are counted but could be outside this range (still able to reach the city).		
	Rather than just flagging cities as safe or evacuating at the start of a turn, a scalar safety rating should be (pre-)computed.		
	While gathering forces for a naval landing, the AI currently loads units into cargo as soon as they reach a tile with a ship; then the units stay in cargo for several turns. This is a needless risk.		
See also	This change doesn't cover threats from civs that the AI isn't at war with, i.e. surprise attacks on the AI navy on the same turn that war is declared. <u>162</u> addresses these.		
	advc.ctr reduces the trade value of cities based on their safety/ evacuating status		
The AI only spends Great People (super specialist, special building, hurry production, Great Artwork) on cities that, at the moment, appear safe.		No such safety checks, neither in the BtS code for Great generals nor in the K-Mod code for the other Great Person types.	
Credits	Elkad made me aware of the probler	m in this CFC post.	

140	Map-size adjustments (Civ4WorldI	nfo.xml)
See also	910 handles the research modifier b	ased on map size.
	When Civilopedia is accessed from depend on the map size as a range	the opening menu, <u>004y</u> shows numbers that from Duel-size to Huge.
AdvCiv		BtS
with a new for that is less so cylindrical/ to Maintenance religion spreformula is radimensions at the map in the taken into according to the specific taken in	I calls to CvMap::maxPlotDistance unction CvMap::typicalDistance sensitive to world-wrap options (flat/oroidal) than maxPlotDistance. e, espionage mission costs and ead are affected by this change. My ather complicated; apart from map and world-wrap, the crowdedness of erms of the (initial) player count is ecount: The more land is available the lower the distance maintenance	maxPlotDistance is the maximal possible distance between two tiles. That's e.g. 55 on Small cylindrical, 72 on Standard cyl., 89 on Large cyl. and 82 on Small flat. I.e. the worldwrap type has a big impact on distance maintenance.
Sample numbers from the new formula (Fractal): Small, cylindrical, low sea, 7 civs: 43 Small, flat, low sea, 7 civs: 48 Standard, cyl., 7 civs: 60 Large, cyl., 10 civs: 71 Large, cyl., 6 civs: 92		
		50% on Duel, increases in steps of 10 to 100% on Huge.
Rationale	Map diameter shouldn't be so decisi	ive. Empires tend to be circular even on oblong

	maps or maps without world-wrap. What leads to high distance maintenance is mostly a high number of cities, and if a map has lots of space for each civ, civs shouldn't be punished for filling that space.		
	Flat maps are <u>known</u> as a trick for reducing distance maintenance; on high difficulty settings, AI civs pay much less for city maintenance than human civs, and thus the AI civs benefit less from additional maintenance reduction.		
	I'm not sure how to set the distance maintenance multiplier in XML; that multiplier and the one based on map diameter cancel each other out to an extent. Usually, BtS adjusts too strongly to map size, so I've reduced the step from one map size to the next a bit.		
Tbd.	Not sure if DistanceMaintenancePercent in Civ4WorldInfo.xml should be changed as well. Currently 50% for Duel and increases in steps of 5 to 100% for Huge. This is countered by the maxPlotDistance formula, but only partly I think.		
See also	The Tides of War mod also changes the maxPlotDistance formula; this Kek-Mod Git commit merges that formula into K-Mod. I haven't looked at it in detail, but I think I'm good with my own formula.		
government on Normal s (lower max)	The maintenance distance (from nearest government center) is now capped at around 25 on Normal settings; lower cap on smaller maps (lower maxPlotDistance), higher cap on larger maps (higher maxPlotDistance). There is an XML parameter MAX_DISTANCE_CITY_MAINTENANCE, but this only serves as a weight on maintenance costs; there is no actual limit on the distance or the cost.		
Rationale	If a city is very far away from a government center, it shouldn't matter how far away exactly. The BtS cost punishes (very) remote colonies too much.		
Config	The distance cap is tied to MAX_DISTANCE_CITY_MAINTENANCE (in GlobalDefines.xml); changing that value will also change the cap.		
maintenance steps of 4 to (hardcoded) maintenance initially than recommends	e multiplier for number-of-cities e is 42% on Duel and decreases in 22% on Huge. It gets multiplied by a factor that slightly increases e on crowded maps (more players the Custom Game screen s based on map size and sea level) decreases maintenance on sparse		
See also	Prior to AdvCiv 0.97, I had decreased the modifier in steps of 3. <u>CFC discussion</u> about that. Also addresses the crowdedness factor.		
	advc.exp.1 deals with number-of-cities maintenance for very large empires.		
Rationale	Steps of 5 percentage points would be OK if Duel was at 100%; as it is, the ratio e.g. between Small (35%) and Large (25%) is too large. Or perhaps it would also work if only 9 civs were placed on a Large map, however:		
See also	137 changes the default number of civs per map size.		
	Units per turn on Duel-size and Tiny Small, Standard and Large, and 4 on Large, 5 on Huge.		
Reduced the number of free bonuses from national wonders (Broadway, Rock'n'Roll, Hollywood) by 1 on Standard, Large and Huge maps.			

decreasing in Trade profit i	ess multiplier 137% on Duel, n steps of 12.5 to 75% on Huge. multiplier 70% on Duel, decreasing in to 33% on Huge.	150% on Duel, decreasing in steps of 20 to 50% on Huge. 80% on Duel, decreasing in steps of 10 to 30% on Huge.	
Rationale	As above; don't expect the average larger maps than on smaller ones.	number of cities per civ to be that much higher on	
Tbd.	Corporation maintenance decreases rapidly with increasing map size: 400% on Duel, 50% on Huge. That's probably not ideal.		
buildings red Tiny maps, 5 Standard (11	The six national wonders with prerequisite puildings require 4 buildings on Duel-size and Tiny, 5/4 on Small (no change), 6/4 on Standard, 7/4 on Large and 8/4 on Huge, always rounded down. The map-size multipliers are 4/4 on Duel and Tiny, 5/4 on Small (no change), 6/4 on Standard, 7/4 on Large and 8/4 on Huge, always rounded down.		
Cathedrals and the Statue of Zeus require 3 Temples/ Monuments on Small maps.		Consequently, Cathedral and Statue of Zeus, which have a base requirement of 2 buildings, require only 2 buildings on Small maps.	
Rationale	Oxford University is almost indispensable for competing in the Industrial era, and e.g. on a Large map with 11 civs (now the default number), it's difficult to acquire peacefully 7 cities where a University makes sense. The change to Cathedrals and Statue of Zeus is just a side-effect.		
See also	310 gives the Great Wall a (base) requirement of 1 Wall.		
Config	The base numbers of prereq. buildings are set in <code>Civ4BuildingInfos.xml</code> , but I didn't change these. The map-size modifiers are in <code>Civ4WorldInfo.xml</code> . The change to the rounding behavior is in the DLL (<code>CvPlayer.cpp</code>).		
Tbd.	Would prefer abilities that scale with the number of buildings, e.g. "Oxford University: +10-15% research (based on map size) per University up to a maximum of 60%". No required number of buildings necessary then.		

141	No diplo bonus from gifting GP	
AdvCiv		K-Mod
Gifting a Great Person (GP) to an AI civ does not- affect relations with that AI civ. Like in BtS, only units with positive production cost can boost relations when gifted.		+1 relations for each gifted GP.
Rationale	Too easy to take advantage of for a	diplo victory.

	Gifted military units should only boost relations when the AI has an immediate need for military aid. The relations bonus should probably also be capped; seems exploitable.
	Comment by karadoc in CvUnit::gift: 'It would nice if there was some way this could also reduce "you refused to help us during war time", and stuff like that. But I think that would probably require some additional AI memory.' I don't think this is worth the effort, but perhaps gifted units should count for "you gave us help" instead of "fair trade".
	Imp. Knoedel has implemented a new memory type for his Sunset of Civilization mod: <u>Git commit</u> That looks very basic. The main thing of interest would be his iUnitValue formula.

142	Master gets a happiness bonus only from the first peace vassal	
AdvCiv		BtS
bonus only fr		Each vassal, capitulated or not, provides +1 happiness in all cities of the master.
	In large games, the stacking happiness bonus, combined with the free luxury resources from vassals, can let master civs ignore happiness altogether. I also dor like that the bonus applies even if just one city is left; this provides an incentive to keep tiny vassals around, which lead to some oddities in global diplomacy (despite efforts to fix such issues). Also, oppression of capitulated vassals is hardly a point pride. Should perhaps remove the bonus entirely, but for voluntary vassals "We influence other civilizations" makes some sense, and these vassals are harder to get the control of the cont	
	The anger at the vassal side seems sensible (though unimportant) and can't stack.	
		see under <u>130v</u>) remove several disadvantages of o, as far as game balance goes, I don't think a

143	Recently-canceled memory for voluntary vassal agreements (VVA)	
If a vassal loses 35% of its territory, it cancels the Only capitulated vassals revolt when losing VVA with a per-turn probability of 15%. Cancels immediately when losing 45%.		
	The vassal can then make peace independently (possibly by capitulating), while the master is justly punished for not having protected its vassal. The third party (possibly human) is faced with a strategic decision: focus attacks on the vassal or the master? In BtS, only attacks on the master can break up the VVA (by lowering the master's power rating).	
Config	VASSAL_DENY_OWN_LOSSES_FACTOR in GlobalDefines_advc.xml	

When a vassal cancels a vassal agreement for no particular reason (i.e. vassal feels safe or powerful enough on its own), the (AI) master remembers this for, on average, 20 turns, and refuses to sign a VVA during that time. When the threshold for a VVA, the agreement can flicker on agreement is canceled because the master hasn't protected the vassal, including the case where a capitulated vassal breaks free after losing too much territory, the vassal remembers this for 30 turns (on average), and refuses another VVA. (Whether the master or the vassal remembers is only relevant when the master is human.)

No memory about canceled vassal agreements. When a capitulated vassal breaks free, it often signs a VVA with the same master on the same turn. When a voluntary vassal is near the power and off every few turns.

	The flickering isn't only goofy, it also means that war preparations against a former vassal can easily get interrupted by a new VVA, which is frustrating. Also, some mechanism is needed to keep a vassal independent for a while when the master has failed to protected it.
143b	Cancelation and nukes

VVA canceled also after being nuked repeatedly. Only lost territory counts (and only for capitulated The threshold is randomized; usually, the vassal vassals). doesn't break away until more than half of its cities have been hit. Doesn't cancel if the master has SDI and the vassal does not.

Master's SDI protects vassal.

Vassal cancels VVA if it has any nukes unless master has SDI and vassal doesn't: "doing fine on our own."

Capitulated vassals don't build nukes. When a team capitulates, all it's nukes are scrapped. Nukes can't be gifted (between any civs).

SDI is a team project, but doesn't protect vassal teams.

Vassal's nukes factor into its power rating, but a single nuke doesn't usually make a difference.

Vassals don't hold back on anything.

Can gift nukes to circumvent the diplo penalties.

Rationale	SDI is supposed to be an array of space-based lasers. Should be able to intercept any nukes that the SDI owner wants to intercept. Vassals that are powerful enough to build nukes should stand on their own.	
See also	130v makes the master responsible for nukes fired by a capitulated vassal (obsolete now that vassals can't have nukes). 112 cancels VVA when near victory and stops capitulated vassals from pursuing victory.	
Tbd.	A cancelation condition based on present population vs. population when signed might be better.	
	May want to scrap other units upon capitulation too, probabilistically. E.g. when France surrendered to the Third Reich, the French navy was partly scuttled.	

144 Al gift request (part of the <u>Dynamic Diplomacy</u> changes)

See also

130v exempts vassals from this change and prevents vassals from granting gifts to rivals or to a disliked master.

130o deals with memory about tribute demands. Clears recent-demand memory (which is also relevant for gift requests) when war is declared on an AI civ. 104m: Some gift requests are triggered during war planning.

AdvCiv

BtS

Without considering any specifics, the AI refuses The only randomized aspect of the AI response to gift requests with a leader-specific probability. That probability is based on ContactRand: CONTACT GIVE HELP and between 5% (Gandhi) and 32% (Sitting Bull, Montezuma). I'm capping the probability at 50% for Tokugawa, otherwise he'd always refuse.

a gift request is the decay of recent-demand memory: The request is refused if the AI still remembers an earlier request (or tribute demand). So, the first request is handled without randomness, and if a previous request is far enough in the past, it's very likely forgotten (the expected time to forget is 20 turns).

Requests are always refused while preparing war against the player (no change).

CONTACT GIVE HELP determines only how frequently an AI leader offers a gift to human civs that have fallen behind.

Rationale

Shouldn't be able to use requests to determine reliably if the AI is preparing war. It's semi-decidable now – if a request is granted, then the AI certainly isn't plotting. That said, they might start on the very next turn ...

In BtS, CONTACT GIVE HELP is irrelevant for experienced players; it's nice to give this an actual use.

Memory about requests and rejected demands is Can decrease on any turn. Al may grant gifts not decreased while there is a peace treaty between the two civs. Gift requests are rejected during a peace treaty unless the AI remembers receiving a gift from the player (and that case the peace treaty may well result from a gift to the AI).

when there is already a peace treaty.

Likewise, the AI won't ask for a gift during peace treaty unless the human player (i.e. the proxy AI) remembers having received one or when fewer than 4 turns of peace remain. Will only ask for tribute during a peace treaty if it's about to expire (1 turns remaining).

Rationale

To increase the time in between granted requests. A bit too easy in BtS to keep a Pleased AI from planning war: can reliably sign a peace treaty about every 25 turns. which leaves just 15 turns in between, which can sometimes be bridged by asking the Al to attack a third party (which results in a peace treaty; see change 146). My change makes this tactic unsustainable.

Could argue that "begging for peace" shouldn't ever be a tactic. I like that it makes Pleased attitude relevant even for warlike leaders. Think of it as a Reinsurance Treaty. I don't like that this is something only humans can use.

(Could alternatively merge Kek-Mod's <u>one-sided peace treaties</u>. Though communicating those to the player could be a problem.)

AdvCiv

K-Mod

Al refuses gift request if planning war against the Only refuses if already planning war against the player, and refuses with a high probability if war utility is positive (but not yet planning war).

player. (In BtS, the AI doesn't take the resulting peace treaty into account at all; grants request regardless of war plans.)

AdvCiv		BtS
	g for a gift, the AI asks for the tech most, with a bias for cheap tech.	The requested tech is chosen uniformly at random.
Rationale	element (though the AI function that random element). If cost is ignored, the don't want the AI to ask for expensive shouldn't ask for cheap tech often be	ave to be unpredictable; no need for any random I'm using now, AI_bestTech, does have a the most useful tech tends to be expensive, and I be tech all the time. On the other hand, the AI because this makes the decision of the human given some weight but not full weight.
When asking for tribute, the AI is likely (threefold increased probability) to demand the tech that it needs most, though techs that no other civ knows yet remain off-limits. The demanded tech is chosen uniformly at random from among those techs that at leas civs know.		random from among those techs that at least two
Rationale	Rationale Not quite the same procedure as for gifts because I wanted to keep the exception cutting-edge tech; picking (with certainty) the most useful tech that is known to at two civs would've been a bit awkward to implement because of the signature of the CvPlayerAI::AI_techVal function.	
		Maybe yes: The civ that receives tribute remains so yielding to that civ an edge in (military) tech is

AdvCiv		BtS
civ's religior if the humar	or favorite civic decays much faster	The bonus lasts for an expected 100 turns, regardless of whether the player keeps the civic/religion. Can switch out after 5 turns.
religion dec	e penalty for refusing the fav. civic/ ays faster if the human civ is now in eligion, or if the AI civ has switched	
Rationale	Switching right back is a bit cheap, especially with the Spiritual trait. Until v0.95, the relations modifier was suspended instead of decaying faster, but I think that made it too unattractive to accept AI requests.	
See also	Part of the <u>Dynamic Diplomacy</u> changes.	

146	Hired (sponsored) war results in a peace treaty	
AdvCiv		BtS
When a civ agrees to declare war on another civ at the request of a third civ, the civ declaring war and the third civ automatically sign a 10-turn peace treaty. The peace treaty is automatically added to the trade table when a human player adds a war trade to the trade table.		No peace treaty; can ask someone to start a war, and immediately attack that someone.
	A bit of a loophole in BtS. Also want to be sure that an AI civ doesn't attack a human who has just paid the AI civ to attack someone else; not a problem in BtS because the AI only fights one war at a time, but could be a problem with UWAI.	
	Part of the <u>Dynamic Diplomacy</u> changes. Change <u>100</u> is also about sponsored wars (mostly UI changes). When there is already a peace treaty between the sponsor and the civ declaring war, <u>032</u> resets that peace treaty's duration.	
	ctr causes a peace treaty to be signed after city trades. The implementation of the UI support (trade table) for 146 is based on code written for ctr.	

147	Changes to border tensions	
See also	004g changes the explanation text from "close borders" to "shared borders". (The formula works a bit differently if <u>035</u> is enabled.)	
AdvCiv		BtS
at most equal to the mean of the city's current population and its highest-ever population, or at most 6, whichever is higher. foreign borders can contribute 20 lost tiles. The number of lost tiles is then divided by the total number of owned tiles and multiplied by a		number of owned tiles and multiplied by a personality factor to compute the diplo penalty
Rationale	Shouldn't get -4 relations from a single city choked city; this can easily happen in BtS, even in the late game. I generally don't like when high culture leads to painful diplo penalties. This change reduces border tensions a bit overall, and the following change should even that out:	

When an AI civ steals tiles from a neighbor that There's only a diplo penalty for stealing tiles from the AI civ can't work because they're too far awaythe AI, not vice versa.		
from its citie about this. I whereas the AI civ is 8. E percentage territory and decreases a	es, then the AI civ is slightly upset The multiplier for those tiles is 5, e multiplier for tiles stolen from the Both weights are multiplied by a based on the size of the AI civ's I the map size; this multiplier as more territory is acquired and near 50% by the end of the Classical	The weight for stolen tiles is 3.
The weight for the length of the border shared with another civ (no matter if tiles are stolen) is 5. The result is capped at 40, and no border tiles are counted if the border length is less than 5 tiles.		If the border is longer than 7 tiles, a flat penalty of 40 is counted. In the end, the total penalty is divided by 100 and multiplied by the AI leader's CloseBordersAttitudeChange value (between 1 and 4; no change).
Rationale	Count unworkable tiles because I don't want change <u>099b</u> (culture decay in foreign city radii) to reduce border tensions. Should also encourage civs to put at least enough effort into culture to prevent a no man's land that no civ can work (which is implausible at peacetime). Makes sense to me that the AI is annoyed by not being able to work the tiles that it owns and is inclined to remedy this by conquering the cities near those tiles.	
		e total size of the territory because, to a civ that be a big deal, but not to a civ with 10 cities.
		mmon border penalty to stolen tiles because, eally shouldn't be much bad blood. The BtS
Perhaps let the relations penalty increase sublinearly with the weighted sum of stolen tiles. Easy enough to do in CvPlayerAI::AI_updateCloseBorderAttitude by e.g. exponentiating iPercent in the end with 0.7 and then times 3, but maybe a penalty of 1 or 2 already happens much more easily than -3 or -4 (this would be the goal).		
Stolen tiles with a bonus resource are counted double. Every stolen tile counts as 1 tile.		Every stolen tile counts as 1 tile.

148	Relations to attitude mapping of the AI changed	
AdvCiv		BtS
Pleased, at - Friendly. Pla from any of t three difficult	2 Annoyed, at -9 Furious, at 9 yers receive no relations penalty he difficulty settings. On the lowest sy settings, humans receive relations first impression") of 3, 2 and 1	Friendly at 10, Pleased at 3, Annoyed at -3, Furious at -10. On Noble difficulty and above, all relations suffer a penalty of -1. On Chieftain, humans get +1 relations from AI civs and on Settler +2.

Rationale	In effect, this makes Friendly 2 easier. A distance of 7 between Pleased and Friendly was too much considering that most AI civs are already very unlikely to start a war at Pleased and are willing to trade tech. The additional benefits of Friendly aren't that great. Until AdvCiv 1.0, I had kept the Friendly threshold at 10, making it (in effect) only one lower than in BtS, and I had increased the Furious threshold (in effect) by 1, setting it to -8. This way, Pleased and Annoyed attitude had intervals of equal length, as in BtS. I eventually decided that this is not an important property to uphold and that, on the contrary, a longer interval for Annoyed makes more sense because negative modifiers are easier to stack up than positive ones – mainly through declarations of war. Various changes to relations modifiers in the mod make it considerably harder than in BtS to improve relations well beyond the Pleased threshold.	
		y-based modifier, the benefit is that the player nuch less in the game. It was a bit silly to tell the rst impression everywhere.
	The downside is that players have to BULL.	relearn the thresholds that might be familiar from

See also	115b: Al won't vote for victory when i	tself at victory stage 4.
		though the AI-specific portion of the "first impression" modifier (i.e. from peace weight and warmonger respect) is more often positive than
Rationale	This was a bit of an accident. Until v0.93, I had assumed that the BtS relations penalty (-1) applied only to human-AI relations, and I had meant to replace this with a +1 bonus on AI-AI relations. Now that diplomacy overall is balanced around the inter-AI bonus, I'm finding it a bit difficult to remove it entirely; I don't like when AI leaders are Annoyed at each other from the beginning.	
	Relations bonuses from "fair and forthright" trade are generally easier to attain for humans than for the AI, and some relations bonuses tied to AI requests are only available to humans. This is evened out by relations penalties for rejected requests, but not entirely, one could argue. Let's say that the AI bonus makes up for these asymmetries.	
See also	250d removes a few minor advantages that the AI receives through the difficulty level.	

The time-based relations modifier for having the The limit is between 1 (Willem) and 7 (Ashoka. same state religion has an upper limit between 1 Zara Yagob). and 6, depending on the AI leader. I've left all limits of 3 or less unchanged and reduced all limits above 4 by one. As for leaders with a BtS limit of exactly 4, I've reduced the limit to 3 for about half of those AI leaders so that, overall, the average limit has decreased by ca. 0.5. Similarly. I've reduced the limits for the time-The limit is between 1 (Saladin – Theocracy) and based "wisely chosen civics" modifier by ca. 0.5 6 (Gandhi – Universal Suffrage, Mao, Stalin – on average, reducing all limits greater than 4 by both State Property). one and also almost all limits that were exactly 4. the exceptions being Lincoln (Emancipation), Mansa Musa (Free Market), Washington (Free Speech) and Willem (Free Religion). Rationale To match the decrease of the threshold for Friendly attitude, i.e. so that the new threshold doesn't make too many Al leaders very easy to befriend through a shared religion (or civic, less of a concern). It's generally desirable to reduce modifiers that have almost no rational basis. For simplicity, I've changed almost exactly half of the leaders. When I had to choose among leaders with an equally high limit, I decided based on historical and gameplay considerations; e.g. Lincoln being a strong proponent of Emancipation, also internationally, is (somewhat) credible, Roosevelt (or anyone really) promoting Mercantilism much less so. See also Related CFC post (1st spoiler box) 130n adjusts the time-based ideological modifiers dynamically based on their popularity. See the WIP section (toward the end) for a note about overhauling AI personalities for gameplay and historicity. In contrast, the changes implemented here are mostly across the board in order to make them easy to adapt to ("ideological modifiers don't go as high as in BtS anymore" – simple enough). Limits for religious civics should be reduced if the state religion doesn't match. Tbd. Shouldn't get a net relations bonus for sharing, say, Organized Religion with Suryavarman and running a different religion. To become the worst enemy of an AI civ despite Annoyed attitude is the only prerequisite. not being at war, the total relations value needs to be at least 1 worse than the threshold for Annoyed attitude. Going from Cautious attitude to being the worst enemy just through a 1-point Rationale decrease in relations is too abrupt and can lead to too many changes in worst enemy status, especially during the first two eras. Perhaps the worst-enemy threshold should even be 2 lower than Annoyed, but, seeing that this is a post-v1.00 change, I want to play it safe. See also Rank hate easily leads to Annoyed attitude in the early game. 130c may make flickering between -2 and -1 more common. 130d changes some rules regarding vassal agreements and worst enemies; 130p prefers war enemies as worst enemies. GlobalDefines advc.xml

150b	Results of diplo votes		
Record successful UN and Apostolic Palace proposals including targets (e.g. the name of the city to be reassigned), the civ who made the proposal and the vote tally.			

	Since I'm including the name of the Secretary-General/ AP Resident when recording proposals, there should be no need to record the Secretary-General elections.
151	Message about changed religion or civic indicates the earlier civic or religion

152	War trade (sponsored/hired war) indicators on Glance tab		
AdvCiv		BUG	
tab (enabled tab (Foreign	New BUG option "War Trades" on the Advisors ab (enabled by default). If checked, the Glance ab (Foreign Advisor screen) shows a fist icon when a leader is willing to declare war on another eader. The Glance tab shows icons for war and worst enemies. The BUG Military Advisor shows war trades (and embargo trades) on the Sit-Rep tab.		
	AdvCiv never shows a fist icon on the scoreboard The fist icon is shown on the scoreboard when (neither did K-Mod prior to v1.46). AdvCiv never shows a fist icon on the scoreboard The fist icon is shown on the scoreboard when an Al civ is <i>not</i> willing to start any wars.		
	Don't want to use the BUG Military Advisor; too much stuff. On the Glance tab, the indicators don't require extra space because ongoing war (swords icon) and willingness to start a war (fist icon) are mutually exclusive.		
	210a adds an alert for war trades, but this is no use when a savegame is loaded or when the player loses track of the trades mentioned in alerts.		

Split human unit groups at convenier	nt times
AdvCiv	BtS
When a worker build, pillage, bombard or air bomb mission is completed by a group of (non-automated) human units, if the group has no further missions queued, any units with available moves are split into a separate group and that group is either immediately selected (if the mission has just been ordered) or included in the unit (group) cycle. For missions not listed above, in particular for move-to missions, groups that have available moves are included in the unit cycle even if not all units are able to move. Such groups are not split up however, and the whole group gets selected when it comes up in the cycle.	When a group of units is ordered to execute a mission, then as many units as possible execute the mission. If all units use up all their movement points this way, then (no change in AdvCiv) unit cycling continues with a different group; otherwise, the whole group remains selected. When a group completes its mission at a time when it isn't selected (multi-turn move or worker build; queued orders), then the group does not get selected through unit cycling, even if some units still have available moves. No change: Units in automated groups, groups with multiple queued missions and worker groups on a route-to mission will begin with the next task even if not all units in the group have available moves. However, a unit will never move to a different tile ahead of the whole group (as this would cause the group to split).
Credits Proposed at CFC by Leoreth: <u>post</u> (i	tem 1, last part of item 3)

Rationale The goal is to make sure that the player is aware of unspent movement points and to help him or her spend those points by selecting a sensible set of units. However, the game must not split up large groups that the player may want to keep intact. Aside: There is a distinction between selecting units (yellow frame on the UI) and forming a group. Technically, the currently selected units are stored in a CvSelectionGroup object (CvDLLInterfaceIFaceBase::getSelectionList; group id 0), but that group gets overwritten as soon as a different unit becomes selected. As soon as a player gives an order (skip will do) to the current selection, those units form a persistent (CvSelection-) group. It's preferable not to directly split up human groups and instead to just select a subset. That said, a player who doesn't want to move the selected subset (and therefore probably doesn't want to split the group), is probably going to order the selected subset to skip its turn, thereby splitting the group. So it doesn't make a big difference. and I do split them up directly because it's easier to implement. For build, pillage, bomb(ard), it seems fairly likely that the player will want to give orders to any units with movement points left, and those groups are unlikely to be very large or, if they are, the split is likely going to be uneven (only so many units can bombard or pillage a tile). For movement (including attacks), groups can be arbitrarily complex and it may well be that the player wants to keep the group together in one tile. (See also Leoreth's arguments linked above.) Oueued missions already work pretty well in BtS; e.g. when ordering a group of workers to first build a Mine and then a Road, no worker turns can get wasted in between the two builds. If group automation and group route-to were allowed to break up the group, then the easiest implementation would be to split the group (permanently) as soon as automation or the route-to mission starts. It's easy enough for the player to do that manually for these high-level commands; and perhaps there can be reasons for wanting to keep a group of workers in a single tile. Tbd. Maybe there really are no good reasons for group route-to or group automation and groups should be force-split upon those commands. Smarter order of execution for group missions: 004c See also When a human group of attackers (regardless of All selected units advance. the Stack Attack option) destroys the final enemy K-Mod has fixed a BtS problem with Gunships defender, only the most recent attacker moves (which can't capture cities) getting left behind into the defending tile. The remaining units split after a successful group attack against a city. up into one group with units that still have moves

left and another without moves left. Unit cycling will normally continue with the former group if the most recent attacker is out of moves.

When an attack into a non-adjacent tile is ordered, then this change does not prevent all selected units from moving into a tile adjacent to the enemy. From that adjacent tile, only one attacker will advance.

Proposed at CFC by Leoreth: post (item 2) Credits

Rationale	Often, the best play is to split the victorious stack between its original tile and the target tile so that no (potentially damaged) units are left exposed. The BtS behavior makes the Stack Attack option pretty much unusable in some situations, and, when group attacking one by one, it's also easy to miss the point when there is just one defender left and to move all remaining attackers by accident.
	Splitting units with remaining moves from units that (probably) have fought should often be a welcome convenience (though there can be cases where it's undesirable).
	Sending only one attacker forward when attacking across one or several intermediate tiles sounds reasonable, but probably would be unexpected when the attack comprises a multi-turn move. And, with the Stack Attack option, everyone will have to move. So this would get pretty inconsistent. Also seems a bit difficult to implement.
See also	004c may interrupt group missions upon air interception.

154	Unit cycling button

AdvCiv		BtS
(i.e. at the ricycles to the orders. The head unit ar still has all it otherwise. Figroup precein the cycle,	on to the left of the big flag button ght end of the command area) that e next group of units that needs button shows the icon of that group's not a dot indicator in green if that unit is moves available and yellow Right-clicking the button cycles to the ding currently selected group (if any) i.e. normally the most recently oup before the current selection.	Unit cycling can be forced only through the hotkeys W (I guess for "let the current selection wait"), Num5 or Enter. (Enter will instead end the turn when the End Turn button flashes red.) The backslash key (^ on German keyboards) cycles backwards.
selected, the one or multiporders, the the head of if that unit had otherwise, a	oup needs orders and none is e unit cycling button disappears. If ple units are selected and none need unit cycling button shows the icon of the current selection with a white dot as moves left and with a red dot and causes all units to become when clicked (left or right).	Pressing a unit cycling hotkey will unselect all units if the unit cycle is complete.

Rationale	Experienced players need this fairly frequently, and, judging by questions posted on CFC, some are unaware of the keyboard shortcuts (the Enter shortcut seems to be less widely known than W), keep forgetting them or are even unaware after years of playing that unit cycling can be forced. Also, any player will sometimes, maybe by accident, select a unit that already has orders and whose orders they don't want to change, and, without knowing the unit cycling shortcuts, they'll be at a loss as to how to continue with the unit cycle (see this post in the thread linked above). And some few players prefer to control the game entirely through the mouse.		
	It's also preculiar that the game allows players to disable automatic unit cycling but doesn't provide any visible UI support for manual unit cyclic.		
	I don't know (yet) if showing the icon of the next unit in the cycle is really helpful, but it's an intuitive way of communicating the functionality of the button. The overlayed dots make the button look just like the unit buttons listing units in the same tile as the current selection. Also, the dot is usually green, which matches the color of the End Turn button so long as the unit cycle isn't complete. That and the placement to the left of the End Turn button communicate that cycling through units that need orders is part of the turn sequence. The city cycling arrows from BUG are also located nearby, and cities that need production orders are shown as building buttons (when playing with minimized popups) – albeit at the right edge of the screen.		
	On low resolutions, the command area can be filled with promotion buttons. In that case, there is still enough room for the unit cycling button in between a vertical scrollbar and the big flag. That's also where the production filter buttons are placed when the city screen is up.		
	I didn't want to show unit cycling as a command button ("Wait" command) because it's just the point of cycling away that it does not give the current selection any command for the time being.		
	The right-click behavior is a bit obscure, but, if one is aware, right-click to go backwards feels pretty natural. The other reasonable behavior I can think of (which I've tested and left as a comment in CvDLLWidgetData.cpp) is to focus the camera on the next group without changing the current selection. Neither of these functions are really needed, but going backwards seems a bit more useful and lets the button cover all unit cycling commands that BtS allows through hotkeys.		
Tbd.	Could show in the button's hover text how many groups still need orders. Will have to play with the button enabled for a while to figure out what extra info, if any, would be nice to have in the hover text.		
Config	The button can be disabled through the BUG menu ("General" tab). In the same place, a second button for worker cycling can be enabled (see below).		
See also	The deselection behavior is based on the unselect-all global control implemented by change <u>088</u> .		
cycling but there is any Workboat u button will s cycle. The behavior. If to the same overall unit	we default: Underneath the (all-) unit worker cycling button is shown if (# on German keyboards). We group that contains a Worker or unit that needs orders. Clicking the select the next such group in the unit button doesn't have any right-click both unit cycling buttons would refere group, i.e. if the next unit in the cycle is also a worker, the worker con is not shown.		

Rationale	To give the player a choice in how to proceed in the unit cycle, and so that all unit cycling commands available through shortcuts are represented by a virtual button. (There are also shortcuts for cycling through individual units in the current selection group, but that can already be emulated by clicking through the buttons in the unit list. It's also a bit of a different feature and not widely used I think.)
	Testing will show if this is really useful or if players would perhaps prefer some other choice.
	Going backwards in the worker cycle isn't implemented. Wouldn't be difficult to do, but I don't think I want to bother with this. Therefore no right-click behavior.
	Similarly, it might be nice to exclude non-worker units from the unit cycle controlled by the upper button when the worker cycling button is enabled, but I'm not going to implement that. (I also don't really think that cycling through all units is dispensable, and I wouldn't want to add a third button.)
Tbd.	Perhaps add a button for triggering auto-missions (missions of automated units and of units with queued orders). There isn't really room for such a button in addition to the two unit cycling buttons though. I guess two choices could be added to the current BUG dropdown menu: One for just the auto-missions button and one for unit cycling plus auto-missions (never mind the combination of worker cycling plus auto-missions).
	Anticipating which unit will have moves after auto-missions is too difficult to do, so the button icon shouldn't show any unit graphic. It could show a variant of the Automate button graphic with the big yellow dot in the middle edited out (because that dot represents the currently selected unit, which is not going to have an auto-missions). The hover text could show the Ctrl+A shortcut.
	Note that K-Mod triggers auto-missions when the unit cycle wraps around. I think this only happens when the last group that needs orders is either given orders or when the players tries to cycle away from that group (using a hotkey). I think BtS triggers automissions as soon as a player cycles manually to another unit.

155	Changes to team games

When evalustack, the A	uating the defensive strength of a Il adds some extra value based on the of the stack.	K-Mod Both the offensive and defensive evaluation sum up strength values computed for the individual units.

160	Food after starvation	
AdvCiv		BtS
starvation, th	e food store of the Granary is the city's food store.	Whenever food is added to the city's store, the same amount of food is added to the Granary's store. The maximal capacity of the Granary is 50% of the city's store (whose capacity is 10 + 2 * population). After growth, the Granary's store is added to the city's store, but the store of the Granary isn't emptied. The Granary provides no food after starvation.

Rationale

The Granary already provided some protection against starvation by providing a cushion after growth and helping regrow lost population. However, the cushion is just 15 food in a size-10 city. If such a city has balanced health and can't get extra food by reassigning citizens (the AI often doesn't have unworked Farms), a poisoned water supply will consume the 15 food in two turns, and then kill 6 population. My change essentially doubles the cushion, meaning that only 3 population would be killed, which seems much more reasonable. It's not a big issue for human players, but, in the Industrial era, the AI can become very vulnerable to poisoned water.

It's strange that the Granary isn't emptied when a city grows, but normally irrelevant (it would be refilled by the time the city grows again), and actually convenient for my antistarvation mechanism; don't need a separate food store this way.

Until AdvCiv 1.05, I had reduced the amount of food stored by 40% – seeing that Granary is considered to be the most powerful building in the game. See the rationale under <u>912d</u> for nerfing Slavery (a little) instead.

161	Probability of war trades check	
AdvCiv		BtS
The AI considers hiring another AI civ for war with a per-turn probability of p for each potential hireling computed as follows: $p(t) = 10 / (DWTR + 10 * min{10,t}),$		DeclareWarTradeRand is 40 for all leaders except Pacal, whose DWTR value is 60. Regardless of DWTR, the BtS formulas result in p=1 when the war is 0 turns old. For DWTR=40, p is 1/(t+1) for the next three turns, and, for t=4 to t=10 gradually decreases to 1/40.
Rationale	the checks on subsequent turns were reasons – the number of (hireling, wound number of civs. That said, most of the (attitude toward the sponsor and toward).	after 0 turns was intended. If so, then perhaps re made probabilistic only for performance var target) pairs grows quadratically with the ne pairs are usually eliminated by attitude checks ward the target), so I'm not too worried about tems too high to me in the beginning and to low an accident.
Tbd.	Considering to set leader-specific DWTR values so that some leaders tend to wait a see before bringing in help (DWTR=60), some hardly ever do (DWTR=80 or even 100) and some take all the help they can get asap (DWTR=20). Proud and miserly leaders would get a high DWTR, and profligate leaders a low one. I'm finding it diffic to fit the leaders into these categories though. Tentative:	
	Montezuma, Saladin, Churchill, De 14xDWTR=50: Cyrus, Brennus, Juli Washington, Joao, Boudica, Frederi	nan, Mansa Musa, Hatshepsut, Hammurabi, Gaulle, Roosevelt, Augustus Caesar us Caesar, Willem, Pericles, Pacal, Catherine, ck, Bismarck, Wang Kon, Peter enghis Khan, Qin Shi Huang, Gandhi, Kublai Khan,

162	Rule changes against surprise attac	ks

enemy bor spent. Tha be unloade units that c Carrack, S	ders have all their movement points t includes units in cargo, so they can't	Through cargo ships, one can attack any coastal city right after declaring war. In particular, the attacked civ doesn't get a chance to relocate civilians, missiles and ships in port, nor to engage the cargo ships (and their escort) in a naval battle
Config	Disabled by default through SPEND_Civ4GlobalDefines_advc.xml.	ALL_MOVES_ON_INVASION in
Rationale	See this CFC thread, and maybe als	so <u>this</u> one.
	I wasn't quite happy with this change from the start. A border (in the sea) is very much not an obstacle, so the loss of movement points is implausible. I also don't like that naval invasions and bombardment from coastal waters (i.e. when the two war parties share a land border) are affected by this. Fast deployment is the only reason to use navies in a land war.	
	In testing, I also found it easy to forget about the change. It does what it was supposed to do, i.e. grant the defender an extra turn for attacks on unescorted transports, but that just comes up so rarely.	
Have ships that unload units outside a friendly city or fort spend all mand maintain a connection between the ship and its cargo for anothe by the UI as some sort of overlay and labeled as "disembarking". Wh disembarking ship is destroyed some or all of its cargo is destroyed is to expose the transported units to naval attacks for another turn withem invulnerable to attacks by land and without slowing down unopy Will have to make sure that the AI considers naval attacks on ships the before considering land attacks on the disembarking units. Amphibic probably be exempt, i.e. debark instantly and perhaps even with full in the ships and maintain a connection between the ship and its cargo for another another turn with the ships and its cargo is destroyed as its car		the ship and its cargo for another turn, depicted and labeled as "disembarking". When a see or all of its cargo is destroyed as well. The idea naval attacks for another turn without making I and without slowing down unopposed landings. Considers naval attacks on ships that are unloading the disembarking units. Amphibic units should
	Alternatively, some super-light version of zones of control might work, e.g. "Transport ships can't unload next to a hostile ship with equal or higher strength (unless they have full moves?)" or, disregarding ships in cities: "Transport ships can't unload next to a water tile with a hostile unit (unless they have full moves?)." Such a rule is more plausible than the current one based on border crossings, should be easier to remember and doesn't affect naval bombardment in land wars (nor transportation if only one side has ships). Would require some work on the AI though – escorts will have to decide whether to attack defending ships (possibly leaving the transports unguarded), transports have to decide whether to wait for a landing spot to be cleared or to find a different one, and CvUnitAI::AI_guardCoast should at least show an effort to protect the AI's coast against surprise landings.	
		revent surprise attacks on Workers. E.g. allow be" to a nearby friendly city when attacked.

See also	010 disables capturing of workers on the same turn as declaring war.
	164 makes the Blitz promotion easier to access; that promotion is helpful for destroying unescorted cargo ships before they can unload.
	098 changes the rules for culture spread across water. A similar rule change could allow borders to spread farther onto water, making it more difficult to reach the shore on the same turn as declaring war.
	Realism Invictus has a similar mechanism: <u>CFC post</u> (2 nd quote box)

163	Teleported ("bumped") units have all their movement points spent	
AdvCiv		BtS/K-Mod
When a unit is moved because the rules don't allow it to occupy its current tile – i.e. mostly when Open Borders are canceled –, all movement points of the unit are spent, its automation is removed (e.g. if it was set to auto-explore) and it is woken up so that it'll ask for orders on the next turn.		The movement points of the unit are unaffected by the forced move. K-Mod deletes all missions queued for that unit, but doesn't de-automate it and doesn't wake it up; e.g. a Scout that was fortified in foreign territory will continue to fortify after getting teleported and won't ask for new orders.
Exception: Al units that find themselves in a tile with units that they can't peacefully coexist with don't lose their movement points.		
	Don't want players to use teleportation as a means of re-deploying units; can't prevent this entirely, but using up movement points is a start. It's also more plausible that even a forced move costs movement points.	
	The wake-up and de-automation are	e just usability improvements.
	I've made an exception for the AI because, otherwise, an AI invasion could be delayed by up to two turns by placing a single unit on the tile that the AI stack will cross the border from. The teleport then pre-empts the DoW move and moves the AI stack to a non-enemy tile. Depending on the surroundings, that tile may not be adjacent to the border. Without the exception, the interfering unit could even be moved away before the AI stack gets to attack it.	
	ode makes minor changes to the selection of the tile that a bumped unit teleports to. ctr fixes an issue with units getting bumped out spuriously after liberating a city under occupation, and wakes up human units after tile ownership changes that don't lead to bumping.	

164	Changes to the Blitz promotion	
Config	Civ4PromotionInfos.xml	
AdvCiv	BtS	
•		Military Science and Combat III. (K-Mod had allowed Drill III as an alternative requirement.)
Rationale	Want to make Blitz ships (Destroyers, Battleships, Submarines) more common because these make it easier to intercept an (unescorted) naval invasion; cf. <u>162</u> .	
Tbd.	Or perhaps requiring Drill II would a good compromise.	

can receive the proper co	ore than 1 move and paratroopers the Blitz promotion if they also have ombat class (Mounted, Armored, Naval; no change). The extra move om the Morale promotion.	No special clause for paratroopers, and the unit type needs to have more than 1 move, i.e. Morale doesn't help.
Tbd.	receive Blitz because Gunpowder u	and Gunpowder units with a Great Warlord to nits aren't allowed to have Blitz. I'm reluctant to fantry could become too similar to Tank if it's to solve this problem.
Blitz allows ι turn.	The number of attacks is only limited by the number of movement points. E.g. a Destroyer could make 7 attacks per turn or (depending on promotions) even more.	
Rationale	Blitz Destroyers are too goofy and a accessible for level-3 units.	lso a bit too powerful; can't have that if Blitz is

165	Dimensions of individual map scripts adjusted	
	continents exampt from aspect rati possibility of PublicMaps folder	o, pangaea sea level, getNumPlotsPercent,
AdvCiv		BtS
Adjusted the grid dimensions of Hemispheres, Not Too Big Or Small, Pangaea, Terra and Tectonics.		These maps use the default dimensions set in Civ4WorldInfos.xml. Their land/sea ratios are also comparable, however, e.g. Not Too Big Or Small (K-Mod's version of Big Or Small) has a much longer coastline than Pangaea and thus a higher number of resources, of decent tiles and, ultimately, of city sites.
	Terra was using the grid dimensions of the nexhigher map size; e.g. a Large Terra map result in Huge dimensions. Developer comment in Terra.py: "Enlarge the grids! According to Soren, Earth-type maps are usually huge anyway."	
See also 137 changes the default grid dimensions and player counts for each map size. 021b: Perfect Mongoose uses the default dimensions, but I've tweaked the land/sea ratio. 021a: Other small changes to the Tectonics script.		

Rationale	So that the default player counts result in a about the same amount of space for peaceful expansion on all these maps. Those with uninhabited continents (e.g. Terra) should, in my opinion, have a more room once these continents become reachable, but less room initially (compared with e.g. Pangaea). I'm not sure if it's the land ratio or perhaps the resource placement, but the Old World in Terra isn't usually very crowded with the default grid size and player count. "Earth-type map = huge" may be true about scenarios (because the coastlines become unrecognizable at smaller sizes), but shouldn't matter for randomized scripts.
	I haven't adjusted any scripts that start with a letter before "F" because I want Fractal to be on top of the list on the Custom Game screen. The ordering can't be modded and the script names can't really be changed (see below).
	Instead of adjusting the grid sizes, one could add player count recommendations to the map description (in fact I had done this for a few maps until AdvCiv 0.95), but such recommendations are only shown under "Play Now", so most players never see them. As for adding a recommendation on the Custom Game screen: The displayed map name ("Terra") is the name of the map script file, and changing this file name (to e.g. "Terra - extra players recommended") would result in a second map, listed in addition to Terra. I've tried adding a dummy drop-down menu with a single choice, but apparently at least 2 choices need to be given. Such a menu would also be easy to miss because the default menus (which all maps have) are displayed first.
Config	Through copies of the respective map scripts in AdvCiv\PrivateMaps. Aside: My understanding is that placing modified BtS map scripts in the PublicMaps
	folder lets the game remember the most recently played map even when no mod or a different mod is loaded. However, the PrivateMaps get listed at the very top of the Custom game screen, and I don't want (only) the non-BtS scripts on top. I've been careful only to modify BtS scripts that I think are worth playing; in particular, Fractal should be at the very top – it's the script I use most in tests. Scenarios (for what it's worth; AdvCiv has none) in PublicMaps also get shown on the BtS scenario selection screen when no mod is loaded. (CFC thread on the subject; "We the People" Git issue)

170	(Reserved for an overhaul of religion)	
170a	Effects on diplomacy	
See also	145 applies accepted-religion memory only so long as the religion is shared. 130n: religion hate based on revealed population with the offending religion 115b changes how a favorite religion affects the utility of the Theocracy civic. 150a: religions in replays 106e, 151: notifications about religions 131: Al switches its state religion probabilistically	
AdvCiv	BtS	
Rationale		

171	Founding and spread of religions by the AI	
AdvCiv	BtS	

to found ("Cl the favorite i none specifi	leader gets to choose which religion hoose Religions" game option) and sn't available (already founded or ed), that leader chooses the religion apest tech requirement.	Chooses uniformly at random.	
Rationale	If the preference of the leader can't by picking religions in chronological	be matched, at least try to match the game year order.	
AdvCiv	1	K-Mod	
ries tend to a	ring war against a civ, AI missiona- avoid spreading religions to the war eligion spread when war is imminent.	War plans don't affect AI religion spread.	
Tbd.		ssionaryValue and CvUnitAI:: rget evaluation function. Not an easy task leas differently and the results aren't on the same	
of randomne instead cons (i.e. in the ca expansion (i also help). A a religion ted	For the three early religions, reduced the impact of randomness, turn number and city count; instead considering happiness needed in cities (i.e. in the capital) and the need for border expansion (in the 2nd city, though the capital will also help). As a result, an AI civ will usually go for a religion tech around the time that it founds a 2nd city. (AI flavor values still play a big role too.)		
Rationale	Holy City becomes useful for expand capital nears its happiness cap. That worker techs and Bronze Working. If	sm or Buddhism is, in my estimation, when the ling the borders of the second city or when the tusually leaves enough time for researching the AI is too aggressive about founding religions, n't ever consider founding one; that's the state of	
	The overall timing is already pretty g always in the best interest of the AI.	ood in K-Mod, but arguably too random, and not	
	two of the early three religions are prioritzes getting an early religion more.	Such a multiplier already exists, but not specifically for the early religions, and I don't think it has a strong impact.	
Rationale		or human players to monopolize the early aight for a religion, the AI will somewhat match	
Increased the impact of favorite AI religions a bit. Favorite religion doesn't seem to have much of an impact, at least not in K-Mod.			
Rationale	The K-Mod (BtS?) behavior is a bit c religions to matter more.	ounterintuitive; I would've expected favorite	
avoid foundi try to avoid b	rith a favorite religion try harder to ng other religions. In particular, they bee-lining to their favorite religion ill likely result in founding a different	Al already avoids founding non-favorite religions, but that doesn't outweigh the affinity for the favorite religion when a tech path will likely found both.	

Rationale	Bee-lining to Theology or Divine Right just generally isn't smart and puts the Al leaders with the respective feavorite religions at too much of a disadvantage. And if they adopt another religion first, it gets really bad. Aggressive founding of the late religions by the Al also takes that option away from human players.		
See also	192 (civic evaluation of unlimited Artists from Caste System) affects the typical founding date of Confucianism.		
tech race as harder to wir	The AI estimate of the probability of winning a tech race assumes that races are somewhat harder to win when there are many (known or unknown) other civs on the map. Based on the ratio of (known) civs that can currently research the contested tech to the total number of civs. I.e. the probability doesn't decrease in larger games		
Rationale	Relevant for the evaluation of religion techs.		

172	Culture rate from religion unaffected by state religion	
AdvCiv		BtS
maximum of the culture rates of all religions present in the city, i.e. 1 culture when there is at least one religion present, another 4 culture if		When there is a state religion, only the state religion generates culture (same as with happiness from religion), when there is no state religion, then the culture rates of all city religions are added up.
See also	CFC post recommending Paganism for the sake of maximizing religious culture (middle of the post)	
Rationale	Reducing the culture output of a holy city to 0 when running a different state religion is counterintuitive. One can argue that a conquered holy city should not generate culture for the new owner, but BtS allows that too – the new owner just mustn't have a different state religion. Disabling the holy city culture in conquered cities would be easy enough to do, but, at least when the new owner runs the holy city religion as the state religion, holy city culture should arguably be enabled; that gets too complicated, and the Shrine culture (since it's a wonder) is already getting disabled upon conquest, which seems fair enough as a compromise.	
	Another upside is that the Religion Advisor no longer needs to show culture output; makes it a bit easier to evaluate the effect of adopting a (different) state religion.	

173	Changes to religion spread	
See also	140 reduces the impact of the world-wrap setting on religion spread	
	CFC post lamenting slow religion spread in AdvCiv 0.99, before a v1.0 tweak to the world-wrap adjustment. That player was probably mainly feeling the K-Mod adjustment of religion spread to game speed, but was perhaps still onto something.	
AdvCiv	BtS/ K-Mod	

So long as a particular religion hasn't spread to any cities of a player, the per-city spread probability gets adjusted to the number of cities owned by that player: more likely to spread if that player has few cities, less likely if the player has many cities.		Once a turn, each city makes a spread religion roll for each connected Holy City. K-Mod has reduced the impact of (air) distance on the spread probability. There's K-Mod code commented out (was apparently under consideration) that increases the spread probability so long as a religion has spread to at most two cities in the world; this would affect both domestic and foreign spread.
Rationale	To make foreign religion spread a bit less dependent on the recipient's city count. To make an early trade connection more rewarding and to give civs that are boxed in a better shot at receiving religion spread.	
	Perhaps a somewhat needless com complicated anyway.	plication; but, then, the spread formula is pretty
100% and de religion alrea	s probability of missionaries starts at ecreases by 10 points for each ady present in the city. This is the K-Mod behavior for cities of size	Same in BtS except that the decrement per present religion is 1/9 for rival cities and 1/11 for friendly cities. K-Mod disabled the distinction ebetween friendly and rival cities and added a population factor that made success a bit more likely in larger cities.
	It's not intuitively clear whether large cities should be easier or more difficult to convert. Just establishing a community of indetermined size ought to be easier in a larger city, but converting a particular portion of the population ought to be easier in a smaller city. Converting large cities first tends to be the better choice anyway, so making large cities easier to convert doesn't make the gameplay more interesting.	
	The K-Mod code was apparently intended to produce smaller success probabilities; the actual probabilities seem to be the result of a bug – which I haven't fixed (well, I did replace it with simpler equivalent code) because I don't think smaller success probabilities would play better. karadoc lived happily with the bug for the next 7 year (i.e. until he stopped working on the mod), so he might agree.	
	probabilities would play better. karad	

174	Divine Right research cost reduced by ca. 40%.
See also	CFC post (2 nd paragraph) citing some proposals for buffing Divine Right and explaining that I don't want to make such major changes just to redeem a (very) weak tech.
Rationale	A cost change is very low-key. Will at least let whichever civ decides to go for the tech waste fewer research points. The new cost is the same as Banking and still above Paper. I don't want Divine Right to stick out as a very cheap tech.

178	Changes to Apostolic Palace (AP) and United Nations (UN) votes
	kekm.25 allows AP war votes against voting members. 130f allows embargo votes to sever recent deals.

Tbd.	Several gameplay changes, most importantly to the membership rules. The only thing done so far (apart from kekm.25): A temporary adjustment of the City AI evaluation of the AP as a vote source. Assigns 0 value when the state religion is shared by no other civ. Will have to replace that with code estimating the potential for spreading the AP religion after/ while building the AP. (Don't want to force an AI civ that has just founded Christianity to spread that religion around before being allowed to build the AP.)		
	<u>Some players</u> really hate the AP victory. The change to the membership rules will address this.		
See also	115b only counts vote source utility when aiming at a religious victory; that'll also have to change.		
AdvCiv		BtS	
	IN and AP don't require Diplo victory to be nabled, but the victory votes do. Can't build AP and UN when Diplo victory is disabled.		
Rationale	The AI can handle this. Disabling Diplo victory without disabling all votes is requested on the CFC forums from time to time (two examples). Seems like players generally don't dislike voting, just the victory votes, either for reasons of game balance/ fairness (mostly AP) or because they find it irrational that the AI civs will vote for a rival's victory. That said, some non-victory AP votes appear to be problematic in multiplayer (the RtR mod disables them; see under "Miscellaneous" here); will have to disable them through XML then.		
Config	Can be reverted through Civ4BuildingInfos.xml. Individual votes can be disabled through Civ4VoteInfos.xml (though this may break savegame compatibility).		
The "None" option in the popup that asks the player to select a resolution explains that this will trigger an early election. (Unless the vote cycle is ending either way.)			
Rationale	The early-election mechanism is OK	, but needs to be communicated to the player.	
	eace vote requires a non-vassal full be at war with a non-vassal voting	The voting member can be a vassal and, then, the master of that vassal will be forced to make peace even if it isn't itself a voting member.	
Rationale	Shouldn't compel a civ that has no v	ote in the matter.	

179	Changes to the production ability of Apostolic Palace (AP)	
AdvCiv		BtS
shown in the	AP's help text, Civilopedia text and s text (<alt> key).</alt>	The only mention of the production bonus is buried in the "BtS Concepts" page about the Apostolic Palace. Actual-effects (BUG mod) shows the bonus when hovering over religious buildings but not when hovering over the AP.
production be buildings that built, future r	onus, taking into account religious t already exist and that could still be	The production bonus is ignored by the BtS AI. There is BBAI code that factors the bonus into the evaluation of religious buildings but not the evaluation of the AP itself.

Rationale	The ability is quite powerful; shouldn't be a secret. It's tied to the AP vote source (Civ4VoteSourceInfos.xml), not the building, but that's a technicality that players shouldn't have to worry about.		
See also	008a shows some of the restrictions for AP only when they apply. 008e drops the "The" from the AP's name. kekm.25 loosens the conditions for holy war votes.		
buildings, co	+2 production, cost 400, no Priest specialists. dings, costs 350 production and allows 2 est specialists.		
Shrines allo	w 2 Priest specialists.	3 Priest specialists	
See also	Related <u>CFC post</u> (2 nd spoiler box)		
Rationale	+2 production is clearly too powerful, and it doesn't really help that every civ benefits. Turns Monasteries and Temples into highly desirable buildings. Those buildings are generally underpowered, but a wonder making them almost overpowered through an effect that has nothing to do with the primary functions of religious buildings (culture, happiness) is a cure worse than the disease. Also distracts completely from the more interesting AP ability – the votes.		
	Seeing that the AP has an unattractive tech requirement, I do think that it needs to be buffed a little to remain worth considering for human players. Reducing the production cost should be helpful; it's a fairly expensive wonder considering that there is no resource-based discount. But I don't see a lot of leeway for lowering the cost without making the wonder feel strangely cheap. I've considered adding another ability, one that only benefits the AP owner, e.g. +3 or +4 espionage from religious buildings, but the AP already has too much text and too much complexity. The specialists are quite low-key in terms of complexity and can actually be useful when having just founded Christianity. In most situations, they don't make the wonder much better, unfortunately. I've removed a specialist from the Shrines in order to avoid making Priests (feel like they're) too abundant in the midgame. Priest slots at Shrines are mostly antisynergetic, no real loss.

	116: Al razing		
	130w: Relations penalty for cities with foreign culture		
Tbd.	Damage shouldn't be caused primarily upon conquest but during attacks, bombardment and unrest. Dawn of Civilization and Civ 4 Reimagined have already implemented such changes. Capture gold needs to be reduced; perhaps only grant it when razing.		
	Shouldn't be possible to raze in a single turn. (Use a separate change id for that though.)		
	Bombardment and razing should perhaps also affect war weariness.		
AdvCiv	BtS		

Castle, Citadel.		"Reconquest" means that the new owner has the highest city culture – indeed, that can't happen if the new owner hasn't owned the city at some earlier point.
		Defensive buildings have a <code>iConquestProb</code> of 0%, which means that they're always destroyed except upon reconquest or cession. Buildings with the <code>bNeverCapture</code> flag are destroyed even upon reconquest. (In ceded cities, even the nevercapture buildings remain intact.) Only cultural buildings (Monument, Library, University, Theater, Temple, Monastery, Cathedral) have the nevercapture flag.
Config	Civ4BuildingInfos.xml	
Rationale	Since there has to be a conquest before a reconquest, iConquestProb=0 vs. bNeverCapture=true really only makes a difference for buildings that the "transient" owner has constructed. Don't want Walls of that player to benefit the "new old" owner because its somewhat unexpected and because I don't want to discourage players from fortifying newly conquered cities.	
	For unique buildings, the never-capture flag is mostly superfluous – but not entirely: when two or more players have the same civilization type, unique buildings can be captured.	
	Don't want to destroy Bunkers and Bomb Shelters upon reconquest because those are notoriously difficult to demolish in reality. They have an iconquestProb of 66%.	

181	Stop unit action recommendations from leaking map info	
See also	001i: Other info leaks; see the "see also" box there.	
	CFC post with a screenshot demonstrating how unrevealed land tiles can be identified through the highlighted found-city button-	
AdvCiv	BtS	

		T
The game does not recommend actions for unrevealed go-to tiles.		When hovering to move into an unrevealed tile, the found-city button is shown normally or is grayed out based on whether the selected settler is able to found a city in its current tile. If founding in the current tile is possible, the button gets highlighted based on characteristics of the unrevealed go-to tile. Specifically, it gets highlighted if the go-to tile has a positive found-city value and a higher found-city value than all revealed adjacent tiles. Other recommended actions such as worker builds may also leak information about unrevealed tiles.
but fogged ti	mending worker builds for revealed les, the recommendation is based on on improvement and route.	Recommended worker builds give can give away the current improvement and route in a revealed but fogged tile. (But this minor leak is unlikely to provide useful information.) The AI also ignores the fog of war when deciding whether a worker build is valid in a tile.
	ty button is grayed out only for tiles close to a <i>revealed</i> city.	The grayed out found-city button ignores the fog of war when checking for nearby cities.
Rationale	Allowing the player to identify land til continents and islands.	es scattered across the map is a big spoiler about
	I haven't bothered changing the can gameplay is minimal.	Build checks in AI code because the impact on

182	Hide tile yields of unrevealed bonus resources	
AdvCiv	ı	BtS
Tile yields shown in help text and via the Yield Display don't take into account resources unrevealed to the active (human) player.		Resource tile yields of owned tiles are shown based on the tech available to the tile owner.
See also	CFC post pointing out that the Yield I	Display gives away unrevealed resources.
	001i: Other info leaks; see the "see also" box there.	
Rationale	One can still spot improved Copper and Iron on flat tiles because a Mine wouldn't be allowed there otherwise. That can't be helped I think, and it's not all that difficult to figure out and, more importantly, fairly easy to spot. In contrast, the info leak for all owned tiles is easy to fix, obscure and annoying to take advantage of – will have to scan all revealed owned tiles for a production icon (so long as the owner has Iron Working and the human player doesn't – which is often the case) or, when playing without Yield Display, mouse over all revealed owned tiles. I guess an alternative solution would be to reveal all resources on owned tiles – not a serious consideration; for starters, it would be very confusing for players who are unaware of the info leak.	

183	Effects of forts; rules for city defense modifiers outside of owner's borders.	
See also	124 deals with the effect of forts on the trade network. 121: worker AI changes for forts.	
AdvCiv	BtS	

•	ers allow sea and air units to move eign forts, even if the fort owner is a	Only non-rival sea and air units are allowed in, i.e. only units of the fort owner's team or that team's master or vassals.	
Rationale	Streamline the rules by making forts more similar to cities. Disallowing naval movement is also inconsistent with forts allowing rival naval trade to pass through (a rule that, admittedly, rarely ever matters). Air capacity is counted per team, so that's not much of an issue (and surely no more of an issue than in cities). One problem: Unlike a city, a fort can easily be pillaged by its owner (if that were disallowed, the owner would still have to be allowed to replace the fort with another improvement). Pillaging a fort could allow a human player to trap a stack of foreign AI transports in a lake or small inland sea. (Air and sea units inside a fort get bumped out when it's pillaged; that's OK.) Easier to pull off than through canceled Open Borders – but still seems like a pretty elusive scenario.		
See also	to write.	de the team-based pathfinding code a bit easier	
	· -	**TeamTypes) with separate functions (members spects of cities, e.g. CvTeam::isCityDefense. re tagged with just "advc".	
Tbd.	If AI units trapped in a lake ever become a problem in an actual game, perhaps get the AI to unload its transports.		
		ers of a third party (that is a rival of both war ch fighting shouldn't be allowed; not plausible.	
When a fort	Can only rebase aircraft to a revealed fort or city. When a fort gets replaced or destroyed, it is removed from all players' maps regardless of fog of war. Can find forts and cities in the fog of war by hovering with the cursor in Rebase mode. Other than that, forts are subject to fog-of-war rules (like all other terrain improvements).		
	ss some other info leaks, e.g. the n recommendation.		
Rationale		ic when Open Borders allow aircraft to enter rival troyed forts can't be secret – otherwise aircraft a fort had once existed.	
	Units in an unowned fort tile benefit from all defensive advantages of forts. Unowned forts grant +25% tile defense; the odefensive advantages are tied to the acts-asability and apply only to non-rival units: City defense modifiers (e.g. Archer; also: City Raid promotion on the flipside), immune to Flank Attack, immune to targeted attack (Ballista Elephant).		
Rationale	Counterintuitive that the 25% apply but not the other defensive abilities. Arguably a relic from Warlords when the defensive modifier was the only ability. Workers being allowed to build forts on unowned tiles also seems like a bit of a relic. If the defense modifier on unowned tiles were taken away, there would be no point in building unowned forts at all. Through city razing, forts could still end up without an owner though, and then it would be rather strange that units can't get any use out of an abandoned fort.		
Tbd.	Disallow forts building on unowned tiles? Then players wouldn't have to wonder whether such forts can function as ports or air base (they cannot). Forts that end up unowned through razing could still grant defensive benefits.		

See also	119 prevents chopping on unowned tiles.	
Units defending in cities or forts of a third party are treated as city defenders only if that third party is also at war with the attacker – Open Borders alone aren't enough. Units defending in proper cities of a third party but not in forts – are treated as city defenders but not in forts – are treated as city defenders.		
Rationale	To resolve the inconsistency between cities and forts, and part of an effort to make warfare in third-party territory less unrealistic. In particular, the culture defense modifier represents (in my book) the support from the local populace and a boost to morale for defending people's homes – not at all appropriate when the attacker isn't at war with the city owner.	
Tbd.	Ultimately, I think I'd like to disallow attacks in the territory of a neutral third party entirely. Ordering such an attack should bring up a popup asking to declare war on the third party.	

184	Military happiness only from units of the same team or vassal/master	
AdvCiv	,	BtS
Hereditary Rule can receive happiness from		Any (non-hostile) units cause military happiness and count as culture garrisons; even units owned by the player that is trying to flip a city can count as culture garrison against the flip chance.
Only units of the same team as the city owner count toward culture garrison strength.		
Rationale	Comes up rarely, but highly counterintuitive when it does. Arguably an oversight (already in Vanilla Civ 4).	

185	Changes for mods with modified era progression; tagged with "advc.erai" in the code.	
AdvCiv		BtS/ BBAI/ K-Mod
Changed some AI code that made use of absolute era numbers or era differences in order to make it work better for mod-mods with more or fewer eras than BtS/AdvCiv.		Era numbers (0 for Ancient, 6 for Future) are used pretty commonly in AI code as a coarse measure of the game progress or the technological progress of a particular player or team. Usually, AI modders have used ratios involving the current era number and the total number of eras. Such code can be expected to work (somewhat) well in a mod-mod with a different total number of eras. In some cases, however, only the current era number is used, or a difference between the current era number and some threshold or target value.
Rationale	I'm aware of only one AdvCiv mod-mod with a different era count – "These Fractured States of America" (<u>CFC thread</u>), and development didn't get very far on that. There are plans for a merge of Greek World with AdvCiv (<u>CFC post</u>). So these AI changes might matter; they should have no effect in AdvCiv itself.	
Config	Some of the AI code (in the DLL) relies on era ratios. Most of that code is scattered, so mod-modders can't easily change anything about it (the new function	

	CvEraInfo::normalizeEraNum covers only a few cases). Hopefully no changes are necessary. Other AI code uses functions AI_getCurrEra to map era numbers encountered in a game to the BtS era numbers (between 0 and 6) that the bulk of the AI code was written for. All the AI_getCurrEra functions ultimately call CvPlayerAI::AI_getCurrEraFactor. However, it shouldn't be necessary to modify that function either because it uses era numbers set in Civ4EraInfos.xml. That XML file also designates some special eras, for example the era (if any) during which the AI can expect oceangoing transports to become available. Mod-modders should review those XML settings. They're documented in Civ4GameInfoSchema.xml. (Setting those special eras in GlobalDefines.xml would've been a bit cleaner, but I wanted to put all the era-related AI customizations in a single place.)
Credits	In part based on this Kek-Mod Git commit. (A small part of that commit has been adopted directly under id kekm.36.) I've revised a lot more code than DarkLunaPhantom, but that may have been mainly older AdvCiv code. About half of the BtS/K-Mod code modified by Kek-Mod I've left alone. Some of it merely replaces code that was already based on the total number of eras with a call to a normalization function. That's cleaner I guess, but usually not quite equivalent and, to me, not worth the risk of breaking something. In other cases, I think it's better to keep using absolute era numbers. Hard to say sometimes. I expect that a mod with fewer eras is still going to give players enough time to settle the whole world, so the eras are going to last longer than the BtS eras. The mod could achieve that through additional techs — or through higher tech costs. On the bottom line, I would expect some statistics, e.g. tile yields, to develop within a more narrow span than in BtS when there are fewer eras.

186	City bar hover text	
See also	189: Starvation turns on city bar 188: BUG anger timer option also affects city bar hover text. 187, 101: Options for showing revolt help, air unit capacity in city bar hover text. 002f: Changes to city billboard icons 095: Option for wide city bars (only the first half will trigger hover text however)	
Credits	Based on BULL	
AdvCiv		BULL
Values" and except for the disabled are also." Ended compact and innovations sorted alpha production p	Adopted everything from BULL except the "Base Values" and "Base Production" info. No options except for the building list (icons/ names/ disabled) and those listed above under "see also." Endeavored to make the formatting more compact and more self-explanatory. Minor nnovations: Larger specialist icons; buildings sorted alphabetically; showing output of production processes (e.g. Wealth) and showing stored production (chopping, overflow).	
See also	Requested only once I think: <u>CFC post</u> (2 nd bullet)	
Rationale	Mostly for completeness' sake; to bring AdvCiv closer to having strictly better UI support nthan BULL. And I guess players used to consulting the city bar hover text would miss the BULL improvements sorely – the BtS text misses some obvious conveniences. The Base Values/ production stuff is too obscure in my opinion.	
186b	"Zoom City Details" merged from BULL	

AdvCiv		K-Mod/ BULL
The city bar help is shown when hovering over the city details button of a choose-production popup or a city name on the Domestic Advisor. Not optional.		K-Mod had not merged this from BULL. In BULL, the help text on the Domestic Advisor is shown when hovering over the examine-city button and there is an option to disable it.
	Hover text on the Domestic Advisor gets left-aligned and then obscures then examine city button and part of the city name. That's pretty annoying when one is trying to click on the examine-city button – will have to hit it blindly through the hover text overlay. This is much less of a problem when attaching the hover text to the city name. May still take a little bit of getting used to because the cursor will usually be moved across the city name before clicking on an examine-city button. Hopefully, an option will not be needed this way. Having the city bar help for every city in one place should be a significant upside.	

187	Show air unit capacity help in tile hover text	
AdvCiv	BtS	
	about the available capacity for air units Shown in city bar hon tile hover text.	over text.
Config	BUG option (Map tab) for restoring the BtS behavior.	
Rationale	Info that concerns both a city and the units stationed there is more convenient in tile hover text (where the units are listed). Also, capacity info can be shown for forts this way. That said, tile hover text can be scarce due to unit stack sizes. Therefore, I'm keeping the BtS behavior as an option.	
See also	Uses a smaller version (75% game font file) of the BULL airport icon added by <u>002f</u> .	
	101 adds an option for showing revolt help either in the obar hover text. Another example of help text that concern garrisons) and a city. 061 makes unit help (in the tile hover text) more compact	ns both units (culture

188	Tweaks to BUG anger timer	
AdvCiv		BUG
The anger timer also covers anger from defying a diplo resolution (if that's the longest anger timer).		
Hover text of the happiness display shows the remaining duration of temporary anger in parentheses. No change to the BtS hover te		No change to the BtS hover text.
The option also enables anger timers in city bar hover text.		Separate option for city bar hover text.
See also	186 covers city bar hover text (including anger timers).	
Rationale	Defiance anger isn't very likely to overlap with other types of anger; seems like a nice little helpful addition.	

Showing the remaining durations in hover text is helpful when hurry, draft or defiance anger timers overlap, and – more importantly to me – helps explain the meaning of the anger timer shown (as a naked number) next to the happiness display.

189	Starvation turns on city bar	
AdvCiv		BtS
Show turns until starvation on city bar.		Only shows turns until growth. BULL has a "food assist" option that shows starvation turns (but only in hover text).
See also 186: Other (BULL-based) changes to city bar hover text.		

190	Additions to the Settings tab (Victory	/ screen)	
See also	106h shows part of the Settings info in the first replay message.		
	251 may show the game start turn. 135d may hide the game end turn in K-Mod shows the game difficulty in 300 used to show the earliest turn o	multiplayer (in addition to the player difficulty).	
190a	Show mod name, disabled victory conditions		
AdvCiv		BtS	
List any disabled victory conditions in the game options column.		Victory conditions only covered by the Victory tab – which doesn't explicitly say which victory conditions are disabled.	
Show the m	nod name.	The mod name is shown on the opening menu screen; from within a game, it's not visible. (Some mods show it when hovering over the main screen flag button.)	
190b	Show custom map options		
the Settings from the de "Cylindrical"	of custom map options are listed on s tab (Victory screen) if they differ fault. For example, normally, " (world wrap) is not listed because efault value, but "Toroidal" gets listed.	BtS doesn't show custom map options anywhere once the game has started. No way to tell what the options were after loading a savegame.	
190c	More info about unmet players		
and leaders have been assigned randomly. For players whose civ or leader has been set manually (as opposed to randomly), show that civ and leader information even for players that haven't yet been met. savegame), the number of players that yet been met can only be determined by revealing the map. (Well, there are some information leaks in BtS; most of which sho fixed in AdvCiv; cf. 077 – Demographics taken and leaders have been assigned randomly.		revealing the map. (Well, there are some information leaks in BtS; most of which should be fixed in AdvCiv; cf. <u>077</u> – Demographics tab.)	
Tbd.		the RiseFall component should keep track of yers and show the civs and leaders of those ney were randomly chosen.	

Ignore BUG options for showing civs or leaders on the scoreboard if that info would give away the Random civ or leader of an unmet human rival. Don't use player colors either.		In multiplayer games, human rivals are shown on the scoreboard even if they haven't been met. The color of the display name gives away the civ of the rival even if that rival is playing a random civ. BUG options for showing the leader name will also give away the leader.
		K-Mod already ignores the BUG option that gives away the leader name (regardless of whether the leader was already revealed on the Staging Room screen); doesn't protect the civ name.
ch be riv	Seems more interesting to keep this information concealed. Provides an incentive for choosing random civs and leaders, but, in a competitive match, it is probably still far better to pick a strong leader by hand. I also don't think it's vital to know that a human rival has e.g. randomly received Tokugawa. So I don't see a balance or fairness problem with this, and K-Mod had already gone down this road a bit.	

191	Changes to the selection of random civs	
to "Random" Unrestricted the selection multiple avai 20% greater	he civ and leader of a player are set during game setup and the Leaders option isn't checked, then of the civ is biased toward civs with lable leaders. Such civs are given a weight for each leader beyond the swith only a single available leader. The randomization procedure is hidden away in the EXE. Judging from calls to CvRandom in the DLL, the EXE apparently first chooses random civs and then, in a second step, random leaders to match the (randomly or manually) chosen civs.	
Config	PER_EXTRA_LEADER_CIV_SELECTION_WEIGHT in GlobalDefines_advc.xml.	
	Will also affect the <u>True Starts</u> option, which randomizes civs and leaders very differently, but (by default) also biases its choice toward civs with multiple leaders.	
Rationale	Leaders of the same civ have similar personalities for the most part, so, for maximizing variation in AI behavior, favoring civs with multiple leaders isn't all that helpful. The main advantage is arguably that humans will receive a greater variety of traits. (One could argue that repetitive human traits can be prevented by restarting. I think many players don't like restarting.) The main argument I see against a bias, apart from simplicity, is that a uniform selection among civs leads to the greatest variation in unique units and buildings. This is also an argument against using a greater bias when selecting human civs than for AI civs.	
See also	Implementation based on <u>190c</u>	
Tbd.	BUG option to reRandomizeCivsAndLeaders (CvInitCore) when regenerating the map. Can use CvPlayer::changeCiv, changeLeader for that. However, the current randomization code only handles players that have both their civ and leader set to "Random". It also bails on various edge-case conditions. Synchronization: CvGame should pass a random number from CvGame::getSRand to reRandomizeCivsAndLeaders to avoid including CvGame.h. in CvInitCore.cpp. The AdvCiv randomization code also bails when a mod-mod contains any leaders playable only by the AI or only by humans. This was somehow (don't remember how) awkward to implement.	

192	Smarter city AI choices regarding first border expansion	
AdvCiv	1	K-Mod
there are va ring. And ma turns of cultu account that once the city building) and culture weig decreasing t	tizes border expansion more when luable bonus resources in the outer ade a K-Mod limit on the construction are buildings less strict (taking into a the citizen assignment may change y starts constructing a culture differed an issue with the city's overall the total total time and its counted for being additional tiles.	Not sure if, prior to K-Mod, there was specific AI code at all for constructing culture buildings for the sake of border expansion. The K-Mod code simply counts a constant utility value and adds a shortcut for culture buildings that are quick to construct (at most 10 turns on Normal speed).
Rationale	Can be excruciating to watch the AI not claim important strategic resources for dozens of turns.	
Tbd.	The code is still pretty crude and still doesn't expand borders as early as I'd like. Could do a pretty precise calculation of whether the outer ring would get worked and whether workers are available for improving those tiles. But the bigger issue is that the K-Mod shortcut for culture buildings only looks at the culture building with the highest overall utility value. That is often going to be a Library, but Library will then often (rightly) be dismissed for taking too many turns. I've only worked around this problem to an extent.	
See also	303: Barbarian cities don't endeavor to expand their borders.	
AdvCiv	E	BtS
civics takes into account the number of cities		Just a flat value and a multiple of the current number of cities, counted once for each type of unlimited specialist.
Tbd.	As a K-Mod comment already points out, the BtS code is pretty bad. Should check for each city whether it can benefit from the specific specialist.	
See also	171: Also relevant for the AI evaluation of Code of Laws, and thus affects the typical founding date of Confucianism. That's what prompted me to make this change – the AI had been researching Code of Laws, in no small part, for the religion, but what actually makes it useful early on is the specialists. 131: Misc. changes to AI civic evaluation	

193-199	unassigned
200	Reverted K-Mod changes – see the chapter on <u>K-Mod</u> .

See also

Some of the K-Mod changes are explained in the changelog. In some cases, further rationales can be found on K-Mod's GitHub page, e.g. regarding corporation maintenance: Git commit

Prior to AdvCiv 0.98, I had restored the BtS tech requirements (Mass Media + Corporation) for Civilized Jewelers. Now the K-Mod requirements apply again (just Corporation). See CFC discussion here. The essential arguments to me are that, at Mass Media, a Great Artist will virtually always do more good through a Great Work than by founding Jewelers, and that Mass Media already had two powerful culture effects prior to the BtS expansion – outweighing the (valid) counterarguments that Jewelers, being annoying in the hands of the AI (corporation spread, culture spread) and having only narrow uses for humans, shouldn't be the easiest corporation to access, and that Mass Media is a historically plausible requirement. While it is now the easiest corporation to access, it is still not exactly easy to access, especially for the AI, because a particular Great Person (Artist) is required. Insofar, an early Industrial extra tech requirement representing machine shops wouldn't make much of a difference. Requiring a Merchant would make the corporation far less useful for a culture victory without necessarily making the AI less likely to stumble onto it.

201 Tweaks to building and corporation culture rates

Reverted most of the K-Mod changes to culture rates of buildings (Cathedral, Monastery, Madrassa, Pyramids, Hanging Gardens, Colossus, Chichen Itza, Great Library, Angkor Wat, Hagia Sophia, Spiral Minaret, University of Sankore, Shwedagon Paya, Notre Dame, Taj Mahal, Kremlin, Creative Constructions – all marked with "advc.200" in XML), set a culture rate in between the BtS and the K-Mod value for Stonehenge and Temple of Artemis, and kept the K-Mod culture changes to Oracle, Great Lighthouse, Parthenon, Statue of Zeus, Mausoleum of Maussolos, Sistine Chapel, Academy, Sid's Sushi and Civilized Jewelers.

Config These are all XML changes (Civ4BuildingInfos.xml, Civ4CorporationInfos.xml).

Rationale

The wonder culture changes aren't a big deal, but they're quite visible and some players may actually have some of the wonder culture rates memorized. This really shouldn't be necessary; should be possible to balance things under the hood (which also helps rein in culture spread from non-building sources). Well – one could of course take the total culture rate of a city to, say, the power of 0.8 and times a normalization factor, however, the K-Mod culture spread formula is actually fairly elegant and almost simple; I'd rather not use such a crude device. Instead, I'm leaving it at a small tweak to the "free" base culture rate along with my culture decay mechanism (see under "see also"). This probably doesn't fully offset the K-Mod changes to culture spread, so ...

I don't think karadoc has stated a rationale for his building culture changes; the changelog does say, specifically about the religion culture change to Sistine Chapel "culture is more powerful now; so this building needed to be nerfed."

I see a problem mainly with wonders dominating border disputes in the early game. Since tile culture accumulates turn by turn, I don't think any midgame and late-game culture sources are problematic – unless they work as multipliers. So I'm leaving the K-Mod changes to Free Speech and Sistine Chapel in place, and partly the changes to Ancient and Classical wonders, also taking into account the overall power level of the respective wonders.

(Midgame wonders not having much impact on borders and, for that matter, Culture victory, is not a good state of affairs. However, substantially increasing post-Classical wonder culture rates would be a bit outside of the scope of AdvCiv – and should be accompanied by a change to the 1000-year culture doubling rule.)

	I had been meaning to leave the change to Cathedral (only 40% culture rate, only 240 cost) in place because making Culture victory less dependent on religion seemed like a noble goal. However, I haven't found enough decent measures to balance out all the ways in which K-Mod hampers Culture victory. I also think that taking 10 percentage points away merely inches away from religion as the central element of Culture victories, and a 40% modifier isn't used anywhere else so far.		
See also	908b decreases the culture rate of the Creative trait and the Incan Terrace. 201 increases the culture rate of the Great Wall. 251: Removes the culture rate modifier that K-Mod adds to Colosseum. And is concerned with the balancing Culture and Space victory. 099b: Decay of tile culture, especially on "stolen" workable tiles. 098 increases the base rate of culture spread from cities a little bit. (And changes the culture doubling rule, but I've reverted that change again, leaving it commented out in the code.) 172 makes culture from city religions non-cumulative.		
Increase the	culture rate of Cristo Redentor from 5 to 6.		
Rationale	To match Statue of Liberty. I don't think players know culture rates of late-game wonders by heart, so making things a bit less arbitrary should have no downside.		
	National Park, Red Cross and all Corporate Headquarters have 0 culture rate instead of 2 or (National Park) 3.		
Rationale	Streamlining. Those culture rates are negligible in the late game. I guess they were implemented with a rule in mind that all national wonders produce a bit of culture. I don't think players will notice or mind if that rule isn't followed in the late game.

Should then also stop reporting "will no longer trade" and add a willing-to-talk check like the one for city trades [ctr].) '<team1> is willing to stop trading with <team2>." (But what about embargoes that the AI would agree to if the player didn't have any deals with the target?) '5 turns have passed since the last revolution; it's again possible to change civics." '<leader> can be convinced to convert to <religion>." 'The enemy has been spotted near <city>." (Currently, the game reports the same enemy time and again; should work better as a Civ4lert that remembers which enemy units had already been visible on the previous turn. Sentry [0041] already works this wav.) 'Temporary [anger icon] has subsided in <city>." (idea by CFC user BaneFire) 'The borders of the <civ> Empire have expanded./ Tiles have flipped from <civ1> to <civ2> control." (With an indicator bubble. Covering any tile ownership change not covered by city border expansion and city-founded announcements.) and possibly: 'A tile near <city1> has flipped to <city2>." (How to describe the tile?) '<leader1> is now [e.g.]furious toward y (was annoyed)." 'Can cancel this deal with <leader>: vou're receiving <item list1> for <item list2>." <leader> has constructed a <building>Ithe <national wonder> in <city>." (cf. 045) 'You|<leader> have|has overtaken <leader>|you in military power." The military power of <leader> has increased substantially over the last 10 turns." (probably too noisy) 'The effect of our counterespionage mission against <leader> has ended." (A message about enemy counterespionage ending would be difficult because we only learn that "enemy spies appear to be extra vigilant to our espionage efforts." but not whose spies, and the durations can overlap.) '<leader> has acquired the <wonder> of <city>." (The Tbd. under 106 would be preferable, but an alert that is checked at the end of turn would be easier to implement.) Should store AdvCiv4lerts data in savegames. Not challenging to do; just add virtual read and write functions, call them from CvPlayer and disable the check calls from Python upon loading a savegame. Actually, it would be best to move the implementation entirely into the DLL; there's no reason for involving Python. Moving the original (BUG) Civ4lerts into the DLL would be a much taller order. Don't need to do that though: I don't think storing the AdvCiv4lerts data in savegames will make any observable difference, so there won't be an apparent inconsistency with the BUG alerts. 210a War trades (= hired war/sponsored war/joint war) See also The RevolutionDCM mod also has such an alert, but I didn't know this when I implemented the alert for AdvCiv. <u>UWAI</u> uses a different procedure than BtS/ K-Mod to decide whether to entertain jointwar offers (but this alert works in any case). 152 shows currently offered war trades on the Glance tab. **AdvCiv** BUG/ K-Mod No alert about this, but BUG shows a fist icon on Triggers when an AI civ becomes willing to declare war on another civ at the player's the scoreboard when a civ is unwilling to declare

request.		war on account of "having too much on [their]	
Shown in the "Trade" column of the BUG Alerts tab; enabled by default.		hands." Prior to v1.46, K-Mod did not show this icon (not even as an option). K-Mod 1.46 reverts to the BUG behavior (icon enabled by default).	
Removed the	e "Victory" alerts to make room.	,	
Rationale		pport for joint wars) certainly wasn't ideal, and UWAI, "too much on ours hands" doesn#t say specifically for that isn't useful.	
	The victory alerts seem useful only i	n HoF games.	
Config	Can also show an alert when the Al ALERT_ON_NO_LONGER_WAR_TRADE I		
	K-Mod if UWAI is disabled – with one	e scoreboard string (letter 'M') and will work as in e small modification: No indicator is shown next to ous that they have "enough on their hands."

Rationale		ages produced by this alert. War against an ; the hired AI civ isn't going to send units.	
alert is also s have enough	sabled (legacy AI option), then an shown when the AI will respond "we n on our hands" to any war trade and no longer gives such a response.	No alert; just the scoreboard indicator.	
		s way one doesn't have to keep an eye on the or may still be useful in addition so that players are currently preparing for war.	
210b	Revolts		
	en revolt probability changes from 0 an 0 in a city, or when occupation	The only way to learn about changes in revolt probability is to check the city screen each turn.	
(from conque city also nee	est or revolt) ends in a city unless the	The Pacification alert triggers when occupation	
Shown in the	e "City" column, taking the spot if the cation/ Pending" alert.	ends in a city; the pending version when occupation is about to end. Without the alert, there is no notification about ending occupation,	
	he alert also triggered when the	although a conquered city will ask for production orders when occupation ends (unless the new owner has already put something in the queue).	
Rationale	Rationale Now that revolts play a more prominent role (see <u>099c</u>), an alert is direly needed Pacification alert seems fairly unimportant to me, but I've still included it with the alert. Though not the "pending" option; I don't see why one would want that.		
	No pacification alert when the city al	so needs orders; seems superfluous then.	
210c	City founded alert removed		
revealed to t message ab	ign city is founded in a tile that is he player, the game shows a out this to the player. No option to No messages about cities founded d tiles.	The description says that the alert is triggered when "a rival founds a city," but I think it also works for vassal cities (which aren't rivals). K-Mod prevented the alert from showing cities founded in unrevealed tiles and set it to disabled	

by default.			
Rationale	AdvCiv sticks with the K-Mod principle that unrevealed cities should be secret. No need for an optional alert then. Frees up space for a new alert (see <i>Tbd</i> . under 210).		
See also	106: City-founded messages in replays ctr: City trade alert messages		
210d	Third-party resource trades		
strategic res	Triggers when a civ starts or stops trading a Resource trades are public knowledge and can be looked up on the Foreign Advisor screen.		
starts trading any resource to a civ that it was previously not trading any resources to, or when the only resource trade between two civs is canceled.		The BUG Resource Trade alert triggers when an AI civ becomes willing to trade a resource to the player or stops being willing (106 disables the latter part).	
Rationale	Was helpful for testing <u>036</u> . Triggers way too often when all started and ended resource trades are reported. Reporting only strategic resources and the first and last trade is OK, but not quite as interesting as I thought it would be.		
Config	Disabled by default. Can be enabled from the BUG menu, Alerts tab, column Trading. There's also a debug mode for reporting all resource trades, but that can only be enabled in the DLL (AdvCiv4lerts.cpp).		
Tbd.	Perhaps this alert should only cover strategic resources; the current scope is a bit complicated.		
	A "third party" checkbox for an alert about inter-Al tech trades (cf. <i>Tbd.</i> under 210) could be placed in the same column of the BUG menu.		

210e	AI willing to import from human	
triggers also import a surp	e trade alert (enabled by default) when an AI civ becomes willing to blus resource from the player at a ast 3 gold per turn.	The alert only checks AI willingness to export resources.
by one of the	ger when the resource is consumed e player's corporations, nor when an being willing to import a resource.	
	import human surplus resources.	to <u>036</u> because the AI was always willing to ne AI stops being willing to export a resource.

250	Changes to handicaps	
See also	104p sets the target size for AI invasion stacks based on difficulty. 126 deals with free AI techs when starting in a later era. 108b increases the bias toward better starting locations for the AI. 313 gives human units an anti-Barbarian bonus on Monarch, Emperor and Immortal, and reduces human and AI bonuses against animals. 148 Makes inter-AI relations improve slightly with each difficulty level.	
250a	King handicap	
	Ity setting "King" with big initial AI Initial AI advantage and ongoing advantages go (free Worker, free Pottery, humans get	

	arting plots), and moderate ongoing ges (akin to Monarch).	hand in hand for the 9 BtS difficulty settings.
difficulty rati explicitly thr Immortal at	difficulty rating from handicap id. A ing from 0 to 100 is now assigned rough a new XML tag. Settler to difficulty 0, 10, 20,, 70; Deity at 85 65. Plus another 30 when playing a nallenge.	Handicap ids from 0 (Settler) to 8 (Deity) are used as a measure of difficulty, e.g. when computing player scores at the end of a game. This method breaks when handicap settings are added. If added at the end of Civ4Handicap Info.xml, it's treated as more difficult than Deity; if added in the middle, all the handicaps below increase in difficulty.
Rationale	for Pottery: Free tech from the first row (e.g. Hunting or Agriculture) puts those AI civs at a disadvantage that always start with these techs. Pottery should also put the AI on a path to long-term development (Granaries, Cottages), rather than using its initial advantage to choke the human players.	
Config	I've removed this difficulty level in v0.90. Left it commented out in Civ4HandicapInfos.xml and Civ4GameTextInfos.xml at first, deleted that too in v0.98. Monarch combined with SPaH has a pretty similar result, and I wanted to reduce the complexity of the AdvCiv mod, at least on the surface. (An additional difficulty level is a very visible change from BtS.)	
Tbd.	The victory score should take into account other game settings (through difficulty or directly), e.g. Always War.	
See also	See also 108 allows the game to give the worst starting plot to a human civ. kekm.22 rounds the difficulty setting in multiplayer to the integer nearest to the average. 126 prevents civs from continuing research paths that start at free tech whose requirements aren't met (e.g. can't go from free Pottery to Archery when missing the Wheel).	

250b	SPaH; see also chapter Start Points as Handicap.
Config in scenarios	Since v3.17 (reportedly), the Base Points box is grayed out on the Custom Scenario screen unless Advanced Start is set as a default option by the scenario. As a consequence, Advanced Start and SPaH (which builds on Advanced Start) are unavailable in most scenarios. I haven't found a way to work around this. However, it's easy to add Advanced Start as a default option in a scenario file: Locate the file in Sid Meier's Civilization 4\Beyond the Sword\PublicMaps (CivBeyondSwordWBSaves) or Sid Meier's Civilization 4\PublicMaps (Civ4WorldBuilderSaves). This also works for EuroWorld.CivBeyondSwordWBSave. Open it file in a text editor. (Or better make a backup copy first.) Somewhere between BeginGame and EndGame, add this line: Option=GAMEOPTION_ADVANCED_START
See also	Chapter Start Points as Handicap Advanced Rivals mod, precursor of Advanced Civ

Allow players to enter arbitrary point distributions, in particular ones that assign start points to human players. Obstacles: Can't add a drop-down menu for this to the Custom Game screen; if it's done ingame, it will have to happen after game start. For multiplayer, it's not clear who should enter the points; and they'd have to be explicitly synchronized. I've tried an XML file, but that doesn't work well for multiplayer – not clear to the players if they should all use the same XML file, or if XML data of the host will be synchronized with the others. I'd rather avoid using XML for custom game settings.

Caveat: Code added in CvPlayer.cpp assumes that only AI civs can have Advanced Start when SPaH is enabled.

The new SPaH option takes the spot of No City Razing (NCR) on the Custom Game screen; NCR moves to the bottom.

SPaH can't be used in scenarios because the Base Points box isn't available on the Custom Scenario screen.

	250c changes the default start points on the Custom Game screen, and increases the start turn based on the number of start points.		
Tbd.	Not sure if the default start points are appropriate for later-era starts.		
SPaH suppr	esses the difficulty adjustment of AI start points.		
	When playing with SPaH, any free initial items and any AI head start in terms of initial items should be covered by the start points configured for the AI.		

See also 250c disables free AI tech from difficulty setting when using (any) Advanced Start option.

(Just restating what's already described in the SPaH chapter)

SPaH gives the human civs normal starts with e.g. a Settler and Warrior/ Scout in the Ancient era, and Advanced Starts to the Al. If less than 10000 start points are entered, all Al civs get the same number of points (flat distribution). Otherwise, if a 5- or 6-digit number is entered, the Al civs receive unequal amounts of points. The first 4 digits determine the max number of points. This is assigned to the Al civ in the bottommost slot. The last two digits are interpreted as a percentage of the max. The resulting min number is for the Al civ in the topmost slot. The others receive values in between min and max, linearly distributed and slightly randomized.

The AI start points can be reviewed on the Settings tab of the Victory Screen.

There is no SPaH option; all civs, human and AI, receive the same number of start points.

Tbd.

The unequal distribution is linear between max and min, but also based on pairs that tend to have similar point values. Originally, this was supposed to make the assignment of start plots easier. The human civ and the bottommost AI civ were placed first, and the other civs were evenly distributed in between. This doesn't generalize well for multiplayer, so I've abandoned it. Given the current start-plot assignment algorithm, it would be conceptually simpler to use a linear distribution without pairs.

Config	The randomization of start points is o	configurable in GlobalDefines_advc.xml.
specifically, t 0 and 90 (se start point dis game has no start points fo increased by	ored into the game-end score. More he difficulty factor, normally between e 250a), is increased based on the stribution. For example, a Noble ormally a difficulty of 30; with 1000 or every AI civ, that difficulty is 20, which results in the same score h game without SPaH.	Game-end score doesn't account for Advanced Start.
	little bit as a rough indicator of how w	us issues, but I think players still care about it a vell they did. So, the formula doesn't have to be handicap, they should be accounted for
	I haven't thought about scoring in muabout.	ultiplayer games – not important enough to worry
AdvCiv		BtS
Default numb start set to 4	• • • • • • • • • • • • • • • • • • •	600
Rationale	I want this default for SPaH. For regular Advanced Start, 600-800 would be better (considering that 250c increases start point costs), but this can't be set dynamically.	
250c	Changes to (regular) Advanced Start	t
No impact of points.	difficulty setting on the human start	Extra start points for human civs on low difficulty settings (150% on Settler), reduced start points on high difficulty (75% on Deity).
Prince 125% Monarch 145 Emperor 175 Immortal 210 Deity 270% (and they're	5% 5% 0% actually applied). penalty added on difficulty levels	Set to 110% 120% 135% 150% 170% but aren't applied because of a bug.
	Want to reduce the number of modifiers that affect start points. Instead of giving human civs fewer points on higher difficulty settings and AI civs more, I'm giving the A civs a lot more. This is also to account for the free AI tech that is no longer granted in Advanced Start (see below). The higher amount of start points for human civs on Prince and above is countered by	
	an increased point cost for units, buil	ldings and cities (see below).
Credits	I had at first forgotten (not bothered? them after seeing <u>this</u> Kek-Mod comi	r) to add an AI penalty on the low levels; added mit.
the technologin the Classic	No free initial items in Advanced Start except for the technologies of previous eras when starting in the Classical era or later and civ-specific tech when starting in the Ancient era. No free units, but free technologies from the difficulty setting are granted in addition to start points.	
		tly than free units. Obviously, free tech from my solution isn't entirely consistent either.

Charge 1.5 start points per production (units. The ratio is 1 for 1, 1 Food (population) costs 1.5 buildings, cities). start points though. 1.5 start points per 1 culture. 1 culture costs 2.5 start points. 2 * (100 + 3 * number of revealed tiles) / 100 Revealing a tile costs 1 start point plus 1 per every 25 revealed tiles. Advanced Start normally rounded down, i.e. 5 initially. reveals at least 50 tiles upfront. Although AdvCiv doesn't count these fully, the cost normally starts at 2. Can't reveal Ocean tiles that aren't adjacent to Can reveal any tile that isn't adjacent to a Coast when starting in Renaissance or earlier. previously revealed tile (no change). Start point cost for routes and improvements E.g. a Mine costs 24 start points, a Farm 30. reduced to 67%. Techs cost 1 start point per research point (no change). Rationale Units seemed extremely cheap compared with tech. It's not that dangerous because units can only be placed in cities, and each city has a limit of two military units; still, makes lots of Workers and Settlers a too obvious choice. 1 start point essentially corresponds to 1 gold, so 1.5 per 1 production is still a bargain. Should perhaps be 2 for 1 – not sure if there's a good reason to make techs relatively unattractive during Advanced Start. Similarly, 1 revealed tile per 2 start points is still pretty expensive; seems better to buy Settlers and found later than to pay some 50 points extra for revealing the surroundings of a potential city site. A Mine for 24 is too expensive when a Worker costs 60. Now Workers are at 90 and Mines at 16. With cheaper visibility, it could make sense to reveal a diagonal across the entire map under the BtS rules. That would spoil all the surprises, so I'm prohibiting the oceans from being revealed. 2 culture per 3 start points is still expensive – except for the first border pop, which I don't want to turn into a complete no-brainer. Config Costs for culture, revealed tiles and Worker builds are set in GlobalDefines advc.xml. Start points shown on the Custom Game screen Shown points are adjusted to game era, game speed (silently) and world size. The impact of are only auto-adjusted to match the start era. world size is minor; the multiplier is between 80% All start point costs are reduced based on game and 120%. speed. Rationale A large world isn't necessarily less crowded than a small one. The BtS autoadjustment is generally problematic because it overwrites any start point value that the player may have already entered. Also gets in the way of 250b – don't want the player handicap to increase with the world size. The silent game speed adjustment can be a bit confusing – the player ends up with a start point budget that differs from the value shown on the Custom Game screen. I

think it's a bit more elegant to change the costs instead. Makes no functional

difference (apart from rounding).

time immem	n Screen always shown. The "since orial" text and initial techs are only	Dawn-of-Man only shown for normal start, i.e. non-Advanced in the Ancient era.
shown when starting in the Ancient era. While in Advanced Start, scoreboard help text shows the player's leader.		While in Advanced Start, players can only infer their leader from the text color or by using keyboard shortcuts to access Advisor Screens or Civ Description (Alt+D).
Rationale	Players need to know their civ and le on the Custom Game screen.	eader upfront, especially if it was set to Random
	The initial techs are meaningless wh	nen starting in a later era.
The start turn is based on the number of start points, more specifically, the maximum and the mean of the start point distribution. Only applies when starting in the Ancient era (and only when the average of mean and maximum is greater than 500).		The start turn only depends on the start era.
(max=mean:	everyone receives 750 points =750) on Normal speed, Emperor n the start turn is 20, i.e. 1880 B.C.	
Rationale	Should match the historical time line better, and, in the case of SPaH, gives the impression that some of the AI civs have been on the map since 4000 BC, whereas the human civs are late arrivals.	
Config	INCREASE_START_TURN in GlobalDe	fines_advc
No free food when population is added to a city through Advanced Start.		Whenever the population of a city is increased in Advanced Start, half of the city's food store gets filled. 0 food in newly placed cities.
Rationale	Perhaps the free food was supposed to make Granary useful in Advanced Start? But then the cost for increasing population should also be based on the present food store (and it isn't). Anyway, the rule is too obscure; no one expects free food when adding population. If adding population isn't powerful enough, one could always adjust ADVANCED_START_POPULATION_COST, but 1.5 points per 1 food seems fine now that 1 production also costs 1.5 points.	
Credits	Kek-Mod (Git commit <u>1</u> <u>2</u>)	
placing cities except for the first city.		The Imperialistic trait reduces the point cost for Settlers but not for cities. Civs are forced to place at least one city before they can buy Settlers.
		When not in Advanced Start, the Imperialistic trait only increases the production invested in Settlers, not food. Thus, the production bonus is closer to 25% in the early game than to 50%.
Rationale	Inconsistent to apply the bonus to Settlers and not to cities. No bonus for the first cit because, in non-Advanced Start games, Imperialistic leaders don't get an advantage from the initial Settler either.	
	I'm OK with the 50% bonus (rather than e.g. 25%) because Imperialistic is a fairly weak trait.	
Credits	Kek-Mod (Git commit); I've only added the exception for the first city.	

The AI doesn't spend start points on culture in its capital unless it has a lot of points to spend. The AI expands the borders of every city that it places.			
Rationale	The border pop is normally a good investment but not really needed in the capital (although it's so cheap that this was barely worth changing).		
Credits	Afforess (RoM: A New Dawn mod); SourceForge revision: link		
Tbd.	Afforess makes some other changes in the Advanced Start AI code. I think these are mostly for dealing with very high numbers of start points, say, more than 10 000. A lot of magic numbers in his code that would probably have to be adjusted to AdvCiv.		
	Either way, one thing that needs to be fixed: The AI currently places improvements (in CvPlayerAI::AI_advancedStartPlaceCity) before purchasing any techs. Should instead only reserve some points for improvements at first (could use the current code for that; just don't actually buy the improvements) and select and place them after purchasing tech.		
Rationale	Not obvious that buildings and tech can't be removed. (Could probably allow some of them to be removed, but I'm not going to bother with that.)		
Tbd.	Should mention somewhere in help text that removal works through right click. Loading screen hint?		
an Advanced "Explore". Of the city wher	Units that the AI purchases for exploration during an Advanced Start receive the UnitAIType "Explore". Other units receive "City Defense" if the city where the unit gets placed doesn't have city defender yet. Units purchased for exploration receive the default UnitAIType. For Warriors, that's "Attack". Consequently, the Warriors aren't used for exploration but, at best, for patrols, and usually they just guard the capital.		
Rationale	It's embarassing when the AI fails to	clear goody huts close to its capital.	
Credits	The city defense part is from the MNAI mod (<u>Git commit</u>)		
existing impr	When an improvement is placed on top of an existing improvement, the start point cost of the old improvement is replaced without any refund. The Advanced Start interface also allow removing an improvement; in that case, the cos is refunded.		
Credits		hich labels this as a bugfix. Fair enough; the adopted this fix for a potential issue with iles in Advanced Start.	

250d	Al unit supply and upgrade cost not	affected by game era
difficulty sett supply and u AI game pro		The per-era modifier increases most of the AI advantages with each passing era.

	I wanted to apply the AI supply cost modifier to the gold paid for Pacifism (change 912b). The era progression complicates this. And perhaps AI upgrades also happen a bit too swiftly in the late game on Emperor and above.		
	It's also conceptually simpler to have these two AI modifiers apply regardless of difficulty, i.e. also regardless of the per-era modifier (which does depend on difficulty). Look at them as an acknowledgment that the AI needs to have far more units than a human player in order to guard its cities.		
	Note that AI upgrade costs still decrease over the course of a game (on Prince difficulty or higher) because the upgrade cost is computed based on unit production cost, and AI discounts on unit production increase as the game progresses.		
See also	251 exempts all AI gold costs from g	ame progress adjustments.	
250e	Fewer AI freebies, especially units.		
On Emperor receives 1 fre	difficulty and Immortal, the Alee Scout.	2 Scouts; same as on Deity.	
Rationale	Hunting. I don't think extra AI explora difficulty. Also note that, on Monarch,	numan civs; especially the initial Scout from ation units are a good way to ramp up the most AI civs don't start with Hunting and thus get when going from Monarch to Emperor.	
	As for the extra Scout on Deity, it's w for exploration.	orth noting that the AI won't use its free Archers	
See also	031d: Al exploration behavior in the o	early game	
Archery but v defensive un	it and a Warrior as exploration unit. tart with Hunting receive a Scout	Monarch AI civs without Hunting receive two Archers, one for defense, one for exploration. Those with Hunting receive an Archer and a Scout.	
	A Scout is arguably less valuable tha shouldn't be a disadvantage.	n a second Archer, and starting with Hunting	
	ne as on Emperor) and on Deity with	3 on Immortal, 4 on Deity.	
On Immortal defenders.	, Barbarian cities start with 3	4, same as on Deity.	
Rationale	That many initial defenders just seen	n pointless to me.	
See also	The <u>table</u> in the chapter about the SPaH option lists the AI freebies for each difficulty setting.		
No free Agric level.	culture for the AI on any difficulty	Free Agriculture on Immortal (in addition to Hunting and Archery) and on Deity (in addition to Hunting, Archery and The Wheel).	

Rationale	It seems that the jump in difficulty from Emperor to Immortal is a bit too big in general; especially the first one and a half eras are tense, the player is easily boxed in. With the No Slavery option (912d) enabled, it seems very difficult to persevere on a continent shared with a single AI civ.	
	Taking away a free tech seems like the best way to slow AI expansion down a little. Agriculture has the potential of speeding up a second AI settler considerably; I think The Wheel (on Deity) is a less explosive freebie, rather steering the AI toward early Pottery and Cottages, i.e. toward playing a long game.	
See also	I guess changes to map sizes (137, 165), starting positions (027) and AI behavior have made it considerably more difficult to establish at least four decent cities in the early game. Converting AI worker speed increases into a human worker speed decrease (251) may also have had the (unintended) effect of hampering the early development of human civs more than that of AI civs.	
	CFC post of mine (the long paragraph in the middle) about the state of Immortal and Deity in AdvCiv 0.99 (i.e. before the Agriculture change, but after the Deity Settler change), linking to two other relevant threads.	
No second free Settler unit for the AI civs on Deity. I.e. the AI starting units are the same as on Immortal except for an extra Archer. The second Settler means that the AI head start on Deity is much greater than the (already substantial) head start on Immortal. For a challenge in between Immortal and Deity, BtS players sometimes remove the second Settler; that custom difficulty level is sometimes referred to as "Demigod" (that had also been the name of an official difficulty level in Civ 3).		
See also	The Deity research rate set by 251 is	s adjusted to this change.
Rationale	With the second Settler unit, Deity wasn't really playable on a normal map with the default player count as the human player was immediately boxed in.	
	I'm not sure if Deity is now a reasonable difficulty to play on in AdvCiv. (Ultimately, i.e. after some more balance changes, I hope that even the most competent players would be able to find a challenge on Immortal, if not Emperor. Deity would then just serve as a demonstration of what happens if the AI advantages are increased beyond Immortal.)	
Tbd.	Insert a difficulty "God Emperor" in between Emperor and Immortal, and boot Settler? The total number of levels should stay the same for replay compatibility (see 106i). I've created a Git branch for God Emperor.	

251	Pacing adjustments for difficulty leve	ls
See also	910 adjusts the per-era tech modifiers (which apply to everyone, not just the AI) and the game year increments.	
AdvCiv BtS		BtS
speed) for eve the first) that when playing	n is advanced by 10 (on Normal very free Worker and Settler (beyond the Al receives. This only applies without Advanced Start (about the Advanced Start, see 250c).	The start turn is only affected by start era, not by difficulty.
	s" tab (Victory screen) shows the mber when it isn't 0 (for any reason).	

Config	INCREASE_START_TURN in GlobalDe	fines_advc.xml
difficulty set three. I've a modifiers fo that the ratio	s are reduced on the lowest four tings, and increased on the highest djusted the human tech cost r these seven difficulty settings so between human and AI tech costs proximately as in BtS.	Al tech costs are not affected by difficulty. Human tech costs are reduced to 60% (Settler) to 90% (Warlord) on difficulties below Noble, and increased to 110% (Prince) to 130% (Deity) on difficulties above Noble.
Rationale	The overall progress had been too fast on difficulties above Monarch and too slow on difficulties below Prince. It's an aesthetic issue (AI tech matching game date), but also a matter of pace: How much time there is for deploying combat units until another tech is discovered. I don't think that, say, Warlord and Immortal should have fundamentally different pace (that's what the game speed setting is for). Deity still gets ahead of the historical time line, but not all too far.	
See also		oo; in K-Mod <u>1.45</u> , he tied inflation to the global nis solution; see the discussion <u>here</u> .
		mething similar to my change ("tech costs for all 'Bitbucket <u>link</u>). And Caveman to Cosmos also ne top).

AIResearchPercent and ResearchPercent in Civ4HandicapInfos.xml

Starting on Emperor difficulty, production costs, city growth thresholds and Great Person (GP) thresholds of human civs are increased by 10% (Emperor), 20% (Immortal) or 30% (Deity). Exception: Building production costs aren't increased as much. Al production discounts are lower than in BtS, e.g. just 5% on Emperor (at game start).

Config

The AI discounts for wonders are the the same as for other buildings and units. (Except for a 5% discounts on wonders. The per-era discounts do production discount on Prince difficulty that doesn't apply to wonders.)

The modifier for human city growth only affects the base threshold (20 food) for growing a city. That threshold increases by 2 food per population regardless of the difficulty setting. The Al growth modifier works as in BtS. i.e. it also applies to the extra food from population.

The production (and Advanced Start) cost of Settlers is partly affected by the growth modifier (as in BtS) and half affected by the production modifier. This results e.g. in a cost of 130 on Deity.

The GP thresholds of the AI are adjusted by the same percentages as the city growth thresholds.

On the lowest two difficulty levels, human production costs and growth and GP thresholds are lowered. Free happiness and health on Settler difficulty lowered by 1; now the same as on Chieftain.

Human production costs and growth thresholds aren't affected by difficulty, and neither human nor AI thresholds for GP are affected by difficulty. The AI production discounts are e.g. 15% on Emperor and 40% on Deity. These discounts increase over the course of the game, so that, by the Modern era, Al production costs on Emperor are only about 70% of the normal cost.

At game start, the AI receives no production apply to wonders.

The AI city growth threshold is decreased by 5% on Monarch, 10% on Emperor, 15% on Immortal and 20% on Deity; same in AdvCiv.

For each 1 food that the initial city growth threshold differs from 20, the cost for a Settler is adjusted by 5%. Production modifiers don't apply.

Rationale To reduce overcrowding of the map on the high difficulty levels and to match the increased research costs. If only research becomes more expensive as the difficulty level increases, the game balance skews toward warfare in a similar way as on Marathon speed. Perhaps Noble difficulty (on Normal speed) makes it a bit too rewarding to focus on research, but the human research cost modifier on Deity (now 160%) would definitely be too high without a production cost penalty, and on Emperor (125%) arquably also. Similarly, the human costs for growing cities and GP need to match research costs to an extent. The game speed settings, for comparison, have growth and GP modifiers too, and also modify Worker speed (see below), Cottage growth, culture level thresholds, chopping production, hurry production and GP effects. I don't see a need for making all these values dependent on difficulty; it's actually fine if chopping and Slavery become less efficient on the high difficulty levels. Building production costs don't get adjusted as much as unit (and project) production because the full adjustment would make too many buildings categorically unusable on Immortal and Deity. Buildings tend to provide predictable but slow returns, which isn't good enough on the highest difficulty levels. Also, keeping relatively high AI discounts on (non-wonder) buildings isn't much of a problem; won't contribute much to Stack of Doom problems. No production/ growth/ GP penalties on the medium difficulty levels because a small (say 5%) increase would be barely noticeable due to rounding (see next blue box). Given the lower AI production discounts, exempting wonders should no longer be necessary. I'm only doing it on Prince to differentiate Prince from Monarch; these two levels would otherwise have the same AI production discounts (5%). The human growth penalty is applied only to the base food needed for growth because I want to keep the formula for the food per population simple (2 food per population, same as the food consumption). For the AI, simplicity isn't so relevant, and a growth bonus that applies also to the food per population helps the AI in the midgame and late game. The GP discounts and penalties make the high difficulty levels harder and more unfair than in BtS. Changes to the per-era modifier (see below) might even this out. Config I've added tags TrainPercent (for units), ConstructPercent (for buildings, incl. wonders) and CreatePercent (for projects, incl. world projects) to civ4HandicapInfos.xml. These apply to all civs that play at the respective handicap (AI civs play at Noble unless a scenario gives them a different handicap). For GP and growth thresholds, I've added GPThresholdPercent and BaseGrowthThresholdPercent **(for all civs) and** AIGPThresholdPercent **(for Al** civs). See also Since these modifier changes don't affect Barbarians, change 300 decreases the Barbarian activity on the high levels a bit. 101 gives Al-owned cities a somewhat smaller revolt chance. This stacks the game a

482

bit further in favor of the AI (but I don't think it's a significant factor overall).

I'm not sure if the Processes (e.g. Wealth) need to be difficulty-adjusted. When both research costs and production costs increase with the difficulty level, one would think that the conversion rate between them can stay the same. But I think there's still a problem of buildings becoming less attractive as the difficulty level increases, and the processes are generally recognized as more efficient than buildings, so perhaps something like 100% Prince, 90% Monarch, 80% Emperor, 75% Immortal, 70% Deity, maybe coupled with a 20%(?) boost at Computers. Perhaps not good to punish

Thd.

players for running out of things to produce in the endgame.

City maintenance and unit cost modifiers increased a bit on difficulty settings below Emperor. Free wins against Barbarians reduced by 1, meaning that Noble is now the highest difficulty level with a free win (was Prince in BtS). Slightly reduced tech costs on Noble difficulty to keep the pace of the game the same.

Rationale/ See also

708; Aimed mainly at experienced players that combine a medium difficulty level with the R&F game option or some other special-challenge game option.

Since AI civs plays on (player handicap) Noble difficulty, this change hurts them a little and thus makes it a little easier to compete with them on (game handicap) Emperor and above. Shouldn't make a big difference though – due to the AI discounts on Emperor and above, AI expenses should still be pretty painless. Hopefully, a single free win on Noble is still enough to keep the AI out of trouble in the very early game.

Unlike the other human production penalties, those for team projects only apply on Immortal and Deity difficulty. On Emperor and below, the Al receives higher team project discounts instead (the same as in BtS or similar).

No modifiers for human project costs. The Al modifiers for projects are equal to those for other types of city production.

Rationale

Don't want to make Space victory even more grueling than in BtS. See CultureLevelPercent below about balancing Space and Culture victory.

on Emperor, 15% on Immortal and 20% on Deity, setting. The AI work rate bonus is 10% on Prince, The resulting build times are rounded down to to 20 on Monarch, 50 on Emperor, 75 on Immortal, a multiple of 50 before modifiers from game speed and start era are applied. The AI work rate difficulty. Since the base build times (e.g. 200 bonus is 5% on Prince and increases in steps of time units for Road) are a multiple of the work 5 percentage points to 25% on Deity.

Human worker build times are increased by 10% Human workers aren't affected by the difficulty 100 on Deity. Build times aren't affected by rate of the Worker unit (100), even a 1% build time penalty results in at least one extra Worker turn for all builds.

Rationale

In the very early game, build times should somewhat match research times, especially for human civs. Otherwise, civs that don't receive any free worker tech can become unplayable and players can't afford to research any other techs. Also, the very fast Al work rates in BtS can help the AI get ahead too fast and could provide an extra incentive for attacking AI Workers.

Later on, quick AI build times mostly mean that the AI quickly improves and routes every tile, which looks ugly and rather unintelligent.

Given the way that the number of build turns is calculated, a work rate penalty would result in an extra turn for everything; something smoother is needed so that e.g Road can still be built in 2 turns, but Farm may require an extra turn. The build time increase with rounding, albeit complicated, accomplishes that. Work rate bonuses are fine in this regard.

Config

New XML tag BuildTimePercent in Civ4HandicapInfos.xml

Human production and research costs and GP thresholds are rounded to the nearest multiple of only modified by game speed and these 5.

Human production costs and GP thresholds are modifiers usually result in multiples of 5, though e.g. an Archer costs 37 production on Epic speed. The research cost modifier from difficulty can result in odd research costs.

Rationale

Easier to remember and calculate. The game balance isn't so delicate that +/-2 production will make a big difference.

The AI discounts on production costs, research costs and city growth thresholds increase by 1 percentage point every 100 turns on Prince difficulty, every 50 turns on Monarch, every 33 turns on Emperor, every 25 turns on Immortal and every 20 turns on Deity. If the game doesn't start on turn 0, these increments are applied retroactively, i.e. the current game turn is decisive, not the number of elapsed game turns. Also, the numbers are adjusted to the game speed setting (to VictoryDelayPercent to be specific). These increments based on the game turn replace the BtS per-era modifiers.

Whenever an AI civ enters a new era, its discounts on production costs, city growth, expenses (inflation, civic upkeep, unit cost, unit supply), unit upgrades and war weariness are increased by (multiplicative) 1% on Prince, 2% on Monarch, 3% on Emperor, 4% on Immortal and 5% on Deity.

•	•	
See also	250d: Al unit supply and upgrade co	sts are independent of the game progress.
Rationale	The per-era mechanism is self-reinforcing because the sooner an AI civ reaches a new era, the sooner it benefits from increased discounts; such snowball effects are undesirable. Using the game era instead of civ era would also be problematic because of possible human manipulation, and any average gets distorted by vassals/small civs. The game-turn-based mechanism doesn't have these problems and works more smoothly. One potential issue is that high-difficulty games tend to reach the endgame eras earlier than low-difficulty games, meaning that the game progress adjustment may not take full effect. However, the current difficulty-based research cost increases seem to be quite effective at giving games across all difficulty levels a similar length.	
	simpler to adjust the AI research cos expenses. Also, lower expenses hav and how many units it trains. As for v AI even in the late game. As for GP t	ted by the difficulty setting, it's conceptually at to the game progress than to adjust the various re side-effects on the civics that the AI chooses war weariness, I don't think that's an issue for the thresholds, I worry that progressively lower ention to the AI discounts (as every GP birth is

See also	126 adjusts the culture level thresho	lds to the game's start era.
AdvCiv		K-Mod
700 per era (("culture bomb") culture increases by (of the owner of the Great Artist), th the Ancient era.	Starts at 0 culture in the Ancient era, then increases by 800 per era. (4000 flat in BtS, i.e. regardless of the era.)
And hover te the culture p	ext for the Great Work button shows er era.	K-Mod has changed the ability text in Civilopedia, but the action button only shows the total culture based on the current era.
Rationale	The K-Mod change is apparently aimed at border spread, and it's probably true that 4000 culture in the Ancient era is – perhaps not overpowered compared with, say, an Academy – but not well-balanced and not enjoyable to play against. However, when focusing on a Culture victory by the midgame, the reduced culture is quite an impediment. While, in my opinion (from a game designer's point of view), teching to the Modern era should be the standard approach when playing at a challenging difficulty level, teching only to the Industrial era should also be worth considering. I think the K-Mod progression hurts that approach a bit too much. (Making settled Great Artists a more worthwhile alternative would be noble goal, but I don't think it's close even with the K-Mod progression.) Starting at 0 culture in the Ancient era also seems wrong to me for mod-mods (in BtS/ AdvCiv, an Ancient Great Artist is impossible to obtain).	
Config	iGreatWorkCulture Of UNIT_ARTIS	T in Civ4UnitInfos.xml.

<u>Discussion</u> with crullerdonut about Culture victory (starting after the 5th quote box) <u>910</u> increases late-game tech costs and reduces research rates

Rationale

Given the current tech costs and research modifiers in AdvCiv and the +1 research to specialists at Scientific Method, the rate of tech discoveries in the late-game should be about 75% of the BtS rate. The typical culture modifier when going for a Culture victory in BtS is 100 to 150 from 2 to 3 Cathedrals, 100 from Free Speech, 50 from Broadcast Tower; that's 250 to 300%. In AdvCiv, that modifier is 80 to 120(*) plus 50 plus 50 = 180 to 220%, i.e. ca. 72% of the BtS rate.

This sounds almost well balanced assuming that research is the bottleneck for a Space victory – and assuming that Culture vs. Space is fairly well balanced in BtS, i.e. that researching all the techs that a Culture victory doesn't require tends to take a player focused on a Space victory about as long as it takes a Culture-focused player to accumulate 50k culture after cranking up the culture slider.

The main factor that does seem to make Culture victory more difficult overall in AdvCiv than in BtS is that <u>UWAI</u> makes it more difficult to avert late-game wars through diplomacy; that may make it unviable to deprioritize research at the end of Renaissance. Civilized Jewelers at Corporation can't make up for that (not sure if it's worthwhile for a Culture victory at all).

I would prefer to balance this out by slapping +25% culture on some secular building (making Culture victory a bit less dependent on religions), like K-Mod did with Colosseum – but Colosseum really shouldn't be a source of culture; don't want to blur the distinction between amphitheaters and theaters. Another candidate is Market, but that's also strenuous, and, since capitals usually construct a Market before long, it would further increase the culture pressure from capitals, which already seems rather too great. Theater would be the most intuitive place, but then the building should either not grant flat culture or be a good deal more expensive. Either change would make Theater far less attractive in recently conquered cities.

For lack of a better alternative, I'm adjusting the Legendary threshold. The difficulty adjustment already means that 50k is no longer a number that players can rely on, so I don't feel too bad about this.

(*) In AdvCiv 1.0, I've restored the Cathedrals to 50%. The calculation above doesn't take into account that religious culture from Sistine Chapel no longer doubles and that Great Artist culture is only 3500 (after an adjustment on my part, would've been 3200 in K-Mod) unless the player techs into the Modern era. Moreover, if the player stops teching at the onset of the Industrial era (which I'd like to remain a consideration), the +50% culture from Broadcast Tower also can't be counted.

Quick speed: All the speed-adjustments relevant for producing city culture seem to use a multiplier of 67%, and the CFC posts that I was able to find on that topic paint Quick-speed Culture victory as a rather cheap way of winning. Seems that Firaxis went with 50% simply because that results in more aesthetically pleasing (and perhaps more easily remembered) numbers.

300	The fundamentals: gradually increasing activity, ships placed per shelf, food yields matter, fogbusting nerf, game speed scaling, city placement bugfix, New World Barbarians, no cooperation between Barbarian cities, misc. Al improvements vs. Barbarians	
AdvCiv	BtS (K-Mod hardly changes Barbarians)	

Barbarian activity reaches its peak when 54% a continent are owned by civs (or Barbarian cities), appear, typically around turn 50. With Raging Barbarians, the activity peak is a little later.

Barbarian activity peaks shortly after they first

The difficulty setting determines on which turn Barbarians first appear. I've very slightly increased the start turn set there for Noble difficulty and above, but, on high difficulty settings, they still appear quite early, e.g. after 20 turns on Immortal. They initially appear only in small numbers though.

Barbarians can't appear until there are 1.5 cities per civ. Thus, the early start turns set for high difficulty settings through XML have practically no effect.

Rationale

Since Barbarians start slowly, the 1.5-cities rules isn't needed anymore.

I had used 67% until AdvCiv 0.98. That may have matched the time line for the "age of migration" better, but, considering the higher default player count (137), often resulted in no sense of urgency while founding a 2nd and 3rd city and made it undesirable to produce Warriors while growing the capital to size 3. (It's often better to grow to size 3 even if another Warrior isn't needed anytime soon, but it feels bad to produce unnecessary units.) Before AdvCiv 1.04, I had used 56%, then 52% and 54% in AdvCiv 1.05 (which, however, has also tweaked the Barbarian start turn and the conditions for aggressive behavior, see below).

Initially, I had aimed at a gradual increase of Barbarian activity until the early centuries AD, which coincides with the Migration Period in Europe and the Sixteen Kingdoms in China. I have since then come to think that it's better for gameplay to have Barbarian activity recede in the last centuries BC to let the focus shift to warfare between civs. I think changes to the placement of starting sites (027), in addition to the increased default player counts (137), have also made it difficult to keep the Barbarians relevant in the late Classical era; there just isn't enough unobserved space on the map. Moreover, the lack of Barbarian activity around the time when the civs found their second and third city gave the civs too few incentives to produce military units, let alone research Archery, and it was more different from BtS than it needed to be.

That being said, if players configure more sparsely populated maps or if some starting sites randomly end up being spaced far apart. Barbarians can still get guite fierce in the early centuries AD, more so than in BtS I think.

The degree of aggressiveness in the behavior of Barbarians have essentially four patterns of Barbarian units is, apart from city counts, also based on randomness, more specifically on a hash value of a unit's "birthmark" – i.e. the behavior stays consistent over the lifetime of a unit so long as no further cities are founded or razed. As a result of the random element, aggressive behavior can generally be encountered earlier than in BtS. The average city accident) exceeds three; (iii) opportunistic, counts exclude Barbarians and (in most cases) also exclude cities on different continents.

With Raging Barbarians, most units use their highest level of aggression only as the average city count approaches two (i.e. when a second city has been founded by most civs).

behavior: (i) One reserved for the Raging Barbarians option, which causes them to seek out civ cities and form stacks as soon as Barbarian units start appearing; (ii) a similar, but not quite as aggressive, behavior that is used once the average city count per player (the Barbarians themselves count too, perhaps by uncoordinated attacks on cities and improvements, triggered by an average city count of 2; and (iv) patrols of unowned land, trying to avoid cities – used when (non-Ranging) Barbarians first appear (which requires an average city count of 1.5).

Rationale	To make the changes in behavior more smooth. Can feel like fighting the Borg in BtS when they all suddenly decide to flock to cities.	
	Counting only continental cities should make the Barbarian behavior more appropriate for the local state of development. Probably mostly relevant for the highest difficulty settings that inevitably cause human players to lag behind initially and the SPaH game option.	
See also	250e reduces the AI freebies on the highest difficulty levels, so the change to the calculation of the average city count may no longer be justified.	
shelf, i.e. the	arian ships are created for each continental i.e. the ring of coastal tiles surrounding land mass (or enclosed in the case of I seas). Barbarian ships are created for each water body usually, there is only one large water body.	
Rationale	To prevent neglected shores on one continent from affecting Barbarian activity on the shores of another continent, and to prevent Barbarian ships from piling up near remote islands (as they sometimes do in BtS).	
Tbd.	When a shelf is interrupted by sea Ice, Barbarian ships can stile accumulate in between Ice tiles. Need to treat such pockets as separate shelves (akin to what <u>030</u> does). As a temporary solution, no Barbarian ships are placed if the total size of a shelf is far greater than the number of tiles where a Barbarian ship can legally appear.	
(RB), the Ba	(Disabled) When playing with Raging Barbarians The game never tells the player on which turn (RB), the Barbarian start turn is shown on the Settings tab of the Victory Screen.	
Rationale	When starting in a later era or using SPaH, the game doesn't start on turn 0, and it's difficult to tell how many turns have passed. Update (v0.94): Not crucial to know because even Raging Barbarians start appearing gradually. And after the turn on which Barbarians could theoretically first appear (based on the difficulty setting), it may take another 10 or 20 turns until a unit actually enters visibility, so the turn number can be misleading.	
See also	251 shows the game start turn on the Settings tab if it isn't turn 0.	

When computing the target number of Barbarian All land tiles count equally, and water tiles count land units and cities per continent, half of the coastal water tiles in the surrounding shelf also count, and non-habitable tiles are disregarded. I refer to tiles as "habitable" if they have a positive natural food yield when ignoring hill yield changes.

only for sea units.

Barbarian units can't appear on non-habitable tiles. On "non-arable" tiles, i.e. tiles with a vield sum of 1 or 1.5 (counting commerce as 0.5), Barbarians are far less likely to appear than on tiles with higher yields. I'm computing the yield sum twice, once including and once excluding features, and take the minimum. This way, all Tundra and Jungle without (revealed) resources is treated as non-arable.

Tile yields have no impact on Barbarian unit placement.

Civ units only prevent Barbarians from appearing Barbarians can't appear in a 5x5-tile square on visible tiles.

surrounding each civ unit ("fogbusting" range). Visibility practically doesn't matter.

yield or freshwater.

Animals only appear on tiles with a positive food A passable tile not visible to any civ is chosen at random, then an animal suitable for that tile's terrain is chosen.

Rationale

Want Barbarians to work as a corrective for starting positions that have much room for expansion. To this end, fogbusting needs to be nerfed, and decent tiles need to be distinguished from bad tiles.

It's also rather implausible that large numbers of Barbarians would appear in the polar region or desert. The early civilizations were frequently raided by pastoralists from marginal (but not desertic) lands, which is why I'm not distinguishing between e.g. Plains, Grassland and Flood Plains.

'Habitable" tiles: Until AdyCiy 0.97, those were tiles with a positive final food yield (including terrain, features, hills, improvements). That was nice and simple, but I think Plains Hill not spawning Barbarians is counterintuitive and treating Tundra Hill differently than flat Tundra is also dubious.

'Arable" tiles had included river Tundra until AdvCiv 1.0; that seemed like a bit of a gotcha.

Animals: A problem in Earth scenarios; the Sahara gets filled up with Lions. One could look at this as a representation of the harsh conditions there, making the desert difficult to explore, but, ultimately, the lion-filled Sahara looks too silly, and the Sahara lions prevent animals from spawning elsewhere.

See also

Change 304 also affects the per-tile placement probabilities, and the yield-based changes are implemented based on that.

Barbarian creation rate adjusted to game speed. The target number of Barbarians per continent (upper bound) remains independent of game speed. Barbarians start appearing at a slightly earlier year on slower game speed settings (but tstill on a later turn than on faster settings).

Target number of Barbarian units and per-turn creation rate are independent of game speed. Barbarians start appearing in roughly the same vear on all later game speed settings (i.e. on a later turn on slower settings).

Rationale On Epic and Marathon, it takes civs longer to train units, but Barbarians are (re-)placed just as quickly as on Normal and Ouick. As a result, Barbarians are much harder to deal with on Marathon than on the other game speed settings. think letting Barbarians appear a little earlier (than in BtS) on slower game speed settings plays a bit better because the civs get done exploring ther immediate surroundings earlier and are then ready to quard the capital and the site for the second cities from Barbarians (which, initially, only wander about aimlessly). The creation rate still does not take into account how densely or sparsely the civs are placed. It's plausible that more Barbarians appear when there is room for them (and they make such games less boring), and I want to allow players to create games with extra tough Barbarians by placing civs far apart. The creation rate of Barbarian cities increases Static creation rate configured in XML. slightly with the game era. No Barbarian units are created on continents Plenty of Barbarian units are created on without civ cities (nor in the surrounding waters), continents without cities because these but Barbarian cities appear earlier on such continents have 100% unowned tiles. While continents and more densely than in BtS. Barbarian units are created independently for each continent, cities are placed globally, and the If a continent (or shelf) becomes very densely game prefers to place them on continents with populated with Barbarian units, the game starts civ cities. culling them. The greater the density, the higher the per-turn probability of removing a unit. The The game might eventually remove Barbarian Barbarian AI never disbands units for financial units through strike, and the Barbarian AI can reasons, and Barbarians are immune to strikes. disband units. Not sure how frequently that happens; perhaps not at all. Want terrae incognitae to look more like in Colonization, i.e. with lots of Barbarian Rationale cities but not so many units. The cities actually produce too many units, hence the scrapping mechanism; it's also a general safeguard against implausibly large Barbarian stacks. Could interpret the removed units as a result of Barbarian infighting. Disbanding based on finances isn't good because it may leave high concentrations in some areas, and because Barbarians aren't supposed to have an overarching economy. Tbd. Barbarians can currently be removed from tiles visible to a player, which is a bit arring. Should show a message then, e.g. "A Barbarian Galley has been destroyed as a result of infighting." Can't simply exclude visible tiles from removal: In one game, for example, Barbarian Galleys kept spawning around an uninhabited continent and moved from there to an inhabited continent. In such a case, naval stacks of arbitrary size can form on visible tiles. Or simply program the Barbarian AI not to move into overcrowded non-city tiles.

Upgrades are possible using commerce from Barbarian cities but seem to happen rarely because resource requirements are checked

when upgrading; cf.

Barbarian units are never upgraded.

Rationale Don't want a Barbarian economy. Outdated units are still killed eventually, either in combat or removed by the scrapping mechanism above. A mixed bunch of Barbarian units is more flavorful than a uniformly upgraded army; I imagine that Barbarians acquire sophisticated weapons from the civs (through trade) but also continue making their traditional weapons. It can happen that civs keep trained and spawned Barbarians on a continent in check, thus preventing scrapping, but don't attack (all) the Barbarian cities. Then, early-game garrisons will remain unupgraded indefinitely, which starts looking weird once the Barbarians reach Gunpowder, Too rare to worry about. Fixed two BtS bugs that lead to Barbarian cities being placed either in completely arbitrary locations (like an ice island without seafood), or in ideal locations (as far as the AI is able to figure those out). See also Thread on CFC Barbarians avoid approaching civ cities on With RB, the Barbarians usually seek out cities continents with more Barbarian cities than civ right away. Without RB, only the number of civ cities. cities is decisive, not the ratio of civ cities to Barbarian cities. New World Barbarians shouldn't immediately attack colonies. Now only turn Rationale aggressive when half the continent is colonized. Barbarians that look for a city to attack ignore the Barbarians have a per-landmass target city like per-landmass target city of the Barbarian player all other players. Units looking for a city to attack unless there is at least one Barbarian city on the try to either attack that city directly or to capture nearby cities. landmass. Rationale haven't looked into the details, but I expect that computing a target city for a player without local cities would have a pretty arbitrary result that would lead to arbitrary (and possibly unfair to the owner of the target city) Barbarian behavior. Not sure what else the target city is used for, so it seems safer not to just set it to NULL for landmasses without Barbarian cities. The above is obsolete. As of v0.99, Barbarians don't have a per-continent target city at all. The "More Naval AI" mod increases the impact of randomness on the choice of See also Barbarian target cities. (Git commit) For Barbarian units, the survival odds threshold for attacking from within a Barbarian city ("leave attack") is halved. When an AI civ brings an inadequate attack stack to a Barbarian city, there is often a Rationale lengthy standoff (since they can't make peace). This change may help a bit. That said, Barbarian Archers will often have near-0 odds, so I doubt that this change will make a big difference. Al civs use (at most) small stacks of a couple of Normal choke behavior against Barbarian cities. units to "choke" (pillage, block tiles from being Sizable stacks may camp indefinitely next to a

improved or worked) Barbarian cities that are too Barbarian city on a hill defended by a few

Archers. (Whereas, against an enemy civ, a peace treaty will often break the stalemate.)

well defended for an attack

Tbd.	Perhaps Barbarian cities shouldn't be choked at all; I don't think they rely on improved tiles much. The main benefit that I see is that the (quite aggressive) Barbarian tactical AI may launch premature sorties; so choking might help keep the Barbarian unit count in check.	
	I'm also not sure if the choke routine Barbarian cities.	e is the only code responsible for standoffs at
	Vorkers don't connect cities with fewer Forests and prioritize	Barbarian Workers build road networks between Barbarian cities and builds lots of Cottages.
and ocean t (This chang	ities can't trade along rivers, coast tiles unless they own those tiles. Je doesn't apply to savegames ore AdvCiv 1.05.)	Once they obtain the required techs, the Barbarians get to trade along unowned tiles just like every civ.
Rationale	independent cities. Cottages are nic	Barbarian empire, but it's supposed to look like te for pillaging, but don't make much sense for the layers to discover a deforested New World.

Barbarians' current tech era or the previous era, random from among the allowed units		The unit to be created is chosen uniformly at random from among the allowed units, including those from all earlier eras. Obsoletion isn't checked.
Rationale	Ancient Barbarian units become a po	pintless distraction at some point.
302	Tech diffusion only from civs sharing	an area with Barbarians
share a landmass with. The specific conditions (for a shared landmass) change as the game progresses. For the first 100 turns, any Barbarian land unit on a landmass with a civ city suffices (or a ship on the surrounding coast), later on, a single Barbarian city isn't necessarily enough. See CvTeam.cpp for details. The intention is that research of New World Barbarians stops once they're driven out of the Old World.		
Update (v0.93): Barbarian research is now only slowed down when they don't share a landmass with a civ. (Because Longbowman is arguably a better representation of American Indians than Archer.)		

Rationale		rbarians to stop once they're (nearly) eliminated in /orld will usually only have Classical-era Barbarian
See also	300: Barbarian aggressiveness now escalates based only on local cities (not those on other landmasses) kekm.28 grants Barbarians some initial tech in Advanced Start games.	
Tbd.	If I really want New World Barbarians to have Longbows, I could give Barbarians more original research capacity (they already have a little, maybe by accident) and give the Barbarian leader a flavor value that matches the flavor of Feudalism.	
303	Never build culture, can't build cultu	ral buildings, found value considers only inner ring
See also	003n simplifies some AI code for Ba weights to 0.	rbarians, e.g. just sets espionage and culture
following bu Lighthouse,	Barbarians never build culture. Can only build the following buildings: Barracks, Granary, Lighthouse, Walls, Forge, Stable, Aqueduct, Colosseum and Bunker. Can build all mundane buildings except: religious and research buildings, Theater, Security Bureau, Int. Agency and Broadcast Tower. Can expand its borders through Monument (or Castle); not sure how often they actually do that The K-Mod Barbarians immediately expand their borders by building culture if they have the Musitech.	
Rationale	Want each Barbarian city to appear as an independent entity. If they expand their borders as in K-Mod, the borders can easily touch, and then Barbarian cities appear like a unified empire.	
		ians to occasionally have populous cities (think he health and happiness they can get.

of trials is given controls of trials is given the controls of the controls of trials of the controls of trials of the controls of trials is given by the controls of trials is given by the control of trials is given by the control of trials of trials of trials is given by the control of trials of trials.	Plot rewritten: If no maximal number ven (iTimeout parameter), then acRandPlot is guaranteed to return a ere is at least one satisfying the teria. syncRandPlot then returns the alid tiles as well.	Picks tiles at random until it finds one that satisfies the criteria, or gives up after 100 trials.
Rationale	tile, so a probabilistic failure to return is too high in BtS and shouldn't depe	on every turn (or every other turn) in the same a tile is good. However, the probability for failure and on the map dimensions – if a chance of failure w), then it should be based on the proportion of d-wide.
(and to Shell giving each	veight distribution to synchRandPlot f::randomPlot) that gets used for valid tile a probability equal to its ve to the sum of all weights.	Chooses uniformly at random from among the valid tiles; no weights. To make tiles with particular characteristics less likely, one can only re-roll them a fixed number of times.
3	of the changes dependent on veights apply to Animals.)	
See also	Change 300 uses this mechanism to make Barbarian placement in nonarable tiles less likely. Had used two re-rolls until AdvCiv 1.0, which had the (undesirable) effect of making placement on arable tiles very unlikely so long as the portion of nonarable tiles among all valid tiles was small – and not unlikely enough when the portion of nonarable tiles was large. For example, when 30% of the valid tiles are nonarable, the chance rolling a nonarable tile three times in a row is only 2.7%. If 70% are nonarable, the chance of three successes is 34.3%. With the weighted choice method, if we give arable tiles 5 times greater weight than nonarable tiles, we get a 7.9% chance of choosing a nonarable tile from among 30% and a 31.8% chance from among 70%.	
Rationale	Also needed for the change describe	ed below
	nits are less likely to appear near tiles barian unit was recently killed or	All valid tiles have the same probability of spawning a Barbarian unit; the mechanism is memoryless.

	905a increases the speed of Galley the Disorganized promotion.	but keeps Barbarian Galleys at 2 moves through	
in the fog of units are place number of Barbari city with a national also be drop Once unload assault mode BtS: Harass patrol. Ships on patthey can recommend the standard can be st	far. If there is no such ship, the land ced on land tiles instead; the total arbarians placed is the same either an ships with cargo target a nearby aval assault, though the units can ped along the way to the target. led, the ships switch back from a city for a while, then move on and rol seek out unobserved tiles where eive new cargo.		
Rationale	Should make Barbarian sea units mo to interact with civs that don't have w	ore interesting and harder to ignore; allows them vorked sea tiles.	

Tbd.	When a Barbarian ship has been on the map for a long period of time, say, 20 turns, it should stop patrolling and just blockade a city; can get annoying if a player just can't build a ship for lack of a coastal city.	
See also	102 makes AI units on patrol more likely to move in a consistent direction.	
	arbarian units gradually heal by turn from time to time cally).	Apart from hitpoints received from a received promotion, Barbarian units heal only in cities or when they can heal fully in one turn. Near civ cities, badly damaged Barbarian units never attempt to heal. If they're too weak to make an attack, they may patrol indefinitely.
Rationale	If the civs fail to finish a Barbarian unheal.	nit off, it should eventually do the smart thing and
	e cost of Metal Casting (MC), e cost of Optics and (a tiny bit)	MC is almost 4 times as expensive as its prerequisite Bronze Working and about two thirds as expensive as Machinery, the tech that MC leads to. In Warlords, Trireme was at Sailing with Bronze Working (BW) as an additional requirement, BtS moved Trireme to Metal Casting.
See also	CFC discussion	
	The Close to Home multiplayer mod	also reduces the cost of Metal Casting.
Rationale	To make Trireme easier to access. Also to make Metal Casting more attractive to research (as opposed to discovered via Great Person or Oracle) in general; earlier access to an Engineer via Forge is also a plus.	
	Can't reduce the cost drastically because that area of the tech tree is quite sparse. Specifically, I don't want to shorten the path to Machinery (a Medieval-era tech) too much. The path to Optics (via Machinery) is also problematic. Machinery is already an expensive tech; can't just shift beakers there from MC. Optics had some leeway for a cost increase though.	
	Don't want to move Trireme to BW because that tech already does too much (until such a time that Slavery is moved away; cf. <u>912d</u>) and because rams were an essential feature of triremes and did require exactly what the MC tech represents: casting molds that weren't developed until the first millennium BC. Converting MC into a copper smelting tech would be too big a change at this time (and, if big changes ever become a consideration, then there might still be better ways to nerf BW).	
307	Post-Medieval Barbarians	

Barbarian units can be created by the game in all Can only receive and train Warrior, Archer, eras. Barbarians can receive and train Spearman, Axeman, Swordsman, Horse Archer, Musketman, Cavalry, Anti-Tank and SAM-Longbow, Maceman, Galley, No Barbarian units Infantry. created by the game in Renaissance and Cannot train Rifleman, Grenadier, Paratrooper, beyond. Can train Rifleman, Grenadier and Frigate. As of **v0.94**, Musketman is the only post- Frigate. Medieval unit that Barbarians can receive or train. Barbarians can't receive cities in Renaissance Barbarian cities still appear in the Industrial era. and beyond. Starting from Renaissance, Barbarian research In BtS, Barbarian research always ignores tech ignores tech prerequisites. preregs, i.e. Barbarians can research e.g. Pottery and the Wheel simultaneously. K-Mod has The Raging Barbarians option creates more changed this, so that Barbarians only make Barbarian units in later eras: the tiles-per-unit progress on techs that they could research if they divisor is reduced to 60% in the Ancient era, were a civ. Renaissance, 30% in Industrial, 22.5% in Modern and 15% in Future (relative to the divisor without RB). Rationale Gunpowder units mostly for Terra and similar maps – on normal maps, there is typically no land left for post-Medieval Barbarians to appear on. Therefore the reduced divisor for later eras with RB; so that RB players get to see the occasional post-Medieval Barbarian. Muskets are supposed to represent natives that have acquired firearms (through trade or as spoils). Until v0.94, Barbarian Cavalry and (as a fairly ineffective type of infantry) Anti-Tank and SAM were also allowed. I'm reverting this because Cavalry practically never appears (requires a local Horse resource to train), and because advanced weapons like bazookas and MANPADS are jarring in the hands of the Barbarians. Would have to create custom units for the Barbarians to represent adequately e.g. mounted post-Columbian Amerindians or Daesh insurgents. Don't want Barbarians with firearms to be on par with properly trained armies, hence no Rifle, Grenadier and Frigate. No Pikeman: Two Medieval Barbarian units (Longbow, Mace) are enough, and I want mounted units to be effective against Barbarians, especially Cuirs/ Conquistadores. Barbarian research ignoring tech prereqs allows Barbarians to catch up quickly once colonies are founded. By the time New World Barbarians turn aggressive, they'll typically have Muskets. Interestingly, <u>Chronis</u> seems to have had the same idea years before me (though I haven't checked if he implemented it in the same way). No Barbarian cities past Renaissance: Seems more realistic, and enough cities are created in the New World during the early eras. See also 302 stops Barbarian research if they stop sharing a continent with any civ. 301 lets Barbarians only build units that some civ on the same continent can build. kekm.6 disables Barbarian Spies. Marines (or is it Infantry?) as free defensive units Machine Gun as free defensive unit. in Modern-era starts. Rationale Can't use Machine Guns to prevent Barbarians from pillaging.

Tech costs adjusted to Barbarian settings

308

Increased tech costs for all civs in games with Raging Barbarians in the Classical in Medieval era.

Slightly decreased Ancient and Classical tech costs for all civs in game without Barbarians.

Rationale

RB forces the civs to dedicate resources into fighting Barbarians, and as a result, global research tends to lag behind the historical time line.

309	No Animals option, animal behavior.	
AdvCiv		BtS
(i.e. animals	-	Can't disable just animals, only all Barbarians. "No Espionage" was added with patch 3.17; converts espionage points to culture.
somewhat ea	animals; see parenthesis on the	(The game counts animals as Barbarians when deciding how many Barbarians to create on a given turn. Therefore, the presence of animals slows down the placement of proper Barbarians.)
		ers how combat works, but too silly for some ine they're "really" human nomads, say, "lion
		me screen with options. The No Espionage option n't be recommended in its current state. Players petter off just ignoring it.
_	Can get the option back by setting by Assets\XML\GameInfo\CIV4GameOp	Visible to 1 for GAMEOPTION_NO_ESPIONAGE in otionInfos.xml.
Target number difficulty and	above.	With each difficulty level, the target number of animals increases about as much as the target number of non-animal Barbarians.
	Rationale I don't agree that animals should become a lot more common on the higher difficulty levels; I don't think experienced players appreciate randomly losing their precious starting units. Animals are good for teaching combat to beginners and – for lack of neolithic human cultures – to make the world seem more alive; shouldn't affect the course of a game much. (I would be onboard with making the world harder to explore, but this is not an acceptable mechanism, too silly.)	
70% probabi	On Noble and above, animals attack only with a 70% probability. That probability is reduced further for injured animals. 85% on Noble, 90% above Noble. Remaining hitpoints don't matter.	
	Rationale To make the behavior appear a little more natural, and so that players who want an animal to attack may have to stalk it a little bit. I guess I'd prefer a probability closer to 50%, but I don't want this change to be so conspicuous that players think about it (and wonder whether it's indeed intentional).	
		Animals spawn only on their native terrain and features but move indiscriminately.
Rationale	Flavor	
Credits	Idea from <u>Mongoose SDK</u> AnimalMod

owner's b or No Bar	iii.+100% emergence of Great Generals within owner's borders (no change) if playing with RB or No Barbarians. I.e. TGW doesn't have this ability anymore under normal settings.	
	t on Classical and earlier starts.	Can be built on Ancient and earlier starts.
Rationale A strangely cheap wonder in BtS considering that it represents (arguably) the most massive building on Earth. Can be costlier now that Barbarian activity peaks later (ar OK to allow it with Classical era start). Removing the GG ability under normal setting keeps the rules complexity in check (wouldn't be a problem wrt. game balance). Trade route flavor: One purpose of the Chinese Great Wall was to protect traders.		

Some segments protected a portion of the Silk Road. Similar to Castles providing an extra trade route. GM points go along with this, but the goal is also to make the espionage system easier to avoid for players who wish to avoid it. A nice side-effect of the Wall prereg, is that Protective leaders get an implicit discount on TGW. Also makes sure that TGW can't be built before founding a second city – players should analyze whether they're exposed to Barbarian attacks before deciding to build TGW. The Archery reg. is to make Archery a bit better, and to make Masonry less cluttered visually: TGW still requires Masonry for the prereq. Walls. I believe this makes some sense historically as well – walls (with flanking towers) are much more useful with effective projectiles. (But this doesn't explain why ordinary Walls don't require Archerv.) I've removed this requirement in AdvCiv 1.05 because, through changes in that update and some earlier ones, the Barbarian activity peak has moved from the early centuries AD to the 1st millennium BC. So the Great Wall needs to be available earlier again. Moreover, one important purpose of the Archer unit is to fend off Barbarians, and this conflicts with the Great Wall effect. Culture rate: Don't want it to be curiously small, but also don't want to speed up border expansion much because, as soon as that happens, the Great Wall graphic stops aligning with the cultural borders. See also Without 140, which changes the formulas for the number of prerequisite buildings, only 1 Wall would be required on Standard-size maps. 131c decreases the military power value of TGW. 911a adds a Spy specialist slot to Courthouse in order to enable an early Great Spy. The 3D graphic for the Great Wall on the main Along the full length of the owner's cultural map is not shown along borders with other civs borders on the same landmass as the Great Wall and not along unhabitable tiles. Tiles that are city except at the coast. only adjacent to unhabitable tiles and border tiles are also excluded. Confia GREAT WALL GRAPHIC MODE in GlobalDefines advc.xml Rationale If the Great Wall isn't constructed in the early game, the graphic can get very long in BtS. Since the (primary effect of) the wall helps only against Barbarians, which don't normally enter from the territory of another civ. it makes sense to me to omit civ-to-civ borders. If this means that no wall segments are shown at all, then that's also OK with me. The last condition for placing a wall segment is supposed to prevent Gaza-like strips of tiles enclosed between Great Wall and some other type of frontier or obstacle. "Habitable" tiles are tiles with 0 nature vield when hill vield changes are ignored; same See also as for Barbarian placement (300). Credits I took the idea for the implementation from Leoreth (<u>link</u>). I also took a look at the Dawn of Civilization code, but it wasn't easily portable. The Great Lighthouse (GLH): cost 250; cost 200 in BtS, 300 in K-Mod; obs. with Astronomy obs. with Corporation Too powerful in BtS, at least compared with most other wonders. And I don't like that Rationale this ancient wonder becomes most effective in renaissance (with Astronomy). I meant to nerf this later on (along with other balance changes), but with TGW obsolete at Corporation, GLH obsoletion needs to be moved right away. The Colossus:

cost 250 (a obs. with C	s in K-Mod); hemistry.	cost 150 in BtS, 250 in K-Mod; obs. with Astronomy.	
Rationale	Don't want both Colossus and GLH obsolete at Astronomy. The K-Mod cost increase seems reasonable; it's an extraordinarily cheap wonder in BtS.		
Tbd.	Perhaps Forge should be nerfed instead – if Forges weren't spammed everywhere, Colossus wouldn't be such a small investment.		
Versailles generates Great Spy points Great Merchant points		Great Merchant points	
Rationale		Compensation for the change to the Great Wall. Rather symbolic as Versailles is a much later and less useful wonder than the Great Wall.	
311	Uprising events		
AdvCiv	1	BtS	
era, 4 in the	ts in the Ancient era, 3 in the Classica e Medieval era. The era of the player ne event has triggered counts.	l1 to 6 units depending on the map size; era doesn't matter.	
Rationale	4 Vedic Archers on a Standard-size should have no bearing on the number	map is too many. And of course the map size per of units.	
See also	1 5	s in the Medieval era. That was still too many it ap, it's actually more than in BtS): <u>CFC post</u>	
The units can only be placed on tiles that are exactly two tiles away from the borders of the player for whom the event has triggered. Adjacent to that player's borders.			
Rationale	To give the player more time to rally troops. Ideally, a player with a reasonable military should never lose a city to an uprising event (losing one or several defending units is already more punishing than most contemporary events).

312	XP from Barbarians counts half for C	Great General	
XP from combat against Barbarians counts 50%, rounded down, toward Great Generals (GG). Rounding down means that 1 XP (i.e. after combat with very one-sided odds or withdrawal) doesn't count at all toward GG. Units that already have 10 XP can't gain further XP from Barbarians (no change), and thus can't contribute to a GG either.			
3; no chang Barbarians	ge when defending against . Thus, can't hope to gain more than 1 points) by fighting a Barbarian unit at	XP multipliers are 4 when attacking and 2 when defending. Can expect to gain 2 XP from attacking a Barbarian unit even at 95% odds.	
	for XP gain per combat set to 6. Itly, can gain at most 3 GG points per combat.	Can gain up to 10 XP from a single attack.	

Rationale	As an extra incentive for fighting Barbarians rather than (completely) preventing them from being placed through fogbusting. It's also not plausible that wars against Barbarians should produce no GG. Ancient China had plenty of GG that only fought against peoples that Civ would represent as Barbarians. I'd like to give players a (fighting) chance to get a GG without starting a war.
	The original developers must've been worried about Barbarian XP farming, and for good reason. Having Barbarians respawn in some cul-de-sac isn't difficult. Can be worthwhile to exploit just for getting units to 10 XP; which is why I think some restrictions were needed regardless of GG points.
Tbd.	Farming may still be feasible; is a 15% risk of losing a unit worth 2 XP and 1 GG point? Could be, especially if it's an outdated unit Reduce upper bound for per-combat XP to 5 (2 GG points)?
	Perhaps apply the XP restrictions to all combat; would like to reduce combat XP in general in order to lower the stakes in combat.
See also	304 makes Barbarian units less likely to be placed in tiles where Barbarian units were previously created or destroyed. This should at least prevent XP farming from having any major impact on the game balance.

313	Difficulty-based combat bonuses vs.	Barbarians
humans to 5 Immortal. Th for Barbariar ("Disorganiz other difficul	arian combat penalty against % on Monarch, Emperor and his is in addition to the 10% penalty h Galleys from K-Mod hed" promotion). 314	Tribal villages ("goody huts") revised		
See also	315b makes it easier for Explorers to enter guarded Tribal Villages.		
Config	Most of the specific changes to the Tribal Village outcomes are customizable and revertible through Civ4GoodyInfo.xml. I haven't added any new tags; instead, I'm e.g. using the Gold and Tech tags together to represent tech progress.		
Tbd.	Would be better to add new tags. No	t so painful anymore with <u>advc.tag</u> and <u>003t</u> .	
AdvCiv		Vanilla Civ 4 (no changes in WL/BtS/K-Mod)	
game progress. No such adjustment during the first 50 turns, nor after turn 250 (on Normal speed; these turn numbers are speed-adjusted). have passed (not speed-adjusted), a Barbarians can only appear at a cer from cities. Apart from that, only the		, , , , ,	

Rationale

The main goal is to make huts discovered via Caravels or Galleons more rewarding, and thus also give Explorers a better use. And some of the free techs granted in BtS are too powerful in the early game – I quess that's why players commonly play without goody huts.

I'm tying the adjustment factor to the game turn rather than e.g. era because I don't want players to wait for an era transition before entering a goody hut. That's also the reason for the flat effects during the first 50 turns. Gold doesn't have any use in the very early game, so players might decide to let a hut "grow" before entering it.

The power-law function is supposed to mirror the overall economic growth, which is superlinear. I'm freezing the effects on turn 250 because I don't think that industrial civilizations can gain that much from visiting or raiding Bronze Age (or Chalcolithic) villages. "Times 10" is a nice and simple maximal effect (and one can kind of tell that the maximum is reached when a multiple of 10 gold is payed out).

Config

Start turn, peak turn and maximal multiplier are set in GlobalDefines advc.xml.

The Low gold outcome grants between 15 and 45 gold, High gold 25 and 85 gold. Replaced one gold, High between 20 and 120. Low is the more High gold outcome on Chieftain, Noble, Prince and Emperor with a different outcome, meaning that Monarch is the highest difficulty level on which High gold is possible. The speed adjustment is based on the training cost modifier, gold is fully adjusted to game speed, i.e. tripled i.e. only 200% on Marathon. Other than that, the on Marathon. gold payout during the first 50 turns is as in BtS. By turn 250, the payout is multiplied by ten (after being multiplied by the training cost modifier).

The Low gold outcome is between 20 and 60 likely outcome on the medium and high difficulty setting: e.g. on Monarch. Low is four times as likely as High. Emperor is the highest level on which High gold is still possible. The amount of

Rationale

Overall, I want to weaken the effects of goody huts. It's interesting to give players some random freebies in addition to their guaranteed starting units and techs, but the number of huts that each civ gets varies a lot (and tends to favorscivs that are already advantaged by having a lot of space to expand), so strong goodies are pretty bad for game balance. They also steer early exploration too much and into regions too far from the capitals (cf. rationale for <u>031d</u>). Huts can also be disabled entirely and many players actually do so, so it's not necessary to make everyone happy. But my impression is that even the players who like to play with huts enabled find them too consequential.

A free Scout or Warrior is worth 15 production and is immediately useful. Can't really weaken those outcomes. Gold only becomes useful when a second city has been founded, but is then difficult to come by for the first era of the game, so an expected payout of 30 gold seems fair. The High gold outcome should perhaps only occur on 'casual" difficulty levels; for now I've only removed it entirely from Emperor upward – and reduced the payout.

Marathon games tend to be played on larger maps with more huts per civ, hence the smaller speed-adjustment factor than in BtS.

During the first 50 turns, goody huts grant 23 to 61 progress toward a tech. The tech is directly discovered only if that progress is enough to cover at least 80% of the (remaining) tech cost. The granted progress is adjusted to the game speed and game turn in the same way as gold (see above).

The tech is chosen uniformly at random from all pre-Industrial techs that the civ entering the researched tech.

When the Tech outcome is rolled, the hut grants a free tech regardless of that tech's cost. The tech is chosen uniformly at random from among those currently researchable techs that are flagged as bGoody in Civ4TechInfos.xml. No game speed or progress adjustment, but tech costs increase with the game speed and progress. That said, the only post-Classical bGoody techs are Music and Astronomy, so the Village is able to research, including the currently only way to benefit significantly from huts across the ocean is by reaching them in between Optics and Astronomy, and even then it's a long shot.

> Note about a K-Mod change (from the summary in the K-Mod thread): "Free technology bonuses from goody huts are now allowed without settling a city first."

Rationale

Would like the tech outcome to be about as powerful as the Low gold outcome. Need to bear in mind that research can be more immediately useful, but can also be of no use anytime soon or go to waste when a tech is already nearly discovered. Going a bit higher with the research would seem fair, but perhaps not quite as high as I've set it. I don't want huts to never grant a whole tech, so I don't feel I can go much lower with the research boost.

I guess the bGoody techs were chosen based on whether a "primitive" civilization could plausibly possess them. I don't think this works for Astronomy, which unlocks Galleon and Observatory, nor for most other post-Ancient techs. Tech progress somewhat gets around this plausibility issue by merely suggesting that the primitives contribute to the discovery, maybe like modern astronomers employing knowledge from ancient Babylonian records. Such contributions strain credibility for techs like Radio, so I've taken the Industrial and Modern techs off limits.

Config

bAllGoodyTechs flag in Civ4EraInfos.xml. If that flag is not set, then techs from the era can only be obtained from a goody hut if they're set to bGoody in Civ4TechInfo.xml. I.e. it's also possible to revert to the BtS system by setting bAllGoodyTechs to 0 for all eras.

Tbd.

Should perhaps also adjust the outcome to the map size. Tech costs are higher on larger maps (e.g. 100% on Duel, 130% on Standard), and the current payout is going to grant a full tech only rarely on large maps, particularly on high difficulty settings. Then again, one could argue that larger maps have more huts and therefore each hut should provide less research than on smaller maps, if anything.

Might also want to adjust to game era; see 910.

Outcomes that can't be scaled up in a straightforward way, namely Map, XP, Heal and Scout, get a chance of being "upgraded" if they occur later than turn 50. The upgrade probability heals the unit entering the Village and Scout reaches 100% around turn 160. For Map, XP and grants a free Scout.

Heal, an upgrade means that another positive outcome is chosen at random and both are applied. For the Scout outcome, the upgrade is a free Worker instead of the free Scout.

Regardless of the game progress, the Map outcome reveals a randomized subset of tiles within a radius of 4, XP grants 5 XP points, Heal

Rationale

These four are pretty worthless when triggered by an Explorer; can't have so many dud outcomes. A higher amount of XP wouldn't help (not needed on an Explorer) and would be too similar to a Great Warlord.

A free Scout seems out of place when that unit is already obsolete; better to replace that outcome entirely than to roll an additional one. In Renaissance, a free Worker is not as valuable as tech progress or gold, but it should work well enough as a consolation prize.

The Warrior outcome produces a free unit chosen based on combat strength and randomness from among those pre-Industrial combat units that don't require resources and for which the Barbarians have all the prerequisite techs. i.e. Warrior, Archer, Longbow or Musketman. (The same procedure is used when playing with "No Barbarians" as that option does not prevent the Barbarians from discovering tech.)

Always produces a Warrior.

The types of hostile units (Barbarians outcome) are also chosen as above. The lower bound for the number of hostile units (iMinBarbarians) increases a little over time, but there's also an upper bound of 2 + iMinBarbarians.

Hostiles are always Warriors. The Weak Barbarians outcome usually spawns 1 or 2 Warriors and Strong 2 to 4, though as many as 8 are possible.

A non-hostile free unit has a chance of receiving up to two free promotions. Each of the two promotions is assigned with a probability equal to half the upgrade probability (see Scout above). If a promotion is assigned, the specific promotion is chosen randomly from Combat1, Guerilla1, Guerilla2, Woodsman1, Woodsman2 and Cover. The surrounding terrain also factors into the selection of the promotion.

The free Warrior starts with 0 XP and without any promotions.

Rationale

Choosing the unit based on the game era would be simpler, but then Barbarian Archers would appear too early (even if game era minus 1 was used).

In Renaissance, the received unit will usually have to be upgraded in order to be useful; the free promotions should make such an upgrade worth considering. I've picked promotions with a "native" flavor. The selection algorithm is pretty complicated, but I don't think players need to worry about that.

Config	Through XML\ArtCiv4ArtDefines_	Improvement.xml
Ancient, Cla	es are placed when starting in the assical or Medieval era (unless bugh game options).	Only when starting in the Ancient or Classical era.
Rationale	not in the Medieval era. In both case exploration unit. I like the huts as rev	e a reason to place huts in the Classical era but s, the human player starts with a single vards for discovering unclaimed continents. When is too easy as Caravels are available from the
	ul distance between two Tribal Villages ed to the feature grain value of the	Tribal villages need to be at least 4 tiles apart. The feature grain value depends on the map size and affects the size of clusters of terrain features. It's -1 for Duel and Tiny size and +1 for Large and Huge size. It doesn't affect Tribal Villages, which technically are terrain improvements.
Rationale	Space them out more when there is grain value just for this purpose.	more space. Didn't want to add an improvement

Config	The base value for the minimal distance between Tribal Villages is set through	
	iGoodyRange in Civ4ImprovementInfos.xml, the feature grain in	
	Civ4WorldInfos.xml. AdvCiv doesn't modify any of those values.	

315	Recon units	
Rationale	To make these units more useful. Scout has the problem that Warrior provides sufficient exploration early on while also being highly useful for military happiness, city defense and for staving off Barbarians. Moreover, on high difficulty settings, the Al grabs most of the goody huts. Explorer is rarely used at all.	
315a	Scout can attack Animals.	
Rationale	Makes it easier to get promotions. Plus Scout requires Hunting, so it should know how to hunt.	
Config	I've added a new tag bonlyAttackAnimals to Civ4UnitInfos.xml.	
Tbd.	Give Scout the ability to enter Peaks. Will probably have to adjust the global pathDestValid function. Apart from that, I've already gone through isImpassable checks in the code – should be OK. Might want to go through isPeak checks as well.	
	Since <u>030</u> , the AI code doesn't 100% support the ability to cross peaks that separate two land areas. This doesn't apply to any of the AI routines relevant for recon units though; should be fully functional.	
See also	Change 500b, once enabled, will make Warrior less useful for military happiness. 912c already reduces the military happiness from Hereditary Rule. 124 (trade routes only through revealed tiles) and the increased AI aggressiveness of K-Mod/UWAI compared with BtS reward repeated exploration. 250e reduces the number of free AI Scouts on Emperor difficulty.	
315b	Explorer can attack Barbarians, but can't capture cities and gets no free promotions. Culture garrison value: 3 (0 in BtS; Warrior 3, Archer 4, Axeman 4)	
Rationale	It's quite common for goody huts to be guarded by a Barbarian unit by the time Explorer becomes available. In BtS, there is no way to enter such goody huts with an explorer. That's kind of realistic – one can't expect friendly relations with the villagers after killing their guards –, but the Explorer needs a buff, and it should be a buff that makes it better at exploring rather than giving the Explorer some auxiliary use in warfare. It's also wrong to imply that the European explorers engaging in combat with American Indians always acted in self-defense.	
	With "no capture" as an additional ability ("attack only Barbarians" merely replaces "can only defend"), the unit gets too complicated, or at least too verbose, so I'm removing the promotions. They're not really useful anyway because Barbarians rarely attack Explorers, at least not on Forest, Jungle or Hill tiles, and Guerilla2 and Woodsman2 are unattractive for a unit that already ignores terrain movement costs.	
	Culture garrison value: E.g. Columbus became governor of Hispaniola. It's a pretty low value, but the same value as Axeman seems a bit high.	
Config	I've added a new tag bonlyAttackBarbarians to Civ4UnitInfos.xml.	
Tbd.	Replace the "ignore terrain movement cost" ability with a free Sentry promotion. (Does that work inside a Caravel? Should it?) When Scout gets the ability to enter Peaks, Explorer will have to get it too.	
	Are huts sometimes guarded by Archers? Even if an Explorer starts with a promotion from Barracks, a fully fortified Archer is a tough opponent	

See also	314 makes overseas goody huts discovered in Renaissance more rewarding.		
AdvCiv		BtS	
The move-all-terrain ability prevents Gunship from capturing Workers. Explorer can capture Barbarian Workers.		The "cannot capture cities" ability prevents Gunship (and any other unit that can't capture cities) from capturing Workers.	
Rationale	To give Explorer another potential us Though I'm not sure that it's possible	se: steal Barbarian workers for nearby colonies. e to sneak up on Barbarian workers.	
315c		against all Barbarians, not just against Animals. cploration units to guard city sites (i.e. for explore.	
Rationale	Warrior is still the better unit against Barbarians (as it should be) in every regard except mobility: greater benefit from combat promotions due to greater base strength; can attack pillagers; +25% city defense.		
315d	Cap on early Scouts from huts		
	entering a hut can't get the Scout neir owner already has two or more units.	Scouts can beget more Scouts, and, in the first 20 or so turns, it's not so rare to end up with a total of three Scouts when starting with a Scout. Here someone reported three Scouts in a row for a total of four.	
Rationale	The third Scout is a weak outcome, fast.	and no fun because the map gets explored too

Config	Disabled in CvPlot.cpp (calculateNatureYield, isConnectRiverSegments)
500b	Demand better protection

the defensive strength of the local units and population size. A single weak unit doesn't always suffice to avoid "We demand better military protection".

A city requires a total defensive strength equal to at least its population. Defensive strength is computed as combat strength increased by defensive modifiers (e.g. from Archer, Wall, Garrison promotion – but not from culture-based defense). For units that can't receive defensive modifiers, none are counted.

Note that, so long as far for safety is the only cause of fractional anger in the city, i.e. in the early game, rounding will make e.g. a Warrior fully sufficient still at size 5 (not 2 or 3 as one would expect from its defensive strength of 2.5).

The anger is proportional to the lacking defensive strength; e.g. an almost sufficient garrison will lead to just 1 anger.

Recon and Helicopter units count if they have a positive culture garrison value (i.e. Explorer as per change <u>315b</u>, Gunship).

Anger from lack of protection computed based on Any one military land unit (except Recon, Helicopter; based on the MilitaryHappiness flag in XML) suffices to avoid "We demand military protection".

Rationale

Requiring just any military unit becomes a pretty nonsensical rule by the Medieval era. Can either abolish it, or change it so that credible garrisons are required.

Not sure if unit health should matter. I think it would create unnecessary distraction if a city, e.g. after a Barbarian attack, would clamor for better protection for a couple of turns. Likewise, bombardment damage to city defense and fortification bonus shouldn't matter. Fear-for-safety anger isn't supposed to punish players whose cities come close to being conquered (that risk is punishment enough), it's supposed to punish careless/ precarious precautions before the city actually comes under threat.

Counting Walls and Castle buffs those buildings a little. Counting promotions has the side benefit of encouraging promotions at peacetime.

Config

Disabled through DEMAND BETTER PROTECTION in GlobalDefines advc. Can also enable a penalty for outdated units there and tweak the defensive strength target. if this change is enabled, one may want to disable change 500c, which attempts to solve the same problem in a less comprehensive way. On the other hand, keeping garrisons at the proper strength could become annoying in the late game, so perhaps the two changes complement each other.

See also	Defensive strength is already used for revolt probabilities; see <u>101</u> . However, tile defensive doesn't count for revolt probabilities and unit health does count.
	CFC post by me laying out rationales and explaining why I'm not quite happy with this change.
	The mod component <u>Scaling Garrison Unhappiness</u> by Imp. Knoedel uses culture garrison values instead of defensive strength. (But in my estimation, culture garrison strength increases too slowly over the course of a game, and it's another value to be displayed by the UI.)
Tbd.	Defense from obsolete buildings shouldn't count. Will have to add a data member CvCity::m_iNonObsoleteBuildingDefense for this because building defense is cached in m_iBuildingDefense.
	Need to show "Garrison strength x.x, population: y" in help text when there is anger. Otherwise it's too difficult to learn.
	Performance was slightly problematic until I disabled the check for outdated units. Should check sometime if there is still any issue now. If so, then the result of CVCity::getNoMilitaryPercentAnger should be cached. That cache will have to be updated once per turn (sufficient for dealing with defensive buildings and unit obsoletion); and in CVUnit::setXY, CVCity::setPopulation; and after assigning a promotion.
	I've been thinking about making unit upgrades mandatory (if not upgraded in time, units refuse to fight with outdated equipment and defect). Then this change will be important because otherwise players could try to play around unit obsoletion (e.g. don't get Hunting so that Warriors can be trained indefinitely) so that they don't have to upgrade their city garrisons.

500c	Nationalism tech disables "we fear for our safety" anger
	Same as for 500b; this is a much simpler solution that players don't even have to be aware of. Good enough to prevent pre-gunpowder garrisons in the Industrial era.
See also	I've posted briefly about this change <u>here</u> on CFC (end of the post).

550	Changes to tech trading	
See also	130z deals with tech gifted by the AI to rivals	
550a	Tech trade value dependent on tech score and power	
AdvCiv	BtS	

cheaper) when the receiving side is less advanced and powerful than the giving side; charges more if the receiving side is more advanced/ powerful. The effect is small in the		Tech trade value is independent of how well the involved civs are doing. (Vassals can receive free tech from an AI master if they're behind, but that's not a matter of trade value.) BBAI and K-Mod let AI civs that are falling behind technologically check for tech trades more frequently (no change in AdvCiv).	
Exception: Doesn't apply to vassal-master relationships, i.e. vassals don't expect to get tech from their master at a discount.		Vassals charge less from their master for resources, trade embargoes and civic/religion changes. Tech trades are unaffected by vassal/master relation.	
Rationale	A little extra catch-up mechanism. A smarter to be generous than to insis	lso, when dealing with a backwards civ, it's t on a square deal.	
	For vassal-master, the basic idea in BtS is that the master can trade favorably with the vassal. Don't want to turn this upside down.		
	•	Il in the early game because it'll otherwise make chs like Aesthetics or Compass even more els.	
550b	Al doesn't make bad offers for human tech		
AdvCiv		K-Mod	
		The AI can (counter-)propose trades that are up to 300% in its own favor.	
The AI always offers something when proposing a trade.		May offer nothing at all.	
Rationale	I used to accept bad AI offers for tech because I believed that they're due to partial research progress of the AI. That can be the case but often isn't; so it's a bit of a trap.		
Tbd.	The AI probably shouldn't contact players with bad non-tech deals either.		
550c	Changes to tech monopoly thresholds ("don't want to trade just yet")		
AdvCiv E		BtS	
All is more willing to trade tech if it has contact with few civs and still hasn't met most civs. All willingness to trade a tech is based on the percentage of known civs (excluding itself) that already know the tech.		percentage of known civs (excluding itself) that	
acts as if 40% of the other known civs already knew the tech (when in fact it's 0%).		If the AI knows only one civ, the AI will hardly ever trade (unless Friendly) because the percentage is either 100%, meaning the other civ already knows the tech, or 0%, meaning the AI tries to monopolize the tech.	
Rationale	This should make civs on small cont	inents fare better.	

The AI leader-specific thresholds for monopolies (TechTradeKnownPercent; between 0 and 100) are randomly increased or decreased by up to 15 points. This random adjustment is applied once per game to each tech separately, i.e. it's not the same for all techs, and can't be manipulated through repeated trade requests by a human player.		
Rationale	The BtS monopoly thresholds are a bit too predictable in some cases, especially when there are just two or three civs on a continent. And e.g. Pleased Tokugawa <i>never</i> trading anything useful is depressing.	
Tbd.	Perhaps the issues with small continents are already taken care of by the change above; not sure if the randomization is still needed.	
Al considers the unique unit and building of the prospective recipient of a tech when computing a monopoly value. Only looks at the default units and buildings that a tech unlocks when computing the tech monopoly value.		
Rationale	A small tweak. Taking into account more specific information can't hurt.	
550d	Tech costs reduced if tech trading disabled	
When the "No Tech Trading" option is checked on the Custom game screen, tech costs are decreased based on the default player count of the map for all eras except Ancient and Future. The research bonus is the highest for Medieval and Renaissance tech.		
Rationale	A lower bonus in the early game because tech trading doesn't become available until the middle of the Classical era even if it's enabled. A lower bonus after Renaissance because tech progress tends to get more disparate the longer the games lasts, and so fewer and fewer tech trades happen.	
Config	Can be adjusted or disabled through GlobalDefines_advc.xml.	
Tbd.	Would be unnecessary if there was a proper tech diffusion system to replace tech trading.	
See also	910 makes various adjustments to tech costs based on game options.	
	CFC post laying out the formula for my no-tech-trading modifier: link	
550e	Era threshold for "fear you're becoming too advanced" based on the recipient's era	
L	AdvCiv K-Mod	

When a civ receives a tech in trade, all third parties who know the recipient increase their received-tech memory about the recipient (as in BtS), except when (as in K-Mod) the recipient had already researched 2/3 of the tech, or when the era number of the tech is at least 2 lower than the era number of the recipient, E.g. when a civ is in the Medieval era and receives Archery. no tech-received memory is increased.

Tech-received memory leads to "We fear you are becoming too advanced" (as in BtS), K-Mod adds the two exceptions. In the second one, game era (averaged over all civs) is decisive, not the recipient's era.

The recipient's tech-received memory (for "You've shared your discoveries") is also not increased when one of the exceptions above applies.

Rationale

K-Mod comment in CvDeal::startTrade: "This is to prevent the AI from being crippled by human players selling them lots of tech scraps."

Good reason, but this also affects human players receiving tech. Humans need to be able to tell whether a trade is going to count, and the game era is unknown early on, and tedious to determine later on.

I've extended the exceptions to "shared discoveries" because that's also exploitable in BtS.

Insignificant tech trades (2/3 progress or 2 eras behind: see above) are unaffected by the nobrokering game option. Regardless of the brokering option, such techs can be passed along on the same turn that they've been received.

The AI does not reject any tech trades on account of the no-brokering option.

Insignificant tech can also be traded immediately The tech brokering restrictions apply to all techs when it's received through some mechanism other than trade, e.g. the Internet or after the creation of a colonial vassal.

Techs can't be traded on the same turn on which they've been received in trade.

When the AI has already 50% or more progress toward a tech, it refuses to accept that tech in trade when "No Tech Brokering" is enabled: "We would have nothing to gain."

that a civ doesn't discover through its own research or Great People.

Removing the 1-turn delay made it much easier to implement the change to "no Rationale brokering". Also makes sense to treat techs that are traded when 2/3 complete the same way as techs discovered entirely independently. Tech received through the Internet is actually not subject to any trade restrictions in See also BtS; <u>kekm.31</u> removes that inconsistency.

550f	Tech purchases

trades with a for-tech trade tech that it is		AI-AI tech trades are always tech-for-tech. One side can offer gold in addition or multiple techs, but just gold for tech isn't possible.
Rationale		behind in tech. On the flip side, it means extra le Al doesn't pay very well for tech, especially 551).
trade to a hu progress of t		Based on civ size, finances, gold previously traded (all still the case in AdvCiv).
Rationale	Should make it more likely that a sor the BUG gold alert triggers.	newhat fair gold-for-tech trade is possible when

550g	Al tech trade value adjusted to tech discovery value	
See also	CFC post by me	
AdvCiv		BtS/ K-Mod
The adjustment is between +27.5% trade value (Al pays extra for an especially useful tech) and -42% trade value (Al pays less if it has no real use for a tech). Based on intermediate results cached in AI_bestTech. For better or worse, those results are biased toward cheap techs, so the Al will be more inclined to pay extra for cheap techs and to pay less for expensive techs. Also, the cache only gets updated when the Al chooses new research, so the information can be outdated.		AI_techTradeValue and AI_techValue are completely separate functions. The former is mainly based on research cost, the latter performs a complex evaluation of the effects of a tech. Tech path, i.e. the utility of becoming able to research more advanced techs, are only evaluated by AI_bestTech, which returns a single best tech that the AI wants to research most.
Rationale	This is intended to be a moderate adjustment. It's smart to pay for tech based on its intrinsic value, but I don't want to make weak techs like Divine Right even more unattractive to research.	
I've dialed this up in v1.02 (the adjustment was previously between +25% and in order to weaken early-game tech trading a bit, specifically going for Aesthe after Writing and bubling Compass on the highest difficulty levels, and bee-line Alphabet medium difficulty levels.		trading a bit, specifically going for Aesthetics right
See also	CFC post suggesting that religion techs make good trade bait because the AI won't be interested in researching them once the religion has been founded.	

550h	Al research decision puts greater emphasis of possible tech trades	
Credits	Suggested by Lanstro (CFC post)	
AdvCiv	K-Mod	

possible te research. T about every	Il more likely to take into account ch trades when choosing a tech to ech trades now matter, typically, for third research decision. The s still personality-based.	When the AI chooses a tech to research, it decides randomly whether or not to take into account possible tech trades. The probability is equal to the contact probability for AI tech trades, which is between 5% (Tokugawa) and 100% (Mansa Musa); 20% for about 20 of the AI leaders; i.e. typically, tech trades are taken into account for every fifth research decision.
Also increa possible te	sed the utility value counted per ch trade.	K-Mod 1.46 had already increased the utility value counted per possible tech trade.
Rationale To make it a bit harder for human players to take advantage of unpopular techs like Aesthetics. Mustn't take this change too far though 8see rationale under 550g).		, ,

551	Al trade value of tech reduced	
AdvCiv		BtS
When the AI trades for tech, the research cost of that tech is multiplied by 1.25 as part of the trade value computation.		The multiplier is 1.5. For comparison, traded gold gets multiplied by 2.
	on how widely a tech is known, its s multiplied by a factor between 1	The multiplier is between 1 and 1.5.
	Could argue that research and gold should have the same modifier because gold and beakers are essentially interchangeable. But gold should be more valued in trade because the other side loses the gold whereas imparting a tech costs nothing. By reducing the trade value of tech, I'm making it harder to conduct diplomacy (sponsored war, brokered peace, fair trade bonuses) through tech, and easier to buy tech with gold. I'm not setting the multiplier even lower because change 550a already makes it easier to buy tech (for civs that have fallen behind).	
Tbd.	The underlying issue is that it doesn't	t cost anything to share tech.

552	Al trade modifiers (XML) revised	
AdvCiv		BtS
Al trade modifier reduced from 10 to 0: Archery, Horseback Riding, Guilds, Military Tradition, Ecology, Electricity, Advanced Flight, Composites, Stealth, Genetics, Fiber Optics, Satellites, Robotics Increased from 0 to 10: Civil Service, Nationalism, Chemistry, Military Science		In trades, the AI treats some technologies as having a 10% higher value than their beaker cost would suggest, namely those listed in the left column and (no change): Feudalism, Flight, Machinery, Gunpowder, Rifling, Steel, Assembly Line, Railroad, Artillery, Industrialism, Rocketry, Fission, Fusion.

Rationale	The BtS weights seem to be aimed at military techs, especially nuclear war, and Space victory. I think this should be (and is at least in part) handled by the DLL; don't want an AI civ that isn't aiming at a Space victory to pay extra for e.g. Genetics.
	I'm keeping the modifiers for military tech and I'm adding a few more, but not for pre-Medieval tech as pre-Medieval AI warfare is fairly rare. There is also CvTeamAI::AI_getTechMonopolyValue, which makes the AI not "want to start trading away this technology just yet," but if the AI still agrees to the trade, I want there to be an extra high penalty if it's a trade with someone's worst enemy.
Tbd.	+10% trade value is not going to affect the enemy trade penalty much. Perhaps 130p should give the AI trade modifier some extra weight when recording trade values (peacetimeTradeValue).
Config	CIV4TechInfos.xml

553	"Shared discoveries" relations modifier accumulates faster, decays faster.	
AdvCiv		BtS
The relations modifier from "shared discoveries" decays by one technology every 30 turns (on average). Each imparted tech adds between 0.08 and 0.2 to the relations modifier.		The memory count decays by one every 100 turns. Each tech adds a fraction between 0.05 (e.g. Alexander) and 0.2 (only Mansa Musa and Peter) to the relations modifier. (The sum of those fractions is rounded down.)
	Fractional relations modifiers are rounded to the nearest integer by $\underline{130}$ j. This makes it much easier to reach +1 from "shared discoveries".	
	To balance out change 130j, and in the spirit of making diplomacy (a bit) more dynamic.	
Config	The respective MemoryAttitude values are modified through the DLL. (To avoid having to change the XML values of every individual leader.)	
	Should change the MemoryAttitude values in Civ4LeaderHeadInfos.xml eventually, i.e. when I feel confident in my adjustments.	

groundbr	XML options for a research rate penalty when breaking new ground (disabled by default)
Credits	Based on the getSpreadResearchModifier function in "Dawn of Civilization"
Rationale	As a rubberband. I don't really think AdvCiv needs this; mainly for mod-mods.
See also	Discussion in the AdvCiv thread, on and off over several pages, starting with this suggestion by Cruiser76.
Config	See TechDiffusion_GlobalDefines.xml. The comments there also describe how the penalty is computed.
Tbd.	I don't think the AI takes research penalties into account when choosing its research.

570	Changes to expenses (tagged with "advc.exp") in the code	
advc.exp.1	Cap on number-of-cities maintenance	
AdvCiv	BtS/K-Mod	

maintenand K-Mod) and	unt in the formula for number-of-cities be counts vassal cities half (as in discapped at a map-size-based discapped 22 (Tiny) to 25 (Huge). BtS counts vassal cities fully but caps the total at 4 to 8 cities (depending on the difficulty level) – i.e. vassal cities often don't matter at all. K-Mod halves the vassal city count and entirely removes the upper bound on the total city count in order to, as the changelog says, "weaken the power of huge civs."
Credits	Elkad made me aware that, without a cap, city maintenance makes Domination victories on Huge maps too difficult and incentivizes city razing. CFC post
	More recent <u>CFC post</u> by me (penultimate spoiler box)
	CFC post by drewisfat that calls the K-Mod change (well, he seems to attribute it to me) "insane."
Config	MAX_CITY_COUNT_FOR_MAINTENANCE in GlobalDefines_advc.xml.
Rationale	If I just restore the BtS cap, it'll (again) be far too easy, for large civs and in general, to max out the research slider, but the K-Mod change is too extreme to leave it alone. A cap around 40 would be enough to ensure that (decent) conquered cities can pay for themselves, but still leads to number-of-cities maintenance costs that are ca. 5 times higher than in BtS when aiming at Domination on a Huge map.
	A slightly better formula (for game balance) would take the city count to a power slightly below 1, e.g. 0.9, instead of capping the city count. Or some other soft-cap mechanism. See the second half of this CFC post of mine. However, opinions seem to differ on whether costs should simply grow quadratically as in K-Mod; so players may want to customize the formula, and a complicated formula would make that more difficult.
See also	140 adjusts number-of-cities maintenance to the crowdedness of the map.
Tbd.	Number-of-cities maintenance isn't the best tool for increasing the expenses of large civs. I surmise that it was intended only for pacing early-game expansion. I'd like to get rid of number-of-cities maintenance entirely; it's a clunky and slightly confusing concept. I hope that a fixed cost per city, 2 gold perhaps, or a bit less, say 5/3, would work well enough. Part of that cost should be paid by the capital in order to encourage a Courthouse there, or more generally, government centers should pay a maintenance cost for the number of cities in their vicinity (Voronoi cell).
	To increase expenses, civic upkeep should be increased, especially for civics in the Medium and High upkeep class. Ideally in a way that takes into account how spread out the population is; that could avoid punishing small cities that are mostly intended to claim resources. On that note, population should have a greater impact on distance maintenance. The Organized trait may have to be tweaked if civic upkeep is increased substantially.
	The trade route commerce fomula also needs work. There's generally too much trade route commerce in the midgame and late game, and coastal cities aren't rewarded enough. (Related <u>CFC post</u> – see item 4.)
	Inflation should be replaced with even higher costs for city population and civics and increased maintenance costs for units starting sometime in Renaissance (when units begin representing increasingly large numbers of soldiers. Also, air missions should have a small gold cost.
	(I've more detailed notes about all that, but no definitive proposal.)

advc.exp.2	Reduce effect of unique buildings on city maintenance		
AdvCiv		BtS	
Ikhanda red Rathaus by	uces city maintenance by 15% and 70%.	20%, 75% respectively.	
Credits	Suggested <u>here</u> (last quote box) by	CFC user AllTheLand.	
See also	CFC thread rating Ikhanda as one o CFC thread with praises (from reput exp1 (see above) reintroduces a car	able players) for Rathaus.	
	exp1 (see above) reintroduces a cap on city maintenance – but still a much higher one than in BtS.		
	908b weakens Terrace; a precedent	for weakening powerful unique buildings.	
Rationale	These buildings aren't really problematic, but, compared with other unique buildings, they're already quite good in BtS, and the K-Mod increase to city maintenance makes them significantly more effective. Moreover, AdvCiv makes various changes that slow the pace of games on high difficulty levels and make it more difficult to decide games early on; those changes also make midgame buildings more useful. When the mod creates a problem, it's best to address it in some way, even if it's only a minor problem. Players tend to have limited tolerance for mods making any part of the game worse.		
		I modifier (I can't think of any other 20% modifier usual modifier also to Rathaus doesn't worry me	

advc.exp.3	Reduce colony maintenance [disable	ed]
AdvCiv		BtS
of the mainte the maximal most as high multiplying th	enance distance, but gets divided by maintenance distance, i.e. can be at as in BtS. Put differently, I'm	Colony maintenance is (among other factors) proportional to the maintenance distance, i.e. the distance from the nearest government center capped at the maximal maintenance distance, which depends on the map size.
Config	Disabled this again, through the DLL	(CvCity::calculateColonyMaintenanceTimes100).
See also	912g instead disables colony maintenance through the Vassalage civic. Maybe that's better than further complicating the colony maintenance formula.	
Rationale	Colony maintenance gets quite punishing once the colony grows past three cities (maintenance grows quadratically with the city count). This was probably intended by the BtS designers – to encourage players to liberate the colony. Since colonials vassals aren't very useful, this makes it fairly unattractive to ever found more than a few cities on another landmass. Colonies are difficult to defend and require expensive transportation; they didn't need to have another drawback. Still, I don't want to just remove the liberation mechanism (or the main reason for ever using it). For the most part, colony maintenance doesn't hurt the balance of the game much – players can still found or conquer a few colonial cities without suffering too badly from maintenance, and, in the late game, liberation might sometimes be a decent play. There is a balance problem when the map more or less forces a civ to expand to	
	another continent early in order to ha	ifficult to win from such a position. My change to

the maintenance formula leaves colony maintenance as high as in BtS for faraway colonies – so that there can still be an incentive for liberation – but reduces maintenance a lot in colonies close to the capital.

650	Changes to nuclear warfare	
Tbd.	Al still doesn't care to disperse its stacks.	
See also	130q, 130h about diplo effects of nukes 143b: changes concerning vassals and nukes 031 changes the AI evaluation of resources in a way that makes Uranium more attractive (once nukes can be built). kekm.7: Neutral units not hurt by nukes, restrictions on nuking non-enemy cities. kekm.16: AI more willing to construct Bomb Shelters kekm.20 increases the chance of civilian units getting killed by nukes. In particular makes Bomb Shelters less effective at protecting nuke units from enemy nukes. 906 moves missile-carrying submarines to Rocketry and lets Stealth Destroyer carry missiles. 045 hides city buildings from rivals. That means, CvUnitAI::AI_nukeValue shouldn't be based on non-visible buildings. See Tbd. under 045. 002m cuts nuke animations short.	
AdvCiv		BtS/ K-Mod
the interval [10,149] is chosen uniformly at random for each affected unit. (All units have 100 to calculate) chance of surviving two nukes in a row is about 17% (if I'm doing my math right)		resulting in a survival chance of ca. 85% for a single nuke and a very small (somewhat difficult to calculate) chance of surviving two nukes in a row – provided that there are no Bomb Shelters. The AI does not try to predict how many units will be destroyed by a nuke. It does take into account remaining hitpoints, but, if I read the code correctly, in a way that makes the AI <i>less</i>
Rationale	The BtS formula makes it optimal most of the time to drop exactly two nukes on a large enemy stack, and this is unintuitive and uninteresting. A single nuke is only a good investment against the largest of stacks (or when able to follow up with a conventional attack), whereas two nukes eliminate pretty much all enemies. In particular, a reasonably strong Al city garrison can be wiped out reliably with two nukes, giving rise to a first-strike strategy that captures most coastal cities of an Al civ on the same turn as declaring war. While the Al is now somewhat wise to the double-nuke tactic, it still doesn't plan on dropping multiple nukes in a row, i.e. it should be able to figure out when it's a good play to nuke an injured stack, but it's not going to injure a stack through a first nuke with the intention of nuking it a second time afterwards. So nerfing this cheesy tactic also makes the Al more competitive.	
Config	NUKE_UNIT_DAMAGE parameters in able to handle any nonnegative value.	n GlobalDefines_advc.xml. The AI should be es.

Tbd.	The AI still doesn't disperse its units	in order to avoid nuke attacks		
	I'd like to further increase the probability of surviving multiple nukes. One could use negative base damage value to this end, but would give tiles with one or a few units chance of sustaining no damage to units at all, which seems strange. Units not getting damaged, in my mind, does not mean that the nuke wasn't well aimed (or the target information inaccurate), but that the units stacked in the tile are too far dispersed to them all. Such a model really only make sense when a nuke affects a single tile — ar I think that would be better for game balance too. In the interest of reusing exiting Al code, I'd then try to use a formula that uses a base damage value of 100 when only single unit is affected (guaranteeing the unit's destruction) and that adds a (single) droll when there are multiple affected units, reducing the base value (to 0 and below) while increasing the maximal value of the die as the number of units is increased.			
	Surrounding tiles could still be affect improvements.	ed in a minor way, e.g. through destroyed		
	Nuking a city with significant culture of a third party should result in a relations possible will have to implement that as a new type of AI memory ("You nuked your citiz because the two existing nuke memory types don't quite fit. I don't think a warni the UI is needed (would then, to be consistent, also have to warn about partner that will be upset). AI code added to CvPlayerAI::AI_nukePlotValue would be to have, both for the nuked-citizens and the nuked-friends penalties, i.e. a diplomatic fallout.			
See also	Deity K-Mod game won by double no	uking AI city garrisons: <u>CFC thread</u>		
AdvCiv		BtS		
30% for Tac	s an interception chance of 60% (i.e. tical Nukes) and costs 1500 on normal settings), sped up by s in BtS.	75% chance (i.e. 37.5% for Tactical Nukes), costs 1000 production.		
Rationale	makes ICBMs too much worse than that relying on ICBMs is a bad idea. to five or more ICBMs intercepted in work, but I think players expect that and, at 75% odds, this goes very ball don't want to change the SDI much	, however, because it'll always be unrealistic – if I		
	make players relearn some element still means that interception is more	of play, I'd like it to be something sensible. 60% likely to succeed than to fail.		
Config	Civ4ProjectInfos.xml			
enemy inter evasion cha less impact enemies hav	if all current and plausible future ve a high interception probability.	Nuke interception is not taken into account when deciding whether and where to attack with nukes, and the UI only shows the evasion chance (in the unit help text of Tactical Nuke).		
	ring in Nuke Mode, help text shows tion probability (if greater than zero).			
Rationale	Hover text: Easy to forget about the chance and evasion chance interact	SDI, and it's not totally obvious how interception .		
See also	004c shows the interception chance against air missions.			

Tbd.	The cursor color in Nuke Mode leaks information about tile ownership in the fog of war. What to do? Require active visibility on all affected tiles? This would also eliminate the implausible recon visibility while the nuke explodes. It's also not plausible that a nuke fired without the latest recon info would be just as damaging, especially to units. Or introduce a canNukeAt check that works based on revealed ownership and allow for accidental declaration of war upon execution of the nuke mission? Ultimately, ICBM should move to Satellites, and then the Satellites ability could also lift the fog of war when it comes to tile ownership. Putting this effect at Rocketry (the current ICBM tech) would be less elegant.	
inflicted by r damaged ur	only announces that a nuke has exploded and where. The nuke grants visibility for its owner, but only while the nuke animation is playing, so the nuke owner may be able to glimpse some of the damage. Fallout shows where improvements and features have been cleared, but this doesn't tell players which improvements and features were destroyed.	
See also	045 hides the 3D models of buildings in rival cities.	
Rationale	For a player who knows the rules for nuke explosions, the destroyed buildings would seem like the most relevant information not provided by BtS. That is, only for the owner of an affected city. However, the nuke rules aren't necessarily that widely known, specifically how units get damaged. The AdvCiv changes to the damage distribution make it all the more important to be more transparent about the effects of nukes.	
Tbd.	The announcement might be too detailed. Perhaps improvement and feature destruction shouldn't be included (already isn't included for third parties) and perhaps destroyed and damaged units should never be listed (even if the number is small), only counted. Even for the city owner, the details could be annoying – it's not so rare that a bunch of cities get nuked in a row.	
	Would be nice to announce destroyed nuke units separately as they're especially expensive.	
	to nuke damage. Great Wonders (incl. Shrines and corp. HQs), Bunkers and Bomb Shelter are immunte.	
Rationale	Seems a bit too punishing to remove GP buildings, and consistent with Shrines and settled GP not to remove them. Ironworks getting destroyed is also brutal, but can't plausibly be protected either.	
	Regular bunkers cannot plausibly withstand a nuclear explosion, but, given the ability of Bunker, it may well represent air raid shelters. While those aren't a sufficient protection against a nuke, it's plausible enough that they wouldn't be utterly destroyed.	
Credits	Idea from <u>Dawn of Civilization</u>	
Tbd.	Would prefer to let nukes destroy obsolete wonders and settled GP. Will need to announce those effects though. Obsolete wonders also shouldn't be immune to capture-city damage.	
	Bomb Shelter should be renamed to "Fallout Shelter."	
	econ along its coast. Based on BBAI AI seems to use air recon only on rival cities. man) auto-recon.	
Rationale	Could reveal enemy submarines. Not enough to properly defend against Tactical Nukes, but the BtS AI doesn't even seem to try.

	h-priority rule to the City AI for produc me available.	cing at least a small nuclear arsenal as soon as	
Rationale	It takes the BtS/ K-Mod AI too long to difference for deterrence both in gar	o produce its first nukes, which make a big neplay and story terms.	

Revised the calculation of the AI weight for nuking civilian targets: Enemy war successes increase the weight only if the war is going very, very badly. Decreased weight when a war should economy. If no tile is deemed sufficiently be easy to win judging from the power ratio. Leader's personal raze-city weight taken into account. Reduced impact of attitude. (Estimated) and memory of enemy nuke attacks. The number of enemy nuke taken into account (potential for retaliation). The number of enemy nukes also affects the threshold that potential target tiles need to pass in order to be nuked by the Al.

This weight factors into the evaluation of target tiles for nukes, specifically whether to focus on hitting military units or on damaging the enemy's valuable, then no nuke is launched. The weight is computed from the war success rating, attitude Conquest victory strategy also increases the weight.

uic Ai.		
Rationale	See comments in the code (CvPlaye	erAI::AI_nukeDestructionWeight).
Tbd.	My estimate of enemy nukes uses the exact number obscured by random noise. Perhaps a similar statistic could be made available to human players so that this wouldn't be a cheat. For example, the number of nukes per rival could be shown on the Military Advisor under the minimap (and in the scoreboard tooltip of the power ratio) in intervals "1 to 4", "5 to 9", "10 to 16", "17 to 24" etc. (i.e. the more nukes a rival has, the less precise becomes the information). Alternatively, the intel ratio planned for change <u>082</u> could also apply to nukes (would still be a cheat).	
the AI choice nukes – by ta	Substantially reduced the impact of buildings on the AI choice whether and where to attack with nukes – by taking into account the chance of buildings surviving a nuke explosion intact. City buildings seem to dominate the AI calculations, at least when no large garrison is present.	
Tbd.	May have to dial up other factors to a Let's see about that	avoid making the AI too shy about using nukes.
	sband nukes when in financial as the only other remaining units are	As far as I can tell, nukes are disbanded before most other units. BtS tried to save expensive units, which is fine in the case of nukes, but K-Mod focuses on XP, which is generally better, but fails for nukes.

651	Changes to the Fallout Feature	
Tbd.	Would like to rename this to "Exclusion Zone", remove the Scrub action and place only a single one after a meltdown and none after a nuke.	
AdvCiv BtS		
Can't found	Can't found cities on Fallout. Nor on sea Ice. Oasis is the only feature that prevents cities. Coast and Ocean terrain also prevent cities.	
Rationale	I think it's a bit more intuitive this way. (Ice only matters for the Civilopedia text; if water is explicitly forbidden, it seems cleaner to also forbid Ice.)	

652	Rule changes to Meltdowns	
See also	106 reports meltdowns more widely. kekm.5 disables the meltdown chance when there is a clean alternative power source.	
AdvCiv	BtS	

Adjust the meltdown probability to game speed.		Not affected by game speed.
		e-construction cost and amortization time; for dn't be more common on slower game speed.
the ability in	eltdown probability in help text. Omit help text for the city building list clear Plant isn't providing the city	Help text always shows a "small" chance of a nuclear meltdown.

See also Base

Based on kekm.5.

Increased the meltdown chance to 0.7 permille. 0.5 permille.

Rationale

I did some math (see below), but ultimately went by intuition. The BtS probability seems a bit too small now that meltdowns are less disastrous (K-Mod change) and can't happen when the Nuclear Plant is superseded by another power source (Kek-Mod). On the other hand, games tend to last longer with AdvCiv than with K-Mod ...

On Normal speed, there are 125 turns left in 1955 (turn 375), but games hardly ever last that long. A more typical end date for a peaceful AdvCiv game is 2005 (turn 425), i.e. just T=50 turns of nuclear power. If p is the meltdown probability and one assumes (for simplicity) a constant number N of nuclear plants throughout the T turns, then the total number M of meltdowns is distributed binomially with success probability p and N*T trials and thus an expected value of EM = p*N*T. Aim at EM=1 (Chernobyl), then N as a function of p becomes N(p) = 1/(50*p). Table:

```
p N

1/2500 50

1/2000 40 (BtS)

1/1500 30

1/1250 25

1/1000 20

1/750 15

1/500 10
```

A Standard size map only has about 50 cities in the late game. Considering that some civs will reach Fission extra late or never and that one (big) civ may build Three Gorges, N=10 might be a realistic assumption for an all-Al game. In this human game, there were 33 Nuclear Plans at game end, which seems unusually high, – but half of those are out of order due to another power source.

However, if the meltdown probability is greatly increased, then long games on larger maps could end up with a high total number of meltdowns, and already an expected M=1 on Standard size can easily result in multiple meltdowns. You'd think that, after the first one or two meltdowns, people would so something to secure those plants or else abandon them ...

A map size adjustment could be justified by arguing that a single Nuclear Plant represents several plants on smaller maps, but it would still make Nuclear Plants less useful on smaller maps than on larger maps, which is counterintuitive.

Looking at it from the point of view of a single plant, the chance d of dying to a meltdown over a 50-turn span is 1-(1-p)^50, i.e.

```
p d

1/2500 1.9%

1/2000 2.5% (BtS)

1/1500 3.3%

1/1250 3.9%

1/1000 4.9%

1/750 6.5%

1/500 9.5%
```

At some point, it becomes implausible that someone would construct such a time bomb.	
In the 4 th bullet from the end, <u>this</u> post mentions an experiment to assess the prope meltdown chance. (Better to stick to the math though.)	

653	Nuke mode colors the range of the explosion	
AdvCiv	'	BtS
In Nuke mode, wheen hovering over a tile that can be targeted, all tiles affected by the nuke, i.e. the target tile and its 8 adjacent tiles, are colored in yellow.		Only the target tile gets colored (in green).
Rationale	Minor quality-of-life change; or maybe really just for beginners. Using yellow for a nuclear attack seems a little less unsavory than green.	
Can't fire a nuke through right click, need to go through Nuke mode.		Right click will order a nuke to move into a tile, and if that tile is a valid target, the move will detonate the nuke. While hovering with the right mouse button held down, such moves show a red "can't move here" indicator.
Rationale	I don't think I can get the EXE to show the yellow overlay instead of the red indicator. As it is in BtS, the UI behavior is misleading. And one could argue that such a consequential action should require more than a right click.	
Tbd.	Can't currently get a declare-war popup through a nuke. Instead, hovering over neutral tiles shows a gray cursor and help text explaining that neutral territory can't be nuked.	

700	Rise & Fall game option; see chapter <u>Rise & Fall</u> . Id 700: the fundamentals. Other ids only for code outside the R&F classes. Except for those highlighted in blue, all changes in the following are only relevant if R&F is enabled.	
Rationale	For the term "intermediate period": Ancient Egyptian periodization (Wikipedia).	
Config	The number of chapters, interlude length and scoring delay are configurable through GlobalDefines_advc.xml.	
Tbd.	Earth1000AD scenario not currently supported. During initialization, CvPlayer:: verifyAlive kills all civs because no cities have been created yet. I don't see how the R&F code causes this, but apparently, it does. Also, the unequal AI handicaps aren't currently supported by R&F. Would have to store the AI handicap (in RFChapter and in savegame) before human takeover and restore it when AI control resumes.	
	Should perhaps factor game settings other than difficulty into the Rise score, in particular the number and length of chapters. For now, my assumption is that a higher number of chapters implies a lower number of turns per chapter, which makes it harder to maximize the chapter score, and that this about cancels out.	
Credits	Inspired by board games like <u>Peloponnesian War</u> and <u>History of the World</u> (both from 1991) and Kael's Assimilation mod (which is included in <u>Fall From Heaven II</u> and <u>RoM</u>).	

See also	Since R&F scoring is partially based on victory stages, it somewhat hinges on change 115, which revises the computation of those stages.		
	044 autosaves at the start of the active player's turn. R&F does so too, but the exact timing is a bit different.		
701	"Require complete kills" option replaced by the R&F option		
AdvCiv	iv BtS		
When the last city of a civ is captured, all its remaining units are removed, and the civ is eliminated; there is no option for changing this behavior.		When "Require Complete Kills" is checked, units remain in the game when the final city is captured. A civ is only eliminated when all of its units are killed and all cities captured.	
		The option was added by patch 1.61, apparently mainly for mods, <u>specifically</u> Jon Shafer's "Battle for East Asia".	
Rationale	adding the R&F option. Removed it	e-kills option (for the reasons stated below) before entirely now because it's easier to replace a game maintaining savegame compatibility).	
	Too much of a hassle to keep the complete-kills option in mind for all the AI code. I doubt that the WL, BtS, BBAI and K-Mod code can really handle it either, especially in team games when some team members still have cities and others don't. Not sure if this option was ever intended to be more than a gimmick. You even need to kill every enemy Spy (or since BtS: hope that the Spy kills itself somehow).		
Now, in principle, the AI still needs to be able to handle civs without cities human player could decide to never found a city. Through Advanced or I the player could even have a sizable army, not to mention scenarios. I'm have the game at least not crash in such cases, but it's not really support (Barbarians don't necessarily have cities either, but get special treatment the AI code; this works.)		r found a city. Through Advanced or later-era start, e army, not to mention scenarios. I'm trying to such cases, but it's not really supported.	
Tbd.	Instead of just removing the units, remove some, turn some into Barbarians and turn some over to any teammates or (war) allies that the dead civ might have had before its demise. This is more plausible and doesn't create issues for the AI.		
Rise & Fall option not visible on the Staging Room screen.			
Rationale	e Not multiplayer-compatible.		
702	Error handling if game settings are	·	
Not compatible: multiplayer, team games (including Permanent Alliances), One-City Challenge.			

702	Error handling if game settings are incompatible with R&F	
Not compatible: multiplayer, team games (including Permanent Alliances), One-City Challenge,		
SPaH.		

703	"Score" tab on the Victory advisor screen
	pres of past chapters and the start dates of chapters still to be played. When R&F is tabs "Resolutions" and "Members" are merged into one in order to make room for

704	Changes to Dawn of Man (DoM) screen		
Tbd.	Adjust the layout so that the traits can be spelled out. Could be adopted from History Rewritten, but I've made my own mockup, which I like better.		
Show the so	screen at the start of each chapter.		
Tbd.	In the later chapters, the DoM can appear with a few seconds delay. Seems like the EXE is too busy with something else. Perhaps this wouldn't happen if I'd launch the popup earlier.		
See also	004j: DoM screen shown after regen 004x shows a choose-civics popup a	erating map after the DoM screen when starting in a later era.	
AdvCiv		BtS	
Heading of Civilization"	the DoM screen says "The Dawn of .	"Dawn of Man"	
Rationale	Perhaps they were thinking of Kubrid Man"; but that is followed by a scene	ck's "2001", which shows a subtitle "The Dawn of with apes	
705	Rules and AI changes to prevent self-collusion (helping a civ from the previous chapter that hasn't been scored yet, or one about to be taken over)		
In addition t	to the AI behavior described in the R&	F chapter:	
The AI is a the player re		rades – accepts if it receives only 90% of what	
If <u>UWAI</u> is e	enabled, the AI refuses to talk when wa	ar utility is 20 or greater.	
Rationale During a chapter, the player should (ideally) only have to consider the interests o his/her current civ. The AI changes described above (and in the R&F chapter) combined with intermediate periods can't completely prevent self-collusion but m much less relevant.		lescribed above (and in the R&F chapter)	
	Restrictions don't apply to civs that the player is probably not going to want to plathe next chapter		
Trade acceptance: With R&F, it can be extra annoying when the AI refuses to trate two techs of (almost) equal value, but won't accept a 2 for 1 either because this already favor the AI too much. War utility threshold: Don't want players to bypass trade restrictions through reparations.			
		rers to bypass trade restrictions through	
	Would be nice to give the player more feedback, e.g. a grayed-out "gift" button, or the AI responding "you're being too generous" when an offer is too good, but these things seem almost impossible to implement. I did manage to get the AI to say "no thanks" to gifts.		

Tbd.	Perhaps the AI should always show some leniency in pre-Currency trades, i.e. regardless of the R&F option.
	Perhaps reduce or remove the penalty for playing a civ multiple times.
	Should the AI be willing to talk when all potential peace deals are too favorable for the AI? E.g. when the AI wants the equivalent of 1000 gold and the player doesn't have that much gold but does have some 5000-beaker technology. Currently, the AI is willing to talk then, and that's a bit confusing. Though refusing to talk would also be confusing I think – "How is that big technology not enough?"
	The AI currently accepts certain resource trades that have a benefit for the AI side but no benefit for the human side. For example, if the AI has 2 Rice and needs more health, and the human has 0 Rice, the AI will accept a human non-surplus health resource in exchange for the Rice. Such a trade could make sense for the human player because of buildings like Granary, but, normally, it'll only help the AI. I have some notes archived (offline) about how to fix this, but I'm not sure if it comes up often enough to bother.

706	Changes related to Al Auto Play and switching the human-controlled civ		
	When the player "Retires", the current chapter completes on Al Auto Play. The intermediate periods between chapters aren't actually Al Auto Play; there simply isn't a human-controlled civ at all.		
	UI interface elements during intermediate periods and suppress advisor screens and has required changes in a bunch of different places.		
	The player may simply want to end a chapter because he/she doesn't feel like completing it. But retirement is mainly intended for situations when things are going too well. The civ could then become a huge obstacle in later chapters (or just win the game for the AI). Don't want the player to sabotage his/her own civ then.		
	After retiring, the player's civ keeps the game handicap, e.g. Prince, but, since the civ is treated as an AI, the AI modifiers from the game handicap also apply, e.g. 5% faster training of units on Prince. This is confusing, but difficult to change because the AI modifiers get applied in many different places. AI Auto Play without retirement applies the AI handicap (change 127), which is consistent, however, a retired civ should generally do rather badly because retiring is supposed to help when the player's civ gets dangerously far ahead. Perhaps set the handicap after retiring one higher than the game handicap (or always Monarch?) to somewhat cancel out the AI modifiers.		
	Known issue: When taking control of a civ via Civ Changer (Alt+Z) for debugging purposes (in a R&F game, to be clear), all non-expired messages that that civ ever received are displayed on the main interface. Calling CyInterface(). clearEventMessages() from ChangePlayer.py doesn't get rid of them.		
	Hinges on <u>127</u> , which allows MoreCiv4lerts to work when the player takes control of an AI civ. Also records start and end of AI Auto Play in replays, which makes it unnecessary for R&F to record early retirement in replays.		
	The K-Mod code that <u>058</u> (re-)moved was messing up the interface messages sent to AI civs (which the human player may eventually read after switching civs).		

707	Changes to the game end sequence	
No game end upon defeat; Rise score shown als "final score" in HoF, scaled up ("normalized score") for the Dan Quayle screen.

708	708 Player handicap increased above game handicap		
R&F	i layor Hariatoap irioroadoa abovo ge	BtS	
The game handicap is set as configured on the Custom Game screen, but the human player handicap is set one higher than that and the Al player handicap is set to Prince. For example, when Prince difficulty is set on the Custom Game screen, the inflation modifier for Al civs is 95% from the Al player handicap (Prince) times an 80% discount from the game handicap (Prince), while the inflation modifier for human civs is 100% from the human player handicap (Monarch). That means, the Al inflation modifier is 76% of the human inflation modifier.		The human player handicap and the game handicap are always both set to the difficulty level configured during game setup. The Al player handicap is always Noble. The game handicap is reponsible for Al freebies and discounts and Barbarian activity (but not combat modifiers and free wins against Barbarians), the player handicap for everything else. That is, a difficulty other than Noble is chosen, the uneven playing field between human and Al players is the result of them using different player handicaps combined with the Al (dis-)advantages set by the game handicap. For example, if the game handicap is Prince, the inflation modifier for Al civs is 90% from the Al player handicap (Noble) times an 80% discount from the game handicap (Prince), while the human inflation modifier is 95% from the human player handicap (Prince). That means, the Al inflation modifier is ca. 75.8% of the human	
Config	inflation modifier. Config The player handicap adjustment can be disabled or increased through		
Rationale	Playing two or three difficulty levels below one's habits or abilities is fun in some ways – in particular being at a level playing field with the AI civs –, and is really one of the main points of the R&F option, but not much fun in other ways. Coming from, say, Monarch, the maintenance costs on Noble will (rightly) seem quite insignificant, which can trivialize some important strategic decisions. (Perceptions matter a lot for expenses I think: a player who is scared of city maintenance will weigh his or her decisions about the pace of expansion.) Free wins against the Barbarians also feel cheesy.		
The intention is not to make the game easier or harder in terms of competing AI civs (which is what R&F scoring cares about) – players know how challenged AI is on Noble difficulty, and that's what they should get when they select Noble Admittedly, the progression of difficulty-based modifiers is not entirely smooth increasing everyone's player handicap probably does make it either a bit easies harder to beat the AI civs (I really don't know which it would be). It might be nice to use a higher handicap also for some aspects of the game he essentially everything except the ongoing AI discounts –, but seems difficult and would make the handicap mechanics even more complex (and would be work to implement).		cares about) – players know how challenging the hat they should get when they select Noble. Ilty-based modifiers is not entirely smooth, so ap probably does make it either a bit easier or	
		ongoing AI discounts –, but seems difficult to say

	number of free wins against Barbarians.
	127: The difference between game handicap and player handicap is also relevant for Al Auto Play.
	CFC post by a Deity player characterizing city maintenance on Monarch and below as being of "little to no impedance to your expansion."
	all research costs by 3% (through the DLL), in part offsetting the increased player which implies increased research costs).
Rationale	A human player with skills well above the player and game handicap always being in charge of one civ should lead to faster research overall than one would expect from e.g. a game on Noble difficulty (game handicap), but, then, the human player is, for much of the game, in charge of a civ that catches up, so it would seem that the proper cost should be somewhere between the game handicap and (increased) player handicap.

901	AdvCiv K-Mod BtS		
Forest Preserve	at Biology; +1 commerce	at Scientific Method; +1 commerce; +1 commerce if riverside	at Scientific Method; +1 commerce if riverside

K-Mod 1.45 has added a 7th effect to Scientific Method, and enlarged all tech boxes to make room for a 7th icon. Not a good solution; surely no single tech needs to do 7 things.

Nature reserves originated in the early 19th century according to <u>Wikipedia</u>, which fits with Biology. I also don't see much of a connection between scientific method and forest preserves. Not a question of game balance really because Forest Preserves are rarely useful.

Removed the riverside commerce while I was at it. Simpler this way. Not much of a loss because Forests along rivers get chopped anyway (see also change <u>117</u>). Consistent with Lumbermills, which also provide commerce regardless of river in AdvCiv.

Willow also p	which also provide commerce regardless of fiver in havely.				
AdvCiv		BtS			
Positive happiness and health effects from surrounding tiles (features and improvements) only benefit cities that can peacefully enter the borders of the tile owner.		Tile ownership never matters; a Forest Preserve benefits even cities of a war enemy if it is in their radius.			
	Unexpected that other civs can benefit from Forest Preserve – but perhaps not so unexpected for Forest health, and I want the same rules for both. Based on Open Borders as a compromise and because it makes sense that all citizens who are able to visit a Forest or Forest Preserve are healthier or happier than any citizens are unable to go.				
Negative effe	Negative effects apply regardless of ownership (as in BtS).				

Rationale	Don't want players to work around bad health from Jungle by keeping their borders closed. The disease carriers are mostly insects; borders don't stop them.
	with a happiness or health effect becomes accessible or inaccessible, the city's health ess aren't updated until end of turn.
Rationale	Too much work to make sure that updates happen whenever tile ownership, team membership, vassal agreements or Open Borders change.
health inste (rather than because of cities being evaluating t	ML tag HealthPercent to CvImprovementInfo so that Forest Preserve can grant ad of happiness. That health can be fractional and is added to health from features being rounded separately). With AI and UI support (both of which were horrible to write rounding – separately for good and bad health effects – and the possibility of muliple affected). For now the tag remains unused, but some of the new AI code is used for the removal of Forests and the happiness ability of Forest Preserves. Negative effects o supported.
Rationale	Not urgent enough to change before AdvCiv version 1.0. By the time that Forest Preserve becomes available, extra health tends to be more valuable than extra happiness. Livability can be represented just as well through health as through happiness. (I'd prefer to use happiness mostly for effects with a fairly direct political dimensions, e.g. ludi at the Colosseum, luxury resources handed out as perks.)
See also	Some discussion about this on CFC (1 2 3) UI code based on 059. 055 adds an (unused) improvement ability that protects terrain features from Global Warming.
Config	It's an optional tag. See Civ4TerrainSchema.xml to find out the proper position in Civ4ImprovementInfos.xml.
Tbd.	Health is is currently overcounted; see comment in CvCityAI::AI_healthHappyImprovementValue.
	Make the Forest spread ability more predictable and more useful. Grant health instead of happiness. CFC post (Though this more recent post in Strategy & Tips argues that the BtS spread probability isn't far too low to be useful.)

902	AdvCiv	K-Mod	BtS
Watermill	+1 commerce and +1 production initially; +1 commerce with Electricity; 4 turns to build; +1 production with Replaceable Parts	+1 commerce and +1 production initially; +1 commerce with Electricity; 8 turns to build +1 production with Replaceable Parts	+1 production initially; +2 commerce with Electricity; 8 turns to build +1 production with Replaceable Parts

Watermills are decent with Replaceable Parts but rarely useful before that (whereas, historically, they were highly useful throughout the Middle Ages). The K-Mod change to Serfdom (+1 commerce from Farms) exacerbates this. One commerce at Machinery (also a K-Mod change) is the least that needs to be done.

Commerce from Electricity is apparently supposed to get the shift from waterwheels to turbines across (similar for Windmill). That's OK (electricity can be sold), but doesn't have to be so pronounced. Electricity boosting local production is also plausible.

Never saw why Watermills should be slow to build. Perhaps originally an attempt to make Serfdom attractive – well, that didn't work. Reducing build time is a way to make Watermill better early on without making it too good later on.

Tbd.: Still a bit unattractive. 6 turns to build but +2 production earlier?

Lumbermill	at Guilds	at Guilds	at Replaceable Parts
	+1 commerce initially;	+1 river commerce,	+1 riverbank commerce,
	+1 production with	+1 production initially;	+1 production initially;
	Replaceable Parts;		
	5 turns to build	8 turns to build	8 turns to build
	+1 production with	+1 production with	+1 production with
	Railroad track;	Railroad track;	Railroad track;
	doesn't remove Forest	doesn't remove Forest	doesn't remove Forest

The middle column is K-Mod 1.45; I'm keeping the earlier version (not shown above) and I'm reducing the build time in order to give Lumbermill a little extra push. Also, Replaceable Parts is just one tech away from Steam Power, which grants +50% Worker speed, but since Lumbermills are now at Guilds, that bonus is still out of reach, so they really take a long time to build in K-Mod.

I don't think players can be incentivized to not chop all Forests along rivers; not without making Lumbermills too strong in the late game. Therefore, I don't like the river commerce ability (not on Forest Preserve either).

Tbd.: Want to move both Lumbermill and the +50% chopping yield (currently at Mathematics) to Machinery eventually, and apply chopping yields only to buildings and ships (not land units).

Caravel	4 moves removed AI types "Reserve" and "Escort'	3 moves	3 moves

Carrack	4 moves,	3 moves,	3 moves,
	2 cargo,	3 cargo	2 cargo
	removed AI type		
	"Reserve"		
Navigation2 promo	1	Available for all sea units	
	that can enter ocean		

Should give Galleys a use in early warfare (fast deployment), and make them better explorers. If 3 moves aren't enough to make naval deployment useful in land wars, then 4 moves with Navigation1 should do the trick. Sea units moving twice as fast as infantrymen along roads is reasonable from a historic pov, but 5 moves might be a bit much, also gameplay-wise. Therefore, I'm restricting Navigation2. Makes sense that "navigation" benefits ocean-going vessels more.

4 moves for Caravel to keep it faster than the early ships. Now just as fast as Galleon, which is also more accurate historically. Carracks, caravels and galleons could travel at 4 to 5 knots, triremes at 2 to 3 (much faster during battle; see e.g. Olympias on Wikipedia).

3 strength for 45 production makes Trireme a viable warship (perhaps even the best) until Frigate, which should make Triremes more worthwhile overall and might help the AI, which tended to train too many Caravels previously. Should now train a mix of Triremes and Caravels, and use only Triremes for protecting resources and escorting Galleys. May still train too many ships, but at least Trireme is cheaper than Caravel. While I'm at it, the upgrade from Trireme to Privateer is a bit less painful than to Frigate because Privateer is cheaper than Frigate, and this should make AI privateering a bit more common.

Historically, trireme-based ships remained in use in the Baltic Sea until the 18th century, and their usage didn't decline until the 16th century. "[The Battle of] Lepanto [1571] marks the last major engagement in the Western world to be fought entirely or almost entirely between rowing vessels, the galleys and galeasses that were still the direct descendants of the ancient trireme warships." (Wikipedia)

Carrack: K-Mod had increased the cargo capacity along with the other transport ships, but I think this takes the unit unnecessarily close to Galleon, especially now that I've increased the speed (can't not increase Carrack speed if I increase Caravel speed). Back to 2 cargo spaces.

Tbd.: Require Optics or Astronomy for Navigation2; that's more elegant than the restriction to oceangoing ships. Galleys with 4 moves should be more common; remove the Flanking I requirement from Navigation I. But will then have to find another way to make Flanking I attractive, and Trading Post will have to change.

"Explore rival territory" of Carrack should perhaps not work with military units in cargo (unless those units somehow also have that ability).

See also: 124 assigns Galley the Explore AI type.

306 changes research costs to make Trireme a bit easier to access.

CFC post suggesting that 3-move Barbarian Galleys appear out of the blue too often.

Credits: CFC user vedg pointed out <u>here</u> that there aren't enough incentives for upgrading Galleons and East Indiamen.

Rationale:

Transport: Having just 25% more cargo space than Galleon doesn't justify a more than 50% higher cost. Often not worth upgrading. To balance out the lower cost, I've removed the offensive abilities, which aren't entirely unimportant against rivals without Combustion. The unit can still "besiege" water tiles, i.e. prevent them from being worked. The lower strength should give pre-Combustion ships a fighting chance against besieging Transports, and shouldn't make much of a difference against post-Combustion units. While I was at it, I removed the Uranium requirement for historical accuracy; see this CFC discussion.

East Indiaman: Also no incentive to upgrade to Transport. On top of that, historically, East Indiamen appeared a century later than galleons, and were usually larger than frigates. Rather than a warlike Galleon, this is now a Frigate with cargo space. The ability to enter rival borders is messy on cargo ships because these ships (and their cargo) don't get bumped upon declaring war (see *Tbd.* under 905a). The Civilopedia states that "the East Indiaman was inevitably slower than its descendants: the Ship of the Line and the Frigate." This appears to be nonsense: East Indiamen were often full-rigged clippers that could sustain speeds of 10 knots, whereas ships of the line sailed at perhaps 5 knots.

Bombard rates: 8 is the same as Catapult, far too little for ships equipped with cannons. Did not increase Ironclad's bombard rate (12 as in BtS) because at least early ironclads weren't as heavily armed as ships of the line.

Speed increases: Even early frigates appear to have traveled at a speed of about 10 knots; much faster than galleons. According to Wikipedia, "a long hull-design, which relates directly to speed"

was characteristic for frigates. While early privateers were galleons, the Privateer unit in the game is contemporary with Frigate and should therefore have the same speed. Ships of the line traveled at about 5 knots, which is much slower than frigates, but rather faster than galleons and caravels. Assuming some sort of logarithmic scale, speed 4 is justifiable. Speed 3 made it too difficult to use Ship of the Line offensively. See also this post of mine on CFC; thanks to Pepo for pointing out that Frigate needs to be faster.

Ship of the Line: I don't love the K-Mod change to strength; it makes Ship of the Line stronger, which is good, but does so partly at the expense of Ironclad, which is also too weak. 120 production seems pretty clearly overcosted. I've restored the BtS Iron requirement because it doesn't make sense from a historical point of view to require Iron for Frigate and not for Ship of the Line. The latter requires more metal parts (cannons, cannonballs, nails(?)), and thus has more need of a cheap metal. The K-Mod changelog says the goal was to give "ironless civs a decent naval ship if they go for the right tech." Fair enough – but not really important. I hope my other changes to Ship of the Line can give the unit more plausible (niche) uses.

Tbd.:

Bombard rates are still a bit too low. Ship of the Line and Ironclad need to be buffed further, and Frigate should upgrade to Ironclad. Want to allow Transport, Destroyer and Battleship with Coal, but with a movement speed penalty. Move Transport to Industrialism and Destroyer and Battleship to Artillery.

Could give Frigate and Ship of the Line +1 strength to make both more effective against Privateer and then restore Ship of the Line's 50% bonus against Frigate.

Frigate should be allowed to carry 1 "special" unit, or perhaps even a military unit, and should be able to enter rival borders (so long as no military units are carried). Caravel and Carrack should then upgrade exclusively to Frigate.

See also: 081 about AI changes to employ naval bombardment in land wars.

Config: Civ4UnitInfos.xml; note that East Indiaman is called NETHERLANDS_OOSTINDIEVAARDER in that file.

Ironclad	3 moves	3 moves	2 moves
	+25% Coast defense	req. Steel and	req. Steel and
	req. Steam Power	Steam Power	Steam Power

Rationale: To match the increased strength of Ship of the Line. The defense ability is a bit more flavorful than just +1 strength (and 13 would be an unusual strength value); ironclads had difficulty sinking each other and their battles tended to be stalemates. There is no generic defensive bonus in Civ 4 (though it would be easy enough to implement one), hence the terrain restriction. Note that cultural borders can allow an Ironclad to enter Ocean, so the restriction is not entirely irrelevant.

Removal of the Steel requirement gives Ironclad a longer window of utility. Also, the first ironclads, produced in 1862 for the US Civil War, were not clad in modern steel: the first steel mill in the US based on the Bessemer process was set up in 1865.

Tbd.: Stalemates aren't always fun; if it turns out that the ability plays badly, I could still just increase combat strength. It may also, despite the K-Mod change, still be too difficult to engage faster ships. Even early ironclads were only a few knots slower than frigates, so speed 4 would be justifiable; the restriction to Coast would still get across that ironclads aren't as mobile as frigates.

XML tag added for extra speed with access to a resource. Unused for now. "Access" means that either the unit's current tile or the owner's capital has access to the resource. The tactical side of the AI (CvUnitAI) is aware of the increased speed, but I haven't changed the strategic evaluation (CvPlayerAI) of resources and units.

Sevopedia articles about resources now have a "Units" box instead of "Allows" so that units can be listed in articles about resources. Buildings that require resources (none in BtS and, so far, also

none in AdvCiv) are placed in the "Buildings" box instead of "Allows".

Tbd.: Should perhaps guarantee the extra move until the end of a turn if the resource was available at the start of that turn.

Use the ability for Industrial-era ships: allow them to be trained with Coal, but make them faster with Oil. Uranium should then be removed as an alternative requirement for Destroyer.

Rationale: Until AdvCiv 0.97, I had used this ability to represent auxiliary steam engines that were installed on ships of the line in the early 19th century (Wikipedia), but, when I realized that Frigate is too slow in BtS, this complication became unnecessary because, with Frigate at speed 5, Ship of the Line can have speed 4 without any special justification.

The details of what it means that a unit has access to a resource are a little messy. The trade network doesn't extend onto hostile tiles, but I don't want units to lose speed in hostile territory, especially not immediately upon entering. Relying entirely on the availability in the capital could lead to situations where a unit sits right on a resource tile in a friendly Fort or city, and still doesn't get the movement bonus when the tile isn't connected to the capital. With the current solution, a unit can, in theory, still lose its extra moves upon entering hostile territory, but this should be rare.

No strategic AI evaluation: I want to use this ability only for giving naval units (which are already fast) one extra move; i.e. the significance is going to be minor.

906	A	dvCiv		K-Mod		BtS	BtS

requires Stealth	requires Stealth	requires Stealth	requires Stealth
	and Robotics	and Robotics	and Robotics

Rationale: The BtS submarines were too weak against Battleship and the role of Attack Submarine (hunter-killer) was too narrow. Now Attack Submarine is the ordinary submarine unit for the World Wars, and Missile Submarine a more expensive unit representing the cruise missile and ballistic missile subs of the Cold War. First strikes match the flavor of torpedoes and invisibility well; consistent with first strike on Stealth Destroyer. Strength 25 and 5 first strikes would have a nicer symmetry with the 50% withdrawal ability, but that would make Submarines a bit too effective against Destroyers, which, as anti-submarine units, get to ignore first strikes.

Increased the cost of Battleship in order to further weaken that unit against submarines. The BtS cost is also too close to that of Destroyer.

Stealth Destroyer isn't needed as an efficient combat unit, and this would also be unrealistic. The few stealth destroyers that have been manufactured are classified as multi-role guided missile destroyers, and have strong anti-air and anti-submarine weapons. These additional abilities make the Stealth Destroyer an expensive Swiss Army knife. Removed one first strike to make the multiple first strikes of the Submarines more special. The Robotics requirement seems nonsensical and makes the unit very difficult to access.

Credit: <u>Dawn of Civilization</u> lists Stealth Destroyer's submarine detection as a bugfix in its list of features: "Stealth Destroyers detect Submarines as (presumably) intended"

See also: 028 allows Submarines and Stealth Destroyers to defend weaker visible units.

I've only skimmed through <u>this thread</u> (title: "Submarine Confusion"), but I think the participants mostly agree that BtS has its two submarines confused.

164 makes the Blitz promotion easier to access (also for post-Renaissance ships).

Thd

Destroyer is still a bit weak against Submarines. May have to give it an explicit combat bonus against Submarines (instead of relying entirely on first strikes vs. first-strike immunity), or give Submarines an Ocean attack bonus.

Would be nice to show the abilities shared by the two submarines more compactly in help text and Civilopedia:

"Submarine (invisible, reveals Submarines, can dive under Ice, can explore rival territory)"

Lower the strength of all post-Combustion ships a bit; they don't need to be *that* much more powerful than Ironclad.

Air recon shouldn't reveal Submarines so easily.

Would like to give Stealth Destroyer two missile slots, but so long as two Tactical Nukes can eliminate any stack, this seems a bit too dangerous.

Missile Cruiser needs work. Want to move it to Rocketry, but will first have to make room by moving the spaceflight stuff to Satellites.

907: Uniques	AdvCiv	BtS	before patch 1.52
907a	strength 7,	strength 8,	strength 8,
	cost 40, starts with March	cost 45,	cost 40
	named "Legionary"	named "Praetorian"	named "Praetorian"

Rationale	Clearly intended to be easy to recognize as powerful even for new players, and it worked, but this mod isn't for new players, and the unit is toxic for game balance. Supplants all pre-Renaissance units plus Musketman. Because it's so obvious, I'm nerfing this unit before all others.
	7 strength for 40 would be fine, I think, but bland. March is a promotion that doesn't give the unit more raw power, but is still useful, and a good fit flavor-wise as the Roman army was known for its forced marches. (Trivia: The BtS manual incorrectly claims that Phalanx starts with March.)
	As for the name change (only in the English game text), Soren Johnson mentioned in a Twitch video that "Praetorian" was chosen over Legion(ary) to avoid repeating too many names from Civ3, and seemed regretful about this. Legionary is obviously a better fit for the BtS unit, and also fits well with my changes.
	Looks like karadoc had also been considering a name change; there was a text key commented out (now deleted) in the K-Mod game text file that would name the unit "Legion".
See also	131 gives Legionary Attack City as its default AI type.
	CFC thread discussing overpowered unique units.

	AdvCiv	K-Mod	BtS	
907b Quechua	cost 15, starts with Combat I, named "Quechua Warrior"	cost 20, starts with Combat I, +100% vs. Archer, named "Quechua"	cost 15, starts with Combat I, +100% vs. Archer, named "Quechua"	
Rationale	changes that. And playe Archer bonus end up wi "Quechua Warrior" beca	The BtS unit is far too powerful, and I don't think the K-Mod nerf really changes that. And players who aren't willing to take advantage of the anti-Archer bonus end up with a unit that is worse than a regular Warrior. "Quechua Warrior" because Quechua is just an ethnic group (like Oromo). Trivia: Free Combat I was added by the Warlords expansion.		
Tbd.	unit makes more sense Inca. Free Combat1 cou the unit an ability that le become a unique Macer	Want to turn Holkan into the unique Warrior because such an early unique unit makes more sense for an early civilization like the Maya than for the Inca. Free Combat1 could still encourage rush strategies, so I'd rather give the unit an ability that lets it gain XP faster. The Quechua could then become a unique Maceman with lower combat strength and easier tech requirements than a regular Maceman.		

	AdvCiv	BtS
907c Fast Worker	2 moves, ignores terrain movement costs	3 moves
See also	Version 3.0.0.5 of the "Rebalance the Fast Worker the Mobility promotion. Recurrent version of the mod (5.1.1.0) in "Urukku Pikeman" (urukku presumably Home fork of RtR also uses the Mobili multiplayer mod gives Fast Worker a legal to the second s	tealmsBeyond.net (under "Civs"). The stead replaces Fast Worker with a y refers to wootz steel). The Close to ity promotion. The Tides of War

Rationale	Widely regarded as one of the best unique units. This is a bigger nerf than I would like, but I really think that no pre-modern land unit should have more than 2 moves, and it seems that the most skilled players appreciate Fast Worker most for being able to move and chop in a single turn – an ability that my change preserves.
	Ignoring movement costs vs. Mobility makes a difference only on Forest/Jungle Hills. Most players probably aren't aware that the movement penalties stack in those cases, and I don't think they should be aware. Also, free Mobility would be an even weaker ability than the one I use.
Tbd.	The name "Fast Worker" doesn't fit well for the new ability, and it's a lame name in any case. It's also not clear why India should have any such unit at all; the reasons given in the Civilopedia are at best contrived and at worst an offensive stereotype.

	AdvCiv	BtS	
907d Skirmisher	strength 4, 0-1 first strikes	strength 4, 1-2 first strikes	
See also	Multiplayer balance mods: The sets it to 0 first strikes. Rebal	Recent CFC thread with some opinions on Skirmisher: <u>link</u> Multiplayer balance mods: The minimalist <u>Tides of War</u> multiplayer mod sets it to 0 first strikes. <u>Rebalance the Realms</u> adds a 40% attack penalty against Archers. <u>Close to Home</u> leaves the unit as it is in BtS.	
Rationale	any drawback. Since Archers been enough to remove only that Mali already suffers from	One extra strength on an early unique unit is generally too much without any drawback. Since Archers aren't good at attacking cities, it might've been enough to remove only the first strike chance, especially considering that Mali already suffers from a nerf to the Financial trait (see change 908a below); hard to say. Mali still does well in all-Al games.	

907e (added in v1.0)	AdvCiv	BtS

908b Creative	 Cities start at Fledgling (including conquered citi occupation ends). +1 culture rate in all citi Faster production of Lil Theater. 	es once es. • +2 culture prary and • Faster pro	e rate in all cities. oduction of Library, d Colosseum.
See also	Chapter about changes	to the culture system	

Rationale	Creative is already a powerful trait in BtS and easy to use; the changes to the culture system make it too powerful, considering that other powerful traits get nerfed. It's also frustrating to have a Creative leader as a neighbor; usually not economical to compete with them for border tiles.		
	Just halving the culture rate bonus goes too far, so the (one-time) free culture is supposed to compensate to an extent. Also removes the rather pointless 5-turn waiting period until the borders of a new city expand, thus also communicating more clearly what the Creative trait is useful for (expanding borders). One might argue that the 5-turn delay is an important check on the early-game access to strategic resources – but one can always get that by settling adjacent to the resource (or even on top of it).		
Not sure if the ability should really apply to conquered cities. consistent with the old ability this way (the +2 culture per turn cities – so long as they're not under occupation).			
Tbd.	Getting access to the outer ring 5 turns earlier in new and conquered cities might be more powerful than I realize. One could exclude conquered cities if the current ability is too powerful. If it's not powerful enough, one could restore the discount for Colosseum. I had removed that in AdvCiv 0.99 as a minor balance change that, in my view, turned out to be insufficient. The flavor doesn't really fit, but at least it would give players a reason to construct Colosseums sometimes.		
Config	Can restore the BtS abilities through <code>Civ4TraitInfos.xml</code> and (Colosseum discount) <code>Civ4BuildingInfos.xml</code> . In <code>Civ4TraitInfos.xml</code> , the new tag <code>iFreeCityCulture</code> gets displayed as "cities start at such-and-such culture level" if the free culture is exactly equal to the threshold of a culture level; however, it's also possible to set any amount of free city culture.		
Also reduced the	culture rate of Terrace from 2 to 1.		
Rationale	Terrace is regarded as a light version of the Creative trait; don't want it to become actually more powerful than the Creative trait. Also, it's arguably the most powerful unique building in any case and the culture changes in AdvCiv are making it even better.		
See also	201 deals with other changes to building culture rates.		
	Hippodrome grants 1 happiness per 10% culture; Theater and its other unique replacements grant 1 happiness per 10% culture. Hippodrome: 1 happiness per 5% culture; other Theater-class buildings: 1 happiness per 10% culture.		
	Colosseum and its unique 1 happiness per 20% culture. 10% culture.		
Rationale	To make up for the lost production discount from the Creative trait. Colosseum is already a pretty weak building in BtS, don't want to make it even less appealing overall. (That said, a substantial buff would make Temple too unappealing.)		
	Between Colosseum and Theater, it's more intuitive to give Colosseum the stronger happiness ability because Colosseum is all about happiness and Theater primarily about culture. And using the culture slider against (temporary) problems with unhappiness feels like a pretty faithful representation of Roman ludi. Weakening Theater a little bit doesn't hurt.		

See also	200 reverts the K-Mod changes to Colosseum (25% culture, +20 production
	cost); <u>251</u> lowers the Legendary culture threshold instead.

908c Philosophical	+80% GP birth rate, faster production of University	+100% GP birth rate, faster production of University		
Rationale	commonly identified as <i>the</i> most p would be a close call). Nerfing Fin important for non-Deity players (D	ged as a top-tier trait, and I would say the one most at as the most powerful trait by Deity players (but this call). Nerfing Financial was in my estimation more Deity players (Deity players don't really play this mod I, but I don't think I can leave Philosophical alone after		
	Not sure how much to reduce the rate. Anything less than 100% is already a substantial nerf because rounding errors come into play. 67% would make very clear that a single specialist will generate 2 extra GP points. However, this is also clear enough with 80%: 2.4 isn't going to get rounde up, i.e. even if a player isn't aware that rounding down is always the rule, they can't go wrong. For two specialists, there is still no difference betwee 67% and 80% in terms of power level (both round down to +4), but, above that, 80% is more powerful and some base birth rates below 6 also round more favorably with an 80% modifier. Steps of 25% is what the game normally uses, but I'm not aware of 75% being used for anything except SDI, and going below 80% would really seem like too big a nerf.			

909a: Late game units	AdvCiv	K-Mod	BtS
Machine Gun		+10% vs. Mounted +50% vs. Gunpowder	+50% vs. Gunpowder
Rationale	At 10%, Cavalry still was too effective against Machine Gun. Not a gameplay problem, but pretty unrealistic. It might be that charging machine guns on horseback is a better idea than doing so on foot, but it's still a bad idea. Also, 10% is an unusual modifier.		
See also	CFC discussion Post by karadoc contemplating a 25% bonus vs. Mounted.		
Tbd.	Cavalry is also too effective against Infantry. Machine Gun shouldn't be immune to collateral damage (none of the Siege units should be, but especially not Machine Gun).		

910	Era tech cost modifiers adjusted (increased overall). These modifiers were added by BBAI. There's one per era, and it changes the costs of all techs in that era. K-Mod has tweaked them, and eventually (version 1.45) tied them to the inflation rate, a change not adopted by AdvCiv.
Rationale	To match the historical dates of discovery better. E.g. Gutenberg's printing press was invented around 1450, so the Printing Press tech shouldn't be discovered much earlier in a typical game of Civ.
Config	Set in Civ4EraInfos.xml

See also	251 adjusts the AI research speed based on difficulty. 140 adjusts tech costs based on map size. 308 lowers tech costs when Raging Barbarians is enabled. 550d lowers tech costs when playing without tech trading. 174, 306, 131b: Balance tweaks to some tech costs		
Tbd.	Perhaps reduce the travel duration of the spaceship. 10 turns is a long time that late in the game and it's not like the spaceship launch comes as a surprise.

(Only prerequisites represented by an arrow count in this context; called "or prereqs" in the code.) As a BBAI comment observes, "this [effectively reduces] the cost of most techs on the tech tree [by 20%]." Not all techs because e.g. Astronomy has no incoming arrow, and the six techs in the very first column have no prerequisites either. BBAI has added an XML setting for disabling the speed bonus for the first known prerequisite.	
Rationale	I want to leave the research times (turns to research) mostly unchanged because the original developers and modders have balanced the game around those research times. Whether a tech has an incoming arrow or dangles in the air is a technicality that should affect neither research speed nor cost.		
	Again, a tech cost adjustment is more transparent than a research spee adjustment.		
	Note that research generated through the discover ("bulb") ability of a GP unaffected by research rate modifiers, so turning a research rate bonus in a tech cost discount makes bulbs more powerful. However, this is pretty much evened out by the change to the era-based modifiers above.		
Config	The BBAI setting is TECH_COST_FIRST_KNOWN_PREREQ_MODIFIER in TechDiffusion_GlobalDefines.xml.

	er-turn progression to let the r number of turns than in BtS	game reach the 2 nd half of the 20 th century after a and AD 1 a little later.		

Rationale	Can't keep increasing tech costs whenever the AI becomes more effective. Another aim has been to bring down the date of the earliest wars between civs. In terms of tension, I think it's actually fine if a first war happens well after 100 turns (on Normal speed; though I guess it really should be closer to 100 turns than to 150); it's mainly the displayed years that have been bothering me.		
Config	Civ4GameSpeedInfos.xml. Tricky to make (further) changes – the total turn count needs to add up to the turn limit (e.g. 500 on Normal speed) while the year increments need to add up to 6050 (for an end date of AD 2050). I've used an Excel sheet to get this right, still took some trial an error. I've also looked at tech discovery dates in some sample games to come up with desired associations of turn numbers with game years.		
	ements (5 percentage ap sizes, makes a jump	Duel size has 100% tech cost, from there it's +10% for each size level.	
from Standard (115%) smaller jump from Larg	O ()		
Rationale	Trial and error. I don't understand why Large maps lead to much higher research rates than Standard size.		
See also	140 deals with other map-size adjustments.		
The map size modifier techs.	is ignored for Ancient-era	Applies to all techs equally.	
Rationale	In the Ancient era, the map size doesn't normally affect the pace of expansion, and the number of civs met doesn't matter yet because tech trading doesn't become available until the Classical era.		
Credits	Got the idea from the BASE mod (v6.3 <u>changelog</u> ; in German). It sounds like BASE might also exempt Classical tech.		
Tbd.	Perhaps apply the modifier half (or times 75%) for Classical tech.		
If tribal villages are disa	If tribal villages are disabled, the cost of Ancient techs is reduced by 5%.		
In Always-Peace games, tech costs are increased by 5% after the Ancient era.			
Tech costs are adjusted to the sea level setting (if The sea level affects the space available for the map has one): +20% with Low sea level, -15% with High sea level.			
See also	137: impact of sea level of	n the number of supported players.	
Config	Added a tag to CIV4SeaLevelInfo.xml for the sea level modifier. The tag is called iResearch because that's how BtS usually names tech cost modifiers.		

911	Misc. building changes			
911a	AdvCiv BtS			
Spy specialist slots	2 at Courthouse, 1 at Jail.	2 at Jail, 1 at Courthouse.		
See also	310 lets the Great Wall generate Great Merchant points instead of Great Spy points.			
Credits	Proposed and advocated by crullerdo	nut (CFC <u>post;</u> after the 3 rd quote box)		

Rationale	So that players who want to conduct active espionage missions in the midgame don't have to wait until Constitution. I think it's fair enough if espionage-focused strategies only become viable toward the Industrial er but it doesn't hurt to enable them earlier — so long as this doesn't mean the the espionage systems becomes more difficult to avoid for players (such a myself) who dislike it. A concern that Courthouse may become the go-to building for early Great Person "farms" is hopefully addressed by the changes to Market and Grocer below. An alternative consideration was to replace the +25% espionage at Castle			
	An alternative consideration was to replace the +25% espionage at Castl with the Spy specialist slot from Jail. Considering how late Castle become available and that it's a very situational building, this would've been quite extra hoop to jump through.			
	In BtS, it was possible to get an espionage-based economy started through an early Great Wall. This is no longer possible in AdvCiv, so the extra Spy slot at a non-wonder building is supposed to compensate for that.			
See also	CFC post by drewisfat. The last parage change and without having played Advespionage economy is (essentially) or due to AI spam of espionage buildings think the AdvCiv AI behaves that way. espionage AI code and AdvCiv has fix AI to run the Big Espionage strategy fatweaks that discourage AI investments	vCiv) argues that adopting an ally ever worthwhile in the early game is and spies in the late game. 912	Civics			
Tbd.	Lots of problematic civic	S		
	Some projections in hover text would be helpful. E.g. number of work and owned Farms, Plantations and Towns for Serfdom. Related <u>CFC</u> (near the middle)			
	AdvCiv	K-Mod		BtS
912a Serfdom	+1 commerce from Farm, Plantation -1 commerce from Town +50% Worker speed Medium upkeep	+1 commerce Farm, Pla -1 commerce +50% Worke Low upkeep	ntation from Town	+50% Worker speed Low upkeep
Rationale	The switch to Emancipation is a bit too painful in the K-Mod version. At Low upkeep, Serfdom is usually still less powerful than Slavery, but that's not a good baseline, and, for the AI, I'd say Serfdom is more useful than Slavery even with Medium upkeep.			
See also	131b assigns a negative AI weight to Feudalism because the tech is too popular now.			
912b Pacifism	military cost 1 gold; only 0.5 gold for the Al	military cost	0.5 gold	military cost 0.2 to 1 gold depending on difficulty (e.g. 0.2 on Settler, 0.5 on Noble, 1 on Deity)
Rationale	It's good that K-Mod decoupled the cost from the difficulty setting because the difficulty-based modifier was undocumented and needlessly complicated. However, the K-Mod change made Pacifism cheaper on all difficulty settings above Noble, and Pacifism had already been one of the more powerful civics in BtS, even on Deity.		nd needlessly acifism cheaper on all	
	The AI used Pacifism rarely in K-Mod, and the AdvCiv change might've made the civic unusable for the AI. Therefore, the AI supply cost modifier now applies to the Pacifism cost. This should be not nearly as confusing as the BtS approach because the human cost is always the same, and the AI cost is simply 50% of that. Since the AI needs far more units than the human players to guard its cities, I think it's fair to place a 50% discount on anything that punishes a high unit count.			
See also	250d makes the AI supply cost modifier truly independent of difficulty.		endent of difficulty.	
	Git commit message abo	out the K-Mod	l change to F	acifism
Civics screen shows the cost per unit without inflation (i.e. shows just 1 gold) and shows the current total cost (hypothetical if not currently running Pacifism) including inflation.		Cost per unit including influtotal shown.		Cost per unit without inflation, no total.
912c	AdvCiv		BtS/K-Mod	1
Hereditary Rule	1 happiness per 2 militar +25% happiness from re Low upkeep		1 happiness Low upkeep	per military unit
Config	Can restore the BtS abiliunit is set to 2, the gam	-		l. If iHappyPerMilitary per (one) military unit.

Rationale	The BtS ability is fiddly, encourages players to train lots of Warriors and never upgrade them (or generally to train more units than needed), makes it too easy to grow cities without buildings and is a poor fit flavor-wise (would fit for a military dictatorship). This ability should arguably be removed from the game entirely, but the replacement that I have in mind would require some other balance changes that I don't want to make at this point.		
	I had to come up with a temporary solution after change <u>036</u> (Al trades away non-surplus resources if it doesn't need them) because there were too many civs offering happiness resources during the second third of the game and too few civs willing to import them.		
	The bonus to resource happiness should make Hereditary Rule better than Representation at least in some (rare) circumstances, namely when a civ has a lot of luxury resources (and the matching buildings) and needs even more happiness (due to war weariness I guess). The bonus also means that civs can normally get 2 extra happiness out of Hereditary Rule without making a particular effort, namely by having at least 4 luxuries and stationing a second unit.		
912d Slavery	Base yield for hurry production: 24 per population sacrificed.		
Config	XML\GameInfo\Civ4HurryInfos.xml		
See also	CFC post by fippy suggesting that Slavery would be reasonably well balanced if hurry production were reduced to 20. (And here another.)		
	<u>Discussion</u> about moving Slavery to Iron Working		
	See <u>121b</u> about how the AI uses Slavery.		
	160 lets Granary empty upon starvation, arguably making it a little more powerful.		
Rationale	Until AdvCiv 1.05, I had instead reduced the food stored by Granary from 50% to 40%, but I've come to think that, without hurrying, Granary is a rather weak early-game building – which is regrettable because the effect is kind of interesting to evaluate and there are precious few attractive early-game buildings overall. (Granary becomes useful eventually for its health effect and for drafting.) So Granary really isn't the culprit.		
	The hurry production reduction is proportional to the old Granary nerf (four fifth) and 24 isn't too odd a number. The exact number isn't terribly relevant anyway because hurry production gets added to a city's regular production. I didn't want to go as low as fippy proposed because AdvCiv already weakens the Slavery playstyle through a slew of subtle balance changes. In particular, changes <u>027</u> (starting site placement), <u>108</u> (normalization) and <u>129</u> (map generation) make food less abundant near starting locations.		
	More importantly, making Slavery merely "still useful in cities with little production" would go too far for my purposes – or not far enough. Making Slavery somewhat less powerful should be welcomed by most players, but, beyond that, I don't think there's a middle ground for all. For me (for one), the Slavery ability is a lost cause because it's complicated, counterintuitive and tedious to use and an outlandish representation of ancient slave labor. Other players are very attached to the hurry ability and see it as a core element of Civ 4.		

cities with a Sacrificia	l Altar to sacrifice populatio	n regardless	of civics.	
Rationale	See rationale above; the game is better without Slavery, but some will strongly disagree.

maintenance would be a bit anti-synergistic because maritime empires
benefit especially from the Free Market extra trade route. Jails keeping
colonies in check isn't actually realistic, and having to construct Jails is
another hoop that players with colonies shouldn't have to jump through.
Both also come rather too late.

advc.mxc	Mixed continents map script		
See also	chapter <u>Mixed Continents</u>		
	165 decreases the grid dimensions of maps with long coastlines a bit.		
Rationale	I've been looking for a map where water matters and that still (unlike Archipelago) allows most players to place some 5 core cities on their home continent and to wage some land wars, and that isn't as predictable as Inland Sea or the Mediterranean setting of Tectonics (or Eyeball Planet or Caldera). Scripts that place the sea in the middle also give everyone at most two neighbors. Mixing together small and medium-sized continents (some of them merging into bigger continents) seems to work pretty well; "Big and Small", "Medium and Small" and "Not Too Big or Small" don't allow that, but "Continents and Islands" does.		
Tbd.	Testing – I've looked at maps genera haven't played even one full game o	ated for various settings and their statistics, but n the map.	
Translations for some of the options (should do at least German for complete sake). To keep the script self-contained (portable), the hardcoded English texbe used as a fallback.			
Mixed Contir	nents	Continents and Islands	
Renamed some options to reflect that this isn't necessarily a map with continents <i>and</i> islands.		Options named "continent size", "island size", "islands mixed in".	
Allow all landmass sizes for both regions.		"Big and Small" allows only small ("snaky"), normal and massive continents for the first region and tiny and normal islands for the second. "Continents and Islands" allows all sizes for the second region, but no islands for the first.	
Rationale	tionale I don't think a "Small & Small" map (without any continents) is going to play much better than Archipelago, but there's no harm in allowing it.		
The maximal number of tiny islands is based on the map size.		Regardless of the landmass settings, some tiny islands are placed on the map. The number is chosen at random between a minimum of 1 and a maximum of 4.	
Base the hill grain value of each region on that region's landmass size: spread the hills out a bit more on tiny islands, normal islands and snaky continents.		Hills are spread out a bit more in region 2 than in region 1.	
Rationale	In reality, the size of a landmass doesn't determine the ruggedness of its relief; however, for gameplay, it's important that it's not too difficult to give cities access to a couple of hill tiles. On small landmasses, a higher portion of the tiles in city radii are water tiles, which can't be hilly. So it's sensible to adjust the hill grain to the landmass grain value; the problem with the "Continents and Islands" code was only that region doesn't necessarily contain small landmasses.		

Use the defa and Tundra.	ault latitude thresholds for land Ice	Custom thresholds that are higher than in BtS, i.e. less Tundra and Ice.
Rationale	The BtS thresholds had been too low — or at least unrealistic —, but I've already addressed that through CvMapGeneratorUtil.py as part of advc.tsl.	
Tbd.	The K-Mod changelog says about "Not Too Big or Small" that "[z]ones are now more likely to have a buffer at the north and south poles." This buffer should perhaps be shrunk to match the AdvCiv Tundra and Ice latitude thresholds.	
"Add Plains" removed.	and "Reduce Desert" options	Options "Terrain Clumping", "Add Plains", "Reduce Desert" added.
Rationale	The plains and desert options aren't useless but pretty random (Why can't Desert be added? What about all the other terrain types?) and thus confusing. Better to adjust terrain frequencies through the Climate option or adding a new climate type. (In fairness, the plains frequency can't be adjusted through climate.)	
	"Terrain Clumping" seems a bit less	arbitrary, so I'm -tentatively- keeping that one.
Config	Shouldn't be too difficult to re-enable just commented out.	e the removed options in Mixed_Continents.py;
World wrap	option added.	
Rationale	No reason why this script shouldn't have that commonplace option.	
See also	kekm.32 adds a world wrap option to "Not Too Big or Small".	
Mixed Conti	Mixed Continents Continents and Islands	
approximate ratio as in m	The sea level setting is used and has "Big and Small", "Medium and Small" and "Continents and Islands" all ignore the sea level setting. "Big and Small", "Medium and Small" and "Continents and Islands" all ignore the sea level setting.	
		"Continents and Islands" has an "Add Water" option instead.
Rationale	Ignoring the sea level without so informing the player is terrible. May have been an oversight, or Sirian thought that the sea level should be controlled through keeping the two regions separate or mixing them together (the latter results in more land). Of course it's better to have a separate control.	
Config	The "Add Water" option is commented	ed out in Mixed_Continents.py.
	If the sea levels aren't fine-grained enough, more elements can be added to Civ4SeaLevelInfo.xml. I haven't tested it, but I think the mod should be able to handle additional sea levels. Replays will no longer be BtS compatible though (see 106i).	
AdvCiv K-Mod		K-Mod
"Not Too Big or Small" takes the sea level into account. Ignores sea level. No way to adjust the land, ratio.		Ignores sea level. No way to adjust the land/ sea ratio.
Rationale	Since "Not Too Big or Small" doesn'to implement; strange that karadoc h	t allow regions to overlap, this change was easy nadn't done this already.
See also	Kek-Mod has added an "Adjust Wate commit	er Percent" option to "Not Too Big or Small". Git

advc.gfd	GameFont display
Credits	By Nightinggale, adopted without any noteworthy changes. Original mod component: CFC link
Config	Shift+Ctrl+F1 opens the GameFont display window
Rationale	I use the GameFont.tga from BULL and have no plans of extending it, so I probably won't need this, but it could be handy for mod-mods and was very easy to integrate.

test	Temporary changes for debugging and testing are marked with advo.test. or advo.tmp.
Tbd.	Most of the test code should be removed eventually. Currently, there are quite a few branches for recovering from invalid call arguments that don't ever seem to occur. Those should be turned into assertions.
	It would be nice to have a bit of a framework for unit tests. Currently, there are two such tests (not tagged with "advc.test" but with advc.fract respectively) executed in cvxMlloadUtility : LoadPreMenuGlobals. There should arguably be a class of tests called PreMenuTest and another called PostMenuTest and perhaps a third class for tests that execute only when a special savegame is loaded.
	t a "Giant" world size setting commented out in Civ4WorldInfos.xml. I use it for tests with an 18 civs. It's from vincentz's 34-civ mod.
	a test switch for Permanent Alliances in UWAIAgent.h. (They're normally difficult to test Al Auto Play because the preconditions are so narrow.)
	essor define MONTE_CARLO_ODDS_TEST added to CombatOdds.cpp (new implementation code moved from CvGameCoreUtils.cpp). This causes each calculation of combat odds to

Preprocessor define MONTE_CARLO_ODDS_TEST added to CombatOdds.cpp (new implementation file, for code moved from CvGameCoreUtils.cpp). This causes each calculation of combat odds to be verified through a randomized simulation that closely follows the procedure in CvUnit:: resolveCombat. I don't know if I've set a sufficient number of samples for those simulations; there might be false positives. Very small inconsistencies between combat odds calculation and combat resolution can't be found this way: It's already very slow with the current sample size; can't increase that by orders of magnitude.

See also	Found bug <u>001I</u> this way.
	003: Refactoring changes to combat odds calculations.

advc.repro	Reproducibility test
Rationale	To make sure that the course of a game can be reproduced. Important for debugging, performance tests and synchronicity in network games. It's tedious to pinpoint errors found in the test, but still better than relying entirely on observation and the debugger.
See also	001n: Bufixes for OOS errors.
Config	See description in Reprotest.h. The DLL needs to be compiled with the ENABLE_REPRO_TEST flag set; otherwise, none of the test code gets executed.
Tbd.	There may still be false positives due to non-synchronized data being stored in savegames.

make (Changes to the DLL compilation process are marked with advc.make.
--------	---

Compiler version: As of v0.96, AdvCiv's GameCoreDLL is compiled using the updated Visual C++ 2003 Toolkit that was included with Visual Studio 2003 SP1 (from 2006). The code can still be compiled with the original 2003 Toolkit (the one linked in the how-to-compile-a-DLL threads on CFC). The updated compiler seems to generate only marginally faster code, if at all.

As for the Windows Platform SDK, a bunch of different versions are available on CFC (see *Credits* below). On Win 8 with VS 2010 Express (and no other version of VS installed), I can use any of these for compiling the AdvCiv DLL and the DLL always ends up with the exact same file size (but not the same contents). Differences in DLL performance either don't exist or are too small to measure them reliably. As with the Toolkit, the files extracted from VS 2003 SP1 seem to be the most recent ones of the proper SDK version (6.0), appear to result in the fastest DLL (for what it's worth; see above) and take up the least amount of disk space. Until AdvCiv 0.98c, I had been using version 7.0A. It might be that only 6.0 (maybe only Nightinggale's version?) will work without the VS 2010 installed (i.e. when using a more recent version of the IDE).

Some hints about diagnosing fastdep crashes: fastdep.exe dates back to DannyDaemonic's makefile. The VS console will only show "fatal error" when it crashes. For diagnosing the problem, one needs to consult the depends file in the temp_files folder for the current build target. The last .cpp file for which output has been generated was probably handled correctly. The next one in the alphabet should be the culprit. This can be verified by running fastdep.exe on that .cpp file from a command line; if there's no output, then that file (or I guess an included header) is causing the crash. Beyond that, I think one can only use trial and error, i.e. revert recent changes or delete or comment out code until the crash no longer occurs. So far, the crashes that I've encountered were arguably caused by bugs in fastdep: One time, #include <stack> as the last include in CvMap.cpp was causing the crash (resolved by moving it to the precompiled CvGameCoreDLL.h, which is a better place for standard headers anyway); the other time, an #if ENABLE_XML_FILE_CACHE check (cf. 003i) in CvInfo_Civilization.cpp (cf. 003x) was the cause; inserting a newline (which looked better too) resolved that issue.

Credits

Got the files from alberts2, who <u>posted</u> them in the Caveman2Cosmos subforum. There appears to be no official download (of just the updated compiler) on Microsoft.com. Caveat: alberts2's download doesn't include some necessary libraries; see list here.

Windows SDK versions:

- v6.0 extracted from VS 2003 SP1 by Anq; this is the one I'm using. Link 12
- v6.0 from the "We the People" GitHub account (link), recommended by Nightinggale.
- "version 6" hosted <u>here</u> by Asaf. Too recent according to Anq's post linked above.
- The install wizard hosted here by Leoreth appears to install v7.0A.

(Not related to compilation, but I want to document this somewhere: I use a faster version of Python24.dll – uploaded <u>here</u> by alberts2. I've seen a speed-up of about 4% in an AI Auto Play test.)

The AdvCiv Makefile is essentially <u>Nightinggale</u>'s, which is in turn based on <u>DannyDaemonic</u>'s. (Firaxis only released a .vcproj file along with the SDK.) The Visual Studio (VS) project (.vcxproj) and solution (.sln) files are also based on Nightinggale's.

Added by devolution (<u>Git commit</u>, <u>forum post</u>): Makefile target Final_Release that enables more efficient machine instructions and, crucially, whole-program optimization, which speeds up AI turns by about 10%. (Nightinggale eventually also adopted that – <u>Git commit</u>.)

Tbd.	2010 "Express" so far (available here too much of a hassle. If I do, these lo	free "Community" edition of VS; only tested with e). I'm not going to try that anytime soon though; ook like good install instructions. Or maybe there's and 2019, one that won't require VS2010 to be

Enabled precompiled headers and jom for fast Profile and Debug builds. There are now fast configurations for all targets and slow configurations only for Debug and Release. I've removed the slow Assert config.		From Nightinggale's thread: "Jom can't build Profile or Debug targets. This is because Microsoft decided that symbols are written to vc70.pdb by the compiler for each cpp file. This means jom tries to have multiple threads write to the same file at the same time. [] I recommend having two Release build rules, one with jom and one without it. The reason is that jom handles files in parallel, but they also write output in parallel. This makes reading error messages tricky []." I.e. there are fast Release and Assert configurations, and only slow configurations for the others.	
Credits	billw2015 explains <u>here</u> how to solve compiler option.	e the problem with vc70.pdb by using the /z7	
Rationale	Reading the error messages is very rarely a problem. It's nice to have a non-parallel configuration at hand, but don't need slow versions of each. A high number of configurations makes it slightly more fiddly to switch between configurations.		
	Should perhaps also throw out the slow Release configuration. At least on my system and with VS2010, /z7 makes linking far slower than /zi. Not sure if the /DEBUG: FASTLINK option introduced by the MSVC05 linker could be used with the EXE (I guess not) and whether it would help much. The non-parallel "debug" configuration should use /zi instead of /z7. I guess a separate build target needs to be defined to accomplish that.		
memory. The	Makefile target <code>Debug-opt</code> added for debugging crashes that result from accesses to uninitialized memory. The respective configuration uses <code>jom</code> and enables assertions. <code>Debug-opt</code> can also be used for inspecting optimized assembly.		
Rationale	Even without _NO_DEBUG_HEAP and with /RTC1, certain memory errors don't occur in a debug build. Optimized assembly is useful for evaluating micro-optimizations.		
Config	For debugging, assertions should be enabled by uncommenting the line #PROJECT_DebugOpt_CFLAGS = /DFASSERT_ENABLE in Makefile.project. For viewing optimized assembly, it's normally better to keep the assertions disabled.		
Use the $/ {\tt Ob1}$ compiler option for debug builds. This option allows the compiler to inline functions with an inline keyword. In a test, this decreased the turn time with attached debugger by ca. 30%. Specifically, the MSVC03 documentation says that $/ {\tt Ob1}$ "expands only functions marked as inline orinline or, in a C++ member function, defined within a class declaration." That covers nearly all situations in which $/ {\tt Ob2}$ can apply inline expansion, but $/ {\tt Ob1}$ seems to do so more reluctantly, i.e. mostly only when a marker is present (and apparently $_{\tt forceinline}$ works too). The difference could also be due to other optimization that have to be enabled along with $/ {\tt Ob2}$.			
Config	PROJECT_Debug_CFLAGS in Makefile.project Can enable further optimizations as needed, e.g. /ob2 or even /o1.		
Rationale	I do most of my testing under the debugger and, toward the late game, turn times do become a bit of hindrance.		

See also	advc.fract and advc.enum use a lot of indirection. The respective classes hadn't been used as much as now when I did the 30% test mentioned above.

2003 Toolkit compiled wi	ersion: As of v0.96, AdvCiv's GameCoreDLL is compiled using the updated Visual C++ that was included with Visual Studio 2003 SP1 (from 2006). The code can still be the the original 2003 Toolkit (the one linked in the how-to-compile-a-DLL threads on efully, the updated compiler generates slightly faster code.						
before witho	iv 0.98c, I'm compiling with version 6.0 of the Windows SDK. I had used version 7.0A but any noticeable problem, but 6.0 seems safer and, based on a single test, results in er code (at least the test makes me fairly confident that 7.0A isn't faster).						
Credits	Got the files from alberts2, who <u>posted</u> them in the Caveman2Cosmos subforum. There appears to be no official download (of just the updated compiler) on Microsoft.com. Caveat: alberts2's download doesn't include some necessary libraries; see list <u>here</u> .						
	I've obtained the Windows SDK from the "We the People" GitHub account (<u>link</u>) at Nightinggale's recommendation <u>here</u> .						
building a fii	nation from the resource script (CvGameDLL.rc) is written into the DLL only when nal release. K-Mod had already added the mod name (I changed it to AdvCiv) and I've nod version under "FileVersion".						
Rationale	I don't need the meta info during development. Updating the mod version before each final release seems feasible.						
	Note that resource.h is probably only needed for editing the resource script in Visual Studio's resource editor.						
Changes to	header dependencies. Mostly not marked with any in-line comments.						
Credits	Based on Nightinggale's <u>guide</u> (in spoiler tags under "Fix Firaxis mess").						
Rationale	Mainly to reduce compilation time. It's a trade-off: CvGameCoreDLL.h gets precompiled (see PRECOMPILE_CFLAGS1 in Makefile), so if more headers are included there, then compilation becomes faster overall. But a change to any of the headers in CvGameCoreDLL.h causes the whole project to be recompiled.						
	Caveman2Cosmos moved almost all headers into CvGameCoreDLL.h: SVN revision That seems unwise, at least for my purposes, as some headers do change frequently. Also, unnecessary includes obscure the actual dependencies and might pollute namespaces. So I've only moved headers that are unlikely to change and frequently required (or not so frequently required but large).						

Tbd.	Perhaps use the /FI (force include) compiler option and remove all the #include "CvGameCoreDLL.h" directives. Could argue that it's confusing to have invisibly included headers, but that confusion already exists in the .h files, none of which include CvGameCoreDLL.h – which works because all the .cpp files that include those headers include CvGameCoreDLL.h beforehand.							
See also	003x splits up CvInfos.h. Some of the resulting header files are included in CvGameCoreDll.h. (In BtS, the whole CvInfos.h was included there.)							
	003u cleans up the object-oriented design of the AI classes to an extent, and that allowed me to include the various AI headers less frequently in implementation fil							
AdvCiv		BtS (no significant changes in K-Mod/BBAI)						
CvGameCore	out 20 includes from DLL.h and instead added them only files that need them.	CvGameCoreDLL.h includes about 50 commonly used header files, some from the Standard Library and Boost, but mostly from the Civ 4 game core. This means that all implementation files need to be recompiled whenever one of the headers in CvGameCoreDLL.h changes.						
CvGameCore	ose headers remaining in DLL.h from all implementation files uded them redundantly.	Many implementation files explicitly include headers that are already included through CvGameCoreDLL.h.						
Replaced so forward decl	me include directives in headers with arations.

Rationale	To reduce the number of include state	tements.						
implementati	ne include statements in most ion files a bit so that related headers to each other.	Some patterns are discernible, like including the class's own header file first and EXE-to-DLL interface headers last, but it's mostly haphazard.						
distance fund CvMap.h and CvGameCore making them	by Nightinggale, I've moved the ctions from CvGameCoreUtils.h to d removed the CvMap header from Utils.h. I went a bit farther by a (non-static) member functions of h global wrappers for convenience.	CvGameCoreUtils.h contains global utility functions. Some of these deal with distance computations on the game map. Those distance functions operate on CvMap and CvPlot objects and they're inlined for performance, meaning that CvMap.h (which includes CvPlot.h) has to be included in CvGameCoreUtils.h and thus, through CvGameCoreDLL.h, in every cpp file.						
Rationale	The distance functions don't operate on arbitrary coordinates – they require a CvMap object with specific dimensions for dealing with world-wrap. Tying them to a CvMap object communicates this relationship (which isn't entirely obvious).							
See also	advc.pf: Moved the pathfinding funct	ions out of CvGameCoreUtils.						
Renamed Be	etterBTSAI.h to BBAI_Log.h.							
Rationale	For clarity; contains logging code that writes to BBAI.log.							
Added some fewer Boost		o make the Visual Studio Code Editor underline						

Credits	Based on "We the People" code by Nightinggale; e.g. from this Git commit.
	Adding the Boost header paths to Visual Studio shouldn't be difficult to do, but it seems that the (absolute, system-dependent) path will have to be stored in the .vcxproj file, which is under source control and should therefore be fully portable.

advc.wine	Debugging support for the Wine compatibility layer

printed to st Disabled this	on about failed assertions gets dout. s again, though the code (not much) sert.cpp as a comment.	Assertion popups are shown through the Winuser.h function DialogBoxIndirect, which isn't implemented by works also on Wine.						
	printed to the Visual Studio console ed to stdout.	OutputDebugString in WinBase.h is used for writing to the console. These messages aren't visible on Wine.						
Rationale	an assert build. I don't know for sure	users can be diagnosed by providing them with e if the BtS debug output is really inaccessible on by one (savvy) Wine user; I've never used it						
	It seems that output to <code>stdout</code> (via <code>printf</code>) is discarded by MSVC applications when no proper console is attached. The format string doesn't seem to get evaluated either, so, considering that none of this happens in release builds and that logging to console is used only sparingly during startup, there should be no need for checking which kind of console is attached; OK to just call both <code>OutputDebugString</code> and <code>printf</code> in any case.							

tsl	"True Starts" game option (TS)
See also	The essentials are described in the <u>TS chapter</u> .
	CFC thread introducing the option
	Detailed – but difficult to follow – description of Civ 6 starting biases: <u>CFC post</u> (None of that has inspired what I'm doing.) Civ 4 Reimagined also implements simple starting biases based on terrain features, elevation and resources in the workable radius around starting tiles. That mechanism replaces the handicap-based location swaps. <u>Source code</u>
	129: Changes to the standard map generator (resources, features); a small number of those were made with TS in mind.

Config

The game option is available on all the game setup screens, disabled by default. It applies to all players in network games (Staging Room screen) and scenarios with fixed civs, otherwise to all players whose civ is set to "Random".

The civ and leader preferences are set in Assets\XML\TrueStarts and documented in Civ4TrueStartsSchema.xml. They're mostly real-world statistics because this makes it easier to find sensible values for any civs that a mod-mod might want to add. The True Starts code in the DLL then uses a variety of haphazard methods to match those statistics to statistics about the map in the game and to compute a "fitness" value for each pair of a civ and starting location.

The movement of bonus resources (referred to as "sanitization" internally) can be disabled in GlobalDefines_advc.xml (search for "advc.tsl"). When sanitization is disabled, the impact of resource preferences in the fitness calculation is increased.

The AUTO_REGEN_MAP setting in GlobalDefines_devel.xml combined with MessageLog=1 in My Games\Beyond the Sword\CivilizationIV.ini can be used to collect statistics about the frequencies at which the leaders get chosen by TS in MPLog.txt. (Not very convenient; the log just lists the leaders chosen for the original map and each of the re-generated maps.)

A report with breakdowns of the fitness calculations and map sanitization can only be enabled through the DLL, see the start of CvTrueStarts.cpp.

Setting fixed map seeds can be helpful for testing; see the *Config* box under <u>027</u> about that and also 027b.

TS ignores the team placement options that some map scripts (e.g. Team Battleground) have.

Rationales (for config)

For scenarios with fixed leaders and fixed starting tiles, one could argue that TS is unnecessary (the starting locations already match the civs). However, TS can only be available for all scenarios or for none. It does make sense for scenarios that allow arbitrary civs. So TS might as well do something with other scenarios. This has also been helpful for testing – getting TS to match most of the civs on Earth18Civs. For scenarios with pre-placed cities or units, it gets too complicated for too little gain to change the ownership of those items, so TS does nothing with such scenarios.

In network games, only the host learns which civs are set to "Random" (through a hack that is part of change 190c) and game net messages aren't delivered until the game is fully set up, so I can't get that info across the network in time. Letting TS assign only some of the civs doesn't make much sense to me anyway. I'm allowing it in non-network games because it's easy to implement for those – and because I'd like TS to do what the game setup screens say. (On that note, "Random" civs do get chosen randomly by TS; not at all uniformly, but based on a randomized map with randomized starting locations.)

Tbd. (on config)

The minor issue with network games could be resolved by doing the TS stuff at a later point in the game initialization process, i.e. at the earliest when CvGame::

setInitialItems is through. However, at that point, the starting techs and unique units will have to be reassigned (along, perhaps, with other stuff that I'm forgetting about), which is troublesome to implement.

Add XML settings for adjusting the impact of various aspects of the fitness calculation — I think players care the most about whatever aspects they're most knowledgeable about. This might really be a fundamental flaw with this option: A player who doesn't know about African rice might just assume that TS failed to remove a Rice resource near the Mali capital. Perhaps more importantly, players have their own interpretations of Civ 4 maps, e.g. hills representing high elevation vs. rugged terrain. Since TS only makes a best effort, the intentions of the designer aren't clearly communicated, and conflicts with the player's expectations don't get resolved. (It's also questionable how willing a player would be to come around to my interpretations.)

Adjustments prior to the selection of starting tiles: few ...

Rationale

The main idea of TS is to choose civs that fit the map, not to create a map that fits the civs. The latter approach has a potential for matching the historical geography much more closely, but can also easily lead to maps that are highly predictable (at which point a scenario with an entirely fixed map might be preferable) and, in that sense, also don't look or feel realistic. So, for the most part, TS does not affect the map generation process.

(I have, before implementing the TS option, experimented with a map script that generates a map for a set of civs. I got to a sort of proof of concept, but it would take too much work to complete and polish that.)

Most of the fractal-based map scripts, in particular Fractal, Continents and Pangaea, tend to place less land near the equator when playing with the TS option. (But they may still, occasionally, place a lot of land there.)

Rationale

For fewer starting sites at low latitudes. We have too few civs for those (and too many for temperate starting sites).

I've also tried (randomly) moving the equator south (<u>Git commit</u>), either compressing the southern hemisphere or omitting the southern polar region, but that didn't seem to help much. And removing one polar region leads to less bad terrain overall – an undesirable balance change in my book –, while a compressed hemisphere has too little distance between the Jungle belt and Tundra belt. The vertical distances feel too short in general, so it's nice to have a larger northern hemisphere, but some civs will still start in the south.

And I've also considered automatically regenerating maps when the best choice of civs consists mainly of overused civs, but this approach is slow (mainly because the Starting Position Iteration algorithm is slow), not easy to implement and seems a little heavy-handed.

Tbd.

The Big-and-Small family of scripts is not affected by this change; need to figure out how to implement it for the MultilayeredFractal class. PerfectMongoose also still to be done (that one should be easier).

Config

CvMapGeneratorUtil.py

Moved the Tundra (and Ice) belt to higher latitudes on all fractal-based map scripts and reduced the randomness involved in Tundra extending into unusually low latitudes. Part of this change applies also when TS is disabled. In particular, the Fractal map script may, regardless of the TS option, generate land about 10° closer to the poles than in BtS, i.e. now at 75-80° latitude.

Rationale	higher latitudes when the oddly broad water bands at the poles are shrunk to a thickness similar to Continents and Pangaea. It's rather more interesting when a passage by ship between a continent and polar ice isn't guaranteed to be possible think the thick polar water bands have also lead to unnatural (truncated) contine shapes.							
	playing as France when there are Turadius. Temperate terrain (Grassland north in some places. This is desirab	a out of the temperate zone. Doesn't feel like indra tiles already within the capital's workable I, Plains) may still, randomly, extend pretty far lie for getting starting sites far enough north for e influence of a warm current (Gulf Stream).

AdvCiv does	sn't currently depend on these nink), but they apply regardless of	The standard terrain and feature generators in CvMapGeneratorUtils.py have a function getLatitudeAtPlot, but overriding that doesn't affect resource placement. To place resources according to custom latitudes, map scripts need to reimplement much of CvMapGenerator.cpp. The standard implementation of						
		getLatitudeAtPlot assumes that the equator runs through the center of the map. This is inconsistent with the latitude calculation in the DLL, which takes into account the map's top and bottom latitude values; those values don't need to be symmetrical.						
See also	129 tweaks the latitude calculation in	the DLL						
Rationale	of a game option, and, later, for shrir to ensure that Python and the DLL a all use the same latitude values.	r an implementation of TS as a map script instead aking the southern hemisphere. Anyway, it's good and the terrain generator and resource placement						
_	ne latitude limits, sea level and world of most of the "official" scenarios.	The whole-Earth scenarios have latitude limits between -90 and 90, but the northern hemisphere is enlarged, meaning that 0 latitude doesn't align with the equator. The other scenarios don't have latitude values at all. The world size is mostly already set to Huge (which is appropriate), the sea level to Medium.						
Config	Through the DLL; by checking for the names of those specific scenarios. I don't want to change the scenario files because I don't want to include them in the mod. Doing so might suggest that the scenarios have been overhauled or that they're somehow curated content.							
See also	The 2 nd paragraph in <u>this CFC post</u> argues against including the terrestrial scenarios with AdvCiv.							

The scenarios are useful for testing, especially Earth18Civs. If TS can't properly place e.g. Egypt in that scenario, then something is probably wrong with the TS heuristics. Need to have accurate latitude values for that. The world size and sea level are relevant for a crowdedness value that AdvCiv (AI) code uses in a few places and that also affects the radius around the starting tiles that TS takes into account. Those scenarios have dimensions larger than Huge random maps (and more land tiles than such maps), so assuming Low sea level helps getting the right sense of available space.

TS does not affect the placement of the starting locations and the assignment of players to starting locations. (Only the assignment of civs and leaders to players.)

Rationale

It's difficult to find starting locations that are at least somewhat fair (cf. the rationales listed under change 027), and taking into account the TS fitness values (how well a civ could match a potential starting location) already at that point would make that task even harder. I've tried discouraging starting locations near the equator (through the "volatility values" computed by the Starting Position Iteration algorithm) in order to have more starting locations for the many temperate civs in the game, but this didn't have much of an effect. I guess leaving the equatorial area (largely) empty tends to lead to major balance problems as it gives the civs that do start in the tropics and subtropics too much room to expand. So only a major bias against tropical starts would get the job done — but it wouldn't be worth it.

There isn't much of a reason for TS to change the assignment of players to starting locations. (One could perhaps make a case for assigning the starts for which high-fitness civs were found to humans at the end.) I do like the difficulty-based assignment (iStartingLocPercent in Civ4HandicapInfos.xml) of players to starting sites; it's nice that TS (unlike the starting biases in Civ 6) can coexist with that handicap mechanism.

Tbd.

For those players for whom a civ was configured during game setup, it would be nice to do what Civ 6 does, i.e. to start by assigning the available starting locations that fit best to those fixed-civ players and to then to pick civs for any remaining starting locations. This would be in conflict with the difficulty-based assignment; though one could restrict the re-assignment of starting locations to players that play at the same difficulty level. When all players have fixed civs, then TS has currently no effect at all (except for scenarios – where those fixed assignments are ignored).

Implementation wouldn't be too difficult, it's just not clear what the behavior should be exactly.

After a leader and civ has been assigned to every player, TS computes a fitness value for every bonus resource tile on the map. These fitness values are based on the distances of the tile from the civs' starting tiles and on the civs' resource preferences and the game's start era. Then "swap utility" values are computed for pairs of resource tiles. Those utility values are based on the current resource fitness values, the hypothetical fitness values assuming that the tiles' resources are swapped and a disturbance value (negative utility) that accounts for how dissimilar the two resources are, whether and how severely the swap would violate minimal distances that are normally required between resources of the same type or class (e.g. livestock is a resource class), distances to starting tiles, and whether swapping the resources will require a Forest or Jungle to be added or removed. To satisfy the various resource placement requirements (e.g. terrain type, elevation) after a swap, resources can be moved to an adjacent tile; if this is necessary, the disturbance value is increased. Apart from minimal distances between resources, all requirements need to be met or else the swap is disregarded.

TS then makes those swaps that have a positive utility, in descending order of utility. Each resource can get swapped at most once.

The resource preferences are defined in <code>Civ4TruBonusInfos.xml</code>. Defining preference weights in addition to start era conditions would have been a bit difficult to implement, so the preferences are only either encouragement (a civ likes to be near a resource type) or discouragement. Resource swaps can be disabled through <code>GlobalDefines_advc.xml</code> (search for "advc.tsl"). TS then tries harder to respect resource preferences when choosing the civs.

Rationale

Preventing historically inappropriate resources near starting tiles just by selecting the most fitting civs seems impossible. For a few civs in the game, mainly India and China, almost all resource types fit well enough, but, for all the European and American civs, about a quarter of the resource types are inappropriate. Swapping e.g. Rice with Corn or Silk with Wine barely affects the balance of a map or its natural appearance. Not all swaps are this inconspicuous and one can argue about the best weight for the disturbance value in the swap utility calculations, but, in principle, this seems like a very good way of handling ill-fitting resources, allowing the civ and leader fitness calculation to focus on other aspects.

Encouraging resources that are typical for a civ is less important to me (and is a lesser priority in the resource fitness calculation). It might be that, for the most part, the typical resources would manifest often enough just through the discouragement of other resources – and that further encouragement makes starts too predictable and repetitive. Well, the encouragement weight can be tweaked (in the DLL), but it seems helpful to have such a mechanism (and the lists of encouraged resources in XML) in place to begin with.

When playing with the Balanced Resources custom map option, important strategic resources (i.e. all except Marble and Stone; Ivory isn't considered strategic) can't be swapped.

Rationale	Just trying to respect the players (somewhat contradictory) wishes.				
See also	Based on code written for <u>108c</u> (changes to Balanced Resources option).				
ن ده ا می ما ۸ ۸	Albert playing with a system man antique that is a proposed to leave a continue to sent. TO would				

When playing with a custom map option that is supposed to leave a continent empty, TS won't select any New World civs. (Implemented by checking for names of map scripts and of options.)

Rationale I don't think we want New World civs in the Old World when such a distinction exists.

TS computes a fitness value for every pair of a player (with its associated starting tile) and a leader (with its associated civ). Then it goes through the players once in a particular order and assigns to each player the best-fit leader and its civ among those leaders and civs not already taken. After each such assignment, the fitness values are updated (because fitness takes into account civs and leaders already chosen for other – especially for nearby – players). The order of the players prioritizes human players over AI players. Within those categories, AI players that start close to a human player and players for whom it's difficult to find any fitting civ are prioritized.

These computations are fast in comparison with the Starting Position Iteration algorithm. The slowest part is the (re-)calculation of the fitness values.

This Greedy algorithm is a lot more simplistic than what the <u>Culturally Linked Starts</u> mod (CLS) does ("the linking is a very hard to solve optimization problem and that your computer will need some time to find a nice solution"). I don't think optimizing the order in which the players are processed will accomplish much. CLS is all about the positions of the civs relative to each other, but, in the TS heuristics, the distances between the civs are just one of several aspects of the fitness calculation.

The human experience is what matters most. At the start of a game, the human players only see their own starting location, then they discover its surroundings and the locations of their neighbors. Matching the historical geography of AI civs that are farther away is less important – although it's important everywhere to avoid overtly counterfactual characteristics.

No special priority for human players when playing with the R&F option.

See also

R&F chapter

Most aspects of the fitness calculation are only based on the civ, not the leader.

Rationale

Would be nice to have separate preferences for the Britons (Boudica) and Gauls (Brennus) or to give Kublai Khan a rather Chinese start, however, each civ has only one city list, and so the Celtic capital will be Bibracte although this city was not even contemporary with either leader in the game. Looking at the civs as representative of their entire history (with a special focus on the reigns of the leaders in the game) also made it easier to gather the data for the starting preferences – we've got 52 leaders and just 35 civs.

The one leader-specific aspect of the fitness calculation is contemporaneity, i.e. TS prefers choosing leaders (along with their civ) that were at least remotely contemporary with other leaders already chosen in an earlier iteration of the civ and leader selection algorithm (or locked in manually during game setup). For each leader, a random number of other leaders is considered to be contemporary – those leaders whose reign's starting date is the closest to that of the first leader.

Rationale

Seems a bit better than just picking a civ and later a random leader associated with that civ. Doesn't have much impact on the fitness calculation, more like a tie-breaker. Also, the regnal years were easy to research.

When playing with Unrestricted Leaders, the contemporaneity aspect is ignored, i.e. leaders are chosen solely based on their civ. Then, when assigning the best-fit civ and leader, only the civ is kept and a leader is assigned uniformly at random from among all leaders that are still available.

Rationale

If we choose the leaders based on contemporaneity and unrestricted by their civs, we'll end up with the same leaders in every game. I guess players who use Unrestricted Leaders like random combinations of civs and leaders, so let's just give them that.

Contemporaneity with human leaders previously chosen or leaders of the same team as the leader under consideration is encouraged more strongly.

Rationale

Not important, but if we'll have a bunch of contemporary leaders, we'll want the human players to be part of that group, all other things equal.

Geographical latitude has a strong impact on fitness values. I.e. fitness is high if the absolute latitude set in XML (normally the latitude of a civ's capital) is close to the absolute latitude of the starting tile, or, put differently, differences between those latitude values are penalized. Near the boundaries of the temperate zone, latitude differences are penalized more strongly when a temperate civ would be placed in the subtropics or subarctic, less strongly when a subtropic or subarctic (Vikings) civ would be placed in the temperate zone.

Geographical coordinates are easy to look up and latitude correlates strongly with all sorts of climatic characteristics – on Earth and in the game. Very useful. I had even considered implementing TS as a much simpler (and therefore also more transparent) option – based only on latitude values.

At the edges of the temperate zone even small differences in latitude can make a difference between Tundra or Desert being conspicuously close to a starting location or not – which may or may not be desirable. Therefore those differences in latitude are magnified.

The sign of the latitude values (northern vs. southern hemisphere) can't be assumed to affect the climate, at least not in the game, so it seems best to ignore the sign in this context.

For temperate civs, Tundra and Desert tiles, even just one of them, close to the starting tile is explicitly discouraged (i.e. the fitness value is decreased).

Rationale

Even if the latitude is close to being correct, Tundra and Desert can reach far enough into the temperate latitudes to appear jarringly close to a (supposedly) temperate starting location.

Tbd.

Consider converting a small number of Desert or Tundra tiles to Plains during the sanitization step (i.e. when bonus resources get swapped).

For a few civs, the latitudes set in XML differ from the latitude of their capitals by a few degrees.

Rationale

This is because of geographical phenomena (e.g. the Gulf Stream) that are unlikely to be recreated by a map script.

When playing with a Climate setting other than Temperate, the civs' target latitudes are adjusted.

Rationale

For those Climate settings, the latitude values on the map don't imply the same climate as on Earth. E.g. with a Tropical climate, the Jungle belt gets wider, so subtropical civs like Egypt need to move farther away from the equator.

Fitness is increased when distances to civs previously chosen (especially distances to humans) match the geographical distances between the respective civs on Earth. When the distances are large on the map and on Earth, it doesn't matter much how large they are specifically.

Rationale

So that civs tend to be adjacent to civs that they indeed were close to and interacted with on Earth and (at least) not adjacent to civs that they had no or little contact with. The latitude aspect already encourages that to some extent, but, here, the longitude value and the sign of the latitude value are also taken into account.

I've considered listing (in XML) pairs of civs that had contact despite being far apart geographically, e.g. Spain and the Aztec, but I think it's better not to place such civs close to each other, or at least not worth the implementation effort. Most of the colonizing civs have a preference for starting near a coast (see somewhere below); that should already enable them to get in contact with the civs that they colonized in history.

For each civ, a typical annual precipitation value and a value expressing how diverse the climatic conditions in the civ's (core) territory were is set in XML. TS tries to match that data to the terrain and features surrounding a starting tile when computing the civ fitness value. Jungle tiles are considered to be the wettest (regardless of the underlying terrain), Desert and land Ice the driest. Non-Jungle Plains is considered to be drier than Grassland, Tundra about the same as Plains. Forests increase the wetness of a tile. In addition, clusters of similar tiles are assumed to have more extreme precipitation values.

Rationale	Precipitation data is relatively easy to find (certainly for individual cities, not so much averages for a whole country), and precipitation is the main climatic factor not already covered by matching geographic latitudes. I also think players have pretty uniform notions of what (groups of) tiles are dry or wet.
Tbd.	The climate variation value in XML should be renamed to precipitation variation (or something like that) – because that's how the value is used.
computes a	ration analysis splits the surroundings of a starting tile into (overlapping) regions and in overall precipitation value only from a representative subset of those regions. It is surroundings match the desired variation in climate is decided based on per-region in values.
Rationale	An average of the per-tile precipitation values over the entire surroundings tends to be too close to the global average. I think how players look at a starting location is that they see e.g. a large cluster of mostly Plains and another of Plains mixed with Desert, and that makes it seem pretty dry even if the rest of the nearby tiles are a rather wet mix of Grassland and some Plains.
per-region p	especially Desert tiles are given a higher weight than other tiles in the calculation of precipitation values. And a few other special rules that make regions with a lot of Desert ry and regions with a lot of Jungle or Forest tiles more wet.
Rationale	Starting tiles are rarely placed inside a large desert; that can make it difficult to place civs that should have extremely low precipitation (Egypt, Arabia, Babylon, Sumer, Mali) frequently enough. Will have to take what we can get.
	Special treatment for clusters of (coastal) Forests exist mainly for the sake of Japan, which has unusually high precipitation for its latitude.
	elevation within the (core) territory of a civ is matched by the fitness evaluation to the f peaks near a starting location. Groups of adjacent peaks are assumed to be igh.
Rationale	Highest elevation is easy to look up. One could argue that prominence should matter more than absolute elevation, but it doesn't make a big difference for the highest elevations. Also, a high number of high-altitude mountains should be more relevant, but, again, the single highest elevation correlates pretty well with that.
	os and for the Tectonics script, the target frequencies of peaks get adjusted based on requency of peaks.
Rationale	Generally, I don't want to adjust the civs' preferences to the map – a map script like Oasis that has a lot of Desert should receive mostly Desert-loving civs. However, the Firaxis scenarios use peaks very liberally to represent mountain ranges, but those scenarios shouldn't be populated primarily by mountain-loving civs. Similarly, Tectonics is supposed to generate earth-like maps.
	proximation of the portion of mountainous (i.e. rugged, rocky) land in the (core) territory is matched by the fitness calculation to the frequency of hills near a starting location.
Rationale	Such data is fairly easy to find; e.g. I've found a world map that shades countries according to the portion of mountain terrain within their borders. Hills should not represent absolute elevation in my opinion; e.g. an altiplano can be farmed and therefore should be represented by flat land (surrounded by some hills).
See also	021: The terrain generator of PerfectMongoose also assumes that hills show gradients rather than absolute elevation.
Resource p	references (see swapping of resources above) affect the civ fitness calculation.

Don't need to get all the resources right when choosing civs, but should at least avoid placing a civ near numerous inappropriate resources, e.g. Spain in clusters of Silk and Spices. This way, fewer swaps are necessary once all civs have been chosen.

The fitness calculation matches the portion of water tiles and tiles on a different landmass around a starting tile to a target portion of such tiles set for each civ in XML.

Rationale

Seems like a good predictor of how much a player will have to interact with the sea. Shortest distance to a sea tile doesn't seem so promising; wouldn't want maritime civs like England to always start in a coastal tile. If the 2nd or even 3rd city ends up at the coast, that's good enough.

Most civs have a slight preference against a high number of river tiles and segments near their starting tile, some civs have a rather strong preference against, some a strong preference for rivers. Specifically, river crossings adjacent to surrounding tiles are counted.

Rationale

The goal is to place the hydraulic civilizations near a major river or river system. This wouldn't have to imply a high number of nearby river tiles, but measuring the lengths of rivers is a disproportionate implementation effort. Just counting river tiles would miss the visual effect that meandering rivers have on the player. River crossings are, conveniently, already cached by BtS.

There aren't many major river concentrations on most maps, so most civs should prefer not to be placed there, especially subtropical and tropical civs, so that the (mostly subtropical) civs that really need a river have a better shot at getting one.

A total land area is set in XML for each civ. Those values vary greatly (e.g. Netherlands vs. Russia). For civs with a very small land area, TS prefers a starting location with relatively little space for peaceful expansion, for civs with a very great land area, starting locations with greater space for expansion are preferred.

Rationale

So that historically small civs are more likely to be boxed in a little than large civs. The area of modern and historical countries is fairly easy to look up (though there is a judgment call which year to use).

Some civs prefer to have more space for expansion in horizontal than in vertical direction, or vice versa.

Rationale

Not sure if this was really a good idea. In theory, a vertically stretched civs will cover multiple climatic zones, so looking for that shape will help achieve an appropriately diverse climate. However, Egypt doesn't actually have a diverse climate, and, even for the Inca, I don't think the diverse climate is the result of covering a great vertical distance – it's due to differences in elevation.

Civs with multiple leaders are slightly preferred.

Rationale

Since the fitness calculation is mostly based on civs rather than leaders, such a bias needs to be implemented explicitly. While it's more important to me to give every civ proper representation in terms of how often they get chosen, the leader frequencies matter too.

For most civs a small or not-so-small bias value is set in XML that increases or decreases the fitness values for that civ. Negative biases can randomly be doubled in some games.

Rationale	Some civs' preferences are a lot more specific – or harder to find on a Civ 4 map – than others. Rather than endlessly tweaking how the per-civ data translates into target properties of starting locations, the bias values can directly discourage civs that appear too frequently and encourage those that appear too rarely. The doubling is mainly intended for large maps; when choosing a high number of civs, those with easy-to-meet preferences will virtually always get chosen. Doubling the bias of a civ with a high negative bias should sometimes, randomly, take that civ pretty much off limits entirely.
Tbd.	For replayability, ideally, each civ (and leader) should be chosen with equal frequency on Fractal and all similar maps. The status quo is far from that (for all maps). Here is a frequency distribution from 20 Fractal maps, each with 8 civs, standard settings, Monarch difficulty (difficulty affects the human starting location through iStartingLocPercent in Civ4HandicapInfos.xml):

Total (per leade	er), hu	man (p	oer lead	ler), tota	ıl (pei

. .				

I haven't done the math, but this seems still far from a sufficient sample size, so some civs are always going to appear too common and others too rare. (Even with leaders chosen uniformly at random, players get some of the same leaders over and over until they've played a great many games; see e.g. this CFC thread about Civ 6.) Moreover, I make some tweaks each time that I run these numbers, so this is not the current state of affairs. That said, large civs like China and India that fit well enough in multiple climate zones and tropical and "wet" subtropical civs should indeed be expected to appear much more commonly than small temperate civs and desert civs.

Adjusting the iBias values in Civ4TruCivInfos.xml helps, but overdoing that will get a civ placed in surroundings that don't actually match their historical geography well. Moreover, different map scripts and world sizes lead to different civ distributions; for example, maritime civs like England and Japan are more likely to appear on maps with smaller continents or longer coastlines than Fractal. Larger maps tend to have larger deserts.

sha	Changes to the merged Show Hidden Attitude Mod (SHAM)					
See also	130c: Changes to rank-based modifiers					
AdvCiv	SHAM					

, ,		"Developing nations should work together to catch up."	
No option for hiding "spoilers". 130c changes rank-based modifiers so that they don't give away the ranks of unknown civs. Rank-based hate explained as "You're getting ahead of us".		"We feel threatened by your large civilization."	
playing with randomized personalities.		Shows the human first-impression penalty from the difficulty setting – which doesn't hurt but isn't exactly helpful. Hides rank-based modifiers.	
See also	004q hides unusually high memory-based relations modifiers when playing with randomized personalities.		
Config	SHOW_HIDDEN_ATTITUDE in GlobalDefines_advc. Game text in HiddenAttitudes_CIV4GameText.xml.		
us"; instead	Removed the penalty "This war is going badly for us"; instead "This war spoils our relations" partly based on war success. -1 "going badly" if their war success is less than ours, "spoils relations" based only on how long the war has been lasting.		
Rationale	The -1 doesn't make any difference, a needless complication. The AI not getting as mad if a war sees no action makes more sense. Gameplay-wise, it's mostly a matter of whether (or at which point) a war enemy becomes the worst enemy.		
If a non-vassal AI civ would otherwise be Pleased War enemies can have any attitude toward eatoward a non-vassal war enemy, " spoils our relations" is increased just enough to make the attitude Cautious.		other, though anything better than Cautious is	
Rationale		r. Cautious is also weird, but less so, and <u>UWAI</u> peace a little ("Affection cost") if Cautious	
	Vassals excluded because they don' much; conceivable that attitudes rem	t choose their wars, and may not participate nain non-hostile.	

AdvCiv	xyx's savemap	
	127 disables the Ctrl+Shift+M AI Auto Play shortcut, which easy to confuse with the key combination that I want to use for savemap.	
	The description string of the exported map script is generated through DLL code from 106h.	
See also	See the links above for documentation and possible uses.	
Credits	Courtesy of xyx (<u>CFC thread</u>); based on work by tywiggins (<u>Apolyton thread</u>)	
savem	"Savemap" function that saves the map of an ongoing game as a Python script	

Can press Alt+Shift+M at any point of a game to Needs to be invoked from the Python console. export the map into a Python script. This shortcut can be disabled on the BUG menu (Map tab).

Will first try to store it in \AdvCiv\PrivateMaps. If that location can't be written, PublicMaps under \My Games\Beyond the Sword is used. AdvCiv will not be able to load it from the latter location unless NoCustomAssets is set to 0 in \ AdvCiv\AdvCiv.ini.

An on-screen message says whether and where Feedback only through debug output. the new file was created.

Old files are never overwritten (if I've implemented that part correctly).

Regardless of the location, Civ 4 needs to be restarted before the exported script can be loaded.

The file name is generated from the name of the original script or scenario, the map dimensions (not if it's a scenario) and initial player count. A number between 1 and 9 is appended if a file with the generated name already exists in the target location. All settings shown on the Settings tab (Victory screen) are included in the description string of the exported scenario. (That string can be viewed in a text editor or through 'Play Now".)

Always save under My Games\Beyond the Sword\PublicMaps.

I think most mods set NoCustomAssets=1. so it's mostly just unmodded BtS that can load map scripts from \My Games\.

Will overwrite if file names clash.

(I don't think a restart can be avoided. In particular, a manual Python reload doesn't help.)

The file name can be entered through the Python console. The name of the original script, map dimensions and initial player count are saved in the description string.

Tbd.

Add options for using the original civs and leaders and original difficulty level to the generated scripts. See comments in savemap.py about that. For the civs and leaders, DLL functions added by the Change Player mod component will have to be exposed to Python.

CvGame could keep a list of tile changes made during the normalization step and then the generated script could reapply those changes depending on whether the original starting sites are used. Probably too much work. As it is, if the original sites aren't used, new sites are computed based on terrain that includes the original normalization changes and no normalization step is performed afterwards.

Can't use savemap in networked multiplayer. The Python console also isn't normally available in network games. Rationale Seems like a pretty convenient way to cheat. In particular, the names of the AI leaders are easy to find in the saved script. Guard in savemap.py at the beginning of the savemap function. Config When choosing the option to ignore the original New starting locations are generated in Python starting sites, the selection of starting sites is left through CvMapGeneratorUtil. entirely to the DLL. findStartingPlot.

So that StartingPositionIteration (change 027) is used. Rationale

advc.rh

Modular XML loading bugfix merged from rheinig's mod (CFC link)

Credits	xyx made me aware (<u>here</u>) of this fairly obscure mod.	
---------	---	--

From the mod's readme file:

"Some XML tables are loaded in two passes, and the code did load the second pass data into the wrong records for modular additions. Ever wondered why the tech tree or promotion prerequisites get mucked up if you modularize them? Now you *can* modularize those. The full list of Infos that define a second pass loader method and the values those load is:

CvTechInfo(OrPreReqs,AndPreReqs), CvPromotionInfo(PromotionPrereq,PromotionPrereqOr1,PromotionPrereqOr2), CvCivilizationInfo(DerivativeCiv), CvImprovementInfo(ImprovementPillage,ImprovementUpgrade), CvProjectInfo(PrereqProjects,AnyonePrereqProject), CvEventInfo(AdditionalEvents,EventTimes,ClearEvents).

Note Buildings and Units don't need to do that as their perceived self-referencing prerequisites actually refer to the respective "Class", and those are loaded far ahead. Otherwise, this bug may well not have slipped by QA.

Update - Version 3.1.7.3 now delays pass 2 of the monolithic XML until after pass 1 of the modules has finished, too. This finally fixes modular random events.

Changed modular XML load order:

Fixed CvXMLLoadUtility::LoadGlobalClassInfo to sort the list of files after enumerating them and before loading them. Why? Well, before the load order was determined by the file system and essentially unpredictable. You could easily be working on non-XML files in those directories and suddenly have units, buildings or whatever swap their IDs, thus having saved game incompatibilities the loader couldn't catch. The sort now is case-sensitive, which is bad, but I'll leave it at that as the rules governing the casing of returned names are deterministic and constant over any OS generation. You might still get into the effects I mentioned if you moved from, say, Windoze 9x (urgh!) to NT (sorry, I mean XP), but does cIV even run on 9x???"

enects i mentioned if you moved from, say, willdoze 9x (digni) to for (sorty, i mean XP), but does the eventum off 9x???		
Rationale	For mod-mods that use modular loading. The issue doesn't sound important, but, despite the lengthy comments, the code changes are very minor.	
Not merged	"Major Enhancement: Incremental modular loading" — That's a bit more work to merge and even more work to test as I don't know how modular loading is exactly supposed to work. For what it's worth, it seems preferable to the "XML COPY" code by MRGENIE in RoM-AND2.	
	Most of the non-XML bugfixes in the mod seem to have been included in the unofficial patches. The rest I seem to have fixed myself (some 10 years later).	
	The minor optional rule changes and changes to help text, ultimately, aren't worth including in AdvCiv.	
See also	This last item of the readme file has inspired a similar change tagged with "advc.006": "CyGlobalContext().getInfoTypeForString, when called with an unknown key string, formerly logged an error in xml.log citing the last xml file loaded even if the call came from Python and had nothing to do with XML."	

kekm	Bugfixes (and other changes) from DarkLunaPhantom's Kek-Mod [I had labeled these with "dlph" at first because Kek-Mod didn't have a name yet.]	
Credits	Source (Kek-Mod) I've only adopted those changes that were easy to make (cost/ benefit), and none that only deal with Pitboss.	
See also	250c also includes a couple of changes from Kek-Mod 001: My own misc. bugfixes I've reported some minor issues with Kek-Mod changes <u>here</u> .	
kekm.1	"Circumnavigation bonus is now always preserved when forming permanent alliance, previously it was only when the player having it had smaller team number." (also fixed in K-Mod 1.45)	
kekm.2	"Fixed a () bug which caused unremovable espionage city visibility after forming permanent alliance for all cities that the player with larger team number had visibility of at that moment."	
	(As far as I understand, only kekm.26 fixes this properly.)	

kekm.3	Defensive pacts despite war	
AdvCiv		BtS
BBAI option for defensive pacts despite war enabled, and adopted a bugfix and extension from Kek-Mod:		When war is declared on a civ, the defensive pacts of that civ take effect and are then canceled. BBAI has an optional rule change that leaves defensive pacts in place after taking effect; disabled by default.
5 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1		A civ that declares war loses all its defensive pacts. Can't sign defensive pacts while at war.
	ving defensive pacts to be canceled ancel) after a DoW.	
Rationale		more useful, but it's more plausible this way. As ainst any further aggression, but, in your current bund like a typical military pact.
	The immediate cancelation when no longer sharing all wars happens in CvPlayerAI::checkCancel. If that code is removed, then 133 will handle the cancelation, resulting in a probabilistic delay. This could give the DP ally enough time to make peace, preserving the DP. After a test, I think a DP will rarely survive a peace deal despite the delay, and it's cleaner to cancel the DP immediately.	
See also	130y reduces the diplo penalty from DoW triggered by a DP. 104i makes the AI willing to talk with all DP allies upon making peace with one of them. kekm.25 allows DP votes while at war.	
Tbd.	What happens when A has a DP with B and C has a DP with D and A declares war on C? I suppose they'll all be at war (that's how it works in <u>Dawn of Civilization</u> too); is that desirable?	
kekm.4	Can't gift cargo if it contains units that can't be gifted.	
See also	An addition to <u>123a</u>	
kekm.5	"Obsolete buildings and unused power plants (e.g. Nuclear Plant without Uranium or in a city that also has Hydro Plant or receives power from Three Gorges Dam) cannot trigger meltdown event anymore."	
See also	652: Other rule changes to meltdowns.	
kekm.6	Barbarians can't build spies.	
See also	307 prevents the Barbarians from training some later-era units.	
kekm.7	Can nuke despite neutral units; they take no damage. Additional AdvCiv changes: Cannot nuke own units or cities, can't nuke enemy cities that have at least 10% friendly nationality (i.e. total tile culture of the team owning the nuke and that team's vassals or master), can't nuke enemy cities culturally owned by a neutral party, can't nuke unrevealed tiles. Nuking any tiles with a neutral owner is disallowed, as in BtS, but the check is now based on the revealed owner, i.e. nuking fogged tiles can now trigger an unintended war, but hovering in Nuke mode can no longer leak info about tile ownership in the fog of war.	

Rationale	If the neutral units took damage (without having to declare war), this would again be exploitable. Units in nuke range not taking damage is counterintuitive, but I don't see a better simple solution. In the future, I'd like to restrict the effect of nukes to a single tile; then it won't be so strange anymore that only hostile units are hit because one can imagine that units of different owners are encamped separately.	
	BtS and Kek-Mod allow hitting cities and unit's of one's own team. This makes it seem all the more strange that neutral units take no damage. Best to avoid that issue by prohibiting players from nuking their own people.	
	Generally, I'd prefer all wars to be declared explicitly before being allowed to launch a nuke. Change 650 should eventually take care of that by allowing only (actively) visible tiles to be affected. For the time being, allowing unexpected wars in the unlikely case of outdated tile ownership in the fog of war seems preferable to an info leak (although the leak was also of very minor significance).	
Credits	The issue with nuking non-enemy population in an enemy city was brought to my attention by this post by CFC user SalvorSeldon.	
See also	650: Various changes to nukes; see also Tbd. note there about diplo penalties for nuking cities with minority cultures.	
kekm.8	"Fixed bug in AI evaluation of gifted unit for the purpose of relations bonus."	
Not merged	"Player cannot gift combat units to third party which in war with rival with whom the player has unbreakable (temporary or permanent) peace treaty. Also, the receiving player now must satisfy technology requirements (both for the unit itself and for the prerequisite resources)." [link?]	
	"Free units from tribal villages cannot move in their first turn. Gifted units are immobile only if they change teams." Git commit $\underline{1}\ \underline{2}$	
	These aren't restrictions that players would intuitively expect, and I'm not sure that they're necessary. (I do think that there should be diplomatic consequences for gifting units beyond "traded with our worst enemy.")	
kekm.9	"Fixed how AI and worker actions treat fallout feature. Fallout had bNoImprovement set to 1 signaling to AI that no improvements can be built there which didn't make sense since fallout can be cleared just like forest and jungle can. This made AI far less likely to scrub fallout (if at all) than to chop jungle although the features are similar. Improvements can now be built directly on top of fallout and fallout will be cleared in the process just like it is with forest and jungle.	
	Fixed interface and AI bug that caused the game to sometimes wrongly show an improvement as unbuildable. Sometimes the game doesn't [realize] that an improvement can be built. E.g. plains jungle yields 0 food so farm cannot be built as it requires 1 food, but farm can be built there by chopping the jungle as the underlying plains terrain yields 1 food. AI followed the same slightly flawed logic as did the interface. My fix for fallout feature introduced many more such situations."	
kekm.10	"Added verification of state religion. Player shouldn't be able to keep their state religion when there are no cities with it anymore."	
Rationale	Disabled this again. I don't want to force a civ out of its religion while it may still try to reconquer its holy city.	
Config	Disabled through CvPlayer::doTurn.	
kekm.11	"Fixed advanced start bug with reduced unit costs. Advanced start code is bad in general so I just fixed the immediate problem. (There was a way to get extra gold by refunding a worker while having expansive trait.)"	

kekm.12	"Removed Disorganized promotion from free barbarians boats with hidden nationality. Hidden nationality units shouldn't be too obviously (non-)barbarian."
	(But I'm not allowing Barbarians to have Privateers.)
kekm.13	"Fixed permanent alliance bug with AP/UN leader. Similar as with other permanent alliance bugs, if AP/UN leader had higher team number than its permanent ally an empty team would become AP/UN leader instead of the newly formed team."
Not merged	"Changed condition when is a team considered AP/UN full member (and thus eligible for election). Previously all team members had to be full members, but now at least one is enough."
	I don't have an opinion on how this should work.
kekm.14	"Set barbarian unit [gold] costs to 0. These costs don't affect barbarians directly, but they still do influence some decisions."
	Git commit
kekm.15	"Moved the code for building missiles for missile carriers outside of assault only case. K-Mod made similar change for building planes for carriers already so I did the same for missiles. Also fixed a bug when checking whether there are enough missiles already." Git commit
	"Fixed a bug (?) in missile production AI. Missiles for filling up missile carriers should be built in low productivity cities and not high productivity cities." Git commit
kekm.16	"Bomb Shelter was previously always evaluated as almost completely worthless (!!!). I think that AI should build it as soon as possible pretty much everywhere as it is very cheap and effective."
	Git commit
Not merged	"SDI evaluation previously ignored that nukes can quickly obliterate entire militaries and there were some issues with estimating number of nuclear attacks."
	Too much work to merge considering that the rules for nukes will have to change at some point, and that the AI code will have to be revised afterwards.
kekm.17	"Game era calculation changed from rounding down to rounding of all players' average era."
	Git commit
Rationale	I had always assumed that it worked this way, and I'm frequently referencing the game era in AI and Barbarian code, so this should be a significant improvement.
Not merged	"Added Advanced Settlers game option. When used, settlers behave similarly like in Advanced Era starts, i.e. new cities start with more buildings and population as the game progresses through eras. Settler era is a minimum of player's era and game era []"
	I want to add something like this, but I'm not quite happy with the implementation. Looks like it could reward stockpiling Settlers, and the cost of a Settler can increase while in production if the player or game era changes, which is a bit messy. Alternative solutions implemented in other mods: A second Settler unit ("Colonist") with a tech requirement in late Renaissance (which mod was that?) and Realism Invictus's Ministries. Another idea: A production bonus for Ancient and Classical buildings from e.g. the Steel technology.

kekm.18	"Hidden game options are now always set to their default value as they cannot be changed or interacted with anyway and switching between mods can mess up those options."	
	(But I've implemented it through CvInitCore::resetGame.)	
kekm.19	"Capital cannot be moved while spaceship is underway. Reason is the fact that capturing the capital destroys the traveling spaceship, so capital cannot be hidden in this way after the launch."	
Tbd.	Would prefer to let the production cost of Palace increase over the course of a game. This could also make it easier to move the capital in the early game when starting in an awkward spot.	
See also	cdtw.6 causes the AI to move its capital when close to a Space victory.	
kekm.20	"Fixed Bomb Shelter effect for non-combat units. Bomb Shelter used to reduce the probability of nuke destroying a non-combat unit from around 80% to around 2-3% (these probabilities are not immediately obvious and have to be calculated; exercise is left for the reader) because someone was not careful with probabilities. NUKE_NON_COMBAT_DEATH_THRESHOLD was probably picked so that the probability is close to average nuke damage to combat units (which is 79%).	
	I changed the chance to destroy a non-combat unit to exactly 79%, and Bomb Shelter halves that so those are now exactly the same as average damage to combat units. NUKE_NON_COMBAT_DEATH_THRESHOLD is now unused."	
	Git <u>commit</u> , later <u>bugfix</u>	
	The formula sounds legit; just copied it.	
See also	advc.650 changes the damage formula for combat units, but I think everything in DarkLunaPhantom's comment still applies.	
kekm.21	"Show barbarian territory on the minimap and in the globe view."	
	Git commit	
kekm.22	"Changed average handicap [in multiplayer] from round down to round."	
	Git commit	
See also	250a bases that computation on difficulty values assigned to each handicap through XML.	
kekm.23	AdvCiv Kek-Mod	

Razing: Not	merged; no tile culture is removed.	"Reworked how culture behaves when a city is
Culture after trade is handled by change ctr, which converts only a fraction of city and tile culture. I've adopted the equal treatment of liberation and regular city trade from Kek-Mod. I've merged this change. Cities liberated upon the creation of a colonial vassal still receive the free units; that's also the case in Kek-Mod.		razed or acquired. Razing a city will now erase (most of) its plot culture. Trading a city will transfer both city and (most of) plot culture to the new owner. Not all plot culture will be included because plot culture is generated by different mechanisms (e.g. trade routes and free plot culture) and increasing and decreasing city culture doesn't result in adding and removing the same amount of plot culture. Also, liberated cities don't get free units just because a vassal acquired them and diplomatic votes resulting in changing of city ownership will leave old owner's culture intact. An attempt to get more consistent and sane plot/city culture effects related to city trades."
		Git commit
Rationale	A single movement point spent on razing a city shouldn't be enough to ethnically (let alone culturally) "cleanse" a region. Likewise, city ownership agreed to on paper shouldn't instantly resolve all ethnic/ cultural conflicts in favor of the new owner.	
Tbd.	Razing should cause some loss of tile culture.	
kekm.24	"Colonies don't inherit espionage points from parent civ anymore (this didn't se or necessary), but they do inherit EspionagePointsEver.	
	Colonies cannot reuse player slots anymore as this can cause weird bugs sometimes and this is the easiest fix. Number of players can be easily increased (it already is 48) so this is not necessary."	
	Git commit	
	I'm still allowing human players to re	euse a slot when creating a colony.
Rationale	The maximal civ count in AdvCiv is only 18 and increasing it comes with a performance penalty. Reusing slots is not really compatible with the Immortal Culture changes (I suppose culture will be set to 0 when the colonial vassal is initialized), but I don't want to disallow colonial vassals entirely in games with 18 civs. If the player doesn't like the result, he or she can hopefully reload a savegame. (Whereas the player would be unable to prevent the AI from reusing a slot – if that were allowed.)	
Tbd.	Different approach: Store tile culture in an ArrayEnumMap <civilizationtypes, int="">. That'll add some 15*4 byte to CvPlot and may also slow down some algorithms. Peanuts though compared with raising the civ count. Upd.: But the same civ can be played by several players at the same time, so it won't work quite this way.</civilizationtypes,>	
See also	001: A couple of bugfixes pertaining to colonial vassals and the Random Personalities option.	

kekm.25	"Reworked resolutions. Fixed multiple bugs and inconsistencies with conditions for proposing and defying resolutions. [] Vassals cannot defy resolutions anymore. Players can defy resolution assigning them a city. Al can now choose (and vote) to repeal resolutions."
	Git commit
	Changed it so that only capitulated vassals are unable to defy. Voluntary vassals can defy everything except war and peace votes (in BtS, they can defy everything, in BBAI they can defy peace votes but not war votes). And defiance takes no effect if the defying civ is no longer allowed to defy by the time that the vote is resolved; e.g. when that civ has become a vassal while waiting for human votes.
	Regarding a comment in CvPlayerAI::AI_diploVote about vassals and friends of the Secretary General in repeal votes: "[O]nly important if the Secretary General plans to vote yes. Incorporating the other case properly would be a lot of additional work". I've tried to do that extra work; hope I got it right (so that friends and vassals help the Secretary General repeal resolutions).
	"Human vassals are forced to vote for their master. Unless they are also a candidate themselves."
	Git commit
	Only relevant for the <u>R&F</u> option because humans can't normally become vassals in AdvCiv.
	I'm only applying this to capitulated human vassals.
	"War resolution can now be proposed against voting members (and non-members). Defensive pacts with attackers are cancelled before implementing war resolution."
	I don't think this ever works the way it's implemented in Kek-Mod. CvGame::canDoResolution checks if all voting members — including the target! — are able to declare war on the target. I've corrected that: Now only full members are checked, only they declare war and only they can defy the resolution. These change are tagged with "kekm.25/advc". Moreover, only peace treaties of the AP leader can block a war resolution; peace treaties of other members don't matter. (But the AI tries to honor its promises by voting against war when there is a peace treaty.)
Rationale	Shouldn't expect human players to keep track of peace treaties between AI civs, and don't want to allow players to block war votes by signing peace treaties (e.g. by asking for a gift). K-Mod already allowed vassal agreements to override peace treaties.
See also	130f deals with stop-trading resolutions in a similar way.
	CFC thread about a BtS bug fixed by the first commit listed above.
Tbd.	Looks like a human war vote target (non-full member) will now get to vote. Should be an automatic vote against instead. That's handled by CvGame::addVoteTriggered.
	Planned changes to membership rules (see $\underline{178}$) will address the problems with war votes in a simpler way. And I don't think I want civs without a state religion to be eligible targets for war votes.

Not merged	"Religious population for votes in AP is now divided by number of religions in the city. Defiance penalty is now given to the whole team if one team member defies a passing resolution."
	This penalizes civs too much for heaving multiple religions and might weaponize Missionaries of non-AP religions. Also, a state religion tends to have larger communities than a non-state religion (and a civ with a state religion not matching the AP religion already has its votes reduced).
	Not sure about the defiance penalty. If civs vote individually, then it seems that they should also bear the consequences individually.
See also	130v makes capitulated vassals vote along with their master and places many other restrictions on capitulated vassals. 178: My own changes to AP votes
kekm.26	Git commit
	"Finally fixed the bug with espionage visibility. Adjusted CvTeam::shareItems so that only use is enough."
	(Cf. kekm.2)
	"Scaled third party counter towards new team with number of players in each team for consistency.
	Fixed bug with no tech brokering status not being preserved properly.
	Espionage points of the new team and towards the new team are now sum of the old ones instead of max."
	All this only concerns Permanent Alliances.
	"Changed how multiple war declarations work. declareWar used to nest war declarations, now they are queued to trigger defensive pacts and everything else in the correct order."
	This may also be an improvement in other situations; hard to say. There was a bug preventing updates of the attitude cache; fixed. The bugfix was also included in Kek-Mod $\underline{0.25}$.
Not merged (for now)	"Increased victory conditions for permanent alliances. Number of required spaceship parts is multiplied by (1+0.5*(number_of_players-1)) rounded up. Number of required cities for cultural victory is multiplied by (1+0.5*(number_of_players-1)) rounded down." Git commit
	"Adjusted domination thresholds for permanent alliances. Minimum land percentage is now 100*(1+n)/(3+n)+1 where n is number of players in the team. This used to be 51 for all teams. For domination population, in addition to 25% lead required, the population of the second best team is scaled with the standard ratio of (1+0.5*(n-1)) values for both teams (with a minimum of 1), i.e. larger lead is required in the case that the second best team has less players." Git commit 1 2
	Perhaps very sensible changes, but it's difficult to say without really having played with Permanent Alliances. This would have to be mentioned somewhat prominently in the main part of the manual.
Not merged	"Changed how maximum distance is calculated"
	See <u>140</u>
Not merged	"Always show Dawn of Man when beginning a new game" Git commit
	Already handled by <u>704</u> , <u>250c</u> .

kekm.27	"Added OOSLogger. OOSLogger creates a file with all the data used for computing the sync checksum when OOS is detected. Idea from Fall from Heaven 2 by Kael. Implemented as a slight modification of the version in ExtraModMod by Terkhen. Implemented as a BUG module." Git commit 1 2
	The log is created in the Logs folder and named "OOSLog". I've added a MessageLog check (to make sure that both players are aware of the logging), fixed a few of bugs and made some minor adjustments. These were also <u>adopted</u> by Kek-Mod 0.25.
Not merged	"Improved OOSLogger" <u>Git commit</u> Not really an improvement for my purposes.
Tbd.	The log is sometimes triggered because game scores don't match. On the next time slice, scores are updated by CvGame and back in-sync. Not sure if this is a false positive or a problem with CvGame::setScoreDirty somehow getting called asynchronously.
	Move this mostly into the DLL? A CvGame function would be easier to keep updated with the OOS checksum computed by CvGame. And in Python, syntax errors go unnoticed and then parts of the log is lost when an OOS error actually occurs.
	To be merged: A similar but hopefully more potent tool by Nightinggale: Git <u>commit</u>
	Logging of game net messages by alberts2: SourceForge <u>revision</u>
kekm.28	"Barbarians also get some starting tech in advanced start. [] Techs they get in advanced start are the average of all player's tech status after advanced start." Git commit
	"[] [D]on't try to give free units or advanced start points to barbarians." Git commit
See also	The rest of that second commit is covered by <u>250c</u> .
Not merged	"Barbarians require revealing and enabling tech for resources to be able to get units which require those resources." Covered by 301.
kekm.29	"Fixed a bug in target city evaluation for cities that would be autorazed." Git commit Obsolete; fixed differently now.

kekm.30	"Added leader and civ icons to scoreboard." Git commit
	Disabled by default.
	"Unmet dead civs can now be shown in scoreboard." Git <u>commit</u> "Name, civilization and color of dead players are not concealed." Git <u>commit</u> Covered by <u>004v</u> .
kekm.31	"No tech brokering for techs acquired by Internet." Git commit
	"Show a message when a player abandons its state religion." Git commit Covered by <u>150a</u> .
kekm.32	"Added choice of map wraps to Not to Big or Small mapscript." Git commit
	Indeed strange that the map didn't have that option. A caveat: World-wrap for MultilayeredFractal-based maps is implemented through iTerrainFlags, so these flags mustn't be removed from generatePlotsInRegion calls.
See also	advc.mxc adds a world-wrap option to the "Continents and Islands" script.

Not merged	"[O]ption to adjust water percent in not_too_Big_or_Small. Default water percent in not_too_Big_or_Small is 74 and sealevel options can change that by -8/0/+6. Adjust water percent option can change that by 0/-5/-10/-15/-20/-25." Git commit Too extravagant. "Added a new climate [] called Warm and is mainly characterized by less ice and tundra. It is available for all mapscripts that use default climate system. Created by AjmoCiv." Git commit Not as evocative as the other climate settings.
Not merged	"Added Gigantic map size. It is larger than Huge. A lot of values in CIV4WorldInfo.xml seem arbitrary, but I tried to preserve some kind of pattern." Covered by advc.test.
kekm.33	"Changed espionage costs for teams. I want costs to scale with 1+0.5(number of members - 1), but since there are two teams (and two directions) involved, it will scale with the square root of the ratio of those values. Idea for formula by Fran." Git commit (Fran must be a player at "Zulan's Civilization corner") In BtS, mission costs aren't adjusted to the team size at all. K-Mod 1.45 multiplies the
	cost by the team size. The same handicap (+50% per team member) should apply as for tech costs – which is what the Kek-Mod formula does.
Not merged	"Changed how unit type for draft is determined. []" Git commit 1 2 3 4 5 6 7 8 Too much work for too little gain.
kekm.34	"Split CyCityInterface in two parts. Its size was obstructing compilation of debug DLL. Some minor spelling corrections in changed files." Git commit Large Python interface files can lead to a "debug information module size exceeded" error when compiling a Debug DLL. I've never encountered that error, but keldath has confirmed it. I guess it's code bloat caused by the boost::python macros.
See also	According to Nightinggale (<u>CFC post</u>), the file size limit is imposed by Boost. (So I guess it applies throughout the GameCore codebase since Boost headers are included in the precompiled header.)

	I don't think I ever experienced that crash, but it sounds plausible that it could happen.
kekm.37	"Fixed a crash when pillaging is intercepted by sea patrol. []" Git commit
	Addressed by <u>advc.erai</u> .
Not merged	"Adjusted era factors in calculations [], primarily for mod compatibility" Git commit
kekm.36	"Wonder list now uses player text color instead of primary color." Git commit "[A]dded calculation for number of non-early religions, [] primarily for mod compatibility." Git commit
	Covered by <u>135c</u> .
Not merged	"Require debug mode for cheat actions and tooltips." Git commit
_	"Starting location picking system is now the same in every game mode. After randomly assigning preplaced starting locations, it first picks locations for some number of AIs depending on handicap, then for all humans and then for the rest of AIs. Order doesn't depend on player id numbers. This is done this way because locations picked earlier are usually better." Covered by 108b except perhaps for team games, but all that is a bit complicated, so I'm not going to bother with it (again).
	Merged except for the randomization part, which <u>027</u> already adresses (even when Starting Position Iteration is disabled).
	"Changed starting location conditions to improve avoidance of bad terrain and edges of bad terrain. If possible, only locations with large enough per plot yield average in the advanced start sized surrounding area are considered."
	"Strengthened starting location (pre-normalization) food prerequisite. Instead of 5x5 area, the whole standard advanced start sized area is checked for food."
	"In advanced start, the possibility of automatically exchanging starting location with a teammember under certain conditions is now removed. (Why was that even there?)" Merged but disabled. It seems that the BtS code doesn't have any adverse effect and perhaps it does somehow lead to a fairer turn order in team games.
	"Fixed a bug in location evaluation in case when starting location needs to be picked again in advanced start."
	terrain (after normalization)." Due to <u>027</u> , the choice of the starting areas normally only matters as an initial solution for my own starting position algorithm. Still, a better initial solution is better, i.e. may lead to a better final solution or may at least save time.
	"Starting area picking system is changed so that it doesn't overvalue large, but very bad areas. When picking starting location, locations with very little food (before normalization) will be avoided if possible to avoid starting on the edge of very bad
kekm.35	"Changed some details of how starting locations are picked. []" Git commit $\underline{1} \underline{2} \underline{3} \underline{4}$

kekm.38

"Internet now counts players and not teams. [...] Internet's description and tooltip mention civilizations, but the code used teams. I changed the code to agree with the description because that seemed to make more sense for permanent alliances. Additionally, each aditional team member now increases the civilization count requirement by 1." Git commit

The last part doesn't make sense to me, so I haven't adopted that. The alliance already takes away one player from whom tech could spread via the Internet, so why increase the threshold for tech spread in addition? And, depending on the total player count, a threshold of 3 can be a lot more strict than 2.

As for balance in proper team games, in BtS, the Internet is less powerful in team games than in non-team games, and the Kek-Mod change reverses this – because, in team games, there is less entropy in the distribution of techs among players. E.g. in a game with 4 teams of 2, the Internet will grant all techs that 1 of the 3 other teams knows. I woud prefer to make the Internet just as strong in team games as in non-team games, but there's no middle ground to be had. In particular, increasing the threshold from 2 to 3 in games with teams of 2 would be no different from increasing it to 4 or counting teams instead of players (as does BtS).

kekm.39

Fixed int overflow in CvTeamAI::AI_endWarVal Git commit (Less of an issue in AdvCiv because UWAI bypasses that function.)

Great Mediator event: "Added a check to avoid weird bugs like making peace with a vassal if the situation changes after the event is triggered." Git commit

k146 K-Mod update 1.46

"Fixed estimateCollateralWeight with non-combat units."

"Fixed potential divide-by-zero in AI_estimateBreakEvenGoldPercent"

"Fixed overflow bug in CvCity::doPlotCultureTimes100"

Not merged; AdvCiv had already fixed these.

"Adjusted of attitude of human players toward AI."

Not merged; I think I got this covered already.

"Restored WHEOOHRN scoreboard indicator."

Not merged; see 210a.

"Tweaks to default options."

Not merged: "Great person bars should be on by default." (Disagree. Perhaps for people with wide screens because the bars fit on a single row then, but not everyone has such a screen.)

"Increased trade culture rate. Instead of 1% per culture level, it's now the average of that and the max rate. ie. percentage = (current level + max level)/2;"

Merged although trade culture is disabled by default in AdvCiv (see 125).

"Updated loading hints: [...] added [...] alt-wake [...]"

That's the only new hint I've merged (press Alt to wake up units worldwide).

"changes to AI_techValue [...] Increased chop value."

I had to water this down a bit because, in combination with change <u>036</u>, the AI was prioritizing Bronze Working and Iron Working too much.

The remaining changes, i.e. the bulk of the update, are in the back end of the AI and I've merged them almost without adaptation:

"Fixed handling of Al follow actions which split the group.

CvSelectionGroupAl::Al_update no longer assumes that the group stays intact with CvUnitAl::Al_follow actions."

This fixes a fairly rare non-reproducible crash-to-desktop bug.

"Added CvPlayer::haveResourcesToTrain

This is used to help with AI decisions when it isn't clear which city we'll be building in."

Used in just one place so far though.

"Decreased food devalue rate. (Fast growth is more highly valued.)

bEmphasizeFood causes more optimistic evaluation of slave-whipping.

SlaveryValue re-written to use a 'devalue rate' system.

growth Value now takes into account the food cost of worked jobs.

'plotMagicValue' now (usually) assumes fully-upgraded improvements.

'Emphasise food' should work better now.

CvPlot::getYieldWithBuild bWithUp now uses full upgrade rather than 2 stages."

"AI_updateCommerceWeights now better understands focused espionage.

Having very high values on the espionage weight slider are now taken to mean that you don't want to spend espionage on the other teams. This reduces the chance of the AI choosing to assign spies inappropriately. Previously, having a non-zero weight against a team was taken to mean that the player wanted to [have?] espionage points against that team - and thus espionage was more highly valued if the points were low. Now that is only the case if the weight is above a certain threshold. The threshold is based on total weight, and number of teams etc."

"Minor tweaks to CvCityAI::AI_buildingValue

Reduced building value of free-tech. (The evaluation for this is still just a very poor guess; but it is very difficult to evaluate it properly. A true evaluation would require details which we currently do not take into account.)

Reduced the value of espionage commerce multipliers."

"Many changes to Al techUnitValue

We now use slightly more detailed war state info: bLandWar, blsAnyAssault.

Default AI type max value weight increased from 100 to 250, but calculated weight decreased. (ie. Units that are good at their default role will now be valued much more highly; but units that are poor will be valued slightly lower.)

Increased max value weight for non-default types (from 100 to 150).

Adjusted most military values based on bLandwar status, as well as other strategy adjustments; such as for ECONOMY_FOCUS.

Added an optimistic value bonus for tech which reveal required resources."

"For UNITAI_COUNTER, reduced value of attack modifier, added value for defence modifier. Reduced value of speed. For UNITAI_CITY_DEFENSE, added value for hills defence."

"Tweaked small-city yield evaluation. Yield evaluation now assumes that cities with population < 3 will want to grow, even if there are currently no good jobs. This helps prevent flip-flopping with food plots."

"Many changes to Al techValue.

Disabled the random value bonuses for techs with iPathLength > 1. (Raw bonus, and bonus from wonders). ie. techs for which not all preregs have been met no longer get these random bonuses.

Note: This is partially to help the AI focus on real benefits; but a big reason for removing this randomness is a technical one. [...] changing the way multi-step research paths are evaluated. Having randomness in preregs could upset the evaluations because the values will be used for several techs.

Decreased random wonder value.

Increased the value of gold trading.

Changed several constant values to scale with the number of cities. (These things don't necessarily have anything to do with the number of cities. We're only multiplying by cities so that the value scales like things which are evaluated properly.)

Moved project evaluations to a new function: AI_techProjectValue.

Increased value of civic improvements.

Decreased the value of religions.

Rewrote evaluation of bonus techs. It's now based on the average of the max tech cost and average tech cost for currently researchable techs.

Renamed bignoreCost to bFreeTech, to better reflect what the argument is used for. Rescaled the return value so that it is roughly comparable for free and non-free tech.

Renamed "tech whoring" to "tech ground-breaking", to better reflect the concept. (ie. getting the tech first, for better trade options.) Slightly increased the value."

"Rewrote CvPlayerAI::AI_bestTech to better consider tech pathways.

Previously the AI would choose to beeline high-value techs within the depth limit without considering the prerequisites at all. This sometimes led to poor choices; eg. getting stuck on very high cost prereqs, or researching prereqs which would obsolete important bonuses. In the new system, the AI only ever chooses techs that they can research; but adds value based on which techs follow on.

NOTE: this is a totally new system which will require some changes and balance."

I had fixed these two bugs and another one mentioned here by Mattygerst, but replaced my bugfixes with the code karadoc released in early May 2018. I've decreased the DepthRate so that the AI is less interested in beelining toward powerful techs. I worry that a high DepthRate makes AI tech paths too predictable.

"Minor changes to AI unit movements.

Fixed a few coding errors

Tweaked attack threshold for AI_attackCityMove. Increased the acceptable number of ship loading turns AI attackCityMove

Disabled the 'smart' danger aversion in Al_pirateBlockade. (It was computationally expensive, and not particularly effective.)"

l've written a cheaper danger check as a replacement.

kmodx	Bugfixes from K-Mod Extended
Credits	By alberts2 <u>Git repository</u> Much of it just improves hazardous code, but there are also actual bugfixes, e.g. comparisons between different enum types and a mix-up of inner- and outer-loop variables. Hard to say how significant these bugs were, but good riddance!
	I'm listing the descriptions of the merged Git commits below.
	K-Mod 1.45 includes these fixes as well; I had merged them separately before v1.45 was published.
Fixed a m Fixed unir	MemoryLeak in CvDllPythonEvents::reportSelectionGroupPushMission emory leak in CvGameTextMgr::setCombatPlotHelp nitialized variables in CvInfoWater.cpp CyGameTextMgr(CvGameTextMgr* pGameTextMgr) constructor

Fixed various coding errors

Modified BUG's WidgetUtil.py to make it compatible with the traditional means of specifying custom Python widgets via WIDGET PYTHON"

See also
I've run the code through Cppcheck, went through about 1000 (style) warnings and fixed numerous minor oversights. My corrections are mostly unmarked (as the point of the changes is often to improve readability, and tags in the code would run counter to that), or else marked with id 003 (or 001 in the case of minor bugfixes). Several hundred warnings remain, which are more or less false positives as far as I can tell.

003j deals with unused functions discovered through Cppcheck specifically.

cdtw	Al changes by Dave_uk
Credits	Source (LoR SDK ModMod) Dave's changes in the LoR code are tagged with "CD Tweaks". I'm not sure what the "CD" stands for – collateral damage? – but, anyway, hence my tag "cdtw".
	I've adopted only a small portion of his changes because some are only important for LoR (with its focus on modern warfare), many superseded by K-Mod/AdvCiv and a few I didn't find worth having (e.g. because of a planned gameplay change or too minor). And I've made some small changes to the code I did adopt.

cdtw.1	"vassals are more keen to keep [rather than raze] cities, as they can't declare war themselves to expand"
cdtw.2	Regarding the AI choice of target city when in a Blitz or Fast-mover strategy: "when blitzing place higher value on cities with no defense modifiers"
See also	104d always takes into account tile defense when choosing a target city.
cdtw.3	Al evaluation of tech that unlocks a process (Alphabet, Currency, Drama): "value good processes if we already have lots of units, and are not at war with anyone".
	Disabled this again after some testing. Early unit spending doesn't seem to be an issue in K-Mod/AdvCiv.
cdtw.4	Greater willingness to switch to Police State when war weariness is painful.
cdtw.5	"if we're worried about being attacked, don't wait to sign defensive pacts"
cdtw.6	"if we're going for a space victory let's quietly relocate our capital away from the coast"
	Probably bugged in LoR SDK ModMod because AI_isDoStrategy had been confused with AI_isDoVictoryStrategy.
See also	kekm.19 disallows moving the capital once the spaceship has been launched. So the AI can only move its capital prior to launch.
cdtw.7	"if going for culture victory, build lots of fighters to avoid be[ing] blitzed"
	Disabled again. I guess that's really only smart when playing with Dale's Combat Mod.
cdtw.8	"if our best city attacker is crappy, be less likely to build invaders, unless we aren't paying support costs yet"
	Disabled again; K-Mod seems to have this covered.
cdtw.9	In Unit AI, a few checks for same owner replaced by same team.

advc.rom	Misc. changes adopted from RoM-based mods
Credits	Some of the largest Civ 4 mods are based on <u>Rise of Mankind</u> (RoM, started 2007), including <u>A New Dawn</u> (Rand), <u>Caveman to Cosmos</u> (C2C), <u>Vincentz Infinite Projects</u> (VIP) and <u>Dawn of the Overlords</u> (DotO).
	RoM/Rand and C2C have had several AI programmers among their contributors. It seems that most of the AI changes are specific to the many features added by those mods, superseded by K-Mod/AdvCiv or not worth adopting from a cost-benefit angle.
	I'm listing some of the changes that I did adopt here; others are so minor that I'll only tag them with "advc.rom" in the source code.
See also	107 and 110 use a bit of C2C and RoM code. advc.ctr (AI) uses a bit of RoM code.
Tbd.	I'm still in the process of sifting through the revision histories on SourceForge. The larger part (something like 1000 revisions) is still to be done.

rom1	"% modifiers are undervalued by the AI for two reasons: 1) It only calculates its effect at the time of construction, but that discounts future increases as base research goes up 2) In the early game because this calculation only takes account of the absolute increase, not its proportion of the civilization whole, which will be substantial early on (indeed 100% with 1 city). We therefore apply a small boost to reflect futures, and compare to the whole and make an upward adjustment proportional to the ratio with the civilization whole. FUTURE - should we do this for other commerce types too? I am inclined to say no for hammers (since what you produce with them scales with civ size, which the tech tree does not except very indirectly via progression through it). Not sure about gold or espionage."
	SVN revision
	This change increases the utility assigned by the AI to buildings that increase a city's research rate. However, this applies only when the City AI wants to focus on research buildings, which is actually never the case in K-Mod. So I'm also adding this koshling change from the same revision:
	"increased priority for economic builds,"
	which makes the AI choose city production with focus on all economy buildings, including research buildings.
	Removed this again; in multiple test games, it never had any effect. Looks like K-Mod already prioritizes economic buildings sufficiently. The AdvCiv code with the change still present: Git commit
Credits	Koshling
rom2	Al doesn't reassign working plots while in anarchy as "plots return no yields anyway."
	SVN revision
	Reassigned working plots don't seem to be causing problems in AdvCiv, but it does save some CPU time.
Credits	Afforess
rom3	Resources can be randomly discovered only on terrain where they can normally be placed. E.g. no Gold on Grassland.
Rationale	The particular terrain restrictions for Gold, Silver and Gems are pretty nonsensical, but slightly helpful for game balance, and should be enforced for consistency.
Credits	Afforess (but merged from this SVN revision by alberts2)
See also	129 changes the terrain requirements for Gold and Silver a bit (but they still don't make sense).
rom4	Avoid a costly canTrain calls in CvCityAI.
Credits	alberts2 for Caveman2Cosmos; <u>SVN revision</u>
See also	In part superseded by the FOR_EACH_NON_DEFAULT_PAIR macro (advc.enum)

advc.rstr	Minor improvements for ranged strikes. For mod-mods.
	Inspired by keldath's DotO mod. See the end of this post and subsequent posts about ranged strikes in DotO. I haven't adopted any major changes though; just small improvements (in a strict sense).

advc.mi	ai Various tweaks to the behavior of AI units from the "More Naval AI" mod	

Credits	Too laborious to document those separately. Fully or mostly merged: Git commits 1 2 3 4 5 6 Partly merged: 1 2 3 4 All by tholal. I've scoured the whole repository. There are some more things worth adopting; the links to those commits are scattered across the manual. More recent changes from MNALL ("upofficial" continuation of MANI) by Ifgr:
	More recent changes from MNAI-U ("unofficial" continuation of MANI) by lfgr: 12345
See also	Some other changes from MNAI have different tags; will have to do a full-text search on the manual to find them.

devolution	Contributions by Erik (cf. this post and subsequent ones in the AdvCiv thread)
See also	advc.make: Build optimizations 003h: A performance tweak of his that I merged from the "We The People" mod 006l: Stop-autoplay button on the failed.assertion popup, merged from "We the People".
Crash while exiting to desktop fixed (<u>link</u>).	
OPT	Performance tweaks; merged: Git <u>commit</u>
BUG	Bugfixes; merged: Git <u>commit</u> Also merged <u>this</u> correction by vedg (lgor). And I've fixed a similar problem in CvPlayerAI::AI_techValue.
Al	Misc. Al tweaks; merged Git commit <u>1</u> <u>2</u>
ВМ	Benchmarking functionality added to Al Auto Play: Git <u>commit</u> I've added a new shortcut Ctrl+Shift+B to avoid confusing players who just want to watch the Al play.
	Note that this measures wall clock time, not just the CPU time spent on the <code>civ4BeyondSword.exe</code> process. Measuring the latter doesn't really seem possible in Python 2.4 (and generally difficult on Windows). That means, applications running in parallel can significantly skew the result, especially video playback in my experience.
See also	004y adds the shortcut to the list in Civilopedia.

Work in progress

First off, misc. open issues that, ideally, I would have liked to address before v1.0 (ordered by priority). While a lot of issues remain, I did take care of (and deleted) all issues that were really bothering me and were actionable. Above, the appendix lists many more open issues ("Tbd." boxes) of low priority. (I've also been maintaining a long list of small quality-of-life changes of even lower priority that I'm not even going to include in this manual.)

- [advc.tsl] Had multiplayer games with the True Starts option go out of sync right away a couple of times after having run a single-player game on Al Auto Play on the host before hosting the network game. But I haven't been able to reproduce this in three attempts, and I'm not positive that the True Starts option is the problem.
 - Update: Now fixed a bug with the True Starts option having had an ID that has to be reserved for Lock Modified Assets. This might've been the cause.
- [003] Get rid of the GetCstring functions at Cvstring and CvWstring; directly use C_str (std::string, std::wstring) instead. Firaxis seems to have used GetCstring so that the Cv... string classes could be used interchangeably with a class named "FString" in template arguments; however, FString is not even part of the SDK, so it's only confusing and clunky.
- [031] Can I get the AI to place fewer cities that really bother players who think that long-term city planning is more important than high-level players do? That seems to be at the bottom of continued complaints about AI city placement, especially about cities one tile away from the coast. (Though I could be wrong and there might be some unintended AI behavior at work however, the AI cities I see in my games look reasonable, at least when viewed from the perspective of their owner at the time that they are founded.) Should be possible to avoid cities that will irk players without changing the overall approach. (Favoring quality of worked tiles over quantity is a fundamental insight of advanced-level players; this is not a case of the AI being programmed to be too fancy.)

Will have to run a bunch of AI Auto Play games, preferably on Huge maps, to find inland cities that are able to work any coastal water tiles with extra yields (seafood, Colossus, Financial trait). Then see if these are primarily caused by insufficient exploration or by a low priority for sea access. In the former case, one consideration is to discourage cities with – or even just adjacent to – unrevealed workable tiles. Though getting the AI to explore more effectively would be preferable.

CFC post (I've also received a private message lately in the same vein.)

- [124] An AI leader should refuse to sign (or should cancel if already signed) Open Borders with a leader who is the worst enemy of several other leaders that the first leader cares about. May have to weigh the number of foreign trade routes that the first leader is forgoing and the importance of (appeasing) the second leader (city count?) with the first leader's attitude toward the third parties and their importance. Reason for trade denial: Could use "We couldn't betray our close friends!" (DENIAL_ATTITUDE_THEM), but probably better to add a new denial type, e.g. "You have made powerful enemies..."
- [advc.enum] Some large classes CvPlayerAI comes to mind first could use a
 pass of refactoring that replaces arrays with enum maps, for loops with various
 macros and iterator and allows all small functions to be inlined (and not just when

whole-program optimization is used).

003t: XML loading code should also use enum maps, especially CvInfo Unit.h.

• [<u>UWAI</u>] Affection cost in team games should be based on the no-war attitude probability of the current team member, not the average of all team members. Related discussion

Problem with this: Call locations of CvTeamAI::AI_noWarAttitudeProb should be consistent with the behavior of UWAI's Affection::evaluate.

- [UWAI] Dial up the impact of war success on the <code>conf...</code> variables in <code>InvasionGraph:: Node::step</code> when a war has been going on for some time and has seen a lot of fighting (high total war success). Currently, a human player attacked by an AI civ with clearly superior power ratio (say, 150 to 200%) and superior production capacity won't ever get a peace deal. In such a situation, the human civ may well be able to hold onto its cities, but probably won't manage to start a counteroffensive. Even if the AI will win such a war in the long run, it won't hurt to at least take a 10-turn break now and then.
- [<u>UWAI</u>] The AI estimate of military build-up based on the power graph needs to account for units destroyed during war somehow. Those losses do not imply that a civ has stopped producing new units.
- [130i, 130p, 148] Some of the <u>Dynamic Diplomacy</u> changes have made it more difficult to befriend AI players. Consider letting the relations modifiers from Open Borders and Defensive Pacts increase to up to +3. As for Defensive Pacts, the AI may then also have to be more discerning about signing them or the relations modifier will have to be based on how threatened the AI feels and who is protecting whom. Fair trade could be based more on the total trade value; it's still mostly based on the difference in trade values. In AdvCiv 1.0, I've already decreased the Friendly threshold by one more and made the mutual struggle diplo modifier some 20% more sensitive to war successes (and thus also a bit more lasting). I still don't think this fully solves the problem. In any case, having more ways of pleasing the AI would make games without tech trading more interesting. CFC posts: 12

[130i] Pleased attitude might be too difficult to reach in team games, perhaps because of my changes to the Open Borders relations modifier. CFC post

- [130r] Exponential backoff mechanism for AI contact delay? To ensure that the AI doesn't offer the same trade over and over. CFC post
- [<u>UWAI</u>] War trades might be offered too rarely. Perhaps I should relax some attitude thresholds (<u>CFC post</u>), or perhaps it's already better now (since v1.0) that Friendly attitude is easier to reach. v1.02 also tweaks the war utility threshold for the "enough on our hands response" (but I don't think that'll make much of a difference).
- [BM] Consider limiting the Civ4BeyondSword.exe process to a single core for performance tests; maybe even in general if it turns out to be faster. Can try it through the Task Manager: "Details", context menu, "set affinity". Programmatically: see 2nd answer here.
- [055] Global Warming: Should the population portion of the formula be tied to technological progress (or is it already), e.g. at least one player in the Industrial era? Some problem with map size or speed scaling? CFC discussion play report (with some sample numbers)

Future Tech should grant some Global Warming protection. Idea (CFC)

Perhaps add a "No Global Warming" game option.

- [200] Is the (K-Mod) Great Artwork ability too powerful when starting in a later era (since no culture has accumulated yet)?
- [001] Check if the Ctrl+Shift+L shortcut (Civ Changer) disables the "wait at end of turn" player option as reported here.
- [kekm.3] When a civ declares war and both sides have Defensive Pacts with (different) third parties, then the third party that has a Pact with the aggressor should not end up at war. Verify that this is what happens.
- [021b] PerfectMongoose: See if I can combine the PW2 and PW3 elevation maps for the best of both worlds. Mountain ranges look strictly better with PW3, whereas PW2 produces larger and more convex continents, which tend to play better than the Perlin noise curls.
- [077] Perhaps show info about foreign trade routes ("imports") on the Info tab of the Foreign Advisor screen. <u>CFC discussion</u>
- [312] Consider reducing the XP modifier on the attack from 4 to 3. This is already implemented for Barbarian units. CFC post
- [031] The AI might value strategic resources too highly when it has few cities and no prospects for expanding much; and perhaps not highly enough in the late game. The evaluation doesn't really take into account how many cities will benefit from a resource. See comment in AIFoundValue::nonYieldBonusValue.
- [082] The AI shouldn't embark units while gathering them for a naval assault. <u>CFC discussion</u>

Might it be enough to remove the AI_load call in CvUnitAI::AI_attackCityMove under "if no land path to enemy cities, try getting there another way" when pTargetCity is NULL? Or perhaps the loading happens somewhere else entirely most of the time ...

Potentially helpful: Git commit from MNAI

- [004] Some of the game text additions proposed in this post by CFC user crullerdonut for terrain improvement should be worth implementing. I'd probably want to be a bit more low-key, and some of it shouldn't appear only in Civilopedia. This post also flags the lack of information about Tundra Farms.
- [UWAI] If add another game option, consider replacing "Aggressive AI (Legacy)". (Should then also change the prefix of loading screen hints from "UWAI" to "AdvCiv".)
- [UWAI] Too little warfare in team games? That may not be so wrong as AI teammates aren't good at coordinating their attacks; so even when two members of one team are on a landmass with just one member of another team, starting a war isn't a no-brainer. Risk aversion might be a problem if one teammate expects to gain 2 cities and the other to lose 1, the team typically won't go to war. Could simply increase utility from GreedForAssets artificially to get more wars going. That said, lately, there didn't seem to be that little war fare.
- [advc.ctr] One player has reported that the AI will occasionally give away cities too cheaply; not sure if there's really a problem.

Make some leaders extra thankful about city liberation, e.g. Gandhi. (Maybe also some slightly less thankful.)

- [002] On certain surfaces, the Farm graphic flickers during camera movement. I haven't checked yet whether this also occurs in BtS. The part that flickers is a flat rectangle that seems to be related to the shadow cast by the barn. Perhaps it's too close to the ground; or maybe I can just throw that out somehow? Even that is difficult to do without any knowledge about .nif files ...
- [101] A couple of users report that it takes too many units or too much time to supress revolts, especially prior to Rifling. Consider buffing Musketman. $\underline{1}$ (in the middle) | 2

Perhaps foreign culture strength should be reduced a bit when the cultural owner has been defeated.

Consider slightly adjusting foreign culture strength or revolt probability to the map size. If there is more space to fill, there should be fewer incentives against rapid expansion. CFC discussion

(v1.0 has addressed some of these issues, but maybe not fully – has made revolts harder to suppress in the late game, but not easier in the early game; foreign culture strength gets adjusted to the difficulty level of the city owner.)

- [055] Make it easier to disconnect Coal and Oil on purpose (for the sake of avoiding health penalties and Global Warming anger/ events). Current problems: Can't disconnect resouces in city tiles; disconnecting Coal and Oil makes it impossible to build Railroads; automated workers may reconnect disconnected resources. It seems that trading a resource away works around all of these issues (not sure about Railroads), but there isn't always a taker. Also, both trading and self-pillaging are pretty counterintuitive plays. Might be best to add buttons somewhere for toggling Coal and Oil on and off, e.g. on the Environment tab (Economics Advisor). Disabling a resource that way should arguably also cancel any deals importing the respective resource or, if impossible to cancel, notify the player of the ongoing deal. Another idea is to turn the resource icons on the city screen into buttons that allow any resource to be toggled on a per-city basis. Ctrl+click could affect all cities. Hover text should arguably only mention those actions for Coal and Oil. Disabling a resource could perhaps also affect tile yields, treating them as if the resource didn't exist. (But that wouldn't work cleanly on a per-city basis.) Related CFC post (2nd spoiler box)
- [139, UWAI] Can CvCityAI::AI_updateSafety take into account remaining movement points and turn order? Currently, when negotiating peace, the AI is equally alarmed about units that can immediately take the city and units that will be able to do so on their next turn. Both is alarming, but not quite the same thing.

The AI should not just care about cities that are all but certain to fall. Need another <code>CitySafetyTypes</code> enumerator: <code>CITYSAFETY_TOSSUP</code>.

Related CFC post

- [706] When the active (human) player gets defeated in a Rise&Fall game, another
 player (typically player 0 from the initial chapter) becomes active when the defeat and
 civ selection popups are shown, and this can give away part of the map. Not sure
 how to prevent that. CFC post
- [116] Should use the AI_assetVal function (introduced for city trades) also for raze decisions.
- [703] When loading a game or returning to the opening menu, CvVictoryScreen.

iscreen in Python should be reset. Perhaps this could be piggybacked on some existing dirty-bit. As it is, the R&F tab may remain active after loading/ starting a non-R&F game.

- [036] Perhaps modify the trade value that the AI assigns to gold based on the attitude toward the civ that pays the gold. Rationale (CFC); another related post
- [036] To evaluate techs that enable a new terrain improvement, at least during the Ancient era, when performance isn't an issue, the AI should go through each city, check for tiles in the city radius where the new improvement can be built and compute the difference in yields between the new improvement and the worst currently worked tile. And then put the sum of those differences in relation to the total yield rate of all its cities.

CFC discussion

- [130w, 148] The relations penalty for having capitulated vassals should decrease to -1 per vassal eventually. Based on the time since capitulation I guess. To be consistent with the "oppose your ruthless expansionism" penalty, which tends to decrease over time. May then (perhaps) want to revert an increase of the expansionism penalty implemented in v1.01.
- [UWAI] When evaluating a sponsored war, a phase of military buildup should be assumed for all war parties because the hireling usually won't be ready to invade directly. The assumed duration could be something like 10 minus 1.5 times the tech era of the hireling. Also, the attackerUnprepared flag that already exists in InvasionGraph::Node::step Should take into account whether it's a sponsored war.
- [<u>UWAI</u>] The limit for what the AI is willing to pay for peace should be increased when the tactical situation (clearly) favors the other side. Normally, it doesn't make sense to pay much for 10 turns of peace, especially not to a human player, but it does make sense to pay extra if it gets the AI out of a bad spot.
- [UWAI] InvasionGraph::Node::step sets its isNaval flag solely based on whether the target city is reachable (at all) by land. Worse, UWAICache::City doesn't store separate distances via land and via sea. UWAICache::City::updateDistance mustn't just set pwd=d in the cantrainAnyCargo branch. Should instead maintain a separate vector pairwDurationsLandOnly for distances computed assuming that cantrainAnyCargo=false, and store an additional distance value distByLand at the UWAICache::City object. Try encoding non-reachability through a distance value of -1.

Then Node::step could set isNaval if either there is no land-only path to the target city (as is the case now) or if (important) WarevalParameters::isNaval() and the distance by sea (i.e. by any means; sea or land) is significantly shorter than the land-only distance. Also UWAICache::City::attackPriority will have to use the land-only distance for cities reachable by land if WarevalParameters::isNaval() == false. Will probably need a separate comparator UWAICache::City::byLandAttackPriority for this.

- [UWAI] InvasionGraph::Node::resolveLossesRec Seems to use costly memory allocation.
- [<u>UWAI</u>] Limited war might be used too often and total war too rarely based on one user report. My own observations are inconclusive; the AI behavior is probably not way off.

- [130v] Now that vassals generally can't sign peace treaties and don't get a peace treaty from city trades (advc.ctr) either, I could allow voluntary vassals to hire war allies (as in BtS). Originally, my concern was that the vassal would force its master into a peace treaty through change 146.
- [130m, 130w, advc.sha] Through human attacks, the AI relations bonus for "mutual struggle" (CvPlayerAI::AI_getShareWarAttitude) can change throughout a human turn. This can lead to an outdated AI attitude cache. Try updating the mutual-struggle component of the cached value via CvPlayerAI::AI_changeCachedAttitude before/after every human attack (for all war allies of the human). Also, for war enemies, AI_getWarAttitude and, for all rivals, AI_getExpansionstAttitude, AI_getRival VassalAttitude. (The latter two both call AI expansionistHate.)
- [advc.sha] Perhaps bring back the relations bonus among civs in the lower half of the scoreboard for Al leaders with rather peaceful personalities. (Based on peaceweight? But what about Augustus?) Not during the game's start era though (ranks change too often).

CFC discussion

- [130p] Perhaps becoming an AI civ's worst enemy by trading with the current worst enemy shouldn't be entirely ruled out. It's not necessarily illogical. This would concern the iAttitudeDiff formula in CvTeamAI::AI_enemyTradeResentmentFactor.
- [700] When playing with the R&F option, the "Retire" button in the Retire popup should be labeled "End the chapter" instead.
- [UWAI] Try implementing two simulation trajectories (one slightly optimistic, one slightly pessimistic) when performance isn't an issue, e.g. so long as there are fewer than 100 cities in UWAICache. In the late game, outcomes tend to be clearer (greater disparities in military power) anyway.

The constructors of MilitaryAnalyst and InvasionGraph should be the place to implement this.

CFC discussion

- [130f] Peace treaties should block embargoes. I think, currently, players could ask the AI to stop paying reparations to a third party.
- [UWAI] Should perhaps assume a higher guard ratio (in InvasionGraph::Node::step and in ArmamentForecast.cpp I've already tweaked the latter, but could tweak it more by removing the current special treatment for humans entitrely) for humans because, currently, wars against humans are usually judged by the AI as all (take several human cities) or nothing, which takes away the nuances from AI war evaluation. Possible side-effects: AI could become less alert about human attacks, less willing to pay for peace, less willing to attack in the early game (when a high guard ratio matters most). That might be OK.
- [UWAI] To (further) encourage AI civs with a very powerful military to fight multiple wars at once: If all war enemies (current and projected) are pushovers (UWAIAgent::Team::isPushover), force weld in InvasionGraph::Node::findTarget to target WarEvalParameters::targetId() and force target=NO_PLAYER if InvasionGraph ::isPeaceScenario. To evaluate and implement this, I'll need a game state where a civ that is way ahead militarily is being too slow mopping up.
- [104m] When asking for help, the AI should check if a package of several human

- Surplus resources would be valuable enough. (Also: Changes to tribute and help requests don't really belong under id 104m.)
- [700] When the R&F option is enabled, perhaps show the victory stage in the scoreboard help. Only show it if it's greater than 2. Maybe as a roman numeral after the score, e.g. "1744(III)", colored orange if it's a rival at stage III, red if a rival at stage IV and green if it's the active player at stage III or IV. And, ideally, the stages should be computed by a simpler non-AI function that uses mostly public information.
- [083] Should add a shortcut somewhere in CvUnitAI.cpp that makes the AI conquer empty cities in reach, perhaps just with a single unit hoping that the rest of the stack will respond appropriately to the conquest. The AI currently insists on going to an attack-from tile chosen in advance (not necessarily on the shortest path) before entering the city. Possibly related CFC posts 1 2
 - Similar problem: Al transports won't make opportunistic attacks on lightly defended cities while headed toward their target city. The selection of the target city may also be too predictable. <u>CFC disucssion</u>
- [UWAI] Try letting an AI civ estimate human military power more highly in situations when the AI civ is not itself at war with the human. This should avoid AI-on-human dogpile wars that are supposed to keep human cities from falling into a rival's hands. It should also make the AI a bit braver when fighting alongside a human (more ready to try and snatch away territory from a shared enemy) and more alarmed about human wars of conquest.
- [306] Barbarian ships on patrol should eventually just permanently blockade some city, or at least for a long time. Through CvUnitAI::AI_patrolMove, CvUnit::getGameTurnCreated and a coin toss.
- [<u>UWAI</u>] WarUtilityAspect::lossesFromBlockade should be generalized to also cover air bombing.
- [UWAI] MilitaryBranch::Logistics should store military power and cargo capacity separately. Currently, Logistics::power returns the cargo capacity.
 - I guess this'll mean adding a <code>capacity</code> function to MilitaryBranch and all its subclasses. Then go through all occurrences of <code>[LOGISTICS]</code> in the code and replace <code>power</code> calls with <code>capacity</code> where appropriate. Logistics power should continue to be included in Fleet power.
- [550] The relations bonus from "shared discoveries" should be based on the total cost of the traded techs.
- [550d] The research cost adjustment for team games (bTeamSizeModifiers) in CvTeam::getResearchCost doesn't seem strong enough. May have to apply a modifier to all research costs (not based on individual team size) in addition if team size is punished even more, Permanent Alliances may become unattractive. Could e.g. multiply research costs by sqrt(CvGame::countCivPlayersEverAlive() / countCiv TeamsEverAlive()). Apply this factor regardless of whether the bTeamSizeModifiers parameter is set (I guess).
- [082] Implement UWAICache::updateRelativeNavyPower (see comments there) and an auxiliary function for the intel ratio. Currently, the AI magically knows how a civ's military power is split between land and sea units. The BBAI function CvTeamAI:: AI_getRivalAirPower also has this fault. Change 650 also lets the AI cheat with the

number of enemy nuke units.

- May want to force-disable HAPDebugger through gDLL->ChangeINIKeyValue in final-release builds. Causes the game to get stuck at launch unless the HAP debugger is actually running. Only a handful of modders have ever used it, and players sometimes enable it out of curiosity.
- [085] Icons (e.g. religions) on the scoreboard are a bit displaced toward the top. I took a quick look at CvMainInterface.py and BUG Scoreboard.py, but there is no obvious problem. Perhaps an issue with the GameFont file.
- [707] Not sure if R&F games will end properly on a time victory. Should be tested once with retiring (causing the game to end during Auto Play) and once without (player controls a civ when the time limit is reached).
- Perhaps add an optional unit action button that deselects half of the currently selected group. This has been requested here (penultimate bullet), and is actually pretty easy to implement, as pointed out in this post.
- [127c] (see there under *Tbd*.) It's sometimes (very rarely?) impossible to add gold to the trade table. I've seen this bug reported for Realism Invictus and Dawn of Civilization as well. Workaround is to restart Civ; reloading without restart might also suffice.
- [UWAI] Do something with AIDeclareWarProb from Civ4HandicapInfos.xml; currently, it's unused. Just delaying AI war planning isn't good that may well lead to bigger attacks when they do happen. Perhaps make it into a preference for limited over total war.
- [133] If resource trades are still canceled too frequently, try increasing the inertia for keeping resource trades alive further. That said, it's probably already only canceling when "nothing to gain", so a tolerance parameter may have to be added to the denial function CvPlayerAI::AI_bonusTrade. Or simply reduce the cancellation probability even if "nothing to gain" (when trading with a human). For Al-Al trades, consider applying the inertia code that currently applies only to Human-Al trades canceled Al-Al trades could have a domino effect (unclear).

CFC discussion 1 2

- [102] To be tested: Enable "Show friendly moves" in networked multiplayer with simultaneous turns while the other human player is in Globe view. The result should be that the first player sees friendly moves (despite the other player's Globe view, which normally skips foreign moves) and that the other player does not see friendly moves -- but I guess there'll have to a delay while the moves are shown to the first player. Is this working correctly? What if both are in Globe view? The clauses I've added under the comment "Are these timers synchronized" in CvSelectionGroup.cpp might cause a delay in that case (although no moves are shown to either player). What if I remove those clauses? How about non-simultaneous turns?
- [123f] To be tested: Is fail gold for world projects (the Internet) working correctly?
- [kekm.25] To be tested: Do vassals and friends behave correctly in repeal votes? Are human vassals correctly forced to vote?

Larger features that I had considered including before v1.0 (not ordered by priority):

- Merge further UI conveniences from BULL-based mods and PlatyUI: See "Tbd." under change id <u>004</u>.
- Adopt some misc. tweaks from the BASE mod. Or rather from the mod's <u>changelog</u> (in German) – the DLL is closed-source.
- Adopt the improved savegame format (<u>explanation</u> | <u>Git commit</u>) from the "We the People" mod and perhaps also the revised <u>setup</u> for translations. Or at least <u>this</u> little change. And <u>UTF8 support</u>. (Or perhaps that's easier to adopt from "A New Dawn 2" UTF8Support.h/cpp). Currently, special characters in leader and city names aren't (always) displayed correctly if they're not HTML-encoded (<u>Windows 1252</u> encoding, to be exact) in the game text file. And the Japanese (Russian?) edition of Civ might not even be able to load a mod with certain special characters next to an XML angle bracket.

When changing the savegame format, it would also be a good time for transitioning to a single (31-civ) DLL.

- BBAI includes a file unofficial patch list.txt with "outstanding issues". Most of it is incomprehensible, but a couple of items seem worth looking into.
- Scour SVN revisions from the the early days of Caveman2Cosmos and revisions from RoM-AND from 2010/2011 for AI improvements and other useful tweaks that are easy to adopt.
- Complete the <u>EuroWorld</u> scenario. Still a lot to do though and I've run out of steam because the areas that interest me most are already done and because I regret a few of my choices regarding landmass proportions.
- In large games, human players get contacted too frequently by the AI. Ideally, before contacting a human player with an offer, the AI should compute some measure of confidence about the offer being of interest to the human and decide based on that and the number of players known to the human whether to proceed. Since offers can't hurt the human player, there could be an option on the BUG menu in addition to further discourage AI-to-human offers. I don't think the requests that come with a diplo modifier are a big nuisance, so I don't think that a "cease bothering us" option is ultimately needed. Known unhelpful offers: Trade offers for dead-end techs like Divine Right; repeated offers for Open Borders. CFC disucssion
- Move Al-to-human diplomacy to the start of the contacted player's turn. See "Tbd." under <u>001e</u>. <u>CFC discussion</u>
- To further improve the performance of UWAI in games with far more than 18 civs, implement a heuristic for pre-selecting only the top 12 (or so) war targets. Top priority: current war enemies, then humans. Then, for a start, I could try using K-Mod's CvTeamAI::AI_startWarVal. For the targets that are ruled out this way, any calls to UWAI functions need to be avoided; in particular, WarEvaluator::evaluate and UWAICache::update mustn't be called. I might get away with updating the set of relevant targets only once per turn. When a decision on war and peace comes up suddenly, e.g. a war trade, war/peace vote or a tribute demand, K-Mod code could be used as a fallback, but it's probably better to use some safe default behavior instead, e.g. refuse categorically to be hired for war. Another potential issue: Evaluating a war plan against a civ that has other war enemies could be problematic if no UWAI data is available about those third parties.
- Try removing the at-war checks in the code for Al-Al war trades (CvPlayerAI::

AI_doDiplo), i.e. let the AI sponsor wars without declaring war itself. UWAI should be "smart" enough to handle that. Performance will be a problem though; may have to check a bunch of preconditions beforehand to save time, e.g. check UWAICache:: warUtilityIgnoringDistraction. And can always make the check probabilistic to improve the performance by a constant factor.

Brokered peace might also be doable. And the AI could demand that a human player make peace.

- Al civs should ask other Al civs to stop trading with disliked third parties. Precondition: Must be at war with the third party or the third party must be the worst enemy. Then check denial (CvPlayerAI::AI_stopTradingTrade). Need to add a function AI_stopTradingThemTradeValue that says how much the Al wants another civ to stop trading. Embargoes will have to be win-win in terms of that value and AI_stopTrading TradeVal. Could base the contact frequency on the ContactRand value for CONTACT STOP TRADING (currently used for Al-to-human stop trading requests).
- Extend <u>advc.xmldefault</u> to some of the the large XML files like <code>Civ4UnitInfos.xml</code>. This would make XML changes post-v1.0 more convenient.
- Improve the AI code that decides where to gather units for war or where to park them when no war is planned (CvUnitAI::AI_moveToStagingCity). Avoid putting them all into a border city with poor defenses.
- Make third parties less supportive of wars against their partners:
 - Disallow attacks inside the borders of a non-war party. Air attacks should remain allowed. Not sure about attacks at sea.
 - Perhaps restrict railroad movement in third-party borders somehow during a war (or always unless sharing a war, defensive pact or vassal agreement).
 - Being at war with a friend (Friendly attitude) should raise the AI attitude threshold for Open Borders by one level. There may have to be some delay to avoid making an AI civ that starts a war look bad when its invasion is immediately stopped by canceled Open Borders. The friendly AI civ will also have to check if the aggressor is not too dangerous (e.g. check embargo denial).
- Tweak the AI personalities to make them more distinct and to match the historical background better. (But don't introduce new quirks that players have to be aware of.) I have notes for about one third of the leaders. May also have to adjust some diplo texts to fit the personalities.
- Module with graphics from Varietas Delectat (VD) or BAT. Not sure what the best source would be. Leoreth has made some adjustments to the VD graphics that would be nice to have. Anyway, I won't do this on my own as I don't even want to play with those graphics. If someone else does a merge, I can look into making the process easier. <u>CFC discussion</u>; see also *Tbd*. under <u>002</u>j about some changes to unit graphics that I'd like to make.

Update: DeepWell published his <u>Ethnic Units Extended</u> mod in Feb 2022. That's very easy to install on top of AdvCiv and to keep up to date. But doesn't cover cities. A more expansive graphics pack could be extracted from spqkfk's <u>AdvancedCiv Plus</u> (AdvC+) mod. Don't know how that compares with VD.

A different approach would be to curate graphics (from VD, AdvC+, other sources – graphics modders have kept busy to this day) that won't have to be optional because

they're not just more realistic but also more functional than the original graphics. But, even then, the increased download size will be a downside. And it's difficult to be more functional than graphics that players are highly familiar with.

- Add a (worst) "enemy of my enemy" relations bonus.
- Perhaps decrease the 300% modifiers on Marathon speed to 250%.
- Changes in preparation of a tech diffusion system (see also "city trades" above). Should only apply when tech trading isn't possible.
 - The AI should make more gold available for trade.
 - The AI should accept gold-per-turn as payment joining a war (now that joining a war results in a peace treaty due to change 146).
 - Gifted units should result in a sensible relations bonus (based on whether the receiving side needs the units) and penalty from war enemies of the recipient.
 - Increase the trade value of gold to make payment in gold (e.g. for civics changes, joint war) more affordable.
 - Make the "fair and forthright" and "traded with our worst enemy" modifiers more sensitive. And also the "years you've supplied us with resources" bonus.

The documents about future gameplay changes on <u>GitHub</u> are mostly intended for a version 2.0 of this mod (and, as such, unlikely to ever be implemented). The following changes would've been suitable for v1.0 (or, say, 1.1):

- Various changes concerning religions, the Apostolic Palace and UN
- Forced Labor civic to replace Slavery when playing with the "No Slavery" option (through an XML tag list of game options required to be enabled or disabled in Civ4CivicInfos.xml).
- Nerf some food resources
- Add an Islet terrain feature
- Don't require Flanking I for the Navigation I promotion
- Optional tech diffusion from tile culture
- Optional transaction cost for tech trades
- Limited Worker charges
- Drafting may consume stored food
- Changes to city conquest rules
- Reduce process conversion rates (e.g. Wealth), perhaps based on difficulty level.
- Penalize extreme commerce slider positions (or frequent changes; cf. <u>157</u>)
